This School offers the practice of Elementary and Perspective Drawing, the Antique, the Living and Costume Model, Anatomy, &c. Distinct Classes for Ladies and Gentlemen. Pupils prepared for the Royal Academy.—Prospectuses, containing further particulars, may be had at the School.

ROYAL LITERARY FUND.—The SIXTY-SIXTH ANNIVERSARY DINNER of the Corporation will take place in FREEMASONS' HALL, on TUESDAY, May 22.

The LORD BISHOP of OXFORD in the Chair.
The Stewards will be announced in future advertisements.
73, Great Russell-street. OCTAVIAN BLEWITT, Sec.

A COURSE OF EIGHT LECTURES on the HUMAN FORM will be delivered by JOHN MARSHALL, Esq., F.R.C.S., in the Lecture-Room of the GEOLOGICAL MUSEUM, Jernyn-street, on the 4th of May and following Fridays, at 4 o'clock P.M.
Tickets of admission to be obtained on application at the Museum, Marlborough House, Pall Mall.

MONTT'S LECTURES ON ANCIENT and MODERN SCULPTURE.—The First of these Lectures will be delivered on WEDNESDAY, the 16th of May.—Particulars can be obtained at Messrs. COLNAGHI'S, Pall Mall East.

CHEMISTRY.—Mr. MEDLOCK, F.C.S., formerly Chief Assistant in the Royal College of Chemistry, continues to give PRIVATE INSTRUCTION to Gentlemen in all Branches of CHEMICAL SCIENCE. Particulars may be had at the Laboratory, 29, Great Marlborough-street, London.

LANDSCAPE PAINTING.—J. B. PYNE is OPEN to RECEIVE A PUPIL, for either Three or Five Years, who shall be somewhat advanced in Landscape.—43, Camden-road Villas, Camden-town.

MR. CHARLES WEISBECKER, Pianist, begs to inform his Friends and Patrons that he has REMOVED to 6, Clarendon-road, Maida-hill.

AS TEACHER of the PIANOFORTE.—A LADY receives Pupils, or attends Schools and Private Families.—L. B., 60, Arlington-street, Camden Town.

MR. CHARLES HALLE having arrived in LONDON for the SEASON requests that any communications from his friends and pupils may be addressed to the care of Messrs. JOHN BROADWOOD & SONS, 33, Great Pulteney-street, Golden-square.

MASTER ARTHUR NAPOLEON begs to announce that he HAS RETURNED from Germany, and intends to stay in LONDON for the SEASON. All letters to be addressed to him, 30, Oxford-terrace, Hyde Park.

THE GOVERNESSES' INSTITUTION, 34, Soho-square.—Mrs. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools to her Register of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

TO TUTORS, GOVERNESSES, and STUDENTS.—All persons engaged in Tuition purchasing their Books of Messrs. HULL & Co. are allowed the FREE USE of their extensive Library in addition to the usual discount.—BULL HUNTON & Co. 19, Holles-street, Oxford-street, London (Four Doors from Cavendish-square).

A SOUND CLASSICAL, MATHEMATICAL, SCIENTIFIC and GENERAL EDUCATION is afforded on moderate Terms at the LICHFIELD GRAMMAR SCHOOL.—For Prospectuses apply to the Rev. J. G. CUMMING, M.A. F.G.S., Head Master.

BRIGHTON.—EDUCATION.—There are VACANCIES in a first-class Establishment where only Twelve Young Ladies are received. A Parisian Governess resides in the house, Signor F. Lablache, Herr Kuhe, Messrs. E. de Paris, Michon, and other eminent Professors of Music. References to Parents of Pupils.—For Terms, and Address Misses B. care of Mr. Rolandi, 20, Berners-street, Oxford-street, London, where Prospectuses can also be had.

EDUCATION.—The MISSES SMITH, late of Mornington-crescent, Regent's Park, inform their Friends that they have removed a few miles into the Country, and will be prepared to receive their usual number of PUPILS at their residence, THE BROADWAY, Plaistow, Essex, on TUESDAY, May 1st. Prospectuses, with terms and references, on application to the Rev. J. C. Harrison, 24, Queen's-road, Regent's Park; Rev. W. Spencer Edwards, 36, Gloucester-road, Regent's Park; Robert Johnston, Esq., 4, Camden-street, Camden-town; Charles Wyatt Smith, Esq., Surgeon, High-street, Poplar; and the Misses Smith.

ST. JOHN'S WOOD PROPRIETARY COLLEGIATE SCHOOL, 25, St. John's Wood Park.
Head Master.—The Rev. THOMAS MARKBY, M.A., late Scholar of Trinity College, Cambridge, and Classical Master in King's College School.

Second Master.—J. DEIGHTON, Esq., M.A., Scholar of Queen's College, Cambridge.
The School is supported by the Proprietors holding transferable Shares of 21l. each, and by the Fees paid by the Pupils.
Each Proprietor has the right of nominating one Pupil at a time to the School at reduced fees.
R. HODSON, Hon. Sec.
* * * The Second Master RECEIVES BOARDERS at 24, Boundary-road.
The next Term will begin on TUESDAY, the 1st of May.

HOME EDUCATION for BOYS in DELICATE HEALTH.—A Fellow of the London College of Physicians (a Wrangler at Cambridge, and late Scholar of his College), residing at the sea-side, within three hours' distance from Edinburgh, RECEIVES FOUR BOYS into his family to be educated with his own sons. An excellent resident Tutor (a Graduate in classical honours at Oxford) assists him in the general management of the studies of his pupils, to whose health and physical education special attention is paid. The locality is remarkably dry and healthy, and there are admirable sands and good bathing within five minutes' walk from the Advertiser's house. References, if required, can be given to the most eminent physicians in London and Edinburgh. There is at present ONE VACANCY. Terms from 100 to 150 guineas per annum, according to age.—Address P. R. S., Parthenon Club, London.

PEOPLE'S COLLEGE, NOTTINGHAM.—Immediately after the ensuing Midsummer Vacation, a LADY WILL BE REQUIRED to conduct the Girls' Day School and Female Adult Evening Classes connected with this Institution. A sound knowledge of the usual English branches and of Teaching, as well as experience and skill in Teaching, indispensable. An acquaintance with Linear Drawing and Singing will be a great additional recommendation. Salary 60l. per annum without board or residence.—All applications, with testimonials, to be forwarded, on or before May 21, to Mr. JOSEPH WRIGHT, Honorary Secretary, College-street, Nottingham.

COURS DE FRANÇAIS et de MUSIQUE
pour les DÉMOISELLES.
Sous la Direction de MADAME LOFFET.
French Class for Beginners, French Conversation, Composition, Epistolary Style, &c., every Tuesday, at 11 o'clock.
Ditto Advanced, ditto ditto, every Thursday, at 11 o'clock.
Piano Class for Beginners, Study and Reading of Music at Sight, Practice, &c., every Tuesday, at 12 o'clock.
Ditto Advanced, ditto ditto, every Thursday, at 12 o'clock.
Terms, per Quarter, of either Class, 2l. 2s., payable in advance.
Term of the Summer Classes—1st of May to end of July.
Ditto Winter Classes—1st of November to end of March.
Albany Institute, 1A, Albany-street, Regent's Park.

DR. ALTSCHUL'S LECTURES and READINGS.—To Literary Institutions, Schools, and Families.—LECTURES (in English) on the contents of Dramatic and Literary Readings, are delivered by Dr. ALTSCHUL, M. Ph. Soc., Examiner Royal Coll. Preceptors, Professor of the German, Italian, and French Languages and Literature.—Chandos-st., Cavendish-square.

MR. B. H. SMART, formerly of Connaught-square, now of 37, WYNDHAM-STREET, Bryanston-square, acquaints his Friends, and personally, from 3 till 5, with CLERICAL and other PUPILS in ELOCUTION, to meet Classes in Families and Schools for English generally, and to engage for Public Readings and Lectures.

LESSONS in LITERATURE and COMPOSITION.—Manuscripts prepared for the Press.—Address to A. B., 31, Newman-street, Oxford-street.

A SCHOOL ASSISTANT WANTED for an Institution in Scotland.—It is indispensable his being a man of character, energy, and attainments; a finished penman, an expert arithmetician, and an accurate English Scholar. Drawing a recommendation. Salary (according to qualifications), with board and lodging.—Apply, by letter, not after Thursday, to LAMBA, 27, Aldgate, London, or personally, from 3 till 5, at Chamber Coffee House, St. Paul's, on Friday and Saturday next.

TO TEACHERS of SCIENCE.—WANTED
after Midsummer a GENTLEMAN thoroughly competent to TEACH CHEMISTRY and PHYSICAL SCIENCE. He would have a large and well-stocked laboratory, and every facility for carrying out experimental research. A practical as well as theoretical acquaintance with science is indispensable, and to a gentleman given to scientific investigations this opportunity may prove most valuable. The details of present remuneration would depend upon the claims and qualifications of the candidate; at the same time, it may be stated the prospective salary to a gentleman of competent attainments would be 100l. per annum, with board and rooms.—Address the Rev. ARTHUR RICO, College, Chester.

TO NATURALISTS.—A novel mode of putting up objects in "Box-cells" may now be seen at 30, Tavistock-street, combining simplicity of construction as it respects the cell, with facility of examination in regard to its contents. The invention is especially suited to collections in Public Museums, where minute and delicate objects are so liable to be lost or destroyed by accident. A specimen Box-cell, carefully packed, and containing British examples of the rare shell Truncatella Montagu, will be sent free by post upon the receipt of 12 stamps. Postage Boxes, 2s. per doz.—Circular glass-topped Boxes of various sizes for collections of Eggs, Shells, Seeds, &c. from 1s. to 4s. per doz.—Marine Shell-dresses, 2s. each.—Insect Pocket-collecting Boxes.—Botanical Cases.—Geological Hammers.—Naturalists' Packing Boxes, &c.—On Sale at 30, Tavistock-street, Covent-garden.—ROBT. BURCH, Agent.

CRYSTAL PALACE.—SEASON TICKETS
for the ENSUING YEAR, available from the 1st of May, 1855, to the 30th of April, 1856, will be ISSUED on and after the 30th instant, at the price of ONE GUINEA each. These Tickets will entitle the holders to the exclusive privilege of Admission to the Palace and Grounds at the GRAND HORTICULTURAL and FLORICULTURAL FETE, to be held on SATURDAY, June 3, and on the occasion of playing the whole of the Grand Fountains and Cascades for the first time.
They may be obtained at the Palace, at the Office, 3, Adelaide-place, London-bridge; the Brighton Railway Offices, London-bridge, and 43, Regent-circus; Mitchell's Library, Bond-street; and Sam's Library, St. James-street.
Remittances from the country, and Post-office Orders should be made payable to George Fasson. By order.
Crystal Palace, April 24, 1855. G. GROVE, Secretary.

THE SEAT OF WAR.—The Undersigned has established himself at CONSTANTINOPLE, as Agent for Steamers and Sailing Ships engaged in the TRIPOLI PORT SERVICE. He will be prepared to make ADVANCES to Captains on LETTERS of CREDIT, also to take Charge of Parcels or Letters, and be glad to make his services generally useful.
Constantinople, March 15, 1855. WILLIAM HADFIELD.

BRIGHTON.—A HOME for INVALID and ORPHAN CHILDREN of the Higher Classes, in a superior Mansion, the most delightful and healthy part of Brighton. Only a limited number taken, and from the age of one month to twelve years. A Governess, Nurses, and every suitable accommodation. References permitted to several eminent Medical Men and Clergymen.—Address A. C. L., care of Mr. Wallis, 5, Bartholomew's, Brighton.

ENGRAVINGS BROUGHT WITHIN THE REACH OF ALL.—Immense quantities of first-class Subjects (chiefly from Sales), at unheard-of prices. One instance:—"Morning" and "Evening" (pub. at 21s.), 3s. 6d. per pair. Such an instance has never before occurred to adorn the Wall and enrich the Folio.—For Catalogue of some of the chief subjects, see the *Athenæum*, March 31st, 1855.—J. MADLEY, 9, Wellington-street North, Strand.

London: Thomas Bosworth, 215, Regent-street.

CARLETON'S NEW WORK.

WILLY REILLY, AND HIS DEAR COLEEN BAWN.

A TALE FOUNDED ON FACT.

By WILLIAM CARLETON,

Author of 'The Black Prophet,' 'The Miser,' 'Traits and Stories of the Irish Peasantry,' 'Valentine M'Clutchy,' &c.

In 3 vols. Ready this day at all the Libraries.

Just published, price 7s. 6d. illustrated,

LAYS OF LOVE AND HEROISM, LEGENDS, LYRICS, and OTHER POEMS.

By ELEANOR DARBY,

Author of 'The Sweet South.'

"The authoress is already well and favourably known to the British public by her previous publication, under the title of 'The Sweet South.' The appearance of the present volume will but call forth a repetition of those high encomiums which were so plentifully bestowed upon her former effort. The 'Lily o' Dundee' is of itself sufficient to show the distinguished abilities of the authoress—displaying as it does, in a very high degree, her power, pathos, and poetic skill. The volume, as a whole, cannot fail to contribute very materially to the popularity of the accomplished authoress; and it deserves a very extensive circulation."—*Morning Advertiser*.

IMPORTANT TO AUTHORS.

NEW PUBLISHING ARRANGEMENTS.

HOPE & CO., PUBLISHERS,

16, GREAT MARLBOROUGH-STREET, LONDON,

CHARGE NO COMMISSION FOR PUBLISHING WORKS PRINTED BY THEM until the Author has been refunded his original outlay. W. & R. CHAMBERS, 47, Paternoster-row, London, and High-street, Edinburgh; W. GILLING, Liverpool; T. DINHAM, Manchester; H. CAMPBELL, Glasgow; J. M'GLASHAN, Dublin; and all Booksellers.

Now ready, the THIRD and FOURTH VOLUMES, completing the Work, of

THE DUKE OF BUCKINGHAM'S MEMOIRS OF THE COURT AND CABINETS OF GEORGE III.

FROM ORIGINAL FAMILY DOCUMENTS.

Among the principal important and interesting subjects of these volumes (comprising the period from 1800 to 1810) are the following:—The Union of Great Britain and Ireland—The Catholic Question—The Retirement from Office of Mr. Pitt and Lord Grenville—The Addington Administration—The Peace of Amiens—The Connexion of the Prince of Wales with the Opposition—The Coalition of Pitt, Fox, and Grenville—The Downfall of the Addington Ministry—The Conduct of the Princess of Wales—Nelson in the Baltic and at Trafalgar—The Administration of Lord Grenville and Mr. Fox—The Abolition of the Slave Trade—The Walcheren Expedition—The Enquiry into the Conduct of the Duke of York—The Convention of Cintra—The Expeditions to Portugal and Spain—The Quarrel of Lord Castlereagh and Mr. Canning—The Malady of George III.—Proceedings for the Establishment of the Regency, &c. The Volumes also comprise the Private Correspondence of Lord Grenville, when Secretary of State and First Lord of the Treasury—of the Right Hon. Thomas Grenville, when President of the Board of Control and First Lord of the Admiralty—of the Duke of Wellington, during his Early Campaigns in the Peninsula; with numerous confidential communications from George III., the Prince of Wales, Lords Castlereagh, Elgin, Hobart, Camden, Essex, Carysfort, Melville, Howick, Wellesley, Fitzwilliam, Temple, Buckingham, Mr. Fox, Mr. Wyndham, &c. &c.

HURST & BLACKETT, Publishers, Successors to Henry Colburn, 13, Great Marlborough-street.

NEW NOVEL BY THE AUTHOR OF 'EMILIA WYNDHAM.'

Now ready at all the Libraries, in 3 vols.

THE HEIRESS OF HAUGHTON.

By the AUTHOR of 'EMILIA WYNDHAM,' 'TWO OLD MEN'S TALES,' &c.

THE SECRET MARRIAGE; or, CONSTANCE HERBERT. By Miss JEWSEBURY. 3 vols.

"These volumes teem with dramatic power, and abound in startling and affecting incidents, with numerous strongly sketched characters, and with expressions of sentiment energetically and beautifully enunciated. Miss Williams takes her place amongst the foremost of modern fictionists. Her story, so rich is it in events, so fecund in characters, so varying in scenes and descriptions, cannot be analyzed within the scant space which a newspaper like ours, absorbed in recording the events just now poured around us, can afford to it. We recommend her beautiful work to our readers. It is the most charming story, at least within our perusal, of the season."—*Observer*.

"A deeply interesting tale."—*Athenæum*.

THE WIFE'S TRIALS. 3 vols.

"One of the best novels we have had the pleasure of reading for some time."—*Chronicle*.

Also, just ready, in 3 vols.

THE MONARCHS of the MAIN.

By GEORGE W. THORNBURY, Esq.

HURST & BLACKETT, Publishers, Successors to Henry Colburn, 13, Great Marlborough-street.

A COMBATANT'S ACCOUNT OF THE BATTLES OF ALMA, BALAKLAVA, AND INKERMANN.

On Wednesday, May 2, in small 8vo. price 6s.

NARRATIVE OF A CAMPAIGN IN THE CRIMEA.

WITH AN ACCOUNT OF THE BATTLES OF ALMA, BALAKLAVA,
AND INKERMANN.

By Lieut. GEORGE SHULDHAM PEARD, 20th Regiment.

London: RICHARD BENTLEY, New Burlington-street.

Now ready,

THE FERNS OF GREAT BRITAIN.

Illustrated by JOHN E. SOWERBY.

The Descriptions, Synonyms, &c. by CHARLES JOHNSON, Esq.

In 1 vol. cloth boards, containing 49 Plates, full coloured, 27s.; partly coloured, 14s.

JOHN E. SOWERBY, 3, Mead-place, Lambeth.

Just published, in 2 large vols. imperial 8vo. cloth, 4l. 15s., illustrated by nearly Eight Hundred Views and Plans of the more remarkable Towns, Ports, Harbours, &c.,

THE IMPERIAL GAZETTEER:

A GENERAL DICTIONARY OF GEOGRAPHY, PHYSICAL, POLITICAL,
STATISTICAL, AND DESCRIPTIVE.

Including Comprehensive Accounts of the Countries, Cities, Principal Towns, Villages,
Seas, Lakes, Rivers, Islands, Mountains, Valleys, &c. in the World.

Compiled from the latest and best Authorities.

Edited by W. G. BLACKIE, Ph.D. F.R.G.S.

BLACKIE & SON, Warwick-square, City, London; and Glasgow and Edinburgh.

ANNOUNCEMENTS for MAY.

1. **MEMOIR of the Rev. SYDNEY SMITH**, by his Daughter, LADY HOLLAND. With a Selection from his Letters, edited by Mrs. AUSTIN. 2 vols. 8vo.

2. **THOMAS MOORE'S POETICAL WORKS.** A New Edition, complete in One Volume, printed in Ruby Type; with Portrait. Crown 8vo. 12s. 6d. cloth.

3. **The DEAD SEA a NEW ROUTE to INDIA:** With other Fragments and Gleanings from the East. By Captain W. ALLEN, R.N. F.R.S. 2 vols. post 8vo. with Map, Plans, and Illustrations.

4. **PERSONAL NARRATIVE of a PILGRIMAGE to EL MEDINAH and MECCA.** By RICHARD F. BURTON, Lieutenant, Bombay Army. 3 vols. 8vo. with numerous Illustrations.

5. **A VACATION TOUR in the UNITED STATES and CANADA in the Summer of 1854.** By CHARLES R. WELD, Esq. Barrister. Post 8vo.

6. **LAND, LABOUR, and GOLD; or, Two Years in Victoria.** By WILLIAM HOWITT. 2 vols. post 8vo.

7. **The CRIMEA; Its ANCIENT and MODERN HISTORY:** The Khans, the Sultans, and the Caste: With Sketches of the Scenery and People. By the Rev. T. MILNER, M.A. Post 8vo.

NEW PUBLICATIONS

ISSUED BY

GEORGE ROUTLEDGE & Co.

Farringdon-street, London.

In small post 8vo. price 7s. 6d. cloth gilt; or 8s. gilt edges,

COUNTESS D'AULNOY'S FAIRY
TALES.

Translated by J. R. PLANCHÉ, Esq. Illustrated with a
Portrait from Original Sources, and Eleven fine large Engrav-
ings by JOHN GILBERT.

"The 'Fairy Tales' of the Countess D'Aulnoy are now, for
the first time, presented to the English reader in their inter-
grity. This assertion may appear startling to many who are
familiar with English versions of the most popular of them; but
it is, nevertheless, a fact, as the examination of this Edition
of them will prove."—*Extract from the Preface*.

New Boy's Book—Splendidly Illustrated.

Uniform with 'Wood's Illustrated Natural History.'

In small post 8vo. cloth extra, with gilt design, 630 pages, finely
printed on tinted paper, price 8s. 6d. cloth gilt, or 9s. gilt edges,

EVERY BOY'S BOOK,

A complete Encyclopedia of Sports and Amusements, intended
to afford Recreation and Instruction to Boys in their Play
Hours or Leisure Time. By GEORGE FORREST, Esq.
M.A. With upwards of 600 Illustrations from original De-
signs by WILLIAM HARVEY and HARRISON WEIR.

Fullom's Marvels of Science, New Edition.

In post 8vo. cloth extra, price 5s.

THE MARVELS of SCIENCE,

And their TESTIMONY to HOLY WRIT. By S. W.
FULLOM, Author of 'The Great Highway.' The Ninth Edi-
tion, with Illustrations.

ROUTLEDGE'S CHEAP SERIES.—NEW
VOLUMES.

The People's Edition of Fullom's
'Great Highway.'

Farringdon-street.

LONDON, SATURDAY, APRIL 28, 1855.

REVIEWS

The History of the Corps of Royal Sappers and Miners. By T. W. J. Connolly, Quartermaster-Sergeant. 2 vols. Longman & Co.

THE Corps of Sappers and Miners is not a century old. It was instituted in 1772, at Gibraltar. Before that date civil mechanics, from the Continent and from England, were employed on the works of the fortress. Their irregular industry, however, did not promise to make the Rock impregnable. Accordingly, the governor wrote home for permission to organize a body of military craftsmen who should be amenable to the Articles of War, and apply their drilled energies to the defences of Gibraltar. His suggestion being approved, "the Company of Soldier Artificers" was called into existence by a King's warrant. It consisted of stone-cutters, masons, miners, smiths, and other skilled workmen, with officers of various grades, and a drummer to beat up their quarters, and to time them at their tasks.

The corps, originally small, was gradually developed to the strength of a full battalion. Its services, at first devoted to the bastions and cavern-batteries of Gibraltar, have since diverged over the earth in a surprising multiplicity of forms. It has been engaged to remove sunken vessels,—to blast cliffs for breakwaters and railways,—to travel from steeple to steeple for the purposes of a survey,—to measure a frontier in the pathless Oregon forests,—and to winter—on scientific thoughts intent—on the frozen peak of a Welsh mountain, "on an allowance of provisions fit for the sixth month of a siege, and with no more possibility of communicating with the scanty natives of the place than if shipwrecked on the Sandwich Islands." Such being its duties in times of peace, in addition to battery-building, mining, and fabricating pontoons in time of war, it will readily be allowed that the Corps of Royal Sappers and Miners is not superfluous,—and that, in transcendental phraseology, it vindicates its place in creation. It is now, indeed, esteemed an essential "arm" in warfare, though Sir Francis Head enumerates ten Peninsular sieges carried on without its aid; but the truth is, that in these instances Sappers and Miners were improvised. At all events, from the day of their corporate creation they have been indefatigable auxiliaries of war, of science, and of engineering enterprise.

Mr. Quartermaster-Sergeant Connolly has compiled, at the request of Col. Sandham, a history of the Corps. His chronicle abounds in matter that should interest the public and the profession. It is modest, moderate, and replete with instructive details. Writing from an impartial point of view, Mr. Connolly commemorates the services of officers and privates in an equally ample style,—never digressing to flatter or to disparage. His book, therefore, fulfils its object; it is a faithful, instructive, and entertaining record, worthy of being studied by every soldier, and promoted at once to a place in all military libraries. Nor is it so technical or so special that ordinary readers will shun it. The army, just now, is a popular topic, and Mr. Connolly's volumes form a popular contribution to its history.

In fact, the Corps of Sappers and Miners had not long existed before it could claim connexion, by marriage, with a heroine,—the widow of Corporal John Brown, the wife of his Imperial Majesty of Morocco. Premising that for "Seedy" Mahomed we should probably read something else, we give Mr. Connolly's version of the anecdote:—

"Seedy Mahomed, soon after his elevation to the

throne of Morocco, about the middle of the last century, was desirous to complete the defences of Fez, and knowing the superiority of the English in engineering, he applied to the British Government for the aid of some person skilled in the art. The request was acceded to, and an experienced sergeant of the Sappers and Miners having been selected as a fit person, was placed at the disposal of his Majesty. Seedy Mahomed received him with much kindness, and allotted a suitable house for his reception. The sergeant continued in the service of the Sultan for some time after he had completed the works at Fez, and at length died, leaving his widow without issue. After his interment, the widow, who was a pretty Irishwoman, sought an interview with the Sultan, in order to obtain a pension and the means of returning to her own country. His Majesty was much struck by her fair and comely appearance, and treated her with condescension and benevolence. That interview resulted in the poor Irish widow becoming the Sultana of Morocco!"

This was not bad promotion for a corporal's widow. Mr. Connolly, however, spoils the story in its sequel, by proving, with ruthless figures from the muster-roll, that the Irish Sultana did not give birth to Mulai Yezed, the next Emperor of Morocco. But though none of the Sappers and Miners were fathers, or fathers-in-law, of Sultans or Pashas, one of them had a nephew who ascended the purple steps nearly to the throne. This was Peter Lisle, and, as Mr. Connolly states facts "never published," his narrative is worth repeating. Peter Lisle, being the mate of a ship, quarrelled with his captain, went ashore at Tripoli, and hired himself to the Pasha. He was appointed "gunner of the castle."

"Associated with a strange people, he readily conformed to their manners and customs, embraced Mohammedan tenets—at least in appearance—and assumed the name of Mourad Reis. About 1794 he was nominated captain of a xebec mounting about eighteen guns, and in the course of time, by his naval skill and abilities, became the High Admiral of the Tripoline Fleet and Minister of Marine. He married one of the Bashaw's daughters, had a fine family, and enjoyed an ample income. Besides a house in the city, he had a villa and gardens in the Meshiah among the date-groves, which exhibited evidence of great taste and care, and were enriched with many trees of various species brought by him from different places at which he touched in Europe. He was a prudent and sagacious counsellor, gave excellent advice to the Bashaw, which was always based on good common sense—a quality not superabundant in the Divan—and was of great service to Lord Exmouth during his Algerine expedition. His appearance was venerable, he dressed richly, commanded much respect, and when addressing British officers—whom he always treated with great courtesy and hospitality—spoke with a broad Scotch accent, and sometimes entertained them with a relation of his own stirring adventures. He was unpopular at times, as great politicians sometimes are."

When the Pasha fell, Lisle retired to Sfax, in Tunis, and was no more seen. But, in the zenith of his glory, he used to sail gallantly into the Bay of Gibraltar, and fire a salute of four guns in honour of his uncle, Sergeant Blyth, of the Sappers and Miners. But, as he saluted like a pirate, with a shot in front of his powder, and once aimed too well over the parade, Sergeant Blyth ceased to enjoy the demonstration.

Thomas Finch was another "character" in the corps.—

"Finch joined the company on the 21st October, 1782, at the request of the Duke of Richmond, in whose service he had been employed at Goodwood. Anxious to secure him for the company, his Grace promised not only to make him a sergeant at once, but to give him a written protection to preserve to him as long as he remained, irrespective of his conduct, the pay of that rank. Under these circumstances, he accepted the protective credential, enlisted, and sailed with Lord Hood for the Rock,

Holding such a charter, it was not to be wondered at if Finch sometimes overstepped the line of prudence. Not by any means particular in his appearance, nor scrupulous in his conduct or habits, he was not unfrequently brought before his officers; but no matter how flagrant his offence, the only punishment that could be awarded to him was suspension for a month or two from rank, but not from pay. Captain Eveleigh, of the Engineers, finding that Finch was becoming rather troublesome, and his sentences or but little effect, endeavoured to obtain the Duke's warrant from its possessor, but he refused to surrender it, observing to the captain, 'If you get hold of it, good-bye to my rank and pay.'

By this means the Duke seems to have gained a first-rate carpenter, but a troublesome sergeant. But the work of the Sappers and Miners during the earlier part of their existence was too arduous to admit of many frolics, or of much disciplinarian severity. When Gibraltar, assailed by a double armament, replied to the fire of three hundred great guns, the Sappers and Miners did splendid service, and continually added to the means of defence.—

"On a fine day in May, 1782, the Governor, attended by the Chief Engineer and Staff, made an inspection of the batteries at the north front. Great havoc had been made in some of them by the enemy's fire; and for the present they were abandoned whilst the artificers were restoring them. Meditating for a few moments over the ruins, he said aloud, 'I will give a thousand dollars to any one who can suggest how I am to get a flanking fire upon the enemy's works.' A pause followed the exciting exclamation, when Sergeant-major Ince of the company, who was in attendance upon the Chief Engineer, stepped forward and suggested the idea of forming galleries in the rock to effect the desired object. The General at once saw the propriety of the scheme, and directed it to be carried into execution."

Those wonderful galleries, then, which Crillon pronounced worthy of the Romans, were suggested by Sergeant-major Ince, of the Sappers and Miners. He, indeed, superintended many of the excavations, labouring night and day, like the Russians at Sebastopol, not only to repair the shattered works, but to extend them. New bastions of solid masonry were erected while the bombardment actually went on, and every now and then fresh lines of artillery flashed from embrasures where, a few hours previously, there had been a surface of living rock. Meanwhile, the besiegers, convinced that they could neither starve out the garrison nor subdue it, determined to lift half Gibraltar from its foundations by a tremendous blast of gunpowder,—a blast to which the fire that opened Corinth to its foes would have been as a spark. Their design was nothing less than that of blowing into the sea a perpendicular precipice, 1,400 feet in height. The garrison, informed of this plan, sought to defeat it; but no one could detect the miners at their work. At length, a daring sergeant undertook, in Burke's phrase, to "make them bolt out of their holes."

"Anxious to ascertain the cause of so much mysterious activity at the Devil's Tower, he descended the steep and rugged rock by means of ropes and ladders. The attempt was as bold as it was hazardous. Stopped by an opening very near to the base of the cliff he explored the entrance, and hearing the hum of voices and the strokes of hammers and picks he was well assured of their purpose. Climbing the steep again, he reported what he had discovered. In consequence of this information a stricter watch was kept upon the Tower to prevent communication between it and the Rock. Hand-grenades and weighty fragments of stone were frequently hurled from above to terrify the miners, and choke up the entrance to the gallery; and though these means did not make them relinquish their project, it yet greatly interrupted its progress."

We have seen that the early discipline of the Corps was not the most rigorous. Mr. Con-

nolly's account of its uniform suggests, also, that the non-commissioned officers were decorated to an extent unusual in their rank of the service, in order to entice the best artificers. For example, the corporals wore gold knots and fringes, so that in Spain they were often mistaken for field-officers, and saluted by the guards as such. By whatever means allured, it is certain that some men of uncommon mould entered the body of Sappers and Miners. At the siege of Flushing, three privates worked in the batteries in a manner which shows that the defensive energy of the Russians in Sebastopol is not without a precedent.—

"On occasions when particular parts of the batteries were broken, these men fearlessly forced themselves into the embrasures to renew the work. The firing upon them was usually heavy. To effect their purpose with less interruption, they spread across the mouths of the embrasures wet bulls' hides with the hairy surfaces to the fortress; and bearing as they did a resemblance to the newly disturbed earth, the enemy was deceived and withdrew their firing upon the work. The injured parts of the embrasures were thus restored with incredible dexterity."

Under the Duke of Wellington's command they experienced the severities of military absolutism. While in France, after the Battle of Waterloo, the great captain, incensed against one section of the Corps, condemned the whole of it to a punishment of extraordinary rigour.—

"On the 19th June, private Alexander Milne of the corps was found in a wheat-field, near Raimes, murdered! A number of the men of his company had been in the habit of breaking out of their quarters after tattoo roll-call, and spending the time of their absence in gambling. Some were said to have been playing with the deceased on the night of the murder. Strong suspicion attached to the card party, but as the perpetrator of the deed could not be discovered, the Duke of Wellington, convinced that the murderer was in the ranks of the corps, ordered *all* the sappers and miners with the army, both near and distant, to parade every hour of every day from four in the morning till ten in the evening, as a punishment for the crime; and as the order was never rescinded, it was rigidly enforced until the very hour the companies quitted France. The execution of the penalty fell with singular hardship upon one of the companies which, quartered with the division encamped near St-Omer, was, at the time, seventy miles away from the place of the murder."

The long peace supplied them with nearly as much active employment as the long war. One of their most dramatic undertakings was the submarine destruction of the Royal George. This operation was carried on during several successive seasons, and tried the courage of divers as bold as Persians, who were hung in chains at the bottom of the sea, while they made up faggots of timber and spars. During one of these experiments a curious fact was ascertained. Corporal Jones, wearing a diving helmet, was fathoms below the surface, forcing his way through the dangerous intricacies of the wreck, when he heard a voice, singing—

Bright, bright are the beams of the morning sky
And sweet are the dews the red blossoms sip.

—A pagan Greek would have recognized the voice of "Lone Arion, piping to the seas;" an Arab would have set it down as a Water Jinn, probably about to offer him a treasure of pearls and rubies; but Corporal Jones, though he may have heard the saying, "as dumb as a diver," knew that this was the voice of private Skelton, rummaging through the dislocated hull of the Royal George for copper-sheathing, iron ballast, and brass guns. He met and chatted with him, with a weight of billows above, which checked the conversation; but, says Mr. Connolly, this was the first instance of men talking under water. The same Corporal Jones, however, had other adventures "under the cool translucent wave." Three hundredweight of lead fell upon his helmet, and prostrated him;

but he survived to show that it was possible to fight under water. Espying a valuable fragment of the wreck, he seized it like a shark. Another diver seized it also, and Corporal Jones being moved to anger, injured his antagonist more than the pig of lead had injured him. Here is matter for a ballad:—in the olden time it would not have been told in prose.

We will give one more illustration of the peculiar services required at times from the Sappers and Miners. The incident is worth a note in the history of Dublin Castle.—

"Owing to a rumour that the castle at Dublin could be entered by a subterranean passage or sewer from the Liffey, colour-sergeant Lanyon was directed to explore it. He did so, and found that a strong iron grating existed in the passage, which would effectually prevent the supposed entrance. In this duty, being much exposed to the influence of noxious vapours, he soon afterwards was seized with fever and jaundice, which shortened his days."

Mr. Connolly's ample narrative is carried on to the siege of Sebastopol; but this division of the work is more professional than the others.

Animal Life in the Alps, &c.—[*Das Thierleben der Alpenwelt. Naturansichten und Thierzeichnungen aus dem schweizerischen Gebirge*]. By Friedrich von Tschudi. Leipzig, Weber; London, Nutt.

THERE are some rough lines of Heyne which ring something to this tune:—

Up the mountains will I clamber,
Mid the world of ice and snow,
And from out my airy chamber
Smile upon the fools below.

It is in a very different spirit that Herr von Tschudi ascends the Alps, and tells us of the aspects of Nature there, and of the incidents of animal life. He gives not only graphic pictures of all he sees, but admirably-limned portraits of the native bipeds and quadrupeds to be found among those everlasting hills.

The author writes with a simplicity and gracefulness that remind us of our own Goldsmith, whose 'Animated Nature' is a book less read than talked about,—and which, despite the advances made since it was written in the general knowledge of natural history, is as worthy of being still read as anything that ever fell from the pen of the same author.

Herr von Tschudi has classified his subjects with judgment, and he expatiates on and illustrates all with spirit and distinctness. He first takes us by the hand, and, conducting us through the mountain region, displays to us its general characteristics; and unfolds to us a general view, which is superb for its grandeur and effects. He then discourses upon the botanical productions of the mountains; and this he does, not pedantically, but pleasantly and profitably,—in a manner attractive alike to the student of natural history and the general reader. From this he passes to the animals of every degree,—from the smallest and tamest, to the hugest and wildest, that find a home amid the mountains; and in describing these he is full of picturesque details, and abounding in illustrative anecdotes.

Of all the animals in the Alpine district the eagle seems naturally the lord, and of him some of the best stories are told. His courage is undaunted; but we believe that there is *one* thing which is a terror even to the eagle, and that is—lightning. It is, at least, well known that the eagle of the Pyrenees screams in an agony of fright when the forked lightning flashes over the heights, and that home, nest, and young are often deserted when the lightning adds new horrors to the storm. The author notices how the figure of this bird has been ever taken as the symbol of Imperial power. He might have

added, that it has sometimes been employed to denote or heighten disgrace. From a note in Saxo-Græmaticus we learn that among the English, Danes, and other Northern nations, the conquerors put to death the vanquished, by laying open the body by a wound cut in the back in the shape of eagles' wings, and by this opening the lungs were sometimes torn out by those very refined in cruelty. It was after the "Eagle torment"—the *Aquilina plaga*—that Halca was destroyed, out of revenge for the death inflicted by him on that hero who has come down to us under the name of Regner Lothbrog, or Regner of the Leatherbreeches,—the progenitor, as some very curious genealogists tell us, of the Lethbridges of Somersetshire.

The Alpine eagle, particularly the one known as the "Lamb Vulture,"—not for its gentleness,—by no means confines itself to preying upon mutton or similar fare. He is sometimes terribly disposed to taste human flesh, and not unfrequently succeeds in his attempts to procure it. Here is the author's testimony upon this fearful subject:—

In Hundwyl (Appenzell) such a daring robber carried off a child before the very eyes of its parents and neighbours. In the Silver Alps (Schwyz) an eagle seized a herdsman's child seated on the rocks, began forthwith to tear him to pieces, and dropped him into the abyss before the herdsman could drive the bird away. In Bernese Oberland, Anne Zurbuchen, a three-year old child, was taken out by her parents during the haymaking, and placed by them on the ground near a stable. The child soon fell asleep. The father covered the child's face with a straw-hat, and then went on his way to his labour. As he soon after returned with a bundle of hay, he found the child no longer there, and sought for it for a time in vain. In the mean while, the peasant Heinrich Michel passed by a wild path in the direction of the mountain brook. To his astonishment he heard a child crying. Proceeding in the direction of the sound, he speedily saw from an adjacent height an eagle rise, and for a considerable time hang poised above the precipice. The peasant hastily ascended, and found the child lying on the very edge of the cliff, with no other injury than to the left hand and arm by which it had been seized, but with the loss of socks, shoes and cap, dropped in her aerial flight. From that time the child went by the name of Eagle-Annie..... In Mürru (above the Lauterbach valley) the inhabitants show an inaccessible point of rock which lies exactly opposite to their elevated mountain village. Thither, across the deep Lütschinen valley, a lamb-vulture carried a child which it had caught up in Mürru, and tore it in pieces on the ridge of the rock. For a long time after the little red frock of the luckless child could be discerned lying among the stones.... On the 8th June 1838, two little children, Josephine Doler and Mary Lombard, were playing together on a smooth spot at the foot of the rock, Majoni t'Alesk in Wallis, and about 120 feet distant from it. Suddenly Mary appeared crying at the door of a neighbouring hut, where she breathlessly related how her companion, a three-year old and very weakly child, had suddenly disappeared in the thicket. More than thirty persons explored the rocks and the neighbouring precipices, and at last remarked on the edge of the former a shoe, and on the opposite side of the abyss a sock. It was only on the 18th of August that a herdsman named Franz Favolet discovered the body of the child in the upper part of the rock Lato, about half a league from the spot where the child had disappeared. The body was dried up, the clothes partly torn, partly lost. As it was impossible that the child could have crossed the abyss alone, so it must have been carried off either by a lamb-vulture or by a pair of rock-eagles whose nest was in the vicinity.

Where children are thus attacked, of course the herds and the four-footed keepers of them are not spared. Indeed with the herdsman themselves some of these birds carry on terrible contests. The struggle is not always

over when the powerful winged antagonist has been beaten into senselessness, bound, and carried off. He often recovers, and the complacent victor is lucky if he does not find the claws of his enemy suddenly buried in his skull. This fact reminds us of a curious circumstance alluded to by both Pliny and St. Augustine. They affirm that as the eagle grows old dimness and darkness descend upon his vision, and heaviness upon his wings. The veteran invalid is then taught by its young, or by instinct, to bathe in a well of spring water. This done, the patient soars aloft as far as may be, until by heat of the air and rapidity of flight it becomes so warmed that the pores are opened and the plumage ruffled. The well is again sought, and with such effect that the old feathers are moulted and vigorous plumage takes their place, the vision becomes acute, the strength restored, and the youth of him who "is lord of all above" is for a lengthened period renewed!

The bird of prey has no respect for the beast of prey, and the Alpine eagle often carries off a fox. But Reynard is not unfrequently too much for his gigantic opponent, and occasions have been known when he has seized upon the throat of an eagle in mid-air and bit it through with such force that both have come to the ground, with some fright to each, but with comparative safety to Reynard. Such instances of methods of escape are not unknown in our own country. We remember once seeing a weazel and a hawk thus descending together on Goldsbrough Moor. On alighting the weazel made the best of its way into the nearest bush. The hawk lay gasping for breath, with a wound in its throat, but it had strength enough left to suddenly fly off beyond reach, when too closely approached.

The fox is as cunning in making a capture as in escaping from it. We have read in Mr. Lloyd's 'Scandinavian Adventures,' if we remember rightly, an account more curious, with reference to this matter, than anything told in Tschudi's pleasant pages. The story is to this effect. An old fox was seen leaping on to, and off from, the stump of a tree. After this exercise had been repeated several times, he coiled himself on the top, half hiding himself with a piece of oak-bark he held in his mouth. At sunset, a sow and a train of young ones passed beneath the stump. Reynard shot down upon the rearmost of the number, and with it in his mouth leaped again to the summit of his stronghold. At the foot thereof the mother of the victim made sundry but fruitless attempts at assault. The assassin, regardless of her cries and threats, slew his captive, and devoured the porker in the very face of the mother. Of course the pig did not belong to him who witnessed the incident.

We can recommend Herr Tschudi's book without any reserve. It is written with simplicity enough to render it agreeable even to the moderately learned in German, and it has an elegance and gracefulness of expression therewith that will please those who want something beyond mere simplicity. The chapters are brief; but the author has the power of saying much in a few clear and intelligible words. The volume, too, is charmingly got up; and the illustrations, which are numerous, are designed and executed by artistic minds and hands. "L'esprit," says the French writer Thomas, "L'esprit peut décrire, mais il n'y a que l'âme qui sache louer." The author of this volume has precisely the double qualification here hinted at. He has the wit to describe well that which in his soul he feels deeply.

Pictures of Palestine, Asia Minor, Sicily, and Spain; or, the Lands of the Saracen. By Bayard Taylor. Low & Co.

THE "Oriental traveller" is capable of division into a great many species; and these again may be sub-divided into a great many varieties. It seems probable, among other more important results of the present war, that several of these will cease to have any interest in the eyes of the British public.

In the first and highest class we may place the solemn and learned traveller, who carries a library with him, and publishes in quarto. This gentleman is indispensable to all the rest. He is the authority on sites, dates, and facts. He is a mine of valuable information. With the picturesque aspect of affairs he does not much concern himself. He talks little of his own exploits, and rarely mentions the modern inhabitants of the East, except as having been useful to him along with camels, tents, donkeys, and camp-stools. After him we may place the useful business-like traveller, who harangues us on rice-crops, the silk production, Oriental agriculture, and the "capabilities" of the countries he travels in. We come in the third class to travellers proper, who travel for the sake of travel itself,—though, *en passant*, it would not be easy to say why they all publish, unless it be for the sake of publishing itself. The sub-divisions of this largest class of all are very numerous. There is the mild Biblical enthusiast, who approaches to the pilgrim, and who often writes an agreeable book, especially when he is not too dogmatic in expounding prophecy. There is the rose-water traveller, who is sometimes pretty and in all cases harmless; he comes tripping home with a Syrian rose in his button-hole, and having himself been on a holiday in the East, fancies that the whole of the East has been in a holiday state too. All with him is seen in charming hues, and his book smells of scents, like his pocket-handkerchief. He is, indeed, a little vexatious in the matter of spelling Oriental names, and leaves us bewildered between "nargilly," "nargilleh," and "narguillé." A very different man is the travelling wag, who may be called *par excellence* the cockney traveller. His line is to despise the rose-water man, and to find the East all full of stupidity and commonplace. He scorns to be enthusiastic about it. It is like Wapping. It is like the Grecian Saloon. The travelling wag is occasionally amusing, but a disagreeable reminiscence of London taverns breathes from his pages; and the reader is *not* persuaded to disbelieve in Orient pearls on the ground that they are not to be found in Haymarket oysters. If the reader laughs at the rose-water man, he is yet apt to sicken at the cockney. We now come to a subtler and pleasanter gentleman;—the Londino-cynico-semi-sentimentalistic traveller (if we may coin a word, after the fashion of Aristophanes). This last one does not laugh at the East exactly, but his sense of its strangeness and beauty is tempered by a consciousness of his superiority as a denizen of Pall Mall,—while the memory of Pall Mall itself seems commonplace under palm-trees, and he finds himself sighing (though always with good taste) among moon-lighted ruins, desert-tents, and Arab horsemen. Such are the most notable types,—but we have "crosses" occasionally. Sometimes we have sentiment and epigrams together. Sometimes the wag turns utilitarian, and sometimes the utilitarian drops a tear. Occasionally a practical wanderer gives us simply himself, his whole self, and nothing but himself; and fairly takes up the book with an account of his dinners, his retinue, what he said to his servants,

and what he means to do when he comes home. One fault is common to all these writers as a general rule:—they are too self-conscious, and give us too little of the East, in proportion to what they thought of the East. Simple as the fact may seem, it is yet too commonly overlooked that, in going to the East, the only advantage the writer gains is to see the places. He does not become inspired there. If he were a dull fellow in London, he will be a dull fellow in Damascus. If he could not describe the view from Richmond Hill, he will not be able to describe the view from Camel's Bridge at Smyrna. If he felt no high emotion in Westminster Abbey, let him not try to work himself into high emotion about St. Sophia.

Mr. Bayard Taylor has little to describe which has not been described again and again before, and very well described sometimes. Yet, his book is pleasant, readable and useful, notwithstanding,—which is saying no little for Mr. Bayard Taylor. It is not altogether free—yet it is for the most part free—from unpleasant self-consciousness and faults of taste. Its best characteristic is a liberal eclecticism. He is not too antiquarian—too sentimental—too descriptive,—but blends various qualities into the narrative together, which lie on each other harmoniously, like the strands of a rope.

The Sultan is so prominent a personage just now that we can scarcely have too many portraits of him. Mr. Taylor saw him during the Bairam solemnities of 1852.—

"Sultan Abdul-Medjid is a man of about thirty, though he looks older. He has a mild, amiable, weak face, dark eyes, a prominent nose, and short, dark brown moustaches and beard. His face is thin, and wrinkles are already making their appearance about the corners of his mouth and eyes. But for a certain vacancy of expression, he would be called a handsome man. He sits on his horse with much ease and grace, though there is a slight stoop in his shoulders. His legs are crooked, owing to which cause he appears awkward when on his feet, though he wears a long cloak to conceal the deformity. Sensual indulgence has weakened a constitution not naturally strong, and increased that mildness which has now become a defect in his character. He is not stern enough to be just, and his subjects are less fortunate under his easy rule than under the rod of his savage father, Mahmoud. He was dressed in a style of the utmost richness and elegance. He wore a red Turkish fez, with an immense rosette of brilliants, and a long, floating plume of bird-of-paradise feathers. The diamond in the centre of the rosette is of unusual size; it was picked up some years ago in the Hippodrome, and probably belonged to the treasury of the Greek Emperors. The breast and collar of his coat were one mass of diamonds, and sparkled in the early sun with a thousand rainbow gleams. His mantle of dark-blue cloth hung to his knees, concealing the deformity of his legs. He wore white pantaloons, white kid gloves, and patent-leather boots, thrust into his golden stirrups."

When Mr. Taylor was in Damascus he tried the effect of the potent drug *hasheesh*,—a preparation of the leaves of the *Cannabis Indica*,—in which the Syrian seeks what the Chinese does in opium. Everybody takes the Turkish bath—everybody smokes a "nargilly" (however spelled)—everybody is "impressed" in fifty places which Mr. Taylor writes of,—but boldly to try a good dose of *hasheesh* was a somewhat more original performance. Mr. Taylor describes its effects well, but, in parts, much too ambitiously. We shall extract from this chapter, as one of the most curious. All men feel a hankering after such experiments at times; and the phenomena may have a scientific value. Mr. Bayard Taylor has taken his dose,—a spoonful and a half after dinner,—and here is the result.—

"I was seated alone, nearly in the middle of the room, talking with my friends, who were lounging upon a sofa placed in a sort of alcove, at the farther

end, when the same fine nervous thrill, of which I have spoken, suddenly shot through me. But this time it was accompanied with a burning sensation at the pit of the stomach; and, instead of growing upon me with the gradual pace of healthy slumber, and resolving me, as before, into air, it came with the intensity of a pang, and shot throbbing along the nerves to the extremities of my body. The sense of limitation—of the confinement of our senses within the bounds of our own flesh and blood—instantly fell away. The walls of my frame were burst outward and tumbled into ruin; and, without thinking what form I wore—losing sight even of all idea of form—I felt that I existed throughout a vast extent of space. * * It is difficult to describe this sensation, or the rapidity with which it mastered me. In the state of mental exaltation in which I was then plunged, all sensations, as they rose, suggested more or less coherent images. They presented themselves to me in a double form: one physical, and therefore to a certain extent tangible; the other spiritual, and revealing itself in a succession of splendid metaphors.

* * My curiosity was now in a way of being satisfied; the Spirit (demon, shall I not rather say?) of Hasheesh had entire possession of me. I was cast upon the flood of his illusions, and drifted helplessly whithersoever they might choose to bear me. The thrills which ran through my nervous system became more rapid and fierce, accompanied with sensations that steeped my whole being in unutterable rapture. I was encompassed by a sea of light, through which played the pure, harmonious colours that are born of light. While endeavouring, in broken expressions, to describe my feelings to my friends, who sat looking upon me incredulously—not yet having been affected by the drug—I suddenly found myself at the foot of the great Pyramid of Cheops. The tapering courses of yellow limestone gleamed like gold in the sun, and the pile rose so high that it seemed to lean for support upon the blue arch of the sky. I wished to ascend it, and the wish alone placed me immediately upon its apex, lifted thousands of feet above the wheat-fields and palm-groves of Egypt. I cast my eyes downward, and, to my astonishment, saw that it was built, not of limestone, but of huge square plugs of Cavendish tobacco. * * The more vividly I recal the scene which followed, the more carefully I restore its different features, and separate the many threads of sensation which it wove into one gorgeous web, the more I despair of representing its exceeding glory. * * Mahomet's paradise, with its palaces of ruby and emerald, its airs of musk and cassia, and its rivers colder than snow and sweeter than honey, would have been a poor and mean terminus for my arcade of rainbows. Yet in the character of this paradise, in the gorgeous fancies of the Arabian Nights, in the glow and luxury of all Oriental poetry, I now recognise more or less of the agency of hasheesh. * * The most remarkable feature of these illusions was, that at the time when I was most completely under their influence, I knew myself to be seated in the tower of Antonio's hotel in Damascus, knew that I had taken hasheesh, and that the strange, gorgeous and ludicrous fancies which possessed me, were the effect of it. At the very same instant that I looked upon the Valley of the Nile from the pyramid, slid over the Desert, or created my marvellous wells in that beautiful pastoral country, I saw the furniture of my room, its mosaic pavement, the quaint Saracenic niches in the walls, the painted and gilded beams of the ceiling, and the couch in the recess before me, with my two companions watching me. * * My perceptions now became more dim and confused. I felt that I was in the grasp of some giant force; and, in the glimmering of my fading reason, grew earnestly alarmed, for the terrible stress under which my frame laboured increased every moment. A fierce and furious heat radiated from my stomach throughout my system; my mouth and throat were as dry and hard as if made of brass, and my tongue, it seemed to me, was a bar of rusty iron. I seized a pitcher of water, and drank long and deeply; but I might as well have drunk so much air, for not only did it impart no moisture, but my palate and throat gave me no intelligence of having drunk at all. I stood in the centre of the room, brandishing my arms convulsively, and heaving sighs that seemed to shatter my whole being. 'Will no one,' I cried in distress,

'cast out this devil that has possession of me?' I no longer saw the room nor my friends, but I heard one of them saying, 'It must be real; he could not counterfeit such an expression as that. But it don't look much like pleasure.' Immediately afterwards there was a scream of the wildest laughter, and my countryman sprang upon the floor, exclaiming, 'O, ye gods! I am a locomotive!' This was his ruling hallucination; and, for the space of two or three hours, he continued to pace to and fro with a measured stride, exhaling his breath in violent jets, and when he spoke, dividing his words into syllables, each of which he brought out with a jerk, at the same time turning his hands at his sides, as if they were the cranks of imaginary wheels. * * By this time it was nearly midnight. I had passed through the Paradise of Hasheesh, and was plunged at once into its fiercest Hell. In my ignorance I had taken what, I have since learned, would have been a sufficient portion for six men, and was now paying a frightful penalty for my curiosity. The excited blood rushed through my frame with a sound like the roaring of mighty waters. * * After a time, my senses became clouded, and I sank into a stupor. As near as I can judge, this must have been three o'clock in the morning, rather more than five hours after the hasheesh began to take effect. I lay thus all the following day and night, in a state of grey, blank oblivion, broken only by a single wandering gleam of consciousness. * * On the morning of the second day, after a sleep of thirty hours, I awoke again to the world, with a system utterly prostrate and unstrung, and a brain clouded with the lingering images of my visions. I knew where I was, and what had happened to me, but all that I saw still remained unreal and shadowy. There was no taste in what I ate, no refreshment in what I drank, and it required a painful effort to comprehend what was said to me and return a coherent answer. Will and Reason had come back, but they still sat unsteadily upon their thrones.

This will suffice as specimen of our narrator's powers.

MINOR MINSTRELS.

The Mandan Chief: a Tale in Verse. By Mary Heron. (Jarrold & Sons.)—The easier the metre which a poet has chosen, the greater the demand of the reader. Miss Heron's poem is written in the easiest of all legitimate English metres—the octosyllabic, which leaves the author at perfect liberty to devote his whole thoughts and time to expression and sentiment. This advantage our authoress has fully thrown aside by intermingling lines of every possible length and construction with the eight-syllabled ones with which she at first started. This vicious irregularity quite destroys the artistic shape and form that the poem might otherwise have assumed. The story is an Indian one, and is true to scenery and detail. Catlin's 'North American Indians' has been Miss Heron's book of reference,—and we find the proper spicings of mossy cypress-trees, carmine sunflowers, milk-white lilies, prairie dogs, wild horses, &c. The hatchet, the lasso, the scalping-knife are not forgotten; but we start at finding a young Indian of Titanic form, yet shaped like Apollo, sleeping on "countless rose-leaves." As a whole, the poem is crude, but there is power in the versification; and some of the characters, particularly the maiden with that pretty name, "The Sunny Fountain," are well sketched. Some of Miss Heron's images show a fancy,—as when a lover's words are said to fall on the ear as sweetly as the sound of coin after coin of the ransom that releases the prisoner. The following extract shows, we think, a masculine force of rhythm, though, perhaps, like all the poem, a want of that more subtle harmony, which is not a question of counted syllables.—

A mighty river, seaward flows;
Nor deigns to eddy as he goes;
With resolute majestic force,
Selects his wayward, relentless course.

As if, impatient of control,
Or, fitful, in his strong, deep roll;
Missouri girds his mighty chain—
A chain of seas, coiled round the main.
Munificent, stays while he speeds,
To fling rich verdure on these meads.
A thousand thousand bills with pride,
In files grotesque, defend his side;
Some sloping from a lofty cone;
Some crowned with diadem of stone.
These bare, in tints of every shade;
While those, in living green array'd.
The steadfast hills' eternal hush,
Unheard—on, on the waters rush.
Ten thousand floods their murmurs pour
To swell the chorus of his roar.
Forests of cotton wood look down
The cold abyss, with stately frown.

We look for better things from Miss Heron and higher flights. In this poem she is rather hampered and beset by a desire to crowd in facts which, after all, are but spangles sewn on the robe, not flowers interwoven with its texture.

The Transcript, and other Poems. By William Ball. (Cash.)—This is a volume of religious thoughts versified. The Gorham case is discussed in a sonnet, and Mrs. Fry furnishes the subject for a lyric of the Sappho structure. The book, in fact, is one of those poetical newspapers which should come out weekly—if at all. The writer, however, we are ready to allow, shows a versatile and cultivated mind; and appears to have travelled,—for Keynance Cove, with its dried pilchards, reminds him of the New Jerusalem, and the Rhone at Martigni of a selfish soul. We should be the last to reproach any writer for blending religion with all things, but we dislike to see a professional religion intermixed with anything. The religious aspect of Nature may be frequently, but cannot be always, united with its poetical aspect, which deals with man, and not with good men alone. 'The Transcript' is a poem in the Cowper manner:—very pious, but very dull. Throughout the book we find indications of a kind heart; but not much that proves Mr. Ball to have any vocation for throwing sermons judiciously into verse.

Buds of Hope: the Poetical Remains of Esther Pearson. With Biographical Memoir by John Cooper. (Nisbet & Co.)—"De mortuis nil nisi bonum" is a plausible maxim, much acted upon by biographers who leave out the key-note of their friend's character, and cannot own that the "suppressio veri" is at least half a lie. The result is, that all unmix'd eulogy is read with distrust, and much that is really true is perused with a silent protest. The writer of the 'Buds of Hope' died at the early age of seventeen, having written verses in the *Spiritual Magazine* at the age of ten,—lines, to judge from those we append, if not tampered with, almost as wonderful as Pope's or Chatterton's. To judge from such tracts as the present our climate is very fatal to infant virtue and genius,—and we have no doubt that our island would rapidly be peopled with a saintly race did they not die young, worn out with writing hymns, reproving bad brothers and intemperate uncles. We extract a first attempt at blank verse, composed almost before the young authoress could hold a pen.—

Majestic King! Great Universal Lord!
We sing thy great perfections all sublime.
But can we sing thy praise with aught less aid
Than that which comes from thee? Unsearchable
All thy perfections are, great Lord of All!
Reason and thought are lost, and vainly try
To gain the summit of that topos mount—
That boundless space—that sea without a shore.
'Tis so to all created intellectual powers;
Far different to thee; thou knowest them all,
And comprehendest all in thy great Self!

Pebbles from the Lake-Shore; or, Miscellaneous Poems. By Charles Leland Porter, A.M. (Philadelphia, Lippincott & Co.)—This is a volume of poems by a young American admirer of Longfellow, and dedicated by him to his mother—"his earliest and best friend," as he

tenderly terms her. True to his zealous predilections, he gives us vigorous translations from Schiller and Uhland, much blank verse in praise of nature, and a very touching poem upon the "Meeting of the Senior Class of Amherst College with the Pupils of the Mount Holyoke Female Seminary,"—an interesting event which our young author euphuistically and "prettily" turns into an allegory and describes as the "Meeting of Orcades and Druids upon Mount Ida," a classical conglomery worthy of the Elizabethan poet who chose Sappho as the cognomen of a Duke of Milan. With much good feeling and metrical power, and with even considerable delicacy of ear, we find in the writer no power of imagination and no dramatic feeling. In such verses as 'The Song of the Flirt' (parodied from Hood's 'Song of the Shirt') we observe a looseness about the construction of the sentences, and a colloquial vulgarity rather American and very prosaic. If Mr. Porter discourses of mermaids, for instance, he selects, we find, a few such current expressions, as "moonlit sea," "white-crested billows," &c., and twists them into drawing-room music. Nature suggests images to his mind, but he sees them through a fog, and mistakes a lamp-post for a forest tree. A child hears the shell sing instead of murmuring of the parent sea,—and so he writes on, never quite hitting the right thing, but going very hopefully in the right direction. If we had antediluvian lives Mr. Porter, we doubt not, would ripen after a few centuries into a remarkably fine poet.

The Life of the Rev. Robert Newton, D.D. By Thomas Jackson. Mason.

THE true life of a good man, written at full length, with all the "suppressed passages" retained, would be a valuable gift to the world; but in general, religious biography, small and great, is the poorest of literature. Sometimes it is because the individuals themselves are too small and have occupied too obscure a sphere; but if written faithfully, the true life of the humblest human being would have an interest of its own. It is precisely the record of the true inner life which is never given. There is no religious magazine, from the price of a penny upwards, that does not profess to give "an account of the life and death" of somebody—Mary M., David B., Harriett P., or some other equally elect letter of the alphabet. Meagre generalities of their conversion, death-bed and last words,—all cut out according to the pattern of the sect to which they belonged,—are there; but everything individual or special in their character or peculiar in the incidents of their life is omitted. As we rise higher in the scale of biography, the bulk of the work is increased,—extracts are given from letters and diaries, which might, so far as individuality goes, be extracts from 'The Whole Duty of Man' or Doddridge's 'Rise and Progress'; the life has all evaporated, and what remains is nothing but a mummy swathed in the folds of doctrinal conventionality and embalmed in the "myrrh, aloes and cassia" of sweet adjectives of praise, bearing as much resemblance to real human nature as the wooden case of the sarcophagus bears to the outward form of the living and moving human being. The biographer of recently deceased merit writes always under difficulties and restrictions; but the religious biographer is peculiarly hampered. He writes not only under that general "fear of man," which "bringeth a snare," but he writes under a specific nightmare, the fear of the congregation; and Methodist congregations are peculiarly formidable. The ordinary difficulties are aggravated ten-fold.

There is not only the ordinary benumbing censorship of the friends of the deceased, who are generally content if "justice is done" and no especially disagreeable details are given; but in religious biography it is not only rigidly insisted on that the work "shall tend to do good," but, as Queen Elizabeth insisted with her portrait painter, "there must be no shadows." The 'Life of Dr. Newton' is not an exception to these remarks, and yet there was material enough in his life and career to have made a valuable record; but the book, to all who do not chance to be Methodists, is entirely worthless. As a piece of biography, it is little more than a prolonged and elaborate epitaph, and a record of the proceedings of the Methodist body during the years of his ministry. Indeed, it is little else than a tribute to the honour and glory of Methodism.

It is written too soon after death for the author to feel any freedom to delineate characteristic details of Dr. Newton's remarkable career. He was remarkable for integrity of purpose and singleness of mind. No one who ever heard him preach or speak from the platform, or who ever beheld his fine, manly, weather-beaten countenance, but must feel regret that, in the elaborate process of a religious biography he should be rubbed as smooth and indistinct as the head upon a well-circulated sixpence. No one who once heard Dr. Newton preach would ever be likely to forget him. No one who reads this 'Life' of him can form the smallest conception of the manner of man he was. Dr. Newton was perhaps the most remarkable popular preacher on record. He began life as a Methodist local preacher at the age of—eighteen, with immense success, or, as the biographer would term it, "acceptance." His popularity continued to increase, and the tide never ebbed during the course of his long and honourable career.

The book throws a curious light upon the use the Methodist body makes of the popularity of its ministers. It is something terrible:—going through the fire to Moloch would be a safe and sanitary ordeal in comparison. That Dr. Newton was enabled to stand the enormous fatigue,—the frightful excitement,—the adulation,—the gross fat incense of vulgar hero-worship,—and all the nameless and manifold temptations that haunted every step he took,—and that he was enabled to preserve, as he did, his simplicity and integrity to the last,—only proves that such a man deserved to have a better biographer than has fallen to his lot.

Wesleyan ministers are not stationed upon the same circuit more than three years, except under especial circumstances,—which is of itself, one would think, a sufficiently distracting and unsettling arrangement. Dr. Newton, however, from the early commencement of his career, was allowed no rest. The circuits to which he was appointed received him with the understanding that he would preach to them on the Sabbath, but that during the week he was at the service of the entire Methodist body; which signifies that he travelled wherever he was called for the other six days of the week. His presence being always made a "special occasion," a crowd was always gathered to listen to him. A Methodist congregation or audience is very different from the decorous reserved congregations of the Establishment,—the preacher receives from it as much applause and as ardent testimony to his power over the passions of his hearers as any favourite actor. Dr. Newton seldom or never preached except upon some occasion of religious excitement,—either to open a chapel,—to benefit some religious society, or on the occasion of some meeting. Consequently, as he preached

or addressed large audiences of two or three thousand persons—every hour when he was not actually travelling or sleeping—the excitement in the midst of which he led his life may be faintly guessed. In the early part of his career the means of travelling were slow and difficult:—he had to go into parts of the country where even stage-coaches did not travel. Yet at that time 6,000 miles a year was the average of what he accomplished:—when railways began, 18,000. He was sent to America to attend the Methodist Conference there, as the representative of Methodism in England. The narrative of all he accomplished whilst there fairly takes away the breath:—but we cannot go into the details. We will only quote the description of the effect of one of his sermons upon his hearers at Baltimore:—"For a time the utmost stillness prevailed in the congregation; and as the discourse was addressed particularly to ministers who formed the Conference, it might be expected they would control their feelings. But ere long, both they and the rest of the congregation were carried beyond all ordinary bounds. Their eyes were suffused with tears,—they sobbed,—they wept aloud,—they shouted for joy,—they clapped their hands,—whilst the preacher," &c. Of course, we need not say that such displays of devotional excitement rank very little higher than the effects that follow opium or ardent spirits; but that does not lessen the wonder that Dr. Newton should keep the balance of truth and soberness in the midst of such contagious enthusiasm.

The lot of a popular preacher is one of awful anomaly and responsibility. All who are set in such "slippery places" would do well to study the career of Dr. Newton. They will find their account in it, even in the washed-out narrative before us, diluted as it is—half drowned indeed—in many waters. Those who wish to study the machinery of a popular religion will find in these pages some curious details of the religious life of the most effective Protestant sect that has arisen since the Reformation.

The History of Political Literature. From the Earliest Times. By Robert Blakey. Vols. I. and II. Bentley.

POLITICAL writers, as a body, have been neglected. They have had few historians and few critics. There have been, it is true, many commentaries on Plato's Republic, on Macchiavelli's Prince, on Milton's Discourses, and on More's Utopia; but we seldom find the rank of a high science assigned to Politics, which are too commonly regarded as the art of meeting transient, local and ever-varying exigencies, by combinations no less uncertain in their principles and ephemeral in their duration. Nevertheless, to the serious historical student nothing can be more clear than the truth, that one of the loftiest branches of human knowledge is that which relates to the maxims of civil government, to the balance of public rights and duties, to the harmony of classes, and to the defence of social order. This conviction, indeed, acting on the minds of earnest men, has produced in all ages and countries a vast number of original treatises, which Mr. Blakey has undertaken to chronicle in the order of their appearance, and which, as he has shown, constitute a literature of singular interest and value. Without attempting to link the inquiries of successive generations, so as to trace the genealogy of political ideas, he has distributed his subject under various separate heads, and has thus marked the lines—fluctuating and wavering as they are—by which the human race has advanced or lost ground in its search for maxims of polity, from which to construct, in

beautiful gradations from base to summit, an enduring fabric of artificial society.

Mr. Blakey passes lightly over the politics of the Jewish period, when, amid the earlier glimmerings of historical light, we discern patriarch princes ruling the tribes of Israel by laws which contain the primary maxims of all human legislation. We enter "the land of Egypt," and find the sanction of gods and goddesses ascribed to the maxims and practices of rulers; and yet we discover among the records of their civil laws no proofs of that lofty wisdom ascribed to the Egyptians by writers who have not hesitated to assert that they were the only people of antiquity who comprehended the true value of laws as securities for the happiness of the greatest number. However, this notion is too vague to be here discussed. In the Carthaginian State there were political defects which the Greeks saw and avoided, for it was on the Grecian soil that political science rose to nobility and splendour, and amassed a treasury of principles by which mankind over the whole civilized earth has profited. It is interesting to follow the wonderful succession of teachers:—the minstrels—Solon—the Sophists—Socrates—and Plato,—in whose arguments we discover the origin of all the political constitutions, and nearly all the political ideas, now existing in the world. We may, no doubt, be reminded that we cannot, without sinning by false analogy, draw any parallel between the ancient and modern systems of polity. The first Homeric monarchs—the kings of Grecian chivalry—have no descendants among the sacred majesties or royal highnesses of contemporary Europe. The Dorian aristocracy by no means resembled the coronetted class in England; the cities of Greece were not like the States of Christendom;—and yet the political action going on around us is to be understood only through investigations similar to those by which we are enabled to understand the virtues and the vices of the Spartan and Athenian systems. It is customary with certain scholiasts, we are aware, to quote the Latin polity as the parent of modern legislation; but whatever we owe to Cicero and to Rome, Rome and Cicero owed as much to Plato and to Athens,—though a French critic has been bold enough to say, that Plato was only a Spartan polished, who delicately repeated the rude maxims of Lacedæmon.

However this may be, it will never be otherwise than pleasant, while politics are studied, to contemplate the schemes which have been proposed to insure the happiness of states and the virtue of citizens. Built up, in broader proportions, after the archetype of all Codes—the Tables of the Desert—we have the Institutes of Lycurgus, of Draco, of Solon, of Justinian;—the Salic, the Ripuary, the Burgundian, the Visigothic and the Lombard Laws,—not to speak of Menu, Taimur, Confucius and Mohammed, and the later imitation of Napoleon. While some have thus framed projects for enforcing a uniform rule of conduct among men, others have traced the plan of a perfect commonwealth—Republic, Atlantis, Oceana, or Utopia. Mr. Blakey enumerates all these in his record of political literature, and offers an explanation of their purport and of their influence. He adds to the didactic school the debaters, such as Demosthenes, Milton and Sydney, and the historians also, who imply rather than explain their political opinions. We think that, in this class, he gives less than their due importance to such writers as Sallust and Livy, especially as he comments on Polybius and Plutarch, whose political fragments contain no more positive theory than may be gleaned from the historians. If Hume and Gibbon had written nothing but history, they could not be passed over in the imposing line of political writers.

The changes introduced by Christianity into the polity of the world, the influence of the Christian jurists, of the feudal system, of the free cities, of chivalry and the crusades, of representative institutions in their youth, and of the Papacy, form the subjects of several admirable chapters in Mr. Blakey's first volume. In his second there is a more categorical review of the political writers of Europe to the end of the seventeenth century. In England we have More, with his allegory of a free and happy people; Hooker, with his repertory of statements and maxims "which shall continue," said Pope Clement the Eighth, "until the last fire shall devour all learning"; Bacon, Raleigh, Selden, Lilburne, Milton and Sydney—leaders of armies which were chiefly exercised in the defence or attack of kingly prerogative. Contrast with these the French,—the Doctors of the Sorbonne:—Bodin, who talks about the influence of climate on governments,—Bossuet, Fénelon and Pascal, who took up the opposing claims of thrones and churches. Again, the Italian politicians make quite a distinct school. There is Macchiavelli, whose meaning is still disputed, and ever likely to be so; Bellarmine, who mediated between two great parties, and offended both, Fra Paolo Sarpi; Campanella, with his puzzles and paradoxes; and Aretino, the "bitter Tuscan," of whom it was said, in his epitaph, that he satirized every being except God, whom he only spared because ignorant of his existence.

The political writings of Germany, Holland, the Netherlands, and northern parts of Europe bear also a positive character. How much religious feeling was mingled with them is obvious from the names of Hütten—one of the authors of the 'Letters of Obscure Men,'—Luther, Calvin, Melancthon, and Erasmus. De Commynes, among others, was a profound Flemish politician. But in Holland and Germany there arose a new and peculiar class of authors,—the international jurists, Grotius, who "saw in the whole Christian world a licence of fighting, at which even barbarians might blush"; Puffendorf and Vattel, with Barbeyrac and Wolff. Another order was composed of the metaphysical politicians, Spinoza and Leibnitz; while De Witt argued from a statesman's point of view; and Gerard Noodt, in a clear and manly treatise, gave a practical shape to many important views.

In Spain and Portugal politics, as a science, underwent much scrutiny, though generally upon a theological basis. Aquinas set this example, which was followed by the Jesuits and by Cardinal Ximenes. Victoria and Soto are well known for their works on the law of nations; Mariana, for his defence of Clement, the assassin of Henry the Third, and Sanchez for his ponderous analogies between the economy of Adam and the institutions subsequently invented for the management of human affairs.

To his task Mr. Blakey has brought no common diligence and integrity. His object was to collect, arrange, and condense notes on the political theories and speculations of ancient and modern times, and he has succeeded in producing a book of a standard character. The materials have been patiently compiled, the classification is judicious, and the critical review, though disconnected and brief, displays the resources of a liberal and independent mind. Mr. Blakey holds firm and precise opinions, which he does not refrain from urging; but they are by no means sectarian, nor do they interfere with the historical tone of his volumes. When the work, which now brings us no further than the year 1700, has reached its fourth and concluding part, it will, if the second half be not inferior to the first, deserve a permanent place in historical

libraries. When we say this, we mean to confer no slight praise on the author.

History of Foreign Troops in the Service of France, from their Origin to the present Day; and of all the Regiments levied in conquered Countries under the first Republic and the Empire—[*Histoire des Troupes Etrangères, &c.*]. By Eugène Fieffé, Chief Clerk in the Archives of the Ministry of War. 2 vols. Paris, Librairie Militaire.

THE old school of historical writers in France, in relating her struggles with this country, are constantly induced, by patriotic sentiment, to deny the existence of an English army, and to represent the body to which that name is usually applied as composed of troops collected from all quarters of the world—Scotland, Ireland, Germany, Switzerland, Malta.

The subject chosen by M. Fieffé in his elaborate monograph necessarily leads him to avoid this mistake. He is forced to perceive that France, likewise, perhaps to a greater extent than England—if we set aside our Indian conquests—has found it convenient to call foreign mercenaries or auxiliaries at various times to her aid; and he undertakes to pay the debt of gratitude which, according to him, his country owes. With characteristic fear of national susceptibility, however, he apologizes for performing a duty.—

A nation like ours (he says) need not be ungrateful in order to add to her glory, and may, without diminishing her own share, shed some rays on those who during ten centuries have joined in her triumphs and reverses. Yes, France *has* had foreign troops in her service during the ten centuries that separate Napoleon from Charlemagne.

Having made this candid avowal—which scarcely required so emphatic a tone—M. Fieffé proceeds to set in order his materials in a very judicious manner,—for the use of future students rather than for the ordinary reading public. Like most of his countrymen, it is true, he relies too much on French sources of information, disdaining or ignoring the existence of all others. It will require a much more independent mind to set a different example, especially when military matters are concerned. We shall have to wait long before the fable of the English Guards being made drunk like Russian serfs, and having their horses' bridles cut by their officers previous to a desperate charge, disappears from the popular narrative of the battle of Waterloo; and in the mean time we need not be surprised that M. Fieffé makes Abercrombie occupy "the peninsula of Aboukir" in the absence of the French army,—and transforms the victory of Corunna into a "desperate resistance," ending in a night-embarkation. These are not intentional misrepresentations, but arise from the fact that M. Fieffé, following the practice of more distinguished men, never thinks of looking to see how the question is stated on the other side.

It is an inconvenience inherent in the class of subjects which this 'History' chooses as its theme, that the writer who treats of them is compelled either to be fragmentary or to embrace a much wider field than his title indicates. M. Fieffé gives an outline of the achievements of France when the foreign troops are in the field. His first volume is the most interesting. He goes back to the time of Bucelin and Narzes, and mentions the tradition according to which Charles le Gros, in 886 A.D., instituted a body guard of twenty-four Scotchmen as a protection against assassination. There do not, however, seem to be any certain materials for writing the history of foreigners in the service of France before the time of Louis the Seventh. Thence-

forward the most important portion of the French army was foreign, being composed of a mass of lawless adventurers raked together from States which, from their size or other reason, afforded less opportunity for development of military energy. Their character, which more resembles that of brigands than soldiers, is described in the manuscript chronicle of Bertrand du Guesclin:—"People of many nations and countries, some English, some Scotch, many Bretons, with plenty of Hannuyers and Normans, who went about lodging and ransacking at their will, leaving neither ox, nor cow, nor sheep, nor bread, nor flesh, nor wine, nor goose, nor capon where they passed,—such pillagers, murderers, traitors and felons were they." It often happened that these companies, when the state was no longer in want of them, or when irritated by delay in payment, set up on their own account, and made war on the people in whose service they had been engaged. Some of them called France their "chamber"; and Jean de Gouges is well known under the title he himself assumed of "the Friend of God and the enemy of everybody." Many bloody wars were necessary to expel or destroy them. They were at length succeeded by more disciplined, though often not less ferocious bands—Italians, masters of the cross-bow; Swiss, then the best infantry in the world; Scotch archers; Germans or Lansquenets, whose name is preserved in that of a dangerous game; and Greeks, whose custom it was, says Brantôme, "to carry the heads of their enemies at their saddle-bow." The Swiss—not always so faithful as M. Fieffé asserts—many times distinguished themselves in the service of France; but Francis the First, forgetting the destructive influence of his own rashness, was unjust to his own countrymen when he said, looking at the corpses of his allies on the field of Pavia,—"If all my soldiers had done their duty like these strangers, the fortunes of this day would have been changed." We must be suspicious, however, of such sayings, since the famous *tout est perdu, fors l'honneur* has been sobered by modern research into—"Of all that I possessed nothing remains save honour, and life which is safe."

It was towards the end of the sixteenth century that the foreign troops in the service of France lost the name of bands or legions and were organized into regiments. They served on both sides in the wars of religion. Under Louis the Fourteenth they increased yet further in number. During the seventeenth century were formed Scotch, Irish, Liège, Walloon, Swedish, Danish, Hungarian, Croat, Polish and Corsican regiments. To these were added, in the eighteenth century, Turks, Negroes and Tartars. In some of the greatest battles fought by the French these foreign troops distinguished themselves; and M. Fieffé generously returns to each nation the celebrities that have usually been confounded with the native French.—

The two Trivulzi, John Caraccioli, Prince of Amalfi, Peter Strozzi, Albert de Gondi, Concino-Concini (Maréchal d'Ancre) and the Broglie (Broglie) have Italy for their cradle; the D'Ornano came from Corsica, then under the yoke of Genoa, and the Schombergs from Germany; Sweden may claim Rosen and Asfeld; Belgium, Marsin; Hungary, Bercheny; Denmark, Rautzan and Lowendhal, the worthy grandson of Frederic the Third. Great Britain furnishes also many names:—Robert Stuart (Sire d'Aubigny), the Comte de Thomond, descended from the sovereigns of Ireland, and Berwick, son of a king, whose heroic death Villars envied. Among so many valiant captains, Saxony counts the victor of Fontenoi, issue of royal blood, who illustrated the courtier, and died, leaving, as if he had not yet done enough for the land he had adopted, a daughter, from whom was to spring one of the literary glories of our time. In fine, Bavaria

cites with pride the warrior of whom Narbonne said, that his heart was more French than his accent—the brave Luckner—a victim destined to the scaffold. To these were added, at a later time, Masséna, Macdonald, Poniatowski (the heir of whose name has just been made senator of France), Clarke and the Prince of Hohenlohe.

This concentration of well-known facts is not without interest; and many of M. Fieffé's pages will attach the reader, though he may not find anything in them not scattered through ordinary histories. When San Pietro de Bartelica, assisted by the allied French and Turks, endeavoured to free Corsica from the Genoese yoke, but failed, "Vanina d'Ornano, his wife, heiress of the powerful house of that name, resolved to go to Genoa, to beg pardon for her husband; which hearing, San Pietro was moved with great fury. He determined to prevent her, on that or any future occasion, from performing so unpatriotic an act; and having knelt down and asked her pardon, as his lady and sovereign mistress, strangled her with her own scarf."

The Court of Catherine de Medici—we are informed—was horrified by this act; partly, perhaps, because it had its origin in a kind of virtue. San Pietro had been named Colonel-General of Corsican infantry; but his name became so odious that his successor determined to adopt that of his noble victim. This is the origin of the D'Ornano family, which has always distinguished itself, and has, at length, in these days, furnished a Governor of the *Invalides* and a Chamberlain to the French Emperor.

The history of the Scotch archers in the service of France is curious. St.-Louis, during his crusades, was guarded day and night by twenty-four Scotch gentlemen, to whom Charles the Fifth added seventy-five archers, with inferior privileges, it is true. Their pretensions to nobility,—for which M. Fieffé, in a moment of erudition, refers us to Walter Scott,—gave them a kind of claim to be admitted near the person of the king; and the smallness of their numbers prevented any fear that they should become powerful on their own account. During the English invasion, however, seven thousand Scotch, at one time, in 1421, entered the service of the Dauphin Charles, who, when he became king, created the company called the Gens d'Armes Léonais, and added a chief to the body-guard of twenty-four, under the title of the First Man-at-Arms of France. All these Caledonian mercenaries were sumptuously armed and equipped, and allowed each to maintain a squire, a valet and two servants. If Marot may be trusted, they earned the special admiration of the Milanese ladies when they entered their city with the King; and were saluted as "giants, strong as elephants, bold, triumphant," by dames whose glances were rewards. The Scotch distinguished themselves, in the fifteenth century, at the siege of Pontoise and the battle of Monthéry; and later, long protected the life of Henry the Fourth from the daggers of the Sixteen.

The Scotch company preserved its name long after its ranks became filled with Frenchmen; but, says M. Fieffé, "in testimony of its old fidelity, it retained precedence over other companies, and adopted the custom of answering, when challenged, in Scotch, by the word *Hamir*, abridged from *haye hamier*, which sounds very much like *I am here*, and is translated by our learned author *Me voilà!* The Company was suppressed in 1791, and re-established, in name at least, in 1814. M. Fieffé justifies its origin and continuance in the following manner:—

The Kings of France had so often had the opportunity of appreciating the valour of English, Scotch and Irish, that they considered it was but just to

admit the three provinces of Great Britain to the honour of furnishing them with troops.

Further on, we have the following:—

There was also a company of English Gens d'armes brought into France, in 1667, by Count Georges Hamilton. It was composed of English, Scotch and Irish Catholics, who had formed part of the guard of Charles the Second, and whose dismissal the English Parliament had insisted on. Louis the Fourteenth finding them all to be "good men, and well made," formed them into a company, after having draughted into the Scotch ranks the children of ancient Caledonia. He appointed himself Captain and Georges Hamilton Captain-lieutenant. The company served next year in Franche-Comté. Its standard bore a sun with eight eaglets rising, from the earth, to fly towards it, all bordered in gold, with these words: *tuis ad te nos vocat ardor*. Louis the Fourteenth had adopted the sun as his emblem. This desire was, therefore, intended as a piece of flattery.

M. Fieffé publishes a remarkable document, dated 1744, and signed by Louis the Fifteenth, just after the declaration of war against England. His Majesty states, that—

being informed that a memorable number of English, Scotch, and Irish were present as well in his good town Paris as in other cities and provinces of his kingdom, most of whom had served in the army, even in the regiments of their nation in his pay; and being unwilling to allow within his states any vagabonds or persons without occupation who may be set to useful work, orders expressly all the said English, Scotch, and Irish who may be without vocation or employment, between the ages of eighteen or thereabouts and fifty, and in a condition to carry arms, whether or not they may have been formerly in the Irish regiments, in the service of His Majesty, —to repair instantly to the provinces and armies hereinafter mentioned to join those said regiments, under penalty, if they have before served, of being treated as deserters; and if they have not, of being treated as vagabonds and sent to the galleys.

A fortnight's delay only was given, after which the provosts, and other officers of the short robe, were to hunt out and capture all recalcitrants. We are not told how many recruits, and of what value, were by this means obtained.

M. Fieffé seems to have a particular predilection for the Swiss regiments which succeeded to the Scotch in guarding the persons of the French monarchs; and does not hesitate to express a hope that they may once more reappear,—he does not say in what company. To the famous reproach addressed to these venal mountaineers, that the money paid to them by France would have sufficed to construct a road from Paris to Berne, he opposes the answer that the blood spilt by them in defending France would have filled a canal of the same length. The report of Lieutenant de Flue, who commanded the Swiss at the Bastille on the 7th of July, 1789, was, indeed, not unworthy of a place in his pages. It is worth while to contrast its business-like tone with that of eloquent historians. Having narrated the initiatory scenes, M. de Flue proceeds.—

M. de Launay now judged that all was lost. He came down at once, and, taking the match of one of the pieces of cannon, wished to set fire to the powder-magazine, which would have infallibly blown up a part of the Faubourg St.-Antoine; but the subaltern officers prevented him. The tumult was increasing rapidly. The Governor caused the recall to be beaten. At this signal I went into the rooms to stop the firing. M. de Launay asked the garrison what they wished to do, adding that for his part he saw no course open but to ascend again to the towers, continue fighting, and at last blow themselves up, rather than surrender to a populace which would not fail to massacre them all. Meanwhile the crowd increased, the cannons were pointed, and the cry of "Down with the bridges!" became more threatening. This new access of fury seemed to act on M. de Launay as a sudden inspiration. He went to the hall of council and wrote a letter by which he in-

formed the besiegers that he had twenty thousand pounds weight of powder in the place, and that if they refused to accept any kind of capitulation, he would blow up the fort, the garrison and the whole quarter. He gave me this writing, hastily ordering me to pass it out, which I did, by means of one of the holes cut in the bridge to point the muskets through. An individual advanced over a board, which was thrust over the ditch, took the paper, and gave it to one of the chiefs of the besiegers, an officer in the regiment of the Queen. He read it aloud, and cried, "On the faith of an officer, we accept!" But the crowd exclaimed unanimously, "No capitulation! Down with the bridges!" I returned to the Governor, and informed him of this result; and afterwards joined my troop, waiting with resignation for M. de Launay to keep his word and blow up the fortress. What was my astonishment when I saw four persons advance towards the bridges and let them down! Immediately the crowd rushed into the courts. We were disarmed, and seized; they broke into the apartments: the papers of the archives were thrown out of the windows,—arms, effects, money were given up to pillage. Some ran to deliver the prisoners, thought to be in great number, and, as only six were found,—of whom four were forgers and two insane,—people asked, where were the others. After much menacing and rough treatment, the fury calmed down a little. I was dragged to the Hôtel-de-Ville with those of my troop who had been able to remain near me. During the passage the crowd ceased not to insist that we should be hanged; and I do think that, without the intervention of a knight of the arquebuse, M. Ricard, I should not have been left alive. M. de Launay preceded me some paces. From the Bastille to the Hôtel-de-Ville the course to him was a long and cruel execution. He received sword and bayonet thrusts from all sides, and as his head was bare he was easily distinguished. Seeing this, one of his conductors gave him his own hat,—but as the blows now changed their direction, the Governor begged he would resume it. Between the Arcade St. Jean and the entrance of the Hôtel-de-Ville I suddenly saw a head, all bleeding and battered, on the end of a stick: it was that of M. de Launay.

The narrative of this man, who understands nothing of what is passing around him,—who relates, or rather reports, the unfortunate death of the Governor, the frightful project of blowing up a whole quarter of Paris for a mere point of honour, and how he himself waited "with resignation" to be tossed into the air,—is valuable not only as historical testimony, but as condemnatory of the system of which M. Fieffé seems to think so highly. Such unreasoning and unsympathetic machines must always give a dangerous stability and confidence to the power which employs them, until the moment when real resistance begins. Then their inflexible adherence to orders,—their utter contempt of the lives of a population which has with them no ties of blood,—provokes, if it does not justify, massacre. The movement which overthrew Louis Philippe was almost innocent of blood precisely because none but his countrymen were opposed to it.

The second part of M. Fieffé's work enters on totally different and less interesting ground. It records the services of the various troops which, after forty-four departments were added to France, fell in that new territory under the law of conscription; and of certain regiments of auxiliaries incorporated in the Great Army. Future historians will be able by its assistance to narrate some incidents with more precision; but there is a strange absence of characteristic facts and anecdotes. We mention, therefore, that M. Fieffé gives elaborate descriptions of the costumes of the corps whose fortunes he describes—illustrated by coloured figures; and conclude our notice of a work which, though open to criticism, is not without merit of a special kind.

Liber Hymnorum: The Book of Hymns of the Ancient Church of Ireland. Fasciculus I. Edited, from the Original Manuscript in the Library of Trinity College, Dublin, by James Henthorn Todd, D.D. Dublin, Irish Archaeological and Celtic Society.

The 'Liber Hymnorum' is a manuscript of "the ninth or tenth century," preserved in the Library of Trinity College, Dublin. It is valuable as preserving a considerable portion of the ritual of the Church of Ireland as it existed before the English conquest,—and therefore, of course, before the attempt to produce uniformity of worship in the Churches of England and Ireland, by introducing the Use of Sarum. The present volume contains the first-fruits of an intention on the part of the Irish Archaeological Society to publish the whole contents of the 'Liber Hymnorum.' What we have here consists of four Hymns, in praise of St. Patrick, St. Brigid, Long St. Cummain, and St. Mugint:—all worthies of high ecclesiastical fame in the Isle of Saints. To the Hymns are added the manuscript glosses and scholia, of which Dr. Todd assures us that, "setting aside their historical importance," they are "most valuable, from their great antiquity, to the student of Celtic literature."

The author of the Hymn in praise of St. Patrick was one St. Sechnall, a poet with whom we are now called upon to make acquaintance. Full of impetuous fervour, this "most gifted of living men" had a great dislike to being disturbed in his studies. When composing this very Hymn, the vulgar, unpoetical Irish public insisted on holding a fair under his window. The poet bade them be off; but the people of those days were given to frolic and whiskey, and took no heed of the holy warning, whereupon the Saint in a pet raised his hands to heaven and the earth opened and swallowed up thirteen chariots full of them,—jaunting-cars, we presume, horses and all. After this little hint, the rest, we are told, "ran away," and the benevolent poet sat down with infinite self-satisfaction and a mind at ease to complete his inestimable ode.

An under-appreciation of the value of their own labours is not ordinarily one of the faults of the children of song. St. Sechnall was in this respect every inch a poet. When the immortal labour of this Hymn was ended, the poetic pains all suffered, St. Sechnall began to think what he could make by his lines. Other poets on such occasions go to the booksellers, Sechnall sent for a Saint,—the Saint whom he was about to immortalize on earth—St. Patrick. There ensued a scene of curious haggling. "I must have a reward," said Sechnall.—Patrick agreed that it was very right, and asked, "What shall it be?"—"What do you offer?" inquired the poet.—"As many souls shall go to heaven as there are days in the year."—"I will not accept that," answered Sechnall; "it is not enough. The praise is good."—Patrick, amending his offer, proposed that Sechnall should take to heaven as many sinners as there were hairs on the *casula* of the poet's cowl.—"I will not accept it," said the poet, casting an eye, we may believe, on the state of his old cowl; "every believer may take as many as that, but it is not every believer that can compose such a hymn."—St. Patrick, who seems throughout the transaction to have been actuated by a very niggardly spirit, then suggested, "Seven every Thursday and twelve every Saturday to go to heaven of the sinners of Erin."—"It is too little," shouted Sechnall, whose wrath was clearly rising.—Patrick enlarged his offer: "You shall have every one who sings your hymn, lying down and rising up."—"It will not do," answered the wily Sechnall; "the

hymn is long, and the memory of the people not sufficiently retentive."—"Let it be the last three stanzas, then," said Patrick.—"*Deo gratias!*" exclaimed Sechnall,—and so, without more ado, the bargain was struck.

St. Brigid, we may notice, to avoid mistakes, was not the well-known patron saint of Sweden of that name, but another Bridget, of far higher pretensions,—the Mary of the Irish,—a wonder of beauty and mirror of modesty. "She never washed her hands, or her feet, or her head before men. She never looked a man in the face. She never spoke without blushing." The parentage of this simple girl is stated in words which we are almost afraid to quote, lest we should offend the prejudices of some worthy person; but the statement is, of course, to be understood in a spiritual sense, and proves the mythical character of the lady saint.—

"The father of this holy Virgin was the Heavenly Father; her son was Jesus Christ; her tutor was the Holy Spirit: and it was therefore that this holy Virgin performed those great innumerable miracles. It is she that relieves every one that is in difficulty and danger. It is she that restrains the roaring billows and the anger of the great sea. She is the prophesied woman of Christ. She is the Queen of the South. She is the Mary of the Gaeidhil."

Such extravagance seems to have puzzled the votaries of the Saint, until one person amongst them, more apt at guessing riddles than the rest, suggested, by way of answer, that to account for such a pedigree, St. Brigid must have been the same person who dwelt on earth, now some eighteen hundred years ago, as the Virgin Mary. The explanation was admitted; a miracle was obtained—no difficult matter in those days—in confirmation of the suggestion, and thus St. Brigid procured her second title of "the Mary of Ireland." The story illustrates how one myth creates another. Hagiologists have little or no invention. A few leading features ran through all their creations, or rather their adaptations. Even the heraldic description—"the same, with a difference"—can scarcely be applied to their endless repetitions.

The Editor has bestowed great pains upon his portion of the work: of his competency it is needless to say a word.

You have heard of Them. By Q. New York, Redfield; London, Trübner & Co.

WE fancy that we "have heard of" "Q," as well as of "them" described in his book,—and that many persons conversant with London clubs, opera-houses, and newspapers could substitute a name for the initial, without risk of being proved wrong. Whether "Q," however, be known or unknown to any given O, P, R, or S, his book (garnished with a fat fancy portrait of Madame Grisi) will hardly be long heard of, or travel far, even among the least scrupulous lovers of scandal. "Q" means to be as scandalous as any Q, past, present, or to come, can be; but he is only dull,—incorrect in naming some among those with whom he professes to have been personally acquainted (as, for instance, when he talks about "Bartholdy Mendelssohn"),—always wanting in graphic power when he tries to describe,—and not getting beyond such insulated facts as Lady Bulwer's pearl white, or Madame Cerito's plump legs, or as "Q's" own loveliness when he was a boy-author. Lovely, too, does the style of "Q" continue to be:—if we venture to use the verb "continue," it is because we recollect certain opera-paragraphs in the palmy days of Mr. Lumley's autocracy, "the lilies and roses" of which were found attractive by the writers of *Punch*. The following paragraph,

devoted to the dancer just named, has in it a passing gleam of the old well-beloved tinsel,—and more than a shred of the familiar fustian.—

"When she is dancing, it is a purely animal perfection that entrals your eyes. Your senses are steeped in it; but they are not carried away as they would be by the witcheries of Carlotta. No marvellous magic bewilders you, as it used to do when gazing on the matchless and floating form of Taglioni. You are not startled into admiration as you have been, by the faultless figure and wonderful movements of the Ellsler, who was by far the most perfect mechanical dancer of the three. Your admiration for Cerito is a sensual one. Your rapture is neither a marvel, nor is it a joy. * * You wish to know her, to bask in her broad and happy smile, and revel in her laugh, for Cerito can—or could, when I knew her—laugh as freshly and as merrily as any country hoyden who had barely counted fifteen summers."

Those who care to read concerning M. Berlioz, Herr Andersen, Mr. John Oxenford, the painter Haydon, Miss Catharine Hayes, and a score more of English, French, Irish and Italian celebrities, jumbled together after the fashion of the statues in *Lady Jeffers's* garden,—described in language like the above,—may keep company with "Q." We shall not,—and, thus, will only give a single extract, perhaps the most lifelike and humorous passage to be found in this stale medley, which, moreover, can give pain to no one. "Q" when "a handsome boy" wrote a tragedy,—and having surprised Mr. C. Kean into acquiescence, inflicted a reading of the manuscript on that gentleman.—

"The MS. of the 'Students of Bonn' being placed in my pocket, my cab was called and driven to the York House, in which hotel Kean was then staying. I was shown into his room, and found him breakfasting. He asked whether I had broken my fast. I replied, 'Yes.' After a brief conversation, he concluded his meal, and, turning to me, he said, 'Now I am ready.' It was with the accent of one who is surrendering his neck to the noose of the hangman. With a mournful air of resignation he leant back in his chair, closed his eyes, and arranged himself to listen. I drew the MS. out of my pocket and prepared to read. 'Do you not think it would be better to leave it in my hands for a week?' he murmured, with an accent of expostulation, as he once more opened his eyes and gazed sorrowfully upon me.—'I would very much rather read it to you myself,' was my answer, as I opened the first page and turned it under the MS.—'Well! Go on, then!'—I began accordingly. Now the compliment must be paid Charles Kean, of saying that he listens to a play, read by its author, in the most exemplary of manners. He does not disturb him by objections in the course of the reading. At the end of each act, he merely states his opinions of its character. I shall confine myself to the annotation of his remarks. As the first was concluded, he looked up at me. 'Do you not think that there is a good deal of swearing?' he remarked. At the close of the second, he once more opened his eyes. 'Do you not imagine, that *Heinrich*—this was one of my characters—'swears confoundedly?' he inquired. When I ended the third, he said, 'A very fine situation; but "hell" and the "devil" are not pretty words in the mouth of a female.' As the fourth terminated, he remarked: 'The worst act yet—the fourth is always the most difficult to write—and the swearing in it is worse than ever.' But when I finished the fifth act, he jumped up and opened his eyes very wide. They were very large eyes. Then he opened his mouth and pronounced judgment. 'The third and fifth acts are the best. The third is excellent. The first is good, the second tolerable, and the fourth bad. The termination of the tragedy is perhaps too horrible. But, young man! young man! why do your characters swear so much? In private life you may swear as much as you like. You offend nobody but your friends. But on the stage you are talking to the public. If you outrage their sense of propriety, they will "damn" your tragedy,—an unfortunate style of swearing from which there is no recovery.

"Damned" it would be, in every sense of the word. So put your play in your pocket, and, when you write another, remember what I have said to you.' Six days after he had quitted Bath. Now, to tell you the truth, I do not think he was very wrong in his judgment of the 'Students of Bonn.' At the period the play was written, I was only eighteen. When I read it to Charles Kean, my nineteenth year was barely completed, for I had developed myself into literature very early. Soon after, I passed into the world of London, published a novel, wandered on the Continent, spent my money, and woke up when barely twenty-two, to find myself ruined. In six months from that time, I was the literary, musical, and theatrical critic, on one of the leading Morning Journals of Great Britain."

Our readers have had enough, we imagine, of the *quondam* "fashionable critic on the Daily Press of London" (so "Q" describes himself), who solaces himself in foreign lands by serving up and selling every person of note whom he has ever seen or spoken with. Fashionable criticism, however, does not imply the power of "dressing" old acquaintances so as to make them palatable. "Q" has not the secret of that condiment by aid of which the French cook boasted that he could render an old pair of boots, or his grandfather, appetizing. His wits "come out" flabby,—his beauties lose all form and colour,—his artists appear nearly as insipid as fashionable amateurs: so tame is the magic of his receipt for converting those of whom "you have heard" into a literary water-soupy!

OUR LIBRARY TABLE.

The Wife's Trials: a Novel. 3 vols. (Hurst & Blackett).—"The Wife's Trials" deserves to be a successful novel, for it is one of the most spirited and amusing we have read for a long time. It concerns the fortunes of too many characters, who are all elaborately drawn and with equal distinctness, and the number of happy marriages that are made to counterbalance the unfortunate lot of the married heroine is somewhat perplexing to the reader; indeed, that personage will be reduced to the expedient of the eccentric country parson, who on the occasion of some wholesale marrying on an Easter Monday, made a mistake in assorting the "happy couples," and declared they "must right themselves at the church-door." The reader has the satisfaction of feeling that everybody is made happy at last, but there is so much change of scene and purpose that it is difficult to feel quite certain how the parties settle it amongst themselves; but one thing is certain, the interest is sustained without flagging to the very last page. Mrs. Templeton is a charming woman, and her character is drawn with spirit and delicacy: she is far the most interesting victim wife of our acquaintance, and really deserved a better fate, which is more than we can say of most of that class,—generally speaking, victim wives are very aggravating, and deserve all they meet with.—Colonel Templeton, the monster husband, is well done, and a grain of sympathy is extorted even for him. We give no extract, but recommend our readers to take up the book for themselves.

A Romance of the Bush. By E. P. R. (Blackwood & Sons).—An unstudied, inartificial little story, interesting from its local colouring, which evidently has been painted upon the spot by one well acquainted with the places described: the appearance of the ghost, which is not presented with the authority of a legend, is not very well managed, nor is it nearly so touching as the more probable incidents of the narrative.

A Glossary of Judicial and Revenue Terms, and of Useful Words, occurring in Official Documents, relating to the Administration of the Government of British India, from the Arabic, Persian, &c., compiled and published under the Authority of the Hon. the Court of Directors of the East India Company. By H. H. Wilson. (Allen & Co.).—Indian judicial and revenue terms, sufficiently obscure of themselves, have been rendered still darker by a barbarous and unsystematic representation in the

English character. For many years after our first occupation of India, a pardonable ignorance of the native languages and customs prevailed among our officials. To this want of knowledge, natural in new comers, succeeded the ignorance, less excusable, of apathy and indifference. Thus, as Prof. Wilson tells us, even functionaries of superior merit, and "specially selected for their knowledge of the languages," could explain a word which signifies "prefect of a district," as meaning "ten blows":—an etymology which certainly suggests its own reward. If this was the enlightenment of our ablest officials in India itself, we may suppose what sort of ignorance prevailed at home. Nevertheless, up to 1842 it does not appear that any attempt was made to procure for the offices in this country a satisfactory and scientific explanation of the Indian words and phrases constantly recurring in the documents sent for consideration to the India House. When an order was at length transmitted to the different Presidencies for the compilation of the required Glossary, it was treated, we are told, with such gross neglect, that one Presidency (Bombay) never acknowledged it at all; and a Bengal official, Mir Shahamat Ali, coolly confessed that he filled up the columns of his Report with words taken at random from the dictionary. Sir H. Elliott alone came forward and furnished information, "the value and merit of which cannot be too highly estimated." In England, Mr. Clarke, a retired Madras civilian, Honorary Secretary of the Royal Asiatic Society, classed and arranged 7,000 terms. On these and other contributions, Prof. Wilson has built his valuable Glossary now published. In a work which deals with thirteen principal languages and many subordinate dialects, strict accuracy could not be expected from one man; and it is perhaps to be regretted that other gentlemen extensively acquainted with the vernacular tongues were not associated with the compiler, whose profound knowledge of Sanscrit leaves nothing to be desired in that quarter. In this way many chasms might have been filled up. Thus, for example, the explanations of such names as Chingleput and Vizagapatam, which stand with marks of interrogation opposite them, would, no doubt, have been suggested, viz. Singhalapettah and Izhakpatan. In the Preface will be found a very able disquisition on the method of representing Oriental alphabets in English. Yet so great is the difficulty of this undertaking, that we find the learned compiler deviating from his own canons immediately after he has laid them down. Thus, he writes *Mohammed* and *Mohammad* contrary to his own system; though in other words, with exactly the same vowels—such as *Muharram* and *Mukaddam*—he is strictly correct. Thus, too, at pp. 365, 398, 515, we find "*Hasain*" for *Husain*. We will not, however, by noticing minor errors, detract from the general merits of a work which will be of great use both in this country and in India.

Common Law and Equity Reports, 1853-4. 8 vols. (Spottiswoode).—The success of the *Law Journal Reports*, the authorized series of which was commenced in 1832, has apparently led to the advent of a rival, published in a similar manner, in the *Common Law and Equity Reports*,—of which eight handsome and substantial volumes are now lying upon our table. We presume there may be room for both publications in the legal world,—and that each may have its own public. The proprietors tell us in their prospectus, that "the Reports have very frequently been cited before the Courts, and always received with approbation."

The Christ of History: an Argument grounded on the Facts of his Life on Earth. By John Young, M.A. (Longmans).—Mr. Young allows that his book, which "appeals to those who are prepared to treat with severe, yet also dispassionate criticism, one of the gravest subjects of human inquiry," is virtually controversial, if it be not formally so. This takes it, in a measure, out of our hands. We may describe, if not its argument, at least its conclusions, by one paragraph: "There is One Wonderful Personality, only One, of all who ever dwelt on this earth, who had more immediate, constant, and perfect access to the Infinite Foun-

tain of Being, *than was possible to the constitution of a mere creature.*" The author reviews the outer conditions of the life of Christ, the Saviour's works among men, and his spiritual individuality, and arrives at this conclusion, among others, that the Incarnation of Jesus sheds light on all the wonders of his history, and that the world is summoned to at once hear and believe. The argument is sustained with great dignity, and is recommended by its literary ability as well as by its intrinsic importance.

The Life and Labours of St. Augustine: a Historical Sketch. By Philip Schaff, D.D. (Bagster & Sons.)—Prof. Schaff is well known as the author of a Church History of high merit. The same lucid mind and religious tone of thought which distinguish that book are evident in this lighter work. The last chapter—that upon the influence of St. Augustine on his own and succeeding generations—is, to our thinking, the best in the book. That subject is one which would bear great enlargement. In our own Church, and amongst our Reformers, St. Augustine was the one great authority. Many doctrines which in these latter days we are accustomed to regard as derived to our Church from Luther or Calvin were obtained directly from the writings of St. Augustine. His very words were adopted by the framers of our Articles in reference to some of the highest and most disputed questions, and that to a degree which is little suspected. Good service would be done to the history of our Reformation, if Prof. Schaff, or some other candid scholar, would set this matter in a true light. The chapter we have referred to in the present book would form a good foundation for a comprehensive treatise on the influence exercised by the writings of St. Augustine on the dogmatic theology of the Protestant Churches, and especially on that of the Church of England.

Suggestions on the Ancient Britons. In Three Parts. By G. D. Barber, A.M. (J. R. Smith.)—The author desires to establish the Aramitic origin of the Ancient Britons. In the second and third Parts of his work, now published, he gleans from classical and Cymric antiquities such as bear upon his subject. He traces names and customs with painstaking research, and occasionally startles us with some of those odd conclusions at which etymologists so frequently arrive. The meshes which such inquirers weave are infinite. Mr. Barber is not behind his brethren in the multiplicity of his combinations, nor in the ingenuity of his application of presumed facts. We a little doubt whether, occasionally, his inquiries have been sufficiently extended: for example, when endeavouring to show an Aramitic origin for all the peculiarities of the Order of the Garter, he tells us that "Honi," the first word of the motto, "is Aramitic;" that it "never occurs in French, and the Dictionaries de l'Académie, as well as others, have no example of its use, except from the motto."—Did it never occur to him to look into Roquefort, or any of the Dictionaries of old French? The word stands there plain enough. We could multiply such examples, but it is unnecessary. We prefer giving an example of the oddities which etymologists occasionally stumble upon. Who would expect to find a Hebrew origin for our coachman's "hammer-cloth" and our Lord Chancellor's woolsock?—"Wool, צמר, Zamr, or Hamr, is a word preserved in 'hammer-cloth,' the mantling for display of heraldic insignia, now only observed on the driver's seat of the family carriage; the same name probably applied to the banners of knight and noble, in solemn civic assemblies, or ceremonial processions. The woolsock of the House of Lords is apparently a relic of the *hammer-cloth*, though, like the garter, the woolsock has been assigned another origin, or as having originated on a particular, comparatively modern, occasion. The dictum that the coachman's *hammer*, for casual repairs, was deposited under the heraldic mantling of his seat, scarcely deserves the notice of our national lexicographer. Hammersmith, near Shepherd's Bush and Notting-hill (נמר, a sheep-cote), reports Wool-hythe."—The lovers of odd etymologies will do well to consult Mr. Barber's work. We do not guarantee any of its conclusions, nor are we blind to its many defects; we

simply direct attention to it for the sake of those who delight in such inquiries.

Edith Vernon; or, Contrasts of Character. 2 vols. (Hope & Co.)—There is indication of talent in this work; but it is crude and undeveloped, and the tale has the air of having been written by one totally unaccustomed to composition. The story is interesting in its possibilities, but it has not been worked out. The preface by the editor removes the work from the region of criticism. Written when the author was a young girl—thrown aside amid the domestic duties of maturer life—and now brought forward by surviving friends as a sorrowful gratification to their own feelings, it is in fact to be regarded more as a votive tablet than a new novel; and as the author, had she been spared, would in all probability have re-written it altogether, we cannot pass an official judgment upon it. We are inclined to consider that the silence to which the author consigned her early work speaks more for the faculty that really lay within her than anything actually written in the pages of 'Edith Vernon.'

Letters on the Philosophy of the Human Mind. By Samuel Bailey. (Longman & Co.)—A series of careful essays, written in balanced sentences, and not so technical as such productions commonly are. Mr. Bailey's philosophical investigations are too excursive to be followed, and his conclusions too vague to be briefly defined. It must suffice, therefore, if we remind the readers of his former works that this new volume has appeared, and that it supplies a sequel to the order of ideas developed in them. In many of the letters his reasonings take the form of debate, and are applied to controvert the doctrines of previous inquirers. We feel disposed to suggest that, in such passages, it were better to use invariably the language of philosophy in arguing philosophical questions. Had Mr. Bailey adhered to this rule, he would have been satisfied with answering Kant, if possible, without setting down as "extravagant" or "absurd" any proposition of so serious a thinker.

Hardwicke's Shilling Peerage for 1855. Compiled by E. Walford. (Hardwicke.)—There was room for such a "Peerage" as this. It is cheap, compact, and supplies all necessary information. Mr. Walford has not sought to rival the elaborate works of Burke, Dodd, or Forster; he does little more than sum up the practical portions of the lore in which they deal, referring more persevering students to them for applications on genealogies, quarterings, and properties. His volume, indeed, is meant to be portable and popular:—as such it is, in size and contents, all that could be desired.

Krasinski's Poland. Part II. (Chapman & Hall.)—The history still lingers over the events of a remote era. It is composed in the form of a statement rather than in that of a narrative, and, therefore, loses in dramatic animation and effect. But Count Krasinski is chiefly solicitous to preserve the tone of severe impartiality, which distinguished the earlier chapters of his work. A Pole, and full of the warmest hopes of Poland, he never conceals his country's errors, but reviews them, and judges strictly of their consequences. We have not yet seen the story of that gallant nation so philosophically told. Perhaps the style should have been more popular, and the details more graphically arranged; but, as a refutation of the vulgar version of Polish history, which has commonly been accepted in England, we are inclined to think that this book will be as useful as it is meritorious.

The History of the Chartist Movement. By R. G. Gammage. Part V. (Holyoake.)—The dimensions of Mr. Gammage's narrative shrink rapidly as it approaches an end. We see a new party acquiring almost a national position, and then collapsing in the hands of inefficient leaders. This chapter of the story might inspire a Jeremiad on lost opportunities, vanity, extravagance and personal squabbles, typified by the words, addressed by one of Mr. Gammage's Chartist heroes to a rival, "Avaunt! Hell fiend!" It is to be hoped that the readers of this historical outline will study it to some purpose.

A second edition of Mr. Sewell's *Georgics of Virgil, Literally and Rhythmically Translated,*

having been required, he has entirely re-written the translation. In its present form it is a most successful rendering, incomparably superior to a recent attempt by another hand, of which we had occasion to speak not long since. Mr. R. Potts, the editor of Euclid, has just issued a work bearing the title *Liber Cantabrigiensis: an Account of the Aids to Poor Students, the Encouragements to Diligent Students, and the Rewards conferred on Successful Students; to which is prefixed a Collection of Maxims, Aphorisms, &c., designed for the use of Learners.* It consists of three nearly equal parts, a number of aphoristic extracts from various writers, a sort of Cambridge Calendar, and a similar record of the public schools and companies throughout the kingdom having any connexion with the University. The information is derived from the reports of Commissioners, the masters of schools, and the clerks of companies.

Those who have read high in mathematics will find much to interest them in *A Treatise on the Calculus of Operations: designed to facilitate the processes of the Differential and Integral Calculus and the Calculus of Finite Differences*, by the Rev. R. Carmichael, A.M. The author is a Fellow of Trinity College, Dublin, and a contributor to the *Cambridge and Dublin Mathematical Journal*, and the *Philosophical Magazine*, in which publications parts of the present treatise have already appeared. His object is to reduce and simplify the processes employed in the calculus, which is effected by a more systematic and complete exhibition of the laws relating to symbols of operation than has yet been put forth. The subject has hitherto been treated only partially and incidentally, in such works as Gregory's 'Examples,' the *Mathematical Journal*, and other periodical publications. It is here treated very fully, and in a most masterly manner, many valuable improvements upon previous methods having been introduced.

The War still brings forth its miscellanies,—patriotic or personal. *England's War against England's Army* is an enthusiastic attack on the late Ministry,—a pamphlet quilted from the odds and ends of newspapers and speeches.—Sir George Cockburn's *Opinions on the Necessity of Remodelling the Admiralty Board* have been reprinted, as well as Lord Lucan's *Speech in defence of his conduct before the House of Peers*.—We have also a *Report of the First Anniversary Meeting of the Central Association in Aid of Soldiers' Wives and Families*.—Mr. Newmarch has formalized his verbal statement to the Statistical Society *On the Loans raised by Mr. Pitt during the First French War, 1793–1801*, and published it in pamphlet-shape, with a voluminous appendix. His tables of wondrous figures send us with renewed confidence to the system of *Decimal Coinage*, which is *Familiarly Explained, in Theory and in Practice*, by Mr. Cornelius Walford. This is a seasonable production likely to be of much utility.

We have an encouraging report on *Railways in India: their Present State and Prospects*, with reference to the field they present for English capital. The writer shows that great works are rapidly going on, and that the undertakings already in progress will shortly confer on India extensive facilities for intercommunication. He approves of further speculation.—Another counsellor of the enterprising is "a Retired Officer," who argues that Australia is a mistake, and exclaims *New Brunswick for the Emigrant!* He has resided in his favourite colony, but if his New Brunswick sun be as unreal as his Australian shadow, he will make few converts, we fancy. It is absurd to represent the Australian emigrants as a class descending to beggary and crime. Cannot one district of the empire be exalted without a forced libel on another?—Little more than a mention can be bestowed on *Astro-Theology; or, the Religion of Astronomy*, by Edward Higginson, the texture of which is composed of religion and science,—*The Ombrological Almanack*,—and *Notes on Spontaneous Combustion*, by Wyatt Papworth.—With these we have a variety of educational miscellanies, the necessity for which is proved by *Mismerism and Media*, with full Instructions how to Develop the alleged Spiritual Rappings in every Family. It is long since we met with anything so painfully

silly, or so inarticulately impudent. If such oracles are uttered, and anywhere believed, it is well that the schoolmaster should be quickened at his task.—Pamphlets, at least, do not fail. We have Sir John Pakington's speech of March 16 reprinted,—Mr. Arthur Morse's *Education, Secular and Religious, in Townships*,—*Government Regulations for the Examination of Candidates for Appointments of the Civil Service of the East India Company*,—and a *Report of the Commission appointed under the Act of Assembly relating to King's College, Frederick Town*,—so that, at home and abroad, the discussion proceeds with activity.—The Directors of the *Young Men's Library Association* of Cincinnati have issued their Twentieth Annual Report,—and Mr. W. G. Lumley, of the Middle Temple, has published the *Act of 1854*, relating to Literary and Scientific Institutions, with *Notes and Index*.—Messrs. Gould & Lincoln's *Descriptive Catalogue* of American books and reprints,—the *General Atlas* of the National Society, drawn and engraved by Mr. W. Hughes,—and a little compendium entitled *Enquire Within*, and addressed, with much trite triviality, to housekeepers,—complete our list of miscellanies.

MEDICAL BOOKS.

Eutherapeia; or, an Examination of the Principles of Medical Science, with Researches in the Nervous System. By Robert Garner. (Churchill.)—Mr. Garner is a country surgeon; a man of considerable scientific attainments, sound judgment, and extensive practical experience in his profession. Hence his opinions on any subject connected with his profession would obtain respectful attention from his brethren. This work is an attempt to review the present state of medicine from a scientific point of view. In some of the chapters he has taken up the bearing of the last scientific discoveries on practical medicine; whilst in others he has displayed considerable knowledge of the history of medicine as an Art. A chapter devoted to the nervous system contains some new views, and indicates acquaintance with the most recent researches on this subject. One part of the work is devoted to short practical notes and observations on diseases and remedies, and will be found interesting to the practical man. A chapter on pseudo-medical science very properly closes the volume. In this chapter, the writer handles the subjects of phrenology, mesmerism, and homœopathy—those scandals of the medical profession—with considerable skill. This book will afford pleasant and profitable reading for the medical man.

On Pain after Food; its Causes and Treatment. By Edward Ballard, M.D. (Walton & Maberly.)—Dr. Ballard has here taken up a symptom, and shown on what a variety of causes it may depend. Such a treatise would act, we should think, as the best antidote to that tendency which exists in the public mind to seek for universal remedies. It may here be seen that so far from pain in the stomach having a single remedy, it arises from twenty different causes, and in order to cure the pain, the causes must be removed by twenty different and sometimes opposite modes of treatment. In this work Dr. Ballard displays a perfect acquaintance with the pathology of diseases of the stomach and a sound appreciation of the nature of remedial agents in the cure of disease.

A Disquisition on certain Parts and Properties of the Blood. By David Tod. (Churchill.)—This work abounds in speculation; and the author is evidently too little acquainted with recent methods of investigation to give the facts he states much weight. His leading idea is, that the blood corpuscles are a form of animalcular life; but his observations on this subject are limited, and many of them are clearly erroneous. With this view he connects an electrical theory of life, which is again made up of a large number of assumptions. The value of his lucubrations may be judged of, when we say he is a believer in Mr. Crosse's experiments on the creation of *Acaris*. He has evidently experimented much in order to prove his theories; but he has proceeded in a manner the very opposite of the inductive philosopher, and we fear he will eventually find that his researches have been

labour in vain. He has missed the aim and object of inductive science: hence his volume will not be found useful to those engaged in the pursuit of physiological science.

A Manual of Elementary Chemistry. By R. M. Glover, M.D. (Tegg & Co.)—There is no lack of manuals of chemistry; and yet such is the unbounded profusion of facts now embraced by this science, that each writer has the power of forming a new book by varying his illustrations or rearranging his principles. Dr. Glover's 'Manual' will be found convenient as a class-book or a manual for private use, inasmuch as it is compendious, and embraces both inorganic and organic chemistry.

The Pathology of Drunkenness. By Charles Wilson, M.D. (Edinburgh, Black.)—The fearful effects of taking habitually large doses of alcohol are perhaps not yet fully realized by the great bulk of English people. Abstinence and teetotalism are regarded as fanaticism, and perhaps keep people from attending to the subject. Dr. Wilson's book is written from the teetotal point of view; and on that account is not likely to be read,—or if read at all, to be read with suspicion. Works written with the view of showing the evil of intemperance are more calculated to do good than works which conclude with the silly truism that every drunkard was first a moderate drinker, and the absurd consequence that therefore every man ought to abstain lest he should become a drunkard. If this argument were worth anything, it ought to be applicable to other vices. But the history of mankind most clearly proves that the asceticism of the few can never produce morality in the many. It is the will that must be educated; and the teetotaler and the drunkard must alike learn the lesson of being temperate in all things.

Positive Medical Agents. (New York, Norton.)—This is an anonymous volume published by the authority of the American Chemical Institute. It treats of the administration of certain remedial agents indigenous to America; and from the author's account of these remedies, and of the cases in which they were used, we infer that he is entirely ignorant of the first principles of medicine.

A Manual of Pathological Anatomy. By C. Handfield Jones, M.B., and Edward H. Sieveking, M.D. (Churchill.)—The progress of Pathological Anatomy has long demanded a manual that should present the principles of this subject in such a way that they might be comprehensively studied. We cannot say that the object has been attained in this volume. It deals too much in details, and is too much of a treatise to serve the purposes of the junior medical student. It, nevertheless, contains a great amount of research in a small space, and will be found a valuable book for consultation.

Cyclopedia of Anatomy and Physiology. Part XLV. (Longman & Co.)—This part is principally occupied with an article, by Dr. Sanderson, on the Vegetable Ovum. The author takes a comprehensive view of the whole subject of vegetable embryology; and we know of no work in which it has been so fully and completely treated. We are surprised to find that this is the only article devoted to vegetable physiology in the work. It was a favourable opportunity for obtaining a *résumé* of recent researches in vegetable physiology, which ought not to have been overlooked.

Lateral Curvature of the Spine. By B. E. Brodhurst. (Churchill.)—Mr. Brodhurst describes a new instrument for treating lateral curvature of the spine, which seems to promise considerable success in certain cases of that formidable complaint.

Use of Creosote in Camp Dysentery. By J. B. Wilmot, M.D. (Churchill.)—Creosote is undoubtedly a valuable remedy in diarrhoea, and the profession will not be surprised to find that it has been tried in dysentery; but Dr. Wilmot must feel that his cases are too few to establish the fact of its curing dysentery, although they are numerous enough to encourage its use.

Chloroform; its Properties and Safety in Childbirth. By E. W. Murphy, M.D. (Walton & Maberly.)—This is a judicious *brochure*, on an interesting subject, by one competent to give a sound opinion. Those who are making inquiries

will find safe counsels inculcated in this little volume.

LIST OF NEW BOOKS.

Andlau's (Baron) Key to the German Language, new edit. 3s. 6d.
Armstrong's (Rev. C. E.) Tar of the Last War, post 8vo. 5s. 6d. cl.
Boyle's Fashionable Court and Country Guide, April, 1855, 5s. 6d. bd.
Brown's (J. H.) Shipmaster's Guide, new edit. 12mo. 3s. 6d. swd.
Carter's Education in preventing Nervous Diseases, 8vo. 6s. cl.
Christian Treasury, 1854, royal 8vo. 5s. cl.
Cloncurry's (Lord) Life, Times, &c., by Fitzpatrick, 12mo. 6s. cl.
Combe's (G.) Elements of Phrenology, 8th edit. 12mo. 3s. 6d. bds.
Cumming's (Dr.) Sabbath Readings, 'Numbers,' 6s. 8vo. 4s. cl.
Cumming's (Dr.) Urgent Questions, 18mo. 2s. 6d. cl.
Curry's (Rev. G. H.) Spiritual Progress, 8vo. 8s. 2s. cl.
Cuvier's Animal Kingdom, new edit. 21s. plain; 31s. 6d. coloured.
D'Aulnoy's Fairy Tales, trans. by Planché, illust. post 8vo. 7s. 6d.
Floresta Española, por D. Antonio Garrido, 12mo. 6s. 6d.
Forger's Wife, by John Lang, cr. 8vo. 1s. swd.
Fresenius's (Dr.) Qualitative Chemical Analysis, 4th edit. 8vo. 9s. 9d.
George III.'s Court and Cabinets, Vols. 3 and 4, 4vo. 30s. cl.
Gibbs's (J.) English Gothic Architecture, folio, 23s. cl.
Glen's Poor Law Guardian, 12mo. 3s. 6d. cl.
Greenfield's (Rev. W. F.) Exercises in Arithmetic, 12mo. 3s. cl.
Grierson's (Dr.) Poetical Works, new edit. 4 vols. 12mo. 14s. cl.
Guesses at Truth, new edit. 2 vols. 8s. 8vo. 12s. cl.
Gunn's (Rev. D.) Three Scriptural Lessons on St. John's Gospel, 1s.
Hammond's (D.) Practical Stenographer, cr. 8vo. 5s. cl.
Handbook of Travel-Talk, new edit. 8s. 3s. 6d. cl.
Heirss of Haughton, or the Mother's Secret, 3 vols. 31s. 6d. cl.
Montgomery's (J.) Poetical Works, new edit. 4 vols. 12mo. 14s. cl.
Kohlbrügge's (Dr.) Miscellaneous Sermons, cr. 8vo. 2s. 6d. swd.
Light in the Dwelling, new edit. 12mo. 8s. cl.
Mackenzie's (Dr. R. J.) Memoir, by Drs. Begbie and Struthers, 1s.
Mann's (Rev. R. J.) Guide to Knowledge of Life, 18mo. 4s. cl.
Nicholson's (W.) Pearls of Great Price, cr. 8vo. 5s. cl.
Parlour Library, 'James's Castle of Ehirenstein,' 8vo. 1s. 6d.
Ragonot (L. C.) Vocabulaire Symbolique Anglo-Français, 4to. 5s.
Railway Lib. 'The Hour and the Man, by Miss Martineau, 1s. 6d.
Roe's (A. S.) A Long Look Ahead, cr. 8vo. 7s. cl.
Run and Read Library, 'Beatrice, by Miss Sinclair, 2s.
Stephens's (H.) Venter Deep Land Culture, 8vo. 4s. 6d. cl.
Sharpe's Road-Book for the Rail, cr. 8vo. 2s. 6d. cl.
Select Library of Fiction, 'The Ogilvies,' 8vo. 2s. bds.
Sabbath (The), by Sir W. Domville, Vol. 2, 8vo. 3s. cl.
Stowe's (Mrs.) Tales and Sketches of New England Life, 1s. & 2s. 6d.
Sutton's (Rev. T.) The Chelmsley Process, 8vo. 2s. 6d. cl.
Stanley's (Rev. A. E.) St. Paul's Epistles to Corinthians, 2 vols. 1s.
Simpson's (Dr.) Obstetric Memoirs and Contributions, Vol. 1, 16s.
Waterson's Manual of Commerce, new edit. 8s. 8vo. 2d. hf. bd.

[ADVERTISEMENT].—Quoted in the *Quarterly Review* of September, No. 190, pp. 171, 181, and 182, described as "very clever," and no over-statement, LONDON LABOUR and the LONDON POOR. BY HENRY MAYHEW. A Cyclopædia of the Social Condition and Earnings of Those that work, Those that cannot work, and Those that WILL NOT work; with Engravings of the Scenes and People described, copied from special Daguerreotypes by "BEAR." A few more Copies of this valuable Work, in Numbers, Cloth, and Half Morocco, will be ready on Monday next, price 15s. and upwards. GEORGE NEWBOLD, 8, Regent Street, Westminster; and of all Booksellers.—N.B. The main portion of the Work can be supplied without the section relating to Those who will not work, which is to some objectionable from motives of delicacy.

[ADVERTISEMENT].—MINIMUM PREMIUMS for LIFE ASSURANCE.—The following are the Life Premiums for Assurance of 100*l.* at death, charged by the SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY, on the terms stated below:—

Age	20	30	40	50	60
£. s. d.	£. s. d.	£. s. d.	£. s. d.	£. s. d.	£. s. d.
	1 8 6	1 16 7	2 9 7	3 10 9	5 7 9

These rates have been formed on the principle of applying the bonus additions to reduce the premium, on the assumption of a bonus at the rate of 1*½* per cent. If the addition be more, the Policy will be increased—if less, it will be diminished. The rates of addition at the investigations at 31st Dec. 1832, and 31st Dec. 1839, were 1*½* per cent.; at 31st Dec. 1846, 2 per cent.; and at 31st Dec. 1853, 1*½* per cent.

WILLIAM SPENS, Manager.
J. E. C. KOCH, Resident Sec., London.
43, Lombard Street, London, March 17, 1855.

LIFE ASSURANCE.

Reduced Rates for Short Periods.

Age.	One Year.	Seven Years.
£. s. d.	£. s. d.	£. s. d.
60	3 4 0	3 15 0
55	1 14 6	2 9 6
50	1 9 0	1 14 0
45	1 8 7	1 9 6
40	1 5 6	1 8 2

The above are extracted from the new Table of Rates for Assurance of 100*l.*, if death occur within one or seven years. Parties desirous of effecting such insurances will find these rates lower than those of other Offices.

WILLIAM SPENS, Manager.
J. E. C. KOCH, Resident Sec., London.
Scottish Amicable Life Assurance Office,
43, Lombard Street, London,
March 17, 1855.

ON THE HYDROGRAPHY OF INNER AFRICA.

THE great rivers of our globe are justly called the arteries of the countries to which they belong. They are, with few exceptions, the chief lines of intercommunication between their inhabitants, the highroads to civilization, the paths to geographical discovery. In Africa, therefore, as in other countries, they have claimed a great share of attention

and inquiry, although it is questionable whether, taken collectively, they will ever attain to such importance as the navigable waters of other continents,—for, hitherto, not one of the African rivers, except the Chadda, has, for some reason or other, offered a sufficiently practicable road into the interior. The reasons are obvious: the rivers of Africa, proverbially the land of deserts, have most of them to struggle for their very existence, being at one time filled to overflowing, at others dwindled down to insignificance, and even dried up altogether. Many, after rising in mountainous and humid regions of the interior, flow onward as mighty and vigorous streams,—but ere they reach the sea, are entirely lost in deserts of sand or salt-pans, which lie as a broad barrier between them and the sea-shore.

In viewing the important discoveries which in the last six years have been made in the interior of South Africa by Dr. Livingston, Oswell, Murray, Galton, Anderson, and others, an extensive system of rivers presents itself between 10° and 22° south latitude, running eastward; but what becomes of them ultimately,—whether they reach the Indian Ocean, and at what points,—whether they are lost in deserts, or whether they form an inland basin like the rivers of Central Asia,—is as yet unknown. As it depends on their eventual development whether these rivers will ever be of any practical benefit as highroads to civilization and commerce, it is of importance to inquire into this subject, and draw attention to it.

Taking a general view of the Hydrography of Inner Africa south of the equator, and proceeding from north to south, we first meet with the great Lake Nyassa, which during the last ten years has been represented as one of the most prominent features in that continent. Our information respecting it is as yet very imperfect. No European has ever seen it, and we know not whether it is the feeder of a river, or merely a recipient lake; but even in its present somewhat undefined outline, a length is given to it not less than that of the whole Adriatic Sea, or of the Baltic between Bornholm and Bomarsund, or of the German Sea between Ostend and Aberdeen. It is strongly affirmed, that Lake Nyassa is not drained into the Indian Ocean, and hence it would appear that the chief line of waterparting (*divisa aquarum*) in that part of Inner Africa runs comparatively close to the Indian Ocean, all the drainage west of the lake belonging to the Atlantic.

In the Cape Colony the line of waterparting is likewise close to the Indian Ocean, the sources of the Orange river being within 150 geographical miles of its shores; but between the Orange river and Lake Nyassa it recedes from the Indian Ocean, turns at both points almost due west, and, in a great semicircular line, reaches to within 130 geographical miles of the west coast, in the central table-land of the Ovaherero, explored by Messrs. Galton and Anderson. From this table-land, 6,000 feet high, all the rivers eastward run towards the Indian Ocean, including those discovered by Dr. Livingston as far as the country of Balonda, in about 11° south latitude. The area of the tract of country thus drained,—including the Limpopo, Zambezi, and the coast between the latter and Delagoa Bay,—I have calculated to be at least 800,000 geographical miles. How is the drainage of this extensive region effected? The surplus waters of Lake Ngami, received by the river Zougga, seem eventually lost in the desert before they reach the sea. The river Limpopo is by some carried into Delagoa Bay, by others into the Sabia and Govaro (in latitude 21° south); by others, again, into the Bay of Inhambane. I am inclined to subscribe to the latter opinion, as it is based on the knowledge of the Boers, who are probably better acquainted with that region than any other Europeans.

We now come to the large river of Sesheke or Barotse, the proper name of which seems to be Leambey. Dr. Livingston and his companions always speak of this river as being the upper course of the Zambezi, but without sufficiently stating the grounds on which this assumption is based. No European is known to have traced both rivers in the whole of their course, and thereby to have posi-

tively established their identity. The assumption has been strongly disputed by a well-known geographer of no small authority, who maintains that the rise and fall of the Zambezi are at a different season of the year from those of the Leambey, and thence infers that the two rivers cannot be connected. From what has hitherto transpired from Dr. Livingston, it appears, however, that within the basin of the Leambey the rainy season is from November to April, and he distinctly states that the waters of the Cholee, a tributary of the Sesheke, fell in June and July, while he draws particular attention to the contrast between that river and the Zougga, which rises at that identical period,—a circumstance of which no satisfactory account is given, and which is left to find its explanation in the existence of snowy mountains. Further to the west, in the regions explored by Messrs. Galton and Anderson, the true rainy season is between the first of January and the last of April. In February pools of rain-water are to be found everywhere; but by June all of them except the largest are dried up again. Now this seems to correspond well enough with the rise of the Zambezi, which river is quite full in March and April. Another reason for the non-identity of the two rivers has been sought in the elevation of the country, by concluding that the basin of the Leambey was much lower than that of the Zambezi collectively. But the Zambezi seems to have no great fall, and Zumbo, the furthest point on it known, is probably not more than 1,000 feet above the level of the sea, whereas Lake Ngami has been computed to be 2,825 feet, and the basin of the Leambey can scarcely be lower, if we may judge from Dr. Livingston's description of the country between Lake Ngami and Sesheke, as a "dead level." We may, therefore, reasonably assume that the Leambey at Sesheke is at least 1,000 feet higher than the Zambezi at Zumbo, which would more than allow it to communicate with the latter. It will be asked,—what becomes of this magnificent river, the Leambey, if it does not run into the Zambezi? It has been said that its waters are wasted, either on the surface by evaporation or beneath it through the sand and the fissures of the limestone rock, and that, if a complete channel was once cut to the sea, the country explored by Dr. Livingston would be better drained than it is. There seem to be instances, however, where this opinion is not borne out by the fact, as in the case of the Rio de la Plata, which, despite its complete channel to the sea, fails in draining quickly those very extensive marshes and lagoons of Xarayes and Ybera; so also the River Pripet and others. In this consideration of the subject the most favourable view is taken of Dr. Livingston's hypothesis, with which our own belief coincides,—but it must be owned that it rests on too slender and insufficient grounds to be considered satisfactory.

The question as to the identity of the rivers Leambey and Zambezi has by Dr. Livingston's last journey been rendered rather more doubtful and uncertain than otherwise. In this, his fourth journey, he took a number of valuable astronomical observations, of which the following are the chief points:—

	Lat. South.	Long. East Gr.
Kobé Station	20° 53' 14"	24° 52' 3"
Sekeleto Town	18° 17' 26"	23° 50' 9"
Nariel, chief town of the Barotse	15° 24' 17"	23° 5' 54"
Confluence of the Leola, or Lonta, with the Leambey ..	14° 10' 52"	23° 35' 40"

From these positions it will be seen that Dr. Livingston's discoveries have, in all maps published up to this time, been laid down incorrectly, namely, some 130 geographical miles too far to the east. Nariel lies about 630 geographical miles from the west coast of Africa at Little Fish Bay, and 1,030 miles from the east coast at Mozambique. Hence, the distance between the Leambey and Zambezi is also increased, and the gap of this complete *terra incognita* made 130 miles wider. The distance between the town of Sesheke and Zumbo, the furthest points on the two rivers known, amounts to no less than 450 geographical miles.

From the foregoing remarks the importance of exploring the region east of Sesheke will be evident,

and it is therefore gratifying to learn that Dr. Livingston intends, in the journey he is at present engaged in, to descend the Leambey and trace its entire course. From the singular power and endurance with which this gentleman is gifted, and the good fortune which has accompanied him in all his journeys, it is hoped that he may be successful in this the crowning effort of his labours.

Meanwhile another traveller has started on a journey towards the same region,—Dr. W. Bleek, who, it will be recollected, went out with the Chadda Expedition last year, but had to return home from Fernando Po, the climate of tropical Africa having affected his health. Nothing daunted by this failure, he has since directed his mind to African regions beyond the equatorial zone, and, having obtained an engagement in the service of the Bishop of Natal, has lately departed for that colony. His plan is, after staying a certain time in Natal, to penetrate northward in the direction of Lake Nyassa.

There is scarcely a region of Africa which offers so extensive and interesting a field to travellers as the eastern half of that continent between Natal and the equator, containing, as it does, the key to the Limpopo, the Zambezi and Leambey, the Nyassa, the sources of the Nile; while it comprises the celebrated country of Sofala, the snowy mountains near Mombas, and other highly interesting and important points. This region cannot be too much recommended to the lovers of travel and adventure, for reasons which I specially set forth in the *Athenæum* nearly two years ago [No. 1348]. "The novelty of the discovery of Lake Ngami drew numbers of people to the spot, and hardly a year had passed away after its existence was made known before its shores swarmed with civilized men." It is to be hoped that such a stream of travellers will also before long be directed to the very promising regions of East Africa.

AUGUSTUS PETERMANN.

March 31.

FOREIGN CORRESPONDENCE.

Paris, April 20.

I continue my notes on the present position of Art in Paris, and conclude my remarks on the genius of Adrien Guignet. The artist who wishes to live by the labour of his hands finds it impossible to preserve simple manners, a sincere mode of thinking, his personal tastes, independent habits, and individual character. He must paint like nobody else and live like everybody else. He must have a handsome *atelier* and fine carpets. His toilette is criticized,—and his tailor must be known. The public promenades must see him at certain hours, when useful nods and flattering signs of recognition are to be gathered. He must wear white gloves and be profusely present in the *salons* and the theatres,—and he must listen with respect and humility to the lords of the press in club and divan, painting their portraits and adorning the boudoirs of their favourites. The Jockey Club must be no stranger to him,—nor must he shrink from a hand at *lansquenet* when the sort of a banker holds the cards against him.

Adrien Guignet was neither "original" nor adroit. He painted as many others had painted before him,—and did not behave as everybody around him behaved. A dutiful disciple of the great masters and an attentive observer of nature, his assiduous study had one main object—to find the secret of the picturesque phenomena of vision and the laws which regulate the great aspects that Art deals with; but it had also led him to discover, in the works which public admiration has classified as masterpieces, the means which great men had created as it were to translate nature and their own impression thereof. Giorgione, Titian, Rembrandt, and Claude in the Museum explained to him their admirable theories—confirmed by personal reminiscences which he never allowed to die away; for always, at intervals, like a true artist, he made it a point of penetrating boldly into unexplored "interiors"—refuges of poverty and labour—of wandering between boundless horizons, over countries neglected by guide-books, inquiring of Nature whether her most assiduous students

had well understood her. The result was, that his veneration for the Masters increased, not diminished, daily; and he learned to think that they had accumulated for the student in their works a treasure of truths, an arsenal of power. It was his ambition to paint as they had painted,—the reverse of the programme of all the popular artists of the day.

Amidst his poverty and wanderings Guignet loved to dream of times gone by, to call up in his mind the manners of ages past, and become learned in the antiquities of Central Gaul. He dug up old traditions and old relics, old legends and old medals, old songs and old vases, all round about Autun, that ancient Roman municipality, and amidst the Druidical oaks of the Morvan. He entered, as it were, into communion of spirit with Salvator Rosa; and his labours for some time became strongly impregnated with the wild and fantastic character of that master. But, whilst he conformed to such men by identity of views and means, he was completely distinct from them by the individuality and novelty of his undertakings. It was impossible for him to plagiarize or even to imitate. If he followed, it was as a son or as a comrade,—not as a servant or a parasite, borrowing or stealing. No one has any claim to make on his works. They are all his own,—the spontaneous production of his genius, guided, strengthened, and vivified by a constant observation of nature. Yet certain great masters of Art, chosen by his filial veneration, would no doubt recognize in his works Truth and Beauty as they once appeared to them. Guignet, succeeding them in time, was, as it were, the product of the principles which had been revealed to them; but which if he had not studied as faithfully as they, he could never have so completely understood and appropriated. It will be in vain to insinuate, now that Guignet is dead and in nobody's way, that because he partook so much of the dominant character of the great masters he studied, we may deny him the merit of real originality according to our definition. To do so would be to manifest great carelessness and great ignorance of the history of Art. For who can deny that at Venice, for example, from before the period of the Bellini to the very end—including Giorgione, Titian, Paul Veronese, Tintoretto—the whole school displayed a wonderful community of principles, of methods, of modes of execution, and of physiognomy? Yet, is their originality disputed? At Florence, did not every one travel by the same road, wearing the same aspect and the same demeanour? Yet, is it difficult to see that Massaccio cannot be confounded with Signorelli,—that Andrea del Sarto is original by the side of Fra Bartolomeo,—that Michael Angelo and Da Vinci are not the same? At Antwerp, at Amsterdam, can different observations be made?

There is an illustrious painter—not a hundred miles off—who systematically adopts results already obtained, or mixes two or three together, and yet enjoys in France the reputation of great originality. An observer discovered his mode of proceeding,—and one day being alone in his company ventured to make the remark. "Very true," replied he quietly, "I certainly do take heads wholesale—an easy method—but I give them a *false nose*, and know how to do it cleverly. Who the deuce can recognize them? One or two spectated inquirers like yourself. How many are there?"

Guignet never found it necessary to put a *false nose* on the faces he painted. He invented for himself. He worked honestly and with prodigious perseverance. He constantly went forth to consider the marvels of Nature; and having discovered the secret of the hour when she exhibits herself in all the intensity of her character and all the strength of her expression—and learnt how to choose, as it were, his look-out whence to observe the physiognomy of the visible things which are fit objects of painting—he knew how to magnify in a direction indicated by his own personality the sights which he saw mentally, clothed in a meaning derived from all the narratives he had heard, all the pages over which he had silently meditated. How different this from the process of Daguerre, or of the servile imitator of vulgar Nature! By such means an artist, nailed by poverty to the place where he

vegetates, but who obstinately observes, whilst tourists with handfulls of gold wander inattentively, may produce works surpassing in grandeur any special scene that Nature could have exhibited to him. I saw the other day the works of an American artist, who had, no doubt, carefully studied the even lithographs of London and Paris. He was exhibiting to men of the world, admirers of course, views, that failed to produce any impression of grandeur, of Niagara and the shores of those great Transatlantic rivers that roll like ocean currents across interminable savannahs. What were they worth beside the wild rocky scenes, the terrible cataracts, the mighty water-expanses of Guignet, who had never witnessed more than what may be called the domestic aspects of Nature; but who, profoundly versed in all the calculations of reduction and of aerial perspective, knew how to magnify the smallest objects and elevate a tiny part into the dignity of a vast whole?

When Guignet, in some of his wanderings, had chosen a scene and transformed it in his ardent imagination, clothing it with a formidable or poetic character, his general knowledge, his particular acquaintance with the costumes of old, with ancient armour and ancient accessories, his memory of legendary lore and of history filled it with the action and the figures most appropriate and most in harmony with it; and the impressions produced by the wild landscape increased within him at sight of the strange, terrible, and fantastic personages that seemed to live there a real and passionate life,—treading along the roads, climbing the mountains, leaping the ravines, reclining under the trees, or crouching amidst the heather for purposes of crime or virtue, armed with the dagger or the torch, pursuing or flying, resting or lying in wait, indulging in hope, or intent on study, full of love or hatred, of remorse or of despair.

Allow me space for a concluding anecdote, which brings me back to the President of the Permanent Commission of Fine Arts. In 1848, Guignet was rapidly descending the slope that leads to utter despair. He had reached such a point that he was obliged, every day, to go and beg a dinner of a friend;—for such men, fortunately, do preserve a friend or two. He was returning, one evening, to his *atelier* in company with his host. The porter presented a letter, and demanded three sous. Guignet refused it, saying he would keep the few sous he had to buy tobacco for the morrow. His friend pressed him to take the letter, but he was obstinate. Who could write anything pleasant to him?—"Well," said his friend, "I will buy your letter, and know your secret."—They went up together, several stories, of course; and the seal was broken. The letter contained but few words; but how important! It was from the Duc de Luynes, announcing that he had heard of the unknown man of genius, and soliciting the honour of an interview! B.

OUR WEEKLY GOSSIP.

WE believe that all uncertainty as to the opening of the Palace of Industry in Paris on Tuesday next is at an end. The Palace will be inaugurated, even if it should be found necessary to close it next day, to re-open in three weeks. Queen Victoria will not, we believe, return the state visit of the Emperor and Empress in time for the inauguration, nor will this event take place so long as Parliament shall remain sitting, unless for some extraordinary political reason. If Napoleon shall insist on going to the Crimea, and if Lord Palmerston shall deem it sufficiently important to sacrifice precedent and convenience to prevent that expedition, the Queen may go to Paris early in the summer. Otherwise, Her Majesty's visit is not likely to occur before September.

Many candidates are in the field for the chief office left vacant by the death of Sir H. T. De la Beche. We understand, however, that Sir Rodrick I. Murchison is likely to receive the appointment, as a means of reconciling rival pretensions and satisfying the desires of the scientific world.

The first floral Exhibition for the summer season of the Horticultural Society is announced to take place at Gore House, on Wednesday, May 16th,

as an experiment. With a rather late spring, the advantage of being three miles nearer to Hyde Park Corner will probably be found a great attraction to the show.

In the absence of any Government determination with reference to the Chair of Natural History at Edinburgh, the College Committee of the Edinburgh Town Council have made arrangements with Professor Traill for the teaching of the Natural History Class during the summer session.

The Royal Society has lately received a very important and valuable addition to its collection of manuscripts by a present, from Mr. Edwin Canton, of a series of autograph letters from Dr. Franklin, Priestley, Sir Joseph Banks, Howard, and other well-known persons. Mr. Canton has had this collection in his possession since it was given to him, when he was about fourteen years of age, by his uncle, Mr. Nathaniel Canton. The letters were formerly in possession of Mr. John Canton, F.R.S., to whom several of them are addressed. One from Sir Joseph Banks is extremely interesting, as it accompanies a "piece of the new elastic substance" (India rubber) which Sir Joseph gave to Mr. Canton. The collection, which Mr. E. Canton has placed in the archives of the Royal Society, at the suggestion of Mr. Weld, is in excellent preservation.

"Of the Crystal Palace in the Villa Reale," writes a Correspondent in Naples, "we hear nothing more, though during the summer there was a great deal said on the subject, and some expectation was entertained that the project would have been carried into effect. The site was found, I believe, to be too narrow,—or, as is more probable, the whole thing originated in the inflated ambition of a frog attempting to imitate a bull, which afterwards has corrected. A much more feasible undertaking, however, and more proportioned to the capabilities of a small State, has been advertised for execution on the 30th of May. It is called an Exhibition of the Fine Arts, and foreigners as well as natives are invited to contribute. The works are to be delivered at the Museo-Borbonico, from the 1st to the 20th of May, and confided to the care of Cavaliere Quaranta, our distinguished antiquary. The Commission of Examination has, however, signified its intention to reject works of inferior artistic merit, or such as offend against morality, religion, and good manners, or such as have been exhibited before. Such conditions as these in the present high morality state of feeling existing in Naples might, if rigidly applied, check the ambitious efforts of many an aspiring artist,—and we would recommend as a precautionary measure the following questions to be proposed to the Minister of Police. Since the *ballerine* of San Carlo are commanded to appear in green tights, what costume or colour will be permitted to a Nymph or a Goddess? As the books of fashions are prohibited until the plates are made decent and pretty behaved, will high dresses and long sleeves be *de rigueur* for a Diana? Surely a Maddalena would be in the extreme of licentiousness, and Gibson's coloured Venus be denounced as the creation of a most disordered fancy. Nymphs and Saints with dishevelled locks and half-disclosed charms would be shown the door as highly improper, whilst the Figurantes in classic taste and style would be declared no better than they should be. We throw out these hints as worthy of the attention of the artist, and not altogether in joke,—for as many a bookseller has ordered books which have been condemned as prurient, so many a young artist may find to his cost that the labour of many months will be excluded as offending against 'morality, religion, or good manners.'"

Our statement of last week, that the appointments of Sir Charles Eastlake as Director, and Mr. Wornum as Secretary, to the National Gallery still lacked official confirmation, is now indorsed by Lord Palmerston. In answer to a question put by Lord W. Graham, the Prime Minister admitted that "the whole of the arrangements are still under consideration." We are not surprised—not sorry—to receive this assurance that our information was correct. Lord Palmerston has still the power to arrest that accumulation of offices in a single hand, the premature announce-

ment of which drew down so many sharp criticisms.

Barbarians are always tender on the question of genealogy; and we are not surprised to hear that the only sign of intellectual activity in St. Petersburg is the publication, by Prince Dolgorouky, of two volumes, exhibiting the genealogy of the entire body of the Russian nobility, with particulars as to the origin of their families, the part they have sustained in history, and the services they have rendered to the throne and the country. Connemara swine-feeders and Highland drovers exhibit something of the same jealous care for the family credit—just as the vulgarst of vulgar Cockneys rejoice over the merits of a Wardour Street ancestry. Alexander the New smiles blandly, it is said, on this vindication of Russian nobility.

The King of Prussia has presented to the Library of Trinity College, Dublin, 'Denkmaler aus Aegypten und Aethiopien,' by Prof. Lepsius, and 'Alt. Christliche Baudenkmale von Constanti-nople vom V. bis XII. Jahrhundert,' by Prof. Salzenberg.

Some interesting researches about the *national tree* of the Germans have recently been offered to the public by Herr Bader, of Carlsruhe. Mentioning in one of his last works ('Das Land und Volk von Baden'—'The Country and the People of Baden') the ancient and noble Suabian race of *von Bodmann*, whose armorial bearings are three green lime-tree leaves, Herr Bader asserts and proves that not the oak, celebrated so much and so often in modern German song, but the lime was the national tree of the old Germans. "The oak," says Herr Bader, "was principally honoured by the Celts and the Northern nations, and its denomination as the German tree *par excellence* did not come into use before the 'Bardenlieder' of Denis and Klopstock. Our forefathers planted the lime-tree everywhere,—before their homesteads, their towns, and their villages,—on their market-places and their burial-grounds,—near their churches and chapels,—on their frontiers and other spots which they wished to enjoin to the memory of posterity. Under the broad, shady, and odorous roof of the linden-tree they assembled on all possible occasions. There the children played,—there the young people danced to the tunes of the wandering ballad-singer,—there the father of the family rested in the midst of his domestic circle,—there the rural judge performed the functions of his office. 'Under the linden-tree,' it is always said in the records, in the songs and the sagas of our ancestors. Under a linden-tree Siegfried, the hero of the Nibelungen, slew the dragon; a linden-leaf, falling between his shoulders when he weltered in the blood of the killed monster, caused the vulnerable spot which afterwards became fatal to him,—and under a linden-tree, when drinking from the fresh spring, he was murdered by Hagen. Under a linden-tree the dragon of the Syrian Rachaol swallowed the Lombard King Otnit,—and under a lime, too, the dwarf Laurin ravished the beautiful sister of Dietlieb of Styria. The town of Lindau, on the Lake of Constance, was called after the linden-trees which, centuries back, shaded the site of the town when it was only occupied by a nunnery; and when King Conrad the Third, after his victory over the Guelphs, rebuilt the demolished town of Ulm, the inhabitants, in commemoration of the happy event, planted their churchyard of All Saints with limes, some of which were still standing as late as 1538. The sweet linden-tree, with its broad and refreshing shade, with its soft and deep green leaves, was praised by the greatest of our old poets,—by Walther von der Vogelweide, Wolfram von Eschenbach, and Gottfried von Strassburg; and the Minnesingers, who never with a single word mention the oak or the oak-leaf, speak a thousand times of the lime. The lime-tree leaf, on account of its shape (similar to that of a heart) and of its warm green colour, has become quite a symbol with our nation. As a symbol we find it on coats of arms, on pictures and playing cards; it was the favourite ornament of various garments, of monuments, and of many implements of war and peace. It indicated the estate of the freeman and of the landed proprietor,—whereas the acorn was the

distinguishing mark of the serf, of the man without landed property."

A blow, which our readers will have expected, has fallen on the French Academy. M. Guizot, and the political celebrities who have aided him to turn the Chair of the Academy into a political tribune, and by selecting candidates from the old political parties instead of from distinguished literary circles, have prepared a justification for Imperial interference. Napoleon has entered the Academy, and by an unquestionable act of authority has silenced its members. By an Imperial decree, ten new members have been introduced into the sacred body, under the pretence of founding a new section, of "Politics, Administration, and Finance"; so that the Government has now secured, it is said, a majority of voices. It is further announced, that the Academy must adapt itself to the new forms of society,—in fact, must become, as under the first empire, a Napoleonic institution. In the spirit of the new system in France, the Emperor offers the Academy a material compensation for the loss of its liberty—in the form of a prize of 400*l.*, to be adjudged triennially to the work most deserving of reward. The right of speech is taken away, and a hundred and thirty odd pounds a year are given back in exchange. Such is the barter now prevalent in France!

"I perceive," says a Correspondent, "that you mention a new work professing to be by Alexandre Dumas, called 'Les Mohicans de Paris.' This novel is not really by Alexandre himself, though it has appeared in his paper, the *Mousquetaire*, signed with his name. The author is M. Bocage."—Very likely. We have so often warned our readers, specially and generally, against the inference that a book bearing the name of Dumas must necessarily be written by M. Dumas himself, that we consider it unnecessary to repeat the warning every time we see his name in print. M. Dumas is a trader in letters; and his name appears on title-pages like that of the printer or publisher.

A first Report on "The Post Office" has just appeared. From it, among other interesting facts, we learn that "during the last year the measure for establishing a low and uniform rate of postage between the mother country and the Colonies was extended to Canada, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, Bermuda, Malta, Gibraltar, Ceylon, Hong Kong, St. Helena, the Gold Coast, British West Indies, (Turk's Island excepted), New South Wales, Victoria, and South Australia. With the exception of India, the Cape of Good Hope, Mauritius, and Van Diemen's Land, there is now no important dependency of Great Britain to which the reduction has not been applied." During the year, France has diminished the rate of postage from 10*d.* to 4*d.*; China from 1*s.* to 6*d.*; Monte Video from 2*s.* 7*d.* to 1*s.* Some progress has been made in a treaty for the reduction of postage with Sardinia. The communication on the same topic with Portugal and Spain have been less satisfactory than was expected. By aid of the Foreign Office information has been obtained from thirty-two foreign governments as to the present state of Postal Reform.

"Of these there are only two, viz., Sweden and Equator, in which no material improvement has been made since the introduction of Penny Postage into the United Kingdom, in 1840. In Russia, Spain, and Chili the lowest rate (which is generally applicable to the great majority of letters) has been reduced to sums above twopence, but not exceeding fourpence; in seven other countries, viz., France, United States, Bavaria, Hanover, Portugal, Sardinia, and Brazil, the lowest rate has been reduced to sums above a penny, but not exceeding twopence; and in Belgium and Denmark it has been brought down to a penny, though in Belgium this rate is confined to distances not exceeding nineteen miles. In the United States the postage for distances of 3,000 miles and under is 14*d.*; and, for greater distances, 3*d.*. In twenty-three countries postage stamps have been introduced. In two, viz., Russia and Brazil, prepayment of postage is compulsory; in twelve prepayment, though not compulsory, is encouraged; the postage, when not prepaid, being greater. In eighteen the gross receipts of the Post Office are now at least equal to what they were before the reduction; and in two others the amount is nearly the same. In three the profits are nearly as large as before the reduction; and in nine the former amount has been fully regained. In most of the countries embraced in this return the Post Office undertakes the conveyance of passengers as well as of mails; and the receipts, expenses and profits arising from passengers are generally mixed with those relating to letters, and are consequently included in

the sums entered in the column headed 'gross receipts, expenses and profits of the Post Office,' it not having been found practicable to state them separately. Again, in some instances, a large expense is incurred in the delivery of letters; while in others, as in that of the United States, the Post Office does not undertake the delivery. Moreover, in some countries, as in France, the conveyance of the mails by railway is attended with little cost to the Post Office, in consideration, probably, of assistance given by the Government in the construction of railways; while in others the Post Office has to bear the full expense."

—On the whole there is reason to be satisfied with the progress of this great reform at home and abroad, though there is still much to hope for and much to do. The International Postage Association has not laboured in vain.

Closing of the Exhibition.

BRITISH INSTITUTION, Pall Mall.—THE GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five, and WILL CLOSE on SATURDAY, May 12. Admission 1*s.*; Catalogue 6*d.* GEORGE NICOL, Secretary.

SOCIETY OF PAINTERS IN WATER-COLOURS.—The FIFTY-FIRST ANNUAL EXHIBITION WILL OPEN, at their Gallery, 5, Pall Mall East, near Trafalgar Square, on MONDAY NEXT, April 30.—Admission, 1*s.*; Catalogue, 6*d.* JOSEPH J. JENKINS, Secretary.

PHOTOGRAPHIC EXHIBITION.—An Exhibition of the finest English, French and Italian Photographs IS NOW OPEN at the PHOTOGRAPHIC INSTITUTION, 108, New Bond Street. Morning, from 10 to 5. Admission, with Catalogue, 1*s.* Evening, from 7 to 9. Admission, 6*d.*

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—The Railway at Balaklava, Battle of Inkermann, Storm in the Black Sea, Battle of the Alma, Cavalry Charge at Balaklava, Pictorial Map of Sebastopol, &c., are now exhibited in the Diorama, illustrating "Events of the War." The Lecture by Mr. Stoeckeler, Daily at 3 and 5.—Admission, 1*s.*, 2*s.*, and 3*s.*

SEIGE of SEVASTOPOL.—GREAT GLOBE.—All the New Approaches and Siege Works are placed on the MODEL of SEVASTOPOL, including Inkermann, Balaklava, and the Tchernaya, at the GREAT GLOBE, Leicester Square. Open from 10 A.M. to 10 P.M. Admission, 1*s.* to the whole building. Children and Schools, Half-price. A large Collection of Russian Trophies from Bomarsund, &c.

ZOOLOGICAL CONCERT.—LOVE'S ENTERTAINMENTS. VENTRILOQUISM EXTRAORDINARY.—REGENT GALLERY, 69, Quadrant.—Every Evening at 8, except Saturday, Sunday, at 3.—Monday and Tuesday, Mr. LOVE, universally accepted as the first Dramatic Ventriiloquist in Europe, will present his NEW ENTERTAINMENT, called 'THE LONDON SEASON.' Wednesday, Thursday and Friday, the entertainment, LOVE IN ALL SHAPES, to be followed by a ZOOLOGICAL CONCERT, and LOVE'S LABOUR'S LOST. Saturday, at 8, LOVE IN ALL SHAPES, and other entertainments.—Pianoforte, Miss Julia Warman.—Stalls, 3*s.*; Area, 2*s.*; Gallery, 1*s.* Tickets at Mitchell's, 33, Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 8.

SCIENTIFIC

SOCIETIES.

ROYAL.—April 19.—The Lord Wrottesley, President, in the chair.—The Earl of Hatherton was admitted into the Society.—A paper was read 'On the Descent of Glaciers,' by the Rev. H. Moseley.

GEOLOGICAL.—April 18.—W. J. Hamilton, Esq. President, in the chair.—Mr. J. G. Blackburn and the Rev. W. C. Kendall were elected Fellows. —'Notice of Fossils from the Keuper of Pendock, near the Malverns,' by the Rev. W. S. Symonds. —'Notice of the St. Cassian Beds in the Vorarlberg,' by Prof. Merian. —'Notice of Cretaceous Rocks in Natal,' by Capt. R. J. Garden.—The discovery of these fossiliferous rocks near the Umfufuna River, on the coast of South Africa, was made by Mr. H. F. Fynn, in 1824. About three miles to the southward of the river commence certain excavations in the cliffs, formed by the action of the sea, and called by the natives "Whitemen's houses." The caves extend about 800 yards. Capt. Garden collected a suite of fossils from the walls of the caves and from the adjoining cliffs. Fossil trees are seen at low water on a reef of flat rocks near these caverns. Half-a-mile beyond the caves the Umfufuna River is crossed by the fossiliferous strata, which, in Capt. Garden's opinion, extend probably as far as the Umfufuna River.—'Description of some Cretaceous Fossils from Natal,' collected by Capt. Garden, by Mr. W. H. Baily.—'Notice of the Geology of Natal,' by Dr. P. C. Sutherland.—Sandstone and shale, alternating with and traversed by trap rocks, constitute the main features of the Natal district, and form table-hills of considerable elevation and extent. Impressions of leaves and stems, together with Saurian bones, are found in the sandstone and shale, which also contain thin seams of coal, some

of which are worked to supply the colony with fuel. The sandstones are occasionally overlaid by volcanic rock (trachyte), inclosing fragments of the older rocks, which has scored and grooved the underlying surface. A huge dyke of porphyritic granite traverses the country from N.E. to S.W. The author also noticed the sand-dune blown up on the coast by the wind, and hardened into a building-stone by infiltration of carbonate of lime in solution. This stone contains fragmentary sea-shells blown up with the sand, as well as perfect land-shells which lived among the bush on the sand-hills. The copper ore of Natal appears to be a malachite diffused through contorted gneiss rock having a syenitic character.

ASTRONOMICAL.—March 9.—M. J. Johnson, Esq., President, in the chair.—Messrs. J. B. Dancer, W. Erck, and R. J. Mann, M.D. were elected Fellows of the Society.—‘Account of Operations connected with the Advancement of Commercial Astronomy in Australia,’ by Mr. R. L. J. Ellery.—‘Account of the Steps recently taken by Her Majesty’s Government for Promoting the Regular Observation of Meteorological Phenomena at Sea,’ by Capt. R. FitzRoy, R.N.—‘On the Application of Photography to Astronomical Observations,’ by Sir John F. W. Herschel.—I consider it an object of very considerable importance to secure at some observatory, and indeed at more than one, in different localities, daily photographic representations of the sun, with a view to keep up a consecutive and perfectly faithful record of the history of the spots. So far as regards the general delineation of the whole disk, and the marking out on it, in reference to the parallel to the equinoctial passing through its centre, the places, sizes, and forms of the spots, there would need, I should imagine, no very powerful telescope—quite the contrary; but it should be equatorially mounted, and ought to have a clock motion in the parallel. The image to be impressed on the paper (or collodionized glass) should be formed not in the focus of the object-lens, but in that of the eye-lens, drawn out somewhat beyond the proper situation for distinct vision (and always to the same invariable distance to insure an equally magnified image on each day). By this arrangement, a considerably magnified image of the sun, and also of any system of wires in the focus of the object-glass, may be thrown upon the “focussing-glass” of a camera-box adjusted to the eye-end of a telescope. By employing a system of spider-lines, parallel and perpendicular to the diurnal motion, and so disposed as to divide the field of vision into squares, say of 5' in the side, the central one crossing the sun's centre (or rather, as liable to no uncertainty, one of them being a tangent to its lower or upper limb), the place of each spot on the surface is, *ipso facto*, mapped down in reference to the parallel and declination circle and its distance from the border, and its size measurable on a fixed scale. If large spots are to be photographed specially with a view to the delineation of their forms and changes, a pretty large object-glass will be required, and the whole affair will become a matter of much greater nicety; but for reading the daily history of the sun, I should imagine a 3-inch object-glass would be ample. The representations should, if possible, be taken daily, and the time carefully noted. As far as possible, they should be taken at the same hour each day; but in this climate, a clear interval, occurring when it may, had better be secured early in the day. Three or four observations in tropical climates, distant several hours in longitude (suppose 3, at 8^h distance in longitude), each recording at or nearly at noon, would, when the results were assembled, keep up a continuous history of the solar disk. With regard to proper preparation of paper, or the use of collodion acid, the photographic art is now so much advanced, that no difficulty can arise in fixing upon fitting preparations, or the manipulations necessary for multiplying them. But it would be very requisite that many impressions of each day's work should be taken and distributed, and an interchange kept up among observers.—‘Observations of Comet I. 1855,’ by Dr. Donati.—‘On the Constitution of the Atmosphere, upon which Laplace's Table of Astronomi-

cal Refractions is founded,’ by Sir J. W. Lubbock, Bart.—‘Remarks on Mr. Powell's Elements of the Orbit of 70 Ophiuchi,’ by Mr. I. Fletcher.—‘On a Telescopic Appearance seen in the Moon,’ by Mr. R. Hart.—‘Description of an Apparatus for the Mechanical Imitation of Precession,’ by Mr. T. W. Burr.—‘Note on the Method of computing the Moon's Parallax,’ by Mr. Sang.

SOCIETY OF ANTIQUARIES.—April 19.—F. Ouvry, Esq., Treasurer, in the chair.—Mr. G. Roots exhibited a curious shoe-horn, bearing the date 1593.—Mr. David Laing presented several proclamations to the Society's collections.—Mr. Parker concluded his account of the Architectural Peculiarities of Churches in France.

ROYAL SOCIETY OF LITERATURE.—April 18.—Sir J. Doratt, V.P., in the chair.—Dr. P. Colquhoun read a paper ‘On the Topographical History of the Tauric Chersonese,’ in which he gave an account of all that is known of a district so anxiously watched as the centre of the great struggle now in progress; and traced its geographical and topographical history from the earliest period down to the present time.

INSTITUTION OF CIVIL ENGINEERS.—April 24.—J. Simpson, Esq., President, in the chair.—The paper read was, ‘On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams,’ by Mr. J. Barton.

ROYAL INSTITUTION.—March 23.—H. B. Jones, M.D., in the chair.—‘On (so-called) Catalytic Action and Combustion, and Theories of Catalysis,’ by the Rev. J. E. Ashby.

SOCIETY OF ARTS.—April 18.—T. Winkworth, Esq., in the chair.—The paper read was ‘Notes on the Revision of Architecture in connexion with the Useful Arts; with some Account of the Ventilation of St. George's Hall, Liverpool,’ by Dr. D. B. Reid.

April 25.—Robert Lowe, Esq., M.P., in the chair.—The paper read was, ‘On Public Works for India, especially with reference to Irrigation and Communication,’ by Lieut.-Col. Cotton.

MEETINGS FOR THE ENSUING WEEK.

MON.	Zoological, 1.—Anniversary. —Institute of Actuaries, 7.—‘On the Valuation of Public Securities,’ by Mr. Edwin James Farren, V.P.
TUES.	Horticultural, 1.—Anniversary. —Institution of Civil Engineers, 8.—Discussion upon Mr. Barton's paper, ‘On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams.’
WED.	Royal Institution, 2.—Annual Meeting. Society of Arts, 8.—‘On Juvenile Crime as it affects Commerce, and the best means of repressing it,’ by Mr. J. E. Symonds. —Geological, 8.—‘On the Physical Geography and the Pleistocene Phenomena of the Cotswold Hills,’ by Mr. E. Hull.—‘Notice of the Occurrence of Coal in the Gulf of Nicomedia,’ from the Foreign Office.—‘On the Authracitic Schists of the Lower Silurians in the South of Scotland,’ by Mr. R. Harkness.
THURS.	Royal Institution, 3.—‘On Voltaic Electricity,’ by Dr. Tyndall. Society of Antiquaries, 8.
FRI.	Royal Institution, 3.—‘On Christian Art,’ by Mr. G. Scharf, jun. Archæological Institute, 4. —Royal Institution, 8.—‘On Gunpowder and its Substitutes,’ by Dr. J. H. Gladstone.
SAT.	Asiatic, 2. —Royal Institution, 3.—‘On Electro-Physiology,’ by Dr. Du Bois-Reymond.

FINE ARTS

NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

THE twenty-first Exhibition of this Society is now open at the Gallery in Pall Mall. It consists this year of three hundred and forty-eight pictures of more than ordinary merit.

We do not say that there are not one or two specimens of simpering insipidity and vapid “sap-greenery,” for to err is human; but we do say that we have seldom seen so many water-colour paintings of such careful finish and equal merit collected in one room. We suppose there is a steady daily consumption in the Art-market of “Flower Pieces” and “Dead Ducks,” just as there is, for the present, of “Widows of the Alma” and “Charges of Light Cavalry.” The landscapes are more than usually varied, and of a richer and

deeper tone,—while the figure-pieces are as successful as they are ambitious. We are glad, too, to see the body-colour used boldly, but in less open rivalry of oil; and rejoice to welcome once more Messrs. Haghe, Corbould, and Warren, in all the strength of triple alliance,—while in landscape Messrs. Vacher, Rowbotham, M'Kewan, and Mole, present us with not merely the dry skeleton of nature, but its living poetry. When we look round such an Exhibition as this, and listen to the intelligent criticisms of amateur spectators, we feel convinced that one of the great hopes for English Art is the progressing education of the rich and picture-buying class, through the increased taste for water-colour painting. The study of Greek Art is debarred save to a few; oil-painting is too laborious and too tedious; but water-colours are open to all; and will, we hope, ere long, form part of, at least, every lady's education.

Mr. Corbould has been this year more than usually industrious; but if an artist does not hurry or turn mere manufacturer, we never regret the versatility or fertility of his genius. Perhaps his most perfect work is *The Village Stile* (No. 7), although the subject is less picturesque than his *Young Lochinvar* (266). Commend us to Mr. Corbould for beautiful faces. ‘The Village Stile’ represents a peasant-girl, somewhat of the drawing-room order of peasant, resting her milk-pail on a stile, half listening for a lover's footstep;—a chance—quite a chance—having brought Lubin there at the very same moment. The girl has a cheek of that sunny crimson which a hay-making or two has browned to the hue of the fairest possible brunette. She breathes of love and spring and morning; but she has scarcely that “sweet neglect” about her dress that gives the grace of simplicity that old Ben Jonson held to be so delectable. We cannot praise too highly the delightful ease and firmness of the foliage of Mr. Corbould's background; it could scarcely be carried further, at least in this manner. The colour is rich and soft, and glowing; and the drawing of the figure careful, though inclined to “stalking.” The ‘Young Lochinvar’ is a spirited rendering of one of the most gallant elopements ever carried out on paper. The bride, all saintly and *point device* in white satin and jewelled hair, comes in strange contrast to the booted and eager cavalier, looking back at the angry train of jilted suitors passing out of the castle-gate and preparing for the pursuit. The background is excellently chosen, and is just the place Scott must have thought of, with its rocky stream, covert of sapling ashes, and the line of hills embattling the horizon. We do not wish to be hypercritical, when all is so truthful and poetical, but we think the horse would scarcely be so “embossed” with foam after a burst of only a few hundred yards. The broad slip of foreground to the left is mere coloured paper, and needs elaboration,—which cannot destroy breadth when the centre figures have any life, and surely could not detract from the fair Helen and the young Paris of Cumberland. Mr. Corbould, with his usual predilection for female beauty, has sacrificed the face of Lochinvar for that of his bride; but there was great scope for expression in that of the latter, for mischievous glee at his success, love, and determination, must be all there.

Mr. Corbould's more ambitious attempt, *Paul and Silas in Prison at Philippi* (229) is, we think, his least successful work, admirable as it is for breadth, colour, and manipulation. In the first place, the composition is rambling; in the second, there is an evidence of strain which is unpleasant. An earthquake need not necessarily shiver massy beams into ten thousand splinters, nor flutter out the gaoler's vermilion cloak with the fury of a sou'-wester. There is also a want of marked and dramatic expression, and this want is a peculiar failing of Mr. Corbould's. The whole is rather a clever experiment, than a thoughtful or religious work; and religious subjects can only be treated religiously.

Mr. L. Haghe gives us the result of his Italian visit in crowds of shaven monks and bronzed peasants,—all executed with masterly ease and power, and full of the genial influence of the warm South, its superstition, indolence, and gaiety.

His *Post-Office at Albano* (78), though it has no hamour, reminds us of Sterne. The postmaster is seen through the grated window sorting the letters;—a brown-frocked monk is eagerly eyeing him, while another is watching (with a calm absorption, very touching in its unconscious moral) an Italian mother with her swaddled *bambino*;—a second child eyes the priests with an awe that to English minds appears strangely misdirected. *Le Bénitier at St. Peter's* (63) is less pleasing both in colour and composition owing to the scrambling Cupids, with their voluminous drapery, supporting the *bénitier*,—too much breaking up the groups of praying pilgrims, whose faces otherwise would receive their proper share of attention from our eyes, so full are they of that drowsy, narcotic credulity which calms only because it deadens the mind. But Mr. Haghe's crowning piece is his *Festa at St. Peter's* (248). In the foreground is the bronze statue of St. Peter, crowned and robed. Peasants are kissing its feet, and crowding round the pedestal, while beneath sits a priest reading the service and receiving offerings. The whole picture is a scintillating mass of golden light, and gleams, and lustres from roof, pillar, and altar, with rays crossing from window to shrine, irradiating the glories of the roof and shining in halos of more than earthly splendour.

Mr. Absolon, who was last year rather careless, sketchy, and flighty, appears this year with one of his best works, *Genevra* (99). The bride's face is full of innocence and glee, but perhaps rather too rustic and not sufficiently courtly. She is just raising the lid of her tomb, and is listening to the laughter of her distant pursuers as they chase down some echoing corridor. It must have been a very large house where a dying scream could not reach the ears of at least the second-floor back,—but for that let the legend be accountable. *The Girl at a Well* (129) is more in his old style, but is a beautiful hint of French peasant beauty. *The English Sailors before Napoleon* (141) tell no story. We see the Emperor and some sailors looking at a boat. The figures want labels out of their mouths. Artists should remember the difference between mere sentiment and scenes that embody a dramatic crisis.

Mr. Bouvier's *Daughter of the Mist* (136) is exquisitely smooth and pretty, but is not grown a bit since last year. An artist may as well be dead, as far as his profession goes, as repeat himself. When Raphael had done the Cartoons once, he did not repaint them, but began 'The Transfiguration.'

Mr. Wehnert is much improved this year; he is less hard, richer in colour, and equally original and poetic. His *Romeo and Juliet* (88) is, however, open to the objection of the lovers being at least ten years older than Shakspeare made them, for their love is the love of early youth and of Italian youth. This *Romeo* is as old as Faust, and this *Juliet* will never see twenty again. The faces have much merit; the background is a little stiff and conventional.

Mr. H. Warren's "*Ye hæc tell me that afore, Jimmy*" (126) is a finely-painted Scotch pastoral, much marred by the unmeaning expression of the shepherd lover. The lassie is very pretty, innocent and arch, and as arrant a coquette as ever broke a heart. There is a charming ease in the way in which the rams and the youth's bonnet are painted. The scoriated rock, grey and fretted, is forcibly given; and the whole forms a picture worth engraving. Mr. Warren's other picture is of the most daring kind. It is entitled *The First Sunset witnessed by our First Parents* (82). It represents Adam and Eve in the midst of a South American Paradise, embedded in flowers, and looking down on walls of rock and a barren country beyond, that in wet weather must be rather depressing than otherwise to view. A rich and original imagination is visible in the way the picture is worked out; and high praise is due to Mr. Warren for the care and elaboration with which he has worked out his details. "Man's first garden was a prison," said some despiser of the country; but Mr. Warren has very properly made Paradise not a Dutch tulip-garden, as the old painters sometimes drew it, but rather a slope in a virgin forest of the New World. We think that the figures

had better have been either made still more subservient than they are to the landscape, or larger, more expressive, and of more importance. Hartley Coleridge has a beautiful Sonnet full of conjectures as to what sounds of earth first met Adam's ears. Mr. Warren has with much poetry led us to think of the awe with which he must have seen the western fire beginning to dilate through the heavens as if to destroy the scarce completed world. His *Incipient Courtship* (297) is a good illustration of the possibility of investing daily subjects with poetry, without sacrificing one whit of their truthfulness. A market-girl and a ploughboy—a real ploughboy, corduroys and all—and a real market-girl—egg-basket, dowdy umbrella, and slovenly boots—have taken shelter under a spreading oak to avoid a shower. The April sky is smiling through its tears, and a rainbow spans the distant village church. Mutual coquetry has commenced; and the youth is stealing a sidelong glance, willing, but afraid, to speak. The maiden is not altogether unconscious of the direction of his eyes, but puts out her pretty dimpled hand to feel if the rain is over. The details are very vigorously painted; and the whole is a bucolic worth a dozen of the *Thyrsis* and *Corydon* school.

Mr. Vacher gives us scenes which serve as a sort of background to the groups which Mr. Haghe delights in. His works teem with sun and air; yet behind this there is, as is so frequently the case in English artists, a sort of remembrance of English atmosphere. Over many of his scenes—partly from his own sense of poetry and partly from an absence of figures in motion—there spreads a monumental death-sleep, such as might overcast the lotus land, and very fitting a region, not of the present, but of the past; where, as wily Hobbes of Malmesbury said, Papacy is only a ghost gibbering on the grave of old Imperial Rome. What a strange anomaly of Providence it seems to us to use countries for a century or so, and then to throw them by like broken playthings! What a deserted Eden is this land!—vide *Sunny Hours* (6), or *Lerici, Gulf of Spezia* (47). The sea, molten amethyst,—the sky, eternal and stainless azure,—the air, all sun,—and the earth, the earth of Paradise;—but the people slaves and cheats; and their rulers, the Goths that Marius drove before him, as the herdsman does the wild buffaloes of the Campagna. *The Return from the Harvest* (26) is full of serenity and beauty. Mr. Vacher's best work is *Ætna, from the Theatre of Taormina* (173),—the ruins of a Greek theatre with the sun seen through it. Broken arches are in the foreground,—an old fortress crowns the heights,—and *Ætna* sleeps, with its fire all burnt out, in the distance.

Mr. Mole has made an advance this year. He is equally lucid and bright in colour, and less specky and unfinished. His *Mountain Spring* (4) is full of the poetry of English nature, unconsciously sublimated and refined by the painter's eye. His noblest work is *Tarbert Castle, Loch Fyne* (34), that lake which at certain seasons, as the Highlanders say, contains more fish than water. This painting is very rich and deep in tone; and without the dirt or glutinous artificial mystery of a bad oil painting, is mellowed into a perfect sublimity of shade.

After this, Mr. Prout—admirable in his crumbly touch—appears cold and grey with his *Place de la Basse Vieille Tour, Rouen* (12). Yet Mr. Prout is the chieftain of the picturesque; and the scene is full of suggestive, well-beloved nooks,—quite a world for the eye to travel over.

Mr. Rowbotham is varied and elaborate. *The Pass of St. Brenner, Tyrol* (46), is an epical landscape, with its ice mountains, winding stream, high bridge, red-roofed chalets, and brigand-looking sons of Hofer. No one conveys a truer breathing sense of atmosphere better than Mr. Rowbotham. We slowly crawl up his mountains, with their granite blocks half cleared of snow by summer heat. We descend, after some hours, to the mists that boil round the piers of the bridge like the smoke of some spell just passing away. If these pictures of Mr. Rowbotham's are only a year's work, he must have seven-leagued boots and a Briarean number of hands. Now he is at *Llan-*

gollen Mill (23);—now at *Loch Katrine* (32);—then off, presto, to *Lago Maggiore* (100).

Mr. Penley is admirable for broad-washed tints of evening, purpled skies and calm reaches of water, and yet about all he does there is a sense of hardness and smoothness, which needs variety and contrast. His trees know no ruffling wind and no snapping and shivering storm. Even his rocks are scarcely splintered. His seas sleep, and never roar, or only as softly as "any sucking dove, look you," and all is gentleness and peace. By the side of Mr. M'Kewan he is like Camoens beside an Elizabethan poet. His most ambitious work—the *Lake of Geneva, taken from near Vevey* (151)—seems most full of this defect. Do let him remember that, as somebody said, "excessive smoothness and excessive hardness are brother and sister." All sunshine and all smooth water is what Paley called twenty years' married life without a quarrel, "*vara laat*." His lake views are an admirable commentary on Wordsworth's poems, and breathe much of that writer's calm, meditative, summer-evening spirit.

Mr. M'Kewan is a favourite with the public, and justly, though he has not much eye for colour, and is grey, pale and neutral in tone. Still, all like his vigour and freshness, and his free, sketchy trees, permeated with light, and full of motion. His works are numerous; for thin, healthy, out-of-door work seems to throw a spirit of health and industry over the works of water-colour painters that we look for in vain among those of their pale and more bilious rivals in oil. A water-colour painter really does not deserve to sell his productions, since the study of Nature is of itself a sufficient reward to its votaries. A year of perpetual summer, and the water-colour painter would almost forget that this was a transitory and momentary world. On the *Llwyry* (8),—*The Valley of Dolwyddelan* (56),—*Ludlow* (83), show our artist's genius and versatility. He revels in mountain paths, brawling, chafing streams.

Mr. Robins's sea-pieces are sparkling, but pale, perhaps scarcely equal to Mr. Cook's *Sir Francis Drake towing the Dismantled Galleon into Dartmouth* (133). This is a very admirable picture, full of breezy motion. The subject is picturesque, and not too subservient to the landscape.—Mr. Whymper is transparent to perfection in his *Shady Pool, Sussex* (179), the trees and water being equally good.—Mr. Fahey's *Stoltenfels* (190) is a beautiful scene, with its proud falcon's-nest tower looking down on sloping vines, the broad river and the links of hills. Some vine-dressers straggle quaintly along the foreground.—Mr. Weigall's *Ducks* (328) are as good and rough as usual;—and Mr. Harrison Weir shows great knowledge of birds in his *White Pigeons* (144), which are, however, swollen almost into caricature.

FINE-ART GOSSIP.—A circumstance which has lately taken place in a Yorkshire manufacturing town, no less a warning to the producer than the collector of pictures, must ere long furnish a subject for legal investigation. The pictures which certain agents, representing a local institution, had, on their visit to London last August, selected for exhibition in the following September, are at this present time (the last week in April) not forthcoming to their respective contributors. The Exhibition itself appears to have resulted in a failure, the Society to have become indebted for a large amount, and at length so involved as to have been rendered incapable even of defraying the expenses of the transit back to London of the pictures which they had borrowed: cases containing many of the most valuable of the contributions being now detained at the London terminus of the railway,—waiting for the payment of the necessary expenses ere they will be liberated from durance and restored to their authors. With whom the responsibility rests to return to the producer of the work the picture which he had forwarded, or to the proprietor the fine picture for which he had so liberally dispensed his means, must be soon ascertained.—The artists, at least, as a body, will derive a salutary warning from the fact, and learn, when one or more unknown individuals introduce

themselves into their studios, with specious demeanour, with a printed form containing a goodly array of names of persons, not a fraction of whom are interested in the subject of Fine Art, with a plausible prospect of a local Art-Union,—in the hope of cultivating a taste for the Arts in their district, already in possession of that universal *panacea* for the production of provincial artizan progress—a School of Design,—the artist of London will, it is to be hoped, be on his guard ere he rashly confides his property to plausible and specious persons who early in their interviews address themselves to his pecuniary interests—setting forth the innumerable advantages which are to be inseparable from his connexion with the new institution.

The interesting picture of Mr. Barker, 'Napoleon rebuking his Officers on the Battle-Field of Bassano,' that attracted his descendant's attention on his late visit to the Guildhall, is now on view at Messrs. Hering & Remington's, Regent Street, preparatory to engraving. The portraits are all from authentic busts and portraits: the youthful General's from a fine bust by Canova. Hazlitt himself, with all his idolatry for Napoleon, could not have selected a more favourable moment in which to depict his hero; and after all, Napoleon, probably smarting from the stabs in the dark, thought more of the living dog's fidelity than of the calm sleep of its dead master. Men whose red paths to thrones are paved and lined with dead may weep, as Sterne did, over a dead ass, but care little for a dying soldier. The picture has not the vigour of Ward, or the exquisite manipulation of Landseer, but is clever and effective, good in colour, excellent in its distances, and powerful in character. The dead Austrian soldier, in his white uniform, torn and bleeding, lies in the centre of the picture, with his dog howling over his body; to the left are a *vivandière* and some wounded soldiers, beside a broken gun-carriage, and to the right Napoleon on horseback, followed by his suite, Marmont, Masséna, Augereau, and Berthier. The dead horse is well foreshortened, and the background has an intrinsic beauty apart from all association. Napoleon's figure, unfortunately for the spectator, is necessarily subordinate to the central group, and is therefore somewhat kept back. The artist has, however, well expressed the lank, sallow face, not yet recovered from its years of struggle, and the long hair drooping on the shoulders of the immortal young Corsican. The greater fullness of flesh was still wanting to give the perfect beauty of this imperial face, worthy of Theseus or Alexander. The picture has thought and sentiment, and as such we like it; but as a realization of character, the artist might as well have drawn Wellington gambling, Marlborough giving a jacobus to an old soldier, or Nelson dancing at a court ball. Napoleon was not cruel; but the man who offers up hecatombs of men at the altar of Ambition, can scarcely be a member of the Society for the Prevention of Cruelty to Animals.

At length a place has been found in the City for the statue of Peel. It is to stand, we believe, at the western end of Cheapside, on the site now occupied by the obelisk. It is almost ready for erection.

Mr. John Steel has just completed Lord Jeffrey's statue for the Edinburgh Parliament House, and is now engaged on one of the late Lord President Boyle.

The drawing of the prizes of the "London Art-Union" took place on Tuesday last, at the Haymarket Theatre.

An interesting result of the alliance of nations was shown last week in the Gold Medal presented by the Institute of British Architects to M. Hittorff. Mr. Griffiths received the Institute Medal for an essay on 'Medieval Ornament.'

M. Isabey, the well-known miniature painter to Napoleon I. and Louis XVIII., died at Paris on Wednesday, at the age of 88, having been born at Nancy, in 1767.

The question of throwing open our costly public galleries on Saturdays—the people's day—must force itself more and more on Parliamentary atten-

tion. A Correspondent, taking up the thread of an old argument, writes:—

"The excellent remarks of your Correspondent 'E.T.P.' appear to me not only valuable but highly suggestive, as he has considered the subject from the common-sense point of view. On the 30th of last month it was stated in the House of Commons by Mr. Goulburn, one of the Trustees of the British Museum (in the course of a debate on a motion of Sir J. Walsley's), that 'on Tuesdays and Thursdays admission to the Museum was restricted to artists, and on Saturdays the Institution was closed to the public in order that the rooms might be cleaned.' Lord Palmerston also stated in the same debate, 'that the opening of the Museum and the National Gallery on the Saturday as well as the Monday would allow of no opportunity for keeping those buildings in proper order.' Now, I would ask, why are two days in the week restricted to artists? That it is not necessary to give artists even one day will appear evident to all those who have visited the Continental Galleries. There artists copy without any annoyance; and although the Galleries are large, and the visitors numerous and of all classes, yet it is not found necessary to exclude the general public;—why, then, is it found necessary in our country? Are our artists and Art-students more modest and unassuming than their brethren on the Continent?—or are their copies such daubs that they are afraid the general public would compare them with the originals, and thus injure their reputation? The Trustees of a great public institution have no right to exclude individuals on Tuesdays and Thursdays, because artists desire it. What right have they to say to A. B., 'Because you are an artist you will get the entire Museum to yourself on two days of the week;' and to C. D., 'because you are not an artist you cannot enter the Museum on such days?' The reason for not opening our Galleries on Saturdays is plausible, but fallacious. The great Munich Picture Gallery is open every day, except Sunday; so is that of Berlin, the same day excepted. How, then, are the rooms cleaned? The hours of admission to the former are from 9 A.M. to 2 P.M.; and of the latter from 10 A.M. to 4 P.M.: the remaining hours of the day are employed by the servants in cleaning, &c. Seeing that two of the most extensive public galleries in Europe are kept much cleaner than any of our public Institutions, it is absurd—nay, childish—to insist on the necessity of devoting one entire day to such a purpose. Can the servants employed by the Trustees not do as their fellows in Germany? Yes, but they are not so well looked after, although better paid; and that is the reason why a generous public must give them a whole day! There are certainly some grounds for finding fault with the present management of our public Galleries.—I am, &c.

"P. S."

MUSIC AND THE DRAMA

MUSICAL UNION.—H.R.H. PRINCE ALBERT, Patron.—TUESDAY, May 1st, half-past Three.—WILLIS'S ROOMS.—Quartet, No. 5, E flat, Mendelssohn; Sonata, Pastoral, Beethoven; Quintet, in A, Clarinet, &c., Mozart. Solos, Piano-forte. Executants: Cooper, Carodius, Hill, Piatti, Lazarus, and C. Halle. —Visitors: Tickets to be had of Crutcher & Co., Chappell, and Oliver, Bond Street.—Bottisini is engaged for the Third Matinée.—For particulars apply to J. ELLA, Director.

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—On WEDNESDAY next, May 2, will be repeated Mendelssohn's 'LOCHESANG,' and Mozart's 'REQUIEM.' Vocalists: Madame Clara Novello, Mrs. Lockey, Mr. Sims Reeves, and Herr Formes. The Orchestra, the most extensive available in Exeter Hall, will consist of nearly 700 Performers.—Tickets, 3s., 5s., and 10s. 6d. each, may be secured by immediate application at the Society's sole Office, No. 6 Room, within Exeter Hall.

HARMONIC UNION, HANOVER SQUARE ROOMS.—Conductor, HERR MOLIQUÉ. Programme, WEDNESDAY, May 2.—Part I.: Overture, 'Naiade,' W. S. Bennett; Aria, Madame Rudersdorf, 'Sinfonia in A, Beethoven.' Part II.: Handel's 'Acis and Galatea,' with Mozart's accompaniments. Vocalists: Madame Rudersdorf, Mr. Miranda, Herr Reichardt, and Mr. Weiss. The Band and Chorus complete in every department. Leader, Mr. H. Blarove.—Tickets, 5s., 7s. 6d., and 10s. 6d., at the principal Music-sellers.

A PERFORMANCE OF ANTHEMS AND ORGAN MUSIC will take place at the Hanover Square Rooms, on THURSDAY EVENING, May 3, under the direction of Mr. GEORGE COOPER, (Organist of St. Sepulchre's, Snow Hill, Christ's Hospital, Assistant-Organist of St. Paul's Cathedral and Her Majesty's Chapel Royal, who will preside at the new and powerful organ recently erected by Messrs. Gray and Davison. The gentlemen of Her Majesty's Chapel Royal, St. Paul's Cathedral, Westminster Abbey, St. George's Chapel, Windsor, &c. are engaged. Conductor, Mr. Sudlow. To commence at Eight o'clock.—Tickets, 2s.; Reserved Seats, 3s.; may be obtained at all the principal music warehouses. Full particulars at R. W. Oliver's, 19, Old Bond Street; and at the Hanover Square Rooms.

Mr. ALFRED MELLON respectfully announces that his SECOND GRAND VOCAL AND INSTRUMENTAL CONCERT will take place, at St. Martin's Hall, on MONDAY EVENING, May 7, to commence at 8 o'clock, on which occasion Signor Bottisini will make his first appearance in England, and these three years and perform a new Concertino on the Contra-Basso. Vocalists: Mdlle. Louise Cellini and Mr. Sims Reeves. Pianist, Mr. F. E. Bache. Leader, M. Sainton. The band will consist of fifty of the finest living instrumentalists, and will perform during the evening Mendelssohn's celebrated Symphony in A minor, also Overtures by Beethoven, Weber, Auber, &c. Conductor, Mr. ALFRED MELLON.—Tickets, 1s., 2s. 6d., 5s., and 7s. 6d. To be had of Mr. Mellon, 134, Long Acre; Cramer & Beale, 201, Regent Street; St. Martin's Hall, and the principal Music-shops.

ROYAL ITALIAN OPERA.—The journals which have chronicled the events of the Imperial visit have generally prefaced their record of "the wondrous tale" by striking a balance betwixt the shows which "England" can show "France" and those which "France" can display to "England," should the latter return the amicable courtesy. Possibly, there may have been somewhat of a

shop-keeping spirit in this mode of opening parallels. The real dignity, grandeur, and cordiality of such "Fields of Cloth-of-Gold" do not reside in the shires of park-scenery, or in the miles of picture-gallery which one country can exhibit to another. "England" is not to be rated as less warm in the cause of international alliance than "France" should it prove that our Lord Mayor's cook is less exquisite in an *à propos* luncheon than the chef of *M. le Préfet de la Seine*. These may be mere matters of detail, accident, national character:—since, however, comparison is the order of the hour, the *Athenæum* may follow the fashion without harm or jealousy. The *Grand Opéra* of Paris—protected as it is by unlimited Government assistance, including the unanimous support of the press—can exhibit nothing to Her Majesty in musical value equivalent to the performances exhibited by our *Royal Italian Opera* to the Emperor and Empress on Thursday week. We do not, in this assertion, measure one singer against another, so much as the staple working-power of the two establishments,—displayed in orchestra, chorus, and the skill with which these are brought to bear. Even in the midst of the show of the state visit, the execution of the 'Leonora' overture claimed attention by its resonance, vigour, and brilliancy:—the *coda*, especially, was memorable. If the leaping-out of countless fires, mingling and spreading in one blaze of light, can be expressed in sound, it could not be better effected than by that particular performance of that noble piece of musical climax. The grand *finale* to the opera, also, went admirably.

Mdlle. Jenny Ney will excuse us that, when noticing her *début* in 'Fidelio,' we have thus given precedence to the general state of the theatre in which she has made herself known to the English public. She has qualities which justify her engagement for any theatre,—in a voice strong, sonorous, and sweet, rather than even. We imagine it to have been originally a *mezzo-soprano*, and that its middle notes may have been weakened by its owner's desire to extend its compass. Be this as it may, Mdlle. Ney strains her voice less than the generality of German *Leonoras*. She sings with care, rather than with any great depth of passion and pathos. Her acting bears just proportion to her vocal expression. There is nothing in it to offend, there is little in it to enrapture the audience. Lastly, though Mdlle. Ney has hardly the face or the figure which befit the heroine-boy of Beethoven's opera, her success was a fair success, without dissent. It remains to be seen how far she can improve it in future operas. Signor Lucchesi replaces Signor Stigelli. A few new readings have been introduced by Herr Formes. He personates old *Rocco*, the jailer, in a jaunty *Figaro* dress:—and in the prison scene, when *Leonora* menaces the murderous *Pizarro* with her pistol, he seconds her with his pickaxe, threatening the tyrant with so wild an amount of "business," that, on the principle of "giving vermin fair play," we were disposed to pity poor Signor Tagliafico, thus bounded east by an infuriate stout Lady and west by a truculent patriarch in a fancy dress!—We fear that to hope for improvement or good taste in Herr Formes is to hope against hope.

'Ernani' was given on Thursday evening,—we presume for the *début* of Signor Graziani, the new *baritone*,—who will appear with Mdlle. Jenny Ney and Signor Tamberlik in 'Il Trovatore.'—Madame Viardot has arrived.

'Eva,' the new *ballet*, devised by Mr. Harris, set by Signor Panizza, illustrated with some admirable scenery by Mr. Beverly, and danced in to her utmost by Madame Cerito, is one of the best *ballets* belonging to that ghostly family of which 'Giselle' was head. How a deceased maiden, who was beloved by a German painter, is re-animated by a demon, under the diabolical hope that her sorceries will beguile the grief-bewildered youth to sign the notorious Black Parchment,—how the painter has a second love in the shape of a peasant bride, who is made wretched by his struggles under the spell,—and how the dead-alive *Eva* restores them one to the other, consigning herself anew to the tomb, and thereby foiling

the Evil One—those who desire to see, will find shown:—and shown with a comfortable quantity of romance, *diablerie*, and scenic luxury, at Covent Garden. The Arcadian landscape, especially, with its grouped Bacchanals, is excellent,—in every respect as complete as if it belonged to that *Arcady* of ballets, the *Grand Opéra* of Paris. The music, by Signor Panizza, is not bad; and Madame Cerito is more bold and buoyant in her flights than ever. To judge from appearances, 'Eva' may succeed in pleasing the public more than the generality of ballets hitherto presented at the *Royal Italian Opera*.

MUSIC OF THE WEEK.—Our music of the season has now fairly set in. The tide has ebbed away from certain former channels, and filled others. The *Quartett Association*, for instance, does not resume its meetings; and, generally, the lovers of chamber-music are on "short allowance,"—a matter to be regretted rather than wondered at, considering the state of the world as regards composition, and the unwillingness of our public to encourage novelty. Our great orchestral concerts, again, may be said to walk with lagging steps,—or else to be cutting capers, mountebank fashion.—Let it be recorded, for the sake of those who write history, that the Emperor and Empress of the French did not attend Wednesday's *New Philharmonic Concert*.—Last night, 'Israel in Egypt' was to be given by the *Sacred Harmonic Society*.

"Opera," however, to use a mercantile phrase, seems "lively,"—the pressure of public events considered. The experiment at Drury Lane continues. Our contemporaries rejoice in the crowded audiences and the triumphant success of "the people's opera" in terms which might have been stereotyped, since they were last year applied to Mr. Jarrett's speculation. They also complain of want of due rehearsal for 'Il Barbiere,' of choruses out of tune, of a conductor out of time, and of an orchestra out of order. Let those who are adroit in reconciling differences give us the moral of raptures and complaints like the above. We are sorry that an accomplished artist such as M. Gassier seems to us, and a singular vocalist such as his Lady is, should appear in no better framework than this. During the past week they have been singing the parts of *Figaro* and *Rosina*.

Something more real, it is possible, may arise out of Mr. Buckstone's opera-venture at the *Haymarket Theatre*,—though the name of the "little theatre," which used to belong to this *vis-à-vis* of our Opera of other days, necessarily indicates the scale of the experiment so far as regards two musical essentials—orchestra and chorus. Four better vocalists and actors than Mr. and Mrs. Sims Reeves, Mr. and Mrs. Weiss, were never assembled "in projection" of an English opera; and we learn with pleasure that, though Mr. Buckstone has been obliged to commence the engagement with 'Fra Diavolo,' preparations are on foot to produce, as quickly as possible, a new work by an English composer. This is to be 'The Gnome of Harzburg,' by Mr. Henry Smart.

STANDARD.—Shaksperian revivals continue at this theatre. On Saturday the 'Winter's Tale' was added—and successfully added—to the experiments already recorded. The company evidently improve in the representation of the poetic drama; and we doubt not that a laudable emulation to excel inspires all parties concerned. The house was full, and this delightful play seemed to give complete satisfaction to the audience, who were most emphatic in applause at the fall of the curtain. Miss Glyn's *Hermione* is too well known for especial criticism, and was on this occasion most chastely acted. The trial scene, in particular, was rendered with an intelligible and moderate emphasis rarely witnessed. Nothing, perhaps, is more difficult to the *artiste* than to give to a set oration the air of a spontaneous and emotional utterance; and too frequently the pit applaud the more theatrical delivery, and fail to discern the merit of an easy and natural elocution. Miss Glyn speaks rather than declaims: and the difference between the two is the exact measure between the true and false in style,

whatever may be the defects of individual execution. Mr. Marston's *Leontes* was picturesque and striking both in action and attitude, and in some passages of uncommon excellence. Both performers were called before the curtain.

SADLER'S WELLS.—On Monday the Lyceum company continued their experiment at this theatre by the performance of 'Sunshine through the Clouds,' and on Wednesday performed for their last revival the comic piece of 'Anything for a Change.'—The unsuccessful nature of their attempt has given rise to much reflection among critics who have usually opposed our views in regard to these *vaudeville* entertainments, but who now repeat theoretically what we long ago practically pronounced. Thus late in the day they discover that, with an audience composed of persons engaged in the real struggle of life, and sternly occupied in daily efforts "to keep the wolf from the door," the serious drama is preferable to the comic, and the poetic element the very thing that has the needful influence and the fitting interest. The fact is, that we are now in a state of transition, long expected, but inevitable from the moment that free competition in the trade of the drama was permitted. With every circumstance in its favour, the reign of French translation, and of free-and-easy acting in connexion with the prose drama, has come to a sudden pause; and it is well to learn that its success can never be more than temporary and exceptional. When we reflect that from *Æschylus* to *Knowles* verse has been the current form of dramatic dialogue, we may readily conclude that there is some sufficient reason for the prevailing fashion; and that whenever the art finds itself dependent on natural conditions, the more permanent rule will obtain, however for a time some exception to it may have secured a degree of local patronage.—On Monday next Mr. Webster and Madame Celeste are announced as commencing a summer season at this theatre; and we should imagine that the *Adelphi* pieces, being of a graver character, will insure a better chance of success with an Islington audience than the light and frivolous adaptations of the Lyceum could have done under the most favourable circumstances. There is much reason, in the present shifting state of theatricals, to be satisfied with the progress of dramatic reform which is steadily gaining ground on old prejudices and untenable interests.

HAYMARKET.—Miss Cushman is re-engaged, and appeared on Monday in the character of *Romeo*.

MUSICAL AND DRAMATIC GOSSIP.—The proprietors of 'The low-backed Car,' Mr. Lover, the Irish song-writer, and Messrs. Duff & Hodgson, his publishers, have just obtained an injunction from the Vice Chancellor to restrain a well-known house in the City from issuing its own copy of the ballad:—the defendant pleading that he had got the song from America, where it had been originally produced by Mr. Lover as part of an entertainment, and published without due contemporaneous publication and registration on this side of the Atlantic. This plea was set aside, and the Vice Chancellor established Mr. Lover and his publishers in undisturbed proprietorship of 'The low-backed Car,' remarking, in his judgment, that—

"the recent decision of *Boosey v. Jeffreys*, in the House of Lords, only went to this extent:—that a foreign author, unless he resided under the protection of this country, was not entitled to the benefit of the statute of Anne. Some doubt was thrown upon the case of an English author residing abroad first publishing in a foreign country, but nothing was said as to an English author residing in this country first publishing abroad. * * * Mr. Lover had set up no claim, in this country at least, to the authorship of the music—all that he claimed was, to be the author of the song called 'The low-backed Car,' and, as such, he was registered at Stationers' Hall. It was well settled that a man could acquire copyright in a song by adapting his own new words to an old air."

—Every new distinction, difference, and decree on this same question of musical copyright only serves to quicken the desire of all who prefer integrity before intrigue to see the whole matter settled on some broader and more generous basis than it occupies at present. As regards the song in question

—the pretty and catching melody of which has given it "a run" on the hurdy-gurdies and barrel-organs—we suspect that the tune may owe all its grace and favour to Mr. Lover's retouching, and thus be as indefeasibly his to publish by right of equity as are the words. But what confusion will arise should the establishment of property in musical themes ever be made the subject of legislation! In France, we know, dramatic ideas are put under the august protection of "the long robe," and if M. *Un tel* dares to set M. *Quelque Chose's* newest combination of crime and retribution in dialogue, without taking M. *Quelque Chose* into partnership, his drama will be interdicted, and himself (unless he be powerfully screened) sentenced as liable to "costs." What might happen to some of our living play-wrights were such the law of England we do not presume to guess. Certain it is that the musical composers of all countries would fare ill. Rubini's great *finale* in 'I Puritani' (to give only one among many instances) must have been suppressed, had the proprietor of Simone Mayer's 'Donne l'Amore' chosen to claim the eight bars on which it was built by Bellini! The question of pictorial copyright is hard enough to settle; but musical property is even more delicate and divisible, and liable to piracy and intrusion.

It is said in the Irish journals, that an Oratorio, 'Abraham,' the composition of a young gentleman belonging to the choir of Christ Church, in Dublin, has been performed in that city with success, and is to be shortly repeated.

Herr Hildebrand Romberg has arrived in London for the season.—Signor Belletti, too, has come; also, the prodigy, little Arthur Napoleon. We would rather hear of the last as placed at some good school, than read his name in the list of concert-artists for the season.

Can any friend or enemy—home ally or foreign correspondent—tell us something concerning the compositions of Böhrer, on which reliance can be placed? or, better still, afford us any means of judging them for ourselves? The reason for inviting such disinterment is easily given. A tale is going the round of the musical papers to the effect that the best ideas in 'Der Freischütz,' have been derived from Böhrer's works, especially from a *Fifth Pianoforte Concerto* which is now stated to be out of print. The tale has, possibly, no greater value than all tales of the kind, which have been from time immemorial the delight of small and envious persons. Some of the greatest musicians have been the greatest borrowers. Handel himself pilfered as unscrupulously as Signor Rossini has since done. Before Mozart's opera, 'Don Juan,' was thought of, Gluck's *ballet* had been the delight of Vienna. There is a *Pianoforte Concerto* by Mozart in E flat (No. 6 of the dozen edited by Hummel) which cannot be examined without the reader owning it possible that some unconscious remembrance of its effects, and contrasts, may have suggested to Beethoven the more romantic effects and contrasts of his *Pianoforte Concerto* in E flat. Pedantic or perverse critics will harp on a coincidence of four notes, or four bars, just as if by establishing it they could succeed in that dearest of human pleasures—the destruction of an avowed reputation:—just as if they could annihilate those originalities of style, thought, and application of musical idea, which almost destroy identity of phrase—supposing the same notes employed by a Mendelssohn and a Hérold. From a notice in the 'Biographie' of M. Fétis, we find that Böhrer belonged to the Duchy of Gotha, where he was born in 1787, the son of a Thuringian organist,—that he picked up some musical education rather than studied the art regularly,—that about the year 1808 he was residing at Jena, was known to Goethe and Falk, and was noticed by them for the rude originality of his humour. This, it is added, suggested to Hoffmann his Shandean creation, *Kreissler* the band-master, whose ways, whims, and witticisms have become almost a reality in German literature and history. Böhrer was a voluminous composer, especially for instruments; but M. Fétis adds, (probably on the authority of some German biographical dictionary) "he only recommends himself by the good manner in which his

music is made, and in which ideas by no means remarkable are developed. His thoughts are without originality, and the surprise is to find such commonplace ideas in the artistic productions of one who as a man was so different from other men." This, however, is not an uncommon case. So far as we have been able to get at the truth, the music of Hoffmann, who in print and in private life ran so wild in his eccentricity, is placid and regular, if not dull. But that such a man as Böhrner, whose thoughts were not original, should have furnished ideas to a man like Weber, whose ideas *seized* the public by their freshness, is a puzzle—and one which we should be glad to have some means of solving.

Let us again name M. Théodore Gouvy as a French composer who has written Symphonies worth looking after at a time when all orchestral music by the great masters runs as much danger of being worn threadbare as master-pieces can run. A hasty perusal of an arrangement of M. Gouvy's second and third Symphonies has satisfied us of the elegance and contrast of his *motivi*, and of the cleverness with which they are treated and wrought out. There seems also in these Symphonies a touch of French humour, for which we like them none the less.

The following is from Naples, dated early in April.—"The winter season at San Carlo closed a few days since with 'I Due Foscari' of Verdi, in which Beltramelli as *prima donna*, Pancani as *tenor*, and Coletti as *basso* sustained the principal parts. The administration has now published its *programme* for the ensuing season, that is, from the 8th of April to the 9th of September. It promises sixty representations at the theatres of San Carlo and Il Fondo. Sixteen only of these will take place at San Carlo. Two operas will be given, one by a well-known composer, and another new to Naples. The talent, however, that is announced is very slender:—Signora Beltramelli as *prima donna*, Signor Montanaro as *primo tenore*, and Signor Brignole as *primo baritone*. Last night they made their appearance in 'La Figlia del Reggimento' at the Fondo, and were all hissed. Signor Arati as *primo basso*, Signor Luzio *primo buffo*. During the last week the public taste has been satiated with sacred music, and of a very different character from that which is generally heard in our churches. In the churches of San Ferdinando and San Francesco di Paolo the best music might have been heard, the 'Miserere' of Pergolesi having been sung in St. Ferdinand. The great attraction of the week, however, was 'Le Tre Ore d'Agonia,' by Maestro Sarmiento. The principal singers were Mr. C. Braham, Signori Guercia, Montanaro, and Colangelo. The music is, as usual, divided into nine portions. The 1st part, being the Introduction, was sung by many voices. The 2nd, a *terzetto*, was executed by Signori Montanaro, Guercia, and Colangelo. The 3rd, a *solo*, was given by Signor Guercia with sufficient execution. The 4th was a *quartetto*:—the 5th, a *duett*, was sung with intelligence by Signori Montanaro and Guercia; the 6th, a *solo*, by Mr. Braham, so as to give great satisfaction. The 7th, a *concertato*, was for all the voices. The 8th was another *solo* for Mr. C. Braham, who also took the *solo* in the concerted piece which made up the 9th and last part."—We apprehend that the composer named by our Correspondent is the *Cavaliere* Sarmiento, one of whose operas was not many months ago produced at the *Théâtre Lyrique* in Paris.—Mr. C. Braham, we may add, has arrived in England.

American musical periodicals inform us that M. Ole Bull lost so much money during the first fortnight of his attempt to establish an Opera in New York, that he "concluded summarily to close" the speculation.—Madame de la Grange is by this time on her way to the Land of Promise.

Nothing perhaps could better illustrate the facts on which we have so repeatedly moralized, in regard to eastern theatrical establishments, than the circumstance which we have now to register of Mr. Charles Mathews having accepted a starring engagement at the City of London Theatre. The event will, at any rate, apply the test whether, after all, the attraction at such places is more due to the cheapness of the price of admission than to

the character of the entertainment. At all events, the solution must needs be interesting to the proprietors of the Lyceum, who are seeking, we understand, to raise still further the rent to its future occupants, notwithstanding that the former amount has proved too much for the successful management of the theatre either by Mr. Mathews or Mr. Keeley. The rent borne by property of this kind is exorbitant at the best, and altogether out of proportion with that imposed on other edifices of equal extent and style of elevation. The attempt at an advance on the previous excessive surcharge just at this moment strikes us as something preposterous. The Lyceum, at a moderate rent, is well calculated for a model and national theatre. The freedom of the stage, which has been gained, is a great thing,—but it is not all. We need one theatre which should serve as a standard of taste to the people, and to which all excellence both dramatic and histrionic should culminate. But the conduct of such an institution should be placed in hands above suspicion to insure the perpetual encouragement of the products of national genius, and the talent expedient for their support. But when we reflect how difficult it is in this country to steer clear of jobbery in relation to affairs of public magnitude, we fear that we must yet wait for happier times, when popular education shall better enable the masses to guard against the delusion and collusion to which they are exposed on the part of those to whom the management is entrusted.

MISCELLANEA

Progress of the Weather.—Can you, or any of your meteorological readers explain the fact—for I think it is a fact—that remarkable changes of weather in Britain generally travel from south to north, appearing in the south of England one or several days before they reach the north of Scotland? I am not singular in having formed this opinion from a comparison of the weather-news which we receive from England with our own observations here. In the majority of instances we find that changes of weather of every kind commence here, after our London letters or newspapers have already informed us that they have previously occurred in England; so that, since the acceleration of the mail has brought us within forty hours of London, the information we thus receive often serves us as a prediction of the weather we are to expect. How is this to be explained? That south winds and warm weather should travel to us from the south is not surprising; but that north winds and cold weather should do so, is certainly unexpected. The writer of this note was at one time disposed to account for the latter class of phenomena by supposing that those cold north winds are often due to an atmospheric rarefaction, and consequent partial vacuum in the far south, followed by a rush of air from the north to supply it in the manner of suction. But though this hypothesis would explain the apparent northward progress of a north wind merely colder at each particular place than the atmosphere at that place had previously been, I do not see how it can explain the curious fact, that the weather in the south often becomes suddenly colder—not merely than the previous weather in the same locality,—but actually colder than the weather which we in the north have at the very time, and for days afterwards. Thus, we are not infrequently forewarned of snow-storms by the English newspapers, which inform us of the fall of snow in England, while with us the thermometer is still far above the freezing point. To take the most recent instance:—On Saturday last (7th of April) we received intelligence in Ross-shire that the ground in Dorsetshire had been covered with snow several days before the weather here was still fine and genial; and it was only on the following Sunday that the snow and storm reached us. This is but one out of many instances: how are they to be accounted for?

Ross-shire, 10th April.

"Chouse."—Sir Henry Elliot, at page 162 of his 'Bibliographical Index,' after quoting examples of the word from Ford, Ben Jonson, and Butler, concludes his note with these reflections:—"It is obvious to remark, that if in the age of our forefathers cheating to the extent of only 4,000*l.* was sufficient to consign a whole class to an immortality of infamy, how many more expressive words, dissyllables as well as monosyllables, might not the transactions of 1847-48 encourage us to add to our vocabulary, since even 40,000*l.* is not sufficient to satiate the voracity of a Calcutta *Chois*." I have the pleasure to send the above, to complete what your correspondent "A. M.," in to-day's *Athenæum*, is unable to supply.

14th April.

To CORRESPONDENTS.—S. S.—J. S. N.—R.—G. T.—R. M.—received.

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received at BAUDRY'S LIBRARY, 3, Quai Malaquais, Paris, or at the Publishing Office, 14, Wellington Street North, Strand, London. THE HOMILIST for MAY, No. XXIII., price 1s. will contain, amongst other Articles,

1. The Spiritual Universe, by the Rev. David Thomas.
2. On Family Reunions, by the Rev. D. G. Watt, M.A.
3. Religions Tested, by the Rev. D. Thomas.
4. The Spiritual Qualification for the Reception of the Spiritual, by the Rev. H. R. Reynolds, B.A.
5. Glances at Great Preachers—Chrysostom, by the Rev. C. Wills, M.A.

"Most heartily and conscientiously do I recommend 'The Homilist' to all classes of readers. Young preachers should study it. It will greatly benefit them. Laymen (improperly so called) should read it. It will create in them a thirst for something better than what they commonly hear from our pulpits, and stir up in their souls feelings and aspirations of the noblest kind."

Somerset Davidson, D.D., LL.D.

Now ready, price 2s. 6d. cloth.

THE PROGRESS OF BEING. Six Lectures on the True Progress of Man. By the Rev. DAVID THOMAS. 2s. 6d. cloth.

CONSTABLE'S MISCELLANY OF FOREIGN LITERATURE.

Just ready, in 2 vols. cloth, price 7s.

WANDERINGS IN CORSICA: its HISTORY and its HEROES.

By FERDINAND GREGORIOVUS.

"It is our hope that the work of Mr. Gregoriovus may obtain the compliment of translation. . . . We are unwilling to forestall the interest which attaches to his description of the scenes of Napoleon's youth, and the anecdotes which with great diligence the author has collected on the spot, of his Corsican education and adventures. . . . Mr. Gregoriovus is a diligent and enthusiastic collector of the traditions of a heroic race, a man of strong feeling for the great and beautiful, and an able historian."

Quarterly Review, December 1854.

"Here is a book which, if any one can be found to translate it without allowing the bloom to escape in the process, cannot fail to be popular among English readers as the best writings of Washington Irving."—Huntsman Review.

Edinburgh: Thomas Constable & Co. London: Hamilton, Adams & Co. Dublin: J. McGlashan.

Just published, 8vo. price 6d.

SIR JASPER CAREW, KNIGHT.

By the Author of 'MAURICE TIERNAY, the Soldier of Fortune.'

"In describing the wild, varied, and eventful career of 'Sir Jasper Carew, Knt.,' Mr. Lever has evinced peculiar
powers not required in the production of any of his previous fictions. No more acceptable contribution than his has yet
been presented in any cheap editions recently published."—*D. E. Post.*

London: THOMAS HODGSON, 13, Paternoster-row.

NEW PUBLICATIONS.

Royal 4to. price 21s.

THE POETICAL WORKS OF THE LATE CATHERINE GRACE GODWIN.

Edited, with a MEMOIR, by A. C. WIGAN.

With 40 Illustrations by BIRKET FOSTER, JOHN GILBERT, &c.

From the *Literary Gazette*.—"There are many striking and pleasing pieces in Mrs. Godwin's collection of poetry, and
we think that Mr. Wordsworth expressed a fair and candid opinion of the writer's general merit, when he said,—"I have
read your volume ('The Wanderer's Legacy,' &c.) through with much pleasure. Wherever it is read such poetry cannot
but do you honour. It is neither wanting in feeling, nor in that much rarer gift which is the soul of poetry—imagina-
tion. There is a great command of language and fine versification."

London: CHAPMAN & HALL, 193, Piccadilly.

T. K. ARNOLD, M.A., late Rector of Lyndon, and formerly
Fellow of Trinity College, Cambridge.

Also, (uniformly printed.)

**The HANDBOOK of GRECIAN ANTIQUI-
TIES.** 3s. 6d.

The pupil will receive from these works a correct and tolerably
complete picture of Grecian and Roman life: the political portions
(the account of the National Institutions and their effects) appear
to be of great value; while the very moderate extent of each
admits of its being thoroughly mastered—of its being got up and
retained.

Rivingtons, Waterloo-place.

Of whom may be had, by the same Editors,

**1. HANDBOOK of ANCIENT HISTORY
and GEOGRAPHY,** 6s. 6d.

**2. HANDBOOK of MEDIEVAL HISTORY
and GEOGRAPHY,** 4s. 6d.

LOGY** (with Plates), 3s.

5. THE ATHENIAN STAGE; a Handbook
for Students. With Plan of a Greek Theatre, 4s.

Now ready, in Two Vols. post 8vo. with Portrait,
MEMOIRS OF THE LATE RIGHT HON.
RICHARD LACOR SHEIL.
By TORRENS M'CALLAGH, Esq.

"Such a man as Sheil eminently deserved a biography, and Mr. M'Callagh has, we think, proved himself an exceedingly proper person to undertake it. His narrative is lucid and pleasant, sound and hearty in sentiment, and sensible in dissertation. Altogether, we may emphatically call this book an excellent biography."—*Daily News*.

Published for H. Colburn, by his successors, Hurst & Blackett.

On the 30th inst. will be published, price One Shilling, Part XX. of
"THE NEW COMETS." By W. M. THACKERAY. With Illustrations by RICHARD DOYLE.

** The First Volume is completed, and may be had, bound in cloth, price 18s.

THE YEAR-BOOK OF THE NATIONS.
By ELIHU BURRITT.
Published by Longman, Brown, Green, and Longmans, Paternoster-row, London. Price 2s. 6d.

This is a little Work of forty-eight pages, designed to be to the Financial, Commercial, Manufacturing, Agricultural, Educational, Religious, and Moral Statistics of all Nations, what *Dr. Shaw's Guide* is to their Railways. It presents a balance-sheet of Fifty Nations, or Independent States, with their Annual Income, Expenditure, Surplus or Deficit, Exports and Imports, reduced to English Money. It also contains a tabular exposé of their Public Debts, Armies, Navies, and the Annual Charges they involve; also a statement of their Shipping and Railway Traffic, Banking Capital and Institutions, &c.; together with a great variety of Statistics relating to Education and Religion, up to the beginning of 1853. The Statesman, Merchant, Banker, Manufacturer, Agriculturist, Ship-owner, Railway Capitalist, Educationist, Philanthropist, and every Minister of Religion, will, in this little Statistical Guide, find correct information, prepared to his hand, in his special department of inquiry.

Should any difficulty or delay be involved in procuring a single copy through a provincial bookseller, one will be forwarded directly by post to any person who may desire it, on payment of 3s. 6d., in postage stamps, directed to 'The Year-Book of Nations,' No. 35, Broad-street-buildings, City, London.

FRENCH IN ONE VOLUME.
Second Edition, just published, price 6s.

THE COMPLETE FRENCH CLASS-BOOK; or, Grammatical and Idiomatic French Manual: with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and practical plan.

By ALFRED HAVET, French Master in the Glasgow Athenæum, &c.

"Great experience is displayed in selecting the sentences which form the illustrations and exercises. No author seems hitherto to have exactly understood what English learners required in studying French, and no French master ever attempted to combine in one volume such a progressive and complete course of grammar, conversation and composition."—*North British Mail*.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.
"There is something attractive in the very appearance of the work; and one delights to luxuriate among its ample pages, replete, as they are, with excellent and clearly arranged matter, explanatory and illustrative of the French language."—*Scottish Educational Journal*.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French manuals yet published in this country. The new features that it possesses are chiefly, that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language."—*The Educational Examiner*.

"The various principles, illustrations, and exercises, are presented to the pupil at a single coup-d'œil; and advance from the mere rudiments of the tongue, by easy and agreeable stages to the higher form of its development. . . . M. Havet has supplied what teachers long felt to be a desideratum—a work combining, within reasonable limits, the ordinary grammars, phrase-books, and readers, which have hitherto been only procurable separately, and at a large expense to the pupil. The introduction and arrangement of a regular system of questions, to which the ingenuity of the student must devise the adequate reply, is an innovation upon the usual method, and one calculated to sharpen the faculties of the student, and give him such a command of colloquial French as no other plan has ever succeeded in doing."—*Edinburgh Guardian*.
London: Dulau & Co.; W. Allan.

ENGINEERING SCHOOL CLASS-BOOKS.
In cr. 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the Work,
EUCLID'S ELEMENTS OF PLANE GEOMETRY: with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

**ROSS'S PHOTOGRAPHIC PORTRAIT and
LANDSCAPE LENSES.**—These Lenses give correct defini-
tion at the centre and margin of the picture, and have their
visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest
intensity yet produced, by procuring the coincidence of the chemi-
cal, actinic and visual rays. The spherical aberration is also very
carefully corrected, both in the central and oblique pencils."
"Mr. Ross has exhibited the best Camera in the Exhibition. It
is furnished with a double achromatic object-lens, about 3 inches
in aperture. There is no stop, the field is flat, and the image very
perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

seen in the Apparatus room, including Buckle's Brushes, Shallow
Glass Dishes for developing negatives, with case and covers, Deep
Porcelain Dishes, for Washing the Iodized Paper, &c. &c.

An excellent Negative Paper, well adapted for Iodizing, after the
method followed and recommended by Mr. Sutton, price 4s. per
quire, or 3l. 10s. per ream, 19 by 15.

N.B. The stock (50 reams) has now been kept two years. This
paper may also be had ready iodized.

XYLO-IODIDE OF SILVER.

This important photographic preparation is exclusively used at
all the Photographic Establishments. Its superiority is univer-
sally acknowledged. Testimonials from the best photographers
and principal scientific men of the day warrant the assertion, that
hitherto no preparation has been discovered which produces uni-
formly such perfect pictures, combined with the greatest rapidity
of action.

In all cases where a quantity is required, the two solutions may
be had at wholesale price in separate bottles; in which state it
may be kept for years, and exported to any climate. Full instructions
for use.

CAUTION.—Each bottle is stamped with a red label, bearing
my name and address,

RICHARD W. THOMAS, CHEMIST,
10, PALL MALL,

to counterfeit which is felony.

NITRATE of SILVER BATH for the above preparation may
be always obtained of R. W. THOMAS, ready made, at a cost little
more than the price of ingredients used.

CRYSTAL VARNISH.

PREPARED FROM THE FINEST AMBER.

This valuable Varnish, for protecting Negative Pictures, does
not require the application of any heat to the plate. The coating
will be found free from stickiness, hard, and transparent. It dries
immediately.

HYPO-COLOURING BATH.

FOR RENDERING THE POSITIVES ON PAPER DARK
AND RICH IN COLOUR.

CYANOGEN SOAP.

FOR REMOVING ALL KINDS OF PHOTOGRAPHIC
STAINS.

The genuine is made only by the inventor, and is secured with
a red label, bearing this signature and address,

RICHARD W. THOMAS, CHEMIST,
No. 10, PALL MALL,

Manufacturer of Pure Photographic Chemicals and Apparatus.

And may be procured of all respectable Chemists, in pots, at 1s.
2s., and 3s. 6d. each, through Messrs. EDWARDS, 67, St. Paul's

the First Artists. Orders for 1l. and upwards carriage free.—
Stereoscopic Company, 313, Oxford-street, 20 doors west of Regent-
street.—10,000 French and English Bronzes from 1s. upwards, from the first
Designers in Europe.

BANK OF DEPOSIT,

NATIONAL ASSURANCE and INVESTMENT ASSOCIATION,

No. 3, PALL MALL EAST, LONDON.

Established A.D. 1844.

Empowered by Special Act of Parliament.
Parties desirous of depositing their MONEY are requested to exam-
ine the plan of this Institution, by which a high rate of interest
may be obtained with perfect security.

The Interest is payable in January and July at the Head Office
in London; and may also be received at the various Branches, or
through country bankers, without delay or expense.

PETER MORRISON, Managing Director.
Prospectuses and Forms for opening Accounts sent free on
application.

RAILWAY ACCIDENT INSURANCE.—
16,2312. 5s. have already been paid as compensation for Fatal
and other Railway Accidents, by the

RAILWAY PASSENGERS' ASSURANCE COMPANY.

EXAMPLES.

1,000l. was paid to the Widow of H. G. killed on the 24th Febru-
ary, 1852, secured by a payment of 1l.

350l. was paid to H. C. H. J., who had his leg broken on the
31st Aug. 1853, secured by a payment of 1l.

200l. was paid to W. P., severely injured on the 19th September,
1854, secured by a payment of 1l.

For the convenience of frequent travellers, Periodical Insurances
are granted, which now cover the risk of Fatal Accidents while
travelling in any class carriage on any Railway in the United
Kingdom or on the Continent of Europe, and insure Compensation
for Personal Injury in any Railway Accident in the United King-
dom only.

To insure 1,000l. at an Annual Premium of 20s.

Ditto 200l. ditto 5s.

Insurances can also be effected securing the same advantages for
terms of five or ten years, or for the whole of life, at greatly re-
duced rates, which may be learnt from the Company's Prospectus,
to be had at the Offices, and at all the principal Railway Stations.

A new class of Insurance has also been established in case of
Death by Railway Accidents alone, without compensation for
Injury.

To Insure 1,000l. at an Annual Premium of 5s.

Ditto any sum not exceeding 1,000l. for the whole of life, by a
single payment of 6s. per cent.; thus one payment of 3l. will secure
1,000l.

The Premiums charged include the Stamp Duty, this being the
only Company insuring against Railway Accidents empowered by
Special Act of Parliament to pay a commuted Stamp Duty.

Railway Passengers' Assurance Office, WILLIAM J. VIAN,
3, Old Broad-street, London. Secretary.

Advantages.
 The LOWEST rates of Premium on the MUTUAL SYSTEM.

The WHOLE of the PROFITS divided among the Assured every Fifth Year.

No charge for Policy Stamps, nor for Service in the Yeomanry or Militia Corps.

Policies in force upwards of 7,000.

The Assurance Fund exceeds 1,402,532l. Income upwards of 23,000l. per Annum.

The sum of 397,000l. was added to Policies at the last Division, which produced an average Bonus of 67l. per Cent. on the Premiums paid.

For particulars apply to
 ALEXANDER MACDONALD, Secretary,
 6, New Bridge-street, Blackfriars.

SUN LIFE ASSURANCE SOCIETY, LONDON.

SHARE OF PROFIT INCREASED FROM ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in FOUR-FIFTHS, or 80 per cent. of the Net Profits of the Society, according to the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young lives are lower than in many other old-established offices, and Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the investments of Premiums.

Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threadneedle-street, London, or of any of the Agents of the Society.

Abstract of the REPORT of the Directors for 1854:—

The number of Policies issued during the year.....1,302

Assuring the sum of.....£59,974 0 0

Annual Premiums thereon.....19,624 8 8

Policies issued from the commencement of the Institution in December, 1845.....17,494

Policies now in force.....13,175

Annual Income—From Premiums.....£177,999 5 9

(after deducting 33,342l. abatement allowed).....

Ditto—From Interest on invested capital.....44,073 7 7

Amount returned to Members in abatement of Premiums.....240,134 11 8

Amount of Bonuses added to sums assured.....128,564 0 0

Amount paid in claims by Death from the commencement of the Institution.....411,369 11 11

Balance of receipts over the disbursements in the year.....117,669 6 0

Increasing the Capital Stock of the Institution to 1,002,166 9 8.

At the last division of surplus profits made up to Nov. 20, 1852 the reductions varied from 6 to 80 per cent. on the original amount of premiums, according to the age of the member, and the time the policy had been in force; and the bonuses ranged in like manner from 50 to 75 per cent. on the amount of premiums received during the preceding five years.

Members whose premiums fall due on the 1st of April next, are reminded that they must be paid within 30 days of that date.

Prospectuses and other information may be obtained on application at the Office.

Actuary and Secretary.
 CHARLES JELLIHOE, Esq.

The business of the Company comprises Assurances on Lives and Survivorships, the Purchase of Life Interests, the sale and purchase of contingent and deferred Annuities, Loans of Money on Mortgage, &c.

This Company was established in 1807, is empowered by the Act of Parliament 33 Geo. III., and regulated by Deed enrolled in the High Court of Chancery.

The Company was originally a strictly Proprietary one. The Assured now participate quinquennially in four-fifths of the amount to be divided.

To the present time (1854) the Assured have received from the Company, in satisfaction of their claims, upwards of 1,480,000l.

The amount at present assured is 3,000,000l. nearly, and the income of the Company is about 130,000l. per annum.

At the last Division of Surplus, about 120,000l. was added to the sums assured under Policies for the whole term of Life.

The lives assured are permitted, in time of peace, without extra charge, to reside in any country (Australia and California excepted) north of 33 degrees north latitude, or south of 33 degrees south latitude, or to pass by sea (not being seafaring persons) by profession between any places lying in the same hemisphere, and not within those limits.

Assurances effected by persons on their own lives are not rendered void in the event of death occurring by suicide, duelling, or the hands of justice, unless such death take place within one year from the date of the Policy.

All Policy Stamps and Medical Fees are now paid by the Company.

The Annual Reports of the Company's state and progress, Prospectuses and Forms, may be had, or will be sent, post free, on application at the Office, or to any of the Company's Agents.

GREAT WESTERN RAILWAY.—COALS.

—Orders for the best RUABON HOUSE COALS, equal to the finest Durhams, may be executed at 25s. per Ton (cash price), delivered within 4 miles of the Paddington Station.

These Coals are bright and durable in burning, and contain only one-half per cent. of dust.

They are now for the first time introduced into the London Market by the recent opening of the Great Western Railway into North Wales.

Address the Superintendent of the Company, Paddington Station.

F. DENT, 61, STRAND, and 34 and 35,

R. ROYAL EXCHANGE. Chronometer, Watch, and Clock Maker, by appointment to the Queen and Prince Albert, sole Successor to the late E. J. Dent in all his patent rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical, Turret, and other Clocks, Dioptrics, and Patent Ships' Compasses, used on board Her Majesty's Yacht, "Lionel" Gold Watches, &c. Gentlemen's 10 guineas. Strong Silver Lever Watches, 6s. 6d.

FINE-ART MANUFACTURE.—ELKINGTON & Co. respectfully solicit the attention of the Nobility, Gentry, Amateurs, Artists, and others interested in the advancement of British Art-Manufacture, to their increasing collections of Statuettes, &c. published exclusively by them in Bronze, Silver, and Gold, from the Antique and select Works of Modern Artists.

Also to their Artistic and Decorative Plate, calculated for the Table, Sideboard, Library, Bedchamber, &c.

These productions were honoured at the late Great Exhibition by an award of the "Council Medal," and may be obtained at either of the Establishments—

22, REGENT-STREET, } LONDON.
 45, MOORGATE-STREET, }
 NEWHALL-STREET, BIRMINGHAM.

RECONNOITERING TELESCOPES.—These well-known Instruments to be had of the Maker, JOHN DAVIS, OPTICIAN, DERRY. The Telescope, when closed, measures 2 1/2 in., and shows Jupiter's moons. Price, sent through the post, 38s.

The same Instrument fitted up with an additional Eye-piece and Stand, price 32s. Thus fitted, it will show Saturn's Ring.—Map Metres in case by post, 3s. 6d.

LOCKWOOD'S celebrated NUGGET PENS, being electro-plated, are not liable to rust or corrode; with Fine, Medium, or Broad Points, 1s. per box of one dozen. Wholesale and retail at LOCKWOOD'S Stationery and Dressing-Case Warehouse, 75, New Bond-street.

N.B. A box of one dozen post free for 13 stamps.

NO MORE TOOTHACHE nor EXTRACT-ION OF TEETH.—Every one should use CHAMPTON'S TOOTH ELIXIR, for the PRESERVATION and BEAUTIFYING OF THE TEETH. Toothache, that hitherto incurable malady, can now be EFFECTUALLY CURED, and what is better, PREVENTED, by the use of this Elixir, which entirely SUPERSEDES extraction, and all the present INEFFECTUAL METHODS.—Sold in boxes at 6s. and 2s. 6d. each, or postage stamps, by GEOFFREY JAS. HOLLEN, 21, Salisbury-street, Liverpool.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication at the above public buildings, or at Mr. L.'s Show Rooms daily, from Ten till Five, 15, Percy-street, Bedford-square, near Rathbone-place. The Arts taught by correspondence.

52, FLEET-STREET.—At home from Ten till Five.

CONSTANT EMPLOYMENT GUARAN-TEED.—Ladies or Gentlemen are instructed in the New, Elegant, Ornamental Arts of WHITE, GOLD, or OAK DECORATION, for articles of general use. "THE ARTS TAUGHT" for One Guinea each, and constant employment "GUARANTEED," by which from 2l. to 3l. may be readily made weekly. Ladies wishing to increase their incomes cannot pursue a more elegant, artistic, or pleasurable occupation. Private Lessons given at Ladies' own residences. Mr. LAWRENCE, who is an Exhibitor at the Stationery Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites Ladies to see his unique specimens at the above public buildings, or at Mr. L.'s Show Rooms daily, from Ten till Five, 15, Percy-street, Bedford-square, near Rathbone-place. The Arts taught by correspondence.

CARRIAGES of the lightest Construction, best build and finish, at reduced prices.—For SALE, or to be let on Job, a large assortment of New and Second-hand CARRIAGES, comprising single and double seated Broughams, Graciers, Steepce Barouches, Pilettoms, Phaetons, &c.—PEAKE'S old-established Carriage Factory, 5, Lisle, or 11, Princes-street, Leicester-square.

FLOWER-POTS and GARDEN SEATS.—JOHN MORTLOCK, 250, Oxford-street, respectfully announces that he has a very large assortment of the above articles in various colours, and solicits an early inspection. Every description of useful CHINA, GLASS, and EARTHENWARE, at the lowest possible price, for Cash.—250, Oxford-street, near Hyde Park.

GARDEN VASES, FOUNTAINS, &c.—THOMAS SOMERVILLE, Landscape Gardener, Nurseryman, Seedsman, and Florist, Garden-road, St. John's Wood, London, begs to inform the Nobility, Gentry, and his Patrons generally, that he has entered into arrangements with an eminent Company in Scotland for the sole disposal in London of their highly ornamental and very durable VASES, FOUNTAINS, &c. samples of which may be seen at his Grounds, in the Garden-road, as above. T. S. has much pleasure in being the first to introduce to the notice of the public a highly ornamental Vase, capable of resisting most severe weather, and perfectly meets the want of cost of any other possessing the same qualities, and he has no hesitation in stating that a more suitable Vase for the growth of plants cannot be manufactured.

OSLERS' TABLE GLASS, CHANDELIERS, LUSTRES, &c.—44, Oxford-street, London, conducted in connection with their Manufactory, Broad-street, Birmingham. Establishment for the sale of all kinds of glassware in great variety. Wine Glasses, Water Jugs, Goblets, and all kinds of Table Glass at exceedingly moderate prices. Crystal glass Chandeliers, of new and elegant designs, for Gas or Candles. A large stock of Foreign Ornamental Glass always on view. Furnishing orders executed with despatch.

CHUBB'S LOCKS, with all the RECENT IMPROVEMENTS; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete Lists of Sizes and Prices may be had on application.

CHUBB & SON, 37, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley Fields, Wolverhampton.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON & Co., 42, Poland-street, Oxford-street; where one may be seen in daily use. The advantages of this Grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

FISHER'S DRESSING-CASES, FOR LADIES and GENTLEMEN.

FISHER'S STOCK IS ONE OF THE LARGEST IN LONDON, AT PRICES TO SUIT ALL PURCHASERS.

Catalogues post free.

188 and 189, STRAND, corner of Arundel-street.

AT MR. MECCHI'S ESTABLISHMENTS, 112, REGENT-STREET, and 4, LEADENHALL-STREET, London, are exhibited the finest specimens of British Manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and all the articles of the most elegant and useful character for Paper Maché Manufactures and Bagatelle Tables.

Table Cutlery, Razors, Scissors, Penknives, Strops, Paste, &c. Shipping Orders executed. Superior Hair and other Toilet Brushes.

CLEOPATRA NEEDLES.—Never Rust.—Manufactured and warranted by LINNEUS GEORGE BANKS, (son of George Banks, F.R.S., designer and founder of the Royal Devonport Arms, &c.), Cleopatra's Needle Works, Redditch.

N.B. These Cleopatra Needles, the very best, and a superior set of envelopes, do not rust, and the corners do not draw the needle, and are all "axes and screws," same as the old style of paper quivers, paper paste, and gum wrappers, &c.—Caution: Beware of base imitations and baser imitations, as none are genuine except on which this name is stamped. "L. G. Banks, Redditch." Sold by all respectable houses in London, and throughout the known world. Samples of 100 sent free on receipt of 13 stamps.

GLENFIELD PATENT STARCH. USED IN THE ROYAL LAUNDRY.

And pronounced by HER MAJESTY'S LAUNDRESS to be THE FINEST STARCH SHE EVER USED.

Sold by all Chandlers, Grocers, &c. &c.

FENDERS, STOVES, and FIRE IRONS.—

Buyers of the above are requested before finally deciding, to visit **WILLIAM S. BURTON'S SHOW-ROOMS**, 39, Oxford-street (corner of Newman-street), Nos. 1, 2, and 3, Newman-street, and 4 and 5, Perry's-place. They are the largest in the world, and contain such an assortment of **FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY** as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 21.14s. to 54.10s.; ditto with ornamental ornaments and two sets of bars, 31.10s. to 121.12s.; Bronzed Fenders complete, with standards, from 7s. to 31s.; Steel Fenders from 21.15s. to 61s.; ditto, with rich ornamental ornaments from 21.15s. to 71.7s.; Fire-irons, from 1s. 9d. the set to 42.4s. Sylvester and all other Patent Stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges—
Firstly—From the frequency and extent of his purchases; and
Secondly—From those purchases being made exclusively for cash.

BATHS & TOILETTE WARE.—WILLIAM

S. BURTON has ONE LARGE SHOW-ROOM devoted exclusively to the **DISPLAY OF BATHS and TOILETTE WARE**. The stock of each is at once the largest, newest, and most varied ever submitted to the public, and marked at prices proportionate to the quality. With these that have been at his Establishment the most distinguished in this country. Portable Showers, 7s. 6d.; Pillar Showers, 31. to 51.; Nursery, 15s. to 32s.; Sponging, 15s. to 32s.; Hip, 14s. to 31s. 6d. A large assortment of Gas, Furnace, Hot and Cold Plunge, Vapour, and Camp Shower Baths. Toilette Ware in great variety, from 15s. 6d. to 45s. the set of three.

THE BEST SHOW OF IRON BEDSTEADS

in the KINGDOM is **WILLIAM S. BURTON'S**. Thus, passengers and purchasers generally may be supplied at a **GREAT SAVING OF COST**, and embrace the **HOMER** quality at **SHIPPING PRICES**.

BRIGHTON.**SAKE DEEN MAHOMED'S CELEBRATED**

INDIAN MEDICATED VAPOUR and SHAM-POOING BATHS.

Introduced into this Country and Established by him in 1784, and who received the Appointment of Shampooing Surgeon to their Majesties George and William the Fourth, and the Royal Family.

MR. ARTHUR MAHOMED

(Son and Successor of the late Sake Deen Mahomed) continues to administer this highly appreciated and valuable description of Bath, which has, during the period of near Seventy years, obtained a high reputation amongst the Nobility, Gentry, and Medical Profession, in the Cure of the following Diseases:—Gout, Rheumatism, Lumbago, Sciatica, The Doloureux, and the various forms of Nervous and Chronic Inflammations, Sprains, Contractions, Paralytic Affections, Asthma, Scrofula, and diseases produced by improper or long-continued use of Mercury, Severe Colds, Defective Secretions, Torpor of the System, Indigestion, Hypochondriasis, Hysteria, Nervousness, and all Morbid Suppressions.

MR. ARTHUR MAHOMED'S Establishment is conducted by his own personal attendance, and his long experience in the above practice enables him, with pleasure and confidence, to state with continued successful results, of which numerous testimonials may be seen by reference to his book of Cases.

The Ladies' Department is under the Superintendence of **Mrs. MAHOMED**.

Prospectuses of Terms, &c., forwarded by Post (as customary), on application, or to be had at the Establishment.

64, WEST-STREET, opposite St. Paul's Church, BRIGHTON.

THE PEN SUPERSEDED.—MARK your

LINEN.—The most easy, permanent, and best method of Marking Linen, Silk, or Books, is with the **PATENT ELECTRO-SILVER PLATES**. With these Plates a thousand articles can be marked in ten minutes. Any person can use them. Initial Plate, 1s.; Name, 2s.; Crest, 5s.; Number, 1s. 2s. Sent free (with instructions) for stamps, by the Inventor and sole Patentee, **T. CULLETON**, 2, Long-acre, one door from St. Martin's-lane.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of **HERNIA**. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the **MOC-MAIN PAD and PATENT LEVER** fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, five inches below the hips, being sent to the Manufacturer, **Mr. WHITE**, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c.

DIRECTORY, containing a variety of Practical Information especially adapted for the Clergy, Divines, Schools, and Heads of Families, in the absence of Professional Assistance. New Edition, price 2s. 6d., by post 3s.

MEDICINE CHESTS in great variety; a large Assortment of Patterns, at prices from 10s. to 101.

172, New Bond-street, London.

DINNEFORD'S PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession as an excellent remedy for Acidities, Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during Pregnancy; and it prevents the Food of Infants from turning sour during digestion. Combined with the **ACIDULATED LEMON SYRUP**, it forms an Effervescent Aperient Draught, which is highly agreeable and efficacious.—Prepared by **DINNEFORD & CO.**, Dispensing Chemists, (and General Agents for the improved Horse Hair Gloves and Belts), 172, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

THE "BABY'S" NEW FEEDING BOTTLE.

—From the *Lancet*.—"We have seldom seen anything so beautiful as the nursing bottles introduced by **Mr. Elam**, of Oxford-street. Whether for weaning, rearing by hand, or occasional feeding, are quite unrivalled."—**BENJAMIN ELAM**, 196, Oxford-street. 7s. 6d. Each bottle is stamped with my name.

MISS KIRBY, 23, Mortimer-street, Caven-

dish-square, having received numerous orders for her **EMOLLIENT POMADE** for **RESTORING the HAIR**, has appointed the following Agents:—Forster, 52, and Barton, 77, King's-road, Brighton; Savory & Moore, High-street, Cheltenham; J. H. Swayne-street, Dover; Carter, Chemist, Watford; Morris, 25, High-street, Kensington; Davies, Chemist, Bridge-street, Row, Chester; Hallows, 2, High-street, Islington; McDougal, 174, Regent-street; Adolphus, 198, Oxford-street; and Barclay, Farringdon-street.

TO LADIES.

ROWLANDS' KALYDOR, an Oriental Botanical Preparation, for **IMPROVING and BEAUTIFYING the COMPLEXION**, Eradicating CUTANEOUS DEFECTS and DISCOLORATIONS, and renders the **SKIN SOFT, FAIR, and BLOOMING**. It obviates all the effects of Climate on the Skin, whether with reference to cold and inclemency, or intense solar heat, and affords immediate relief in cases of sunburn, stings of insects, or accidental inflammation. Gentlemen after shaving will appreciate its softening and ameliorating properties.

Price 4s. 6d. and 8s. 6d. per bottle.

CAUTION.—The words **ROWLANDS' KALYDOR** are on the wrapper of each bottle, and their signature, **A. ROWLAND & SONS**, 20, Hatton-garden, London, in red ink, at foot. Sold by them, and by Chemists and Perfumers.

OLDRIDGE'S BALM OF COLUMBIA should

be used in the Nursery and the School. It is peculiarly adapted for use during the tender years of childhood. In bottles, with full Instructions for Use, 3s. 6d., 6s., and 11s.

1s, Wellington-street North, Strand.

A CLEAR COMPLEXION.—GODFREY'S

EXTRACT OF ELDER FLOWERS is strongly recommended for softening, beautifying and preserving the skin and giving it a blooming and charming appearance, being at once a fragrant perfume and delicate cosmetic. It completely removes tan, redness, &c., and by its use the complexion acquires qualities renders the skin soft and free from dryness, scurf, &c., clears it from every humor, pimple or eruption; and, by continuing its use only a short time, the skin will become and continue soft and smooth, and the complexion clear and beautiful. In the process of shaving it is invaluable. It annihilates every impure and all roughness, and affords great comfort if applied to the face during cold easterly winds.—Sold in Bottles, price 2s. 9d., with directions for using it, by all Medicine Vendors and Perfumers.

METCALFE & CO'S NEW PATTERN

TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is so constructed that hairs not coming loose, is an improved Clothes Brush, incapable of injuring the finest nap. Only at **METCALFE, BINGLEY & CO'S** Sole Establishment, 130a, Oxford-street, one door from Holles-street.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DR. DE JONGH'S**LIGHT BROWN COD LIVER OIL.**

This OIL, long known, extensively prescribed, and highly appreciated on the Continent, has now, in consequence of its proved superior power and efficacy, acquired the general and entire confidence of the medical profession in this country. It is of the purest and finest quality, free from admixture or adulteration, or the usually repulsive and nauseous flavour, or sickly after-taste of the pale Oil, or of the coarse Brown Oil commonly sold, though totally unfit for medicinal use. It is as low in price per ounce as any other genuine Cod Liver Oil, whilst its equal and superior qualities render it immeasurably cheaper. Medical and scientific testimonials of the highest character delivered or forwarded gratis on application.—Sold in bottles, capsuled and labelled, with Dr. de Jongh's Stamp and Signature, WITHOUT WHICH NONE ARE GENUINE, by **ANSER, HARKER & CO., 77, STRAND, LONDON**, Dr. de Jongh's sole accredited Agents; and by respectable Chemists in Town and Country. Half-pints (10oz.) 2s. 6d.; Pints (20oz.) 4s. 9d.; Quarts (40oz.) 9s. IMPERIAL MEASURE.

NO MORE PILLS NOR ANY OTHER

MEDICINE.—For Indigestion, (Dyspepsia) Constipation, Nervous, Bilious, and Liver Complaints, Asthma, Bronchitis, Rheumatism, and Debility. By **DR. BARRY'S** delicious **REVALENTA, ARABICA FOOD**, which saves fifty times its cost in medicine.

A few out of 50,000 cures are here given.

Cure No. 71, of dyspepsia, from the Right Hon. the **LORD STUART DE DECIES**. "I have derived considerable benefit from **Dr. Barry's** Revalenta Arabica Food, and consider it due to yourselves and the public to authorize the publication of these lines."

STUART DE DECIES.

From the Dowager-Countess of Castlestuart.

Cure No. 52, 692, Rossrevor, County of Down, Ireland, 9th December, 1854. **THE DOWAGER-COUNTESS OF CASTLESTUART** feels induced, in the interest of suffering humanity, to state that **Dr. Barry's** excellent Revalenta Arabica Food has cured her, after all medicines had failed, of indigestion, bile, greenness, and irritability of many years' standing. This food deprives the confidence of all sufferers, and may be considered a real blessing. Inquiries will be cheerfully answered.

Cure No. 49, 332, "Fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness at the stomach and vomiting, have been removed by **Dr. Barry's** excellent food."

MARIA JOLLY, Wortham, Ling, near Diss, Norfolk."

PROF. LIEBIG'S NEW WORK.

Just published, in small 8vo. price 3s. 6d. cloth

PRINCIPLES

OF

AGRICULTURAL CHEMISTRY,

WITH SPECIAL REFERENCE TO THE LATE RESEARCHES MADE IN ENGLAND.

By JUSTUS VON LIEBIG,

Professor of Chemistry in the University of Munich.

EDITOR'S ADVERTISEMENT.

I cannot allow this little Treatise to appear without expressing the very high gratification I have had in translating it, and thus assisting to lay it before the British public. It is, so far as I can judge, by far the best of the author's writings on the important subject to which it refers.

Apart from all controversy, it contains, in the shape of fifty propositions, a most admirable summary of the true relation between Chemistry and Agriculture. These propositions are beyond all doubt true, so far as our present knowledge extends, and contain principles, the due appreciation and application of which is of the last importance to all who wish to cultivate Agriculture on true, that is, on scientific principles.

No doubt can be entertained by any one who has read the various memoirs published by writers opposed to the author's views that these views and the principles or doctrines he has hitherto laid down, have been generally misunderstood by these writers, and that failure and disappointment have been the natural results.

But in the fifty propositions now given to the world, the real doctrines of the author are so simply and clearly expressed, that it is almost impossible not to understand and appreciate them; and it may be confidently expected, that their promulgation will produce most beneficial results.

I trust that I may be allowed to express this hope, since these propositions embody, in a fuller and more extended form, those principles of Agricultural Chemistry, or rather of the science of Agriculture, which I have deduced from the author's writings, and which I have long taught in my lectures, frequently in the very words now used by their author. So strong is my conviction of the truth of these principles, that I regard it as certain, that all real improvements in Agriculture will be found, on examination, to be referable to these principles or laws; and that, as Baron Liebig somewhere has said, "therein lies the whole future of Agriculture."

The present work demonstrates that the author's so-called "Mineral Theory" has been entirely misunderstood by Mr. Lawes, and that the experiments of the latter gentleman, in all points, really prove the truth of the "Theory," as it exists in the author's works.

Important and very Valuable Collection of Oil Paintings, by Old Masters, at Singleton House, Singleton Brook, Higher Broughton.

MR. CAPES has the honour to announce, that he has received instructions from JOHN WILSON, Esq., who is retiring from business, in consequence of ill health, to SELL by AUCTION, with-out reserve, on WEDNESDAY, May 16, at 10 o'clock in the morning, at his residence, Singleton House, Singleton Brook, Higher Broughton, near Manchester, about Fifty Important and Valuable PAINTINGS, by Ancient Masters; comprising the Horrors of War, by Rubens, the picture which excited so much attention when publicly exhibited in London a few years ago—St. Jerome, by Carlo Cignani—a most superb copy of Correggio's finest work at Parma—a River Scene in Holland, by Van Stry, in all respects a magnificent production—The Death of Procris, by Paul Veronese, a very important and finely coloured picture, and in a beautiful state—The Marriage of Rebecca, in a noble landscape, by Claude—Susannah and the Elders, by Domenichino, a marvellously fine example of this favourite artist—The Good Samaritan, by Carracci, a very grand and solemn picture—The Holy Family, by Paul Veronese, remarkable for the depth and beauty of its colour—The Entombment, by Bassano, a work which by much estimation when publicly exhibited in London a few years ago—St. Christ's agony in the Garden, by Andrea Schiavone, an extraordinary example of rich and powerful colour—Christ Driving the Money-changers from the Temple, and Christ at the Pool of Bethesda, by Paul Panini, two exceedingly fine pictures, in a very pure state—Virgin and Child, by Tintoretto—The Ascension, by Murillo; with several fine Portraits by Cypri, Sir Peter Leck, Rubens, Vandryke, Velasquez, Frank Hale, and other desirable specimens by various artists of renown.

The house will be open for view on Friday and Saturday, May 11 and 12; and for the convenience of gentlemen at a distance, the Pictures can also be seen on Tuesday, the 15th, between the hours of 11 and 5.

Catalogues (of the Pictures only) can be forwarded by post on payment of 6s. and of the Furniture also, of 18 stamps, on application to Mr. Capes, 22, Princess-street, Manchester.

A Splendid Collection of Oil Paintings, by Modern, Living, and Deceased Artists, at Singleton House, Singleton Brook, Higher Broughton.

MR. CAPES has the honour to announce that he has received instructions from JOHN WILSON, Esq., who is retiring from business in consequence of ill health, to SELL by AUCTION, with-out reserve, on THURSDAY, May 17, at 10 o'clock in the morning, at his residence, Singleton House, Singleton Brook, Higher Broughton, near Manchester, upwards of Fifty Important and Valuable PAINTINGS, comprising choice Works by Naish, Rothwell, Hilton, R.A., Barrett, and Gilpin, Newham, Romney, Singleton, John Wilson, Junr., E. J. Colbetti, Richard, Wilton, Groszwick, R.A., Smit, S. R. Percy, Parrott, Baxter, Linnell, Pickersgill, A.R.A., Poole, A.R.A., Etty, Macleise, R.A., Barry, R.A., Sir Joshua Reynolds, and Gainsborough.

The Auctioneer feels it unnecessary to state more than that the specimens alluded to by Living Artists are genuine productions of unquestionable authenticity, and that amongst them will be found some exceedingly Choice Works of a few of the leading men in the kingdom.

The house will be open for view on Friday and Saturday, May 11 and 12; and for the convenience of gentlemen at a distance, the Pictures can be seen also on Tuesday, the 15th, between the hours of 11 and 5.

Catalogues (of the Pictures only) can be forwarded by post on payment of 6s. and of the Furniture also, of 18 stamps, on application to Mr. Capes, 22, Princess-street, Manchester.

A TRIP to the TRENCHES in FEBRUARY and MARCH
 By AN AMATEUR.
 Sauniers & Otley, Publishers, Conduit-street.

A SEASON IN BATH; or, Letters from the Green Family to their Friends in the Country. First Series.

"Blame, cynic, if you can, quadrille or ball,
 The snug, close party, or the splendid hall,
 Where night, down-stooping from her ebon throne
 Views constellations brighter than her own." — *Courier*.
 London: David Bogue, and Simpkin, Marshall & Co.

Now ready, embossed cloth, price 4s.

A GUIDE to the KNOWLEDGE of LIFE.
 By ROBERT J. MANN, M.D., F.R.A.S. In this volume the material elements of life are traced through the various stages of preparation for organization, and through vegetable and animal existence up to their highest employment in the composition of the human brain,—the whole being treated with the special view of conducting both the student and the general reader to a scientific acquaintance with the laws and conditions of health.
 London: Jarrold & Sons, 47, St. Paul's Churchyard.

Second Edition, cloth, 1s., by post 1s. 6d.

WELSH SKETCHES. Third and last Series.
 By E. S. APPELYARD, M.A., Author of 'Proposals for Christian Union.' Contents: 1. Edward the Black Prince—2. Owen Glendower, Prince of Wales—3. Medieval Bardism—4. The Welsh Church.—"The chapters on history are written with good taste, and not a little power of description; but we are especially delighted with those on what the author calls the 'Medieval Bardism of the Welsh.' — *Hugh's Instructor*.
 N.B. The FIRST SERIES, 3rd Edition, is out of print.

London: James Darling, 81, Great Queen-street, Lincoln's Inn-fields.

Ready this day, the First Number of a New Journal, devoted to the interests and advancement of Religious Literature, entitled,

THE LITERARY CHURCHMAN,
 and which is intended to extend to that Literature the advantages which General Literature already possesses in the *Athenæum*, *Literary Gazette*, *Critic*, and other similar journals. The principle of the Journal will be that of the Church of England; and, while it will convey information with respect to the Literature of other Religious Bodies, with every desire to show fairness and impartiality, it is not intended to compromise truth, or to countenance indifference.

A Number of the "Literary Churchman" will be issued every alternate Friday Evening, price 4d. A Stamped Edition, to go free by post, price 5d.

A Detailed Prospectus may be had upon application at the Office, 37, Strand.

Just published, in crown 8vo. price 7s. 6d. cloth.

BALDER.

By the AUTHOR of 'THE ROMAN.'

Second Edition, with Preface.

"In this poem we read a magnificent protest against the tendency of our age to materialism and positive philosophy and the apotheosis of mechanism and intellect. An age which everywhere manifests a blind atheistical deification of force and power. The age to which of all others that trumpet-tongued text, 'What shall it profit a man if he save the whole world and lose his own soul?' needs to be preached and sung. There are two hundred and eighty-three pages in this book, and not one but contains fine thoughts, magnificent imagery, striking similes, or searching reflections. Of the wealth of thought revealed we can scarcely trust ourselves to speak, it is so great. We consider 'Balder' to be the first and worthy part of a great poem—one of such a degree of greatness, that it has scarce an equal in our century, and one that will take the public opinion some years to arrive at that greatness. To those who cannot see its purpose, we may say, as the old chroniclers wrote of Shakespeare.—Read it again and again, and if so be you do not understand it then, there is manifest danger that you are not quick of comprehension." — *Eclectic Review*.

"Genius is so unmistakably present in every page of the strange book before us, that to give examples from one, without injustice to the others, we find to be beyond possibility in the limits of a magazine review. We cannot, however, resist a passing allusion to the absence of all melo-drama in those scenes which nevertheless reach the very bounds of the dramatic, and to the instinctive avoidance of the horrible and attainment of the terrible, under circumstances of the highest tragedy. These general facts infer a quality of intuition in the author, which only the true critic can properly estimate; and in such passages as the portrait of Amy in scene twenty-eight, and the *apo* of scene thirty-seven, or scene twenty-four, he will recognize the same wonderful truth of instinct at work, in the calmest moods and most pastoral quietudes of the many-coloured landscape of life." — *Fraser's Magazine*.

"The lesson to be taught would make a grand theme for poetry, but only a crowned singer could hope to teach it. Let some large and wealthy mind study the darker possibilities of his own being—then the question may be met by handling. Some such denizen of Parnassus—understanding by experience the peculiar temptations of high poetic temperament—knowing well all those airy illusive tongues that 'syllable men's names' in the haunted wilderness of aspiration—looking steadily down that wrong turning, the gloomy avenue of that *via mala* he himself *might* have chosen—such an one could address his brethren, and all of us, with happiest effect. Qualifications adequate to an enterprise so worthy, Mr. Yendys unquestionably possesses; to some such purpose he appears to have devoted himself in the present poem, and, in our judgment, with signal success." — *British Quarterly Review*.

Recently published, in post 8vo. price 5s. cloth.

THE ROMAN.

By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we have a new poet among us, we should almost despair of his conversion. But we should not abandon the attempt while we had such an argument in reserve as the ensuing description of the Coliseum." — *Athenæum*.

"How far the merit corresponds with the magnitude of the work there may be some difference of opinion, but none as to the genius and power of the author." — *Literary Gazette*.

"Any man might be proud to be the author of this poem, which, if the first production of an author hitherto unknown, is full of the richest promise; and at any rate shows that we have poets still among us, who, if they would but take equal pains with our older writers, are capable of achievements not any way inferior to theirs." — *Guardian*.

"The hand that has struck this lyre is the hand of a master." — *Sun*.

SMITH, ELDER & CO. 65, Cornhill.

This day is published, crown 8vo. price 6s. 6d. with Illustrations,

THE PHILOSOPHY OF THE BEAUTIFUL.

By JOHN G. MACVICAR, D.D.

Author of 'An Inquiry into Human Nature,' &c. &c.

THE CHRISTIAN LIFE, SOCIAL AND INDIVIDUAL.

By PETER BAYNE, M.A.

Contents.

The Individual Life.

The Social Life.

First Principles.

Howard; and the Rise of Philanthropy.

Wilberforce; and the Development of Philanthropy.

Budget, the Christian Freeman.

The Social Problem of the Age.

Modern Doubt.

John Foster.

Thomas Arnold.

Dr. Chalmers.

The Positive Philosophy.

Pantheistic Spiritualism.

General Conclusion.

"These three sketches, ('John Foster,' 'Thomas Arnold,' and 'Thomas Chalmers,') forming about one-third of the volume, we consider the finest things of the kind that have appeared in the present century.... We predict for the book, not a sounding popularity, for we think it is incalculably too solid, noble, and lofty for that, but a place among the first productions of the age, and a celebrity which will go down to future times." — *British Banner*.

"Some of the biographies condense in comparatively brief space the thinking of ordinary volumes."

"To young men especially would we recommend this volume, with its thoughtful reasonings and its brilliant biographies." — *Rev. Dr. Hamilton, in Excelsior*.

Edinburgh: JAMES HOGG, 4, Nicolson-street. London: GROOMBRIDGE & SONS, 5, Paternoster-row.

INTERESTING NEW WORK.

NOW READY AT ALL THE BOOKSELLERS,

Vols. III. and IV. of

The DUKE of BUCKINGHAM'S MEMOIRS of the COURT and CABINETS of GEORGE III., from Original Family Documents. Comprising the Period from 1800 to 1810, and completing the Work.

Among the principal important and interesting subjects of these volumes (comprising the period from 1800 to 1810) are the following:—The Union of Great Britain and Ireland—The Catholic Question—The Retirement from Office of Mr. Pitt and Lord Grenville—The Addington Administration—The Peace of Amiens—The connexion of the Prince of Wales with the Opposition—The Coalition of Pitt, Fox, and Grenville—The Downfall of the Addington Ministry—The Conduct of the Princess of Wales—Nelson in the Baltic and at Trafalgar—The Administration of Lord Grenville and Mr. Fox—The Abolition of the Slave Trade—The Walcheren Expedition—The Inquiry into the Conduct of the Duke of York—The Convention of Cintra—The Expeditions to Portugal and Spain—The Quarrel of Lord Castlereagh and Mr. Canning—The Malady of George III.—Proceedings for the Establishment of the Regency, &c. The volumes also comprise the Private Correspondence of Lord Grenville, when Secretary of State and First Lord of the Treasury—of the Right Hon. Thomas Grenville, when President of the Board of Control and First Lord of the Admiralty—of the Duke of Wellington, during his early Campaigns in the Peninsula; with numerous confidential communications from George III., the Prince of Wales, Lords Castlereagh, Elgin, Hobart, Camden, Essex, Carysfort, Melville, Howick, Wellesley, Fitzwilliam, Temple, Buckingham, Mr. Fox, Mr. Wyndham, &c. &c.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

Now ready, in 3 vols.

THE MONARCHS of the MAIN; or, the STORY of the BUCCANEERS. By GEORGE W. THORNBURY, Esq.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

13, GREAT MARLBOROUGH-STREET.

NEW PUBLICATIONS AND CHEAP NEW EDITIONS OF STANDARD WORKS.

MEMOIRS of the Right. Hon. RICHARD LALOR SHEIL. By TORRENS MCULLAGH, Esq. 2 vols. with Portrait, bound.

"Such a man as Sheil eminently deserved a biography, and Mr. McCulloch has, we think, proved himself an exceedingly proper person to undertake it. His narrative is lucid and pleasant, sound and hearty in sentiment, and sensible in dissertation; altogether we may emphatically call this book an excellent biography." *Daily News*.

ALSO,

Mr. SHEIL'S LEGAL and POLITICAL SKETCHES. 2 vols.

LIVES of the QUEENS of ENGLAND. By AGNES STRICKLAND. Improved Edition, embellished with Portraits of every Queen, in 8 vols. post 8vo. Price 7s. 6d. each, handsomely bound.

REVIEWS

Memoirs of the Court and Cabinets of George the Third, from Original Family Documents. By the Duke of Buckingham and Chandos, K.G. Vols. III. and IV. Hurst & Blackett.

THE present volumes of the "Grenville Papers" exhibit the same features as the former portions of the series. The general reader is entertained, and the reader for historical purposes is enlightened. It is certainly to be regretted that all these literary treasures from Stowe were not published in one continuous series, and subjected to most careful editorial revision. But of their value and importance, even in their present form, there cannot be two opinions.

The family of "the Grenvilles" exhibited so many phases that it is necessary to attend closely to their political relations while reading any volume of these papers. As a family and political connexion, "the Grenvilles" stand out in parliamentary history as being neither courtiers (in the ordinary sense) nor popular leaders. They aimed at engrossing official influences and exalting their own family; but in doing so, they were often compelled to exhibit what in modern language would be called "liberal" ideas. Their political ambiguity of purpose detracts seriously from their moral dignity; but there was a sustained energy in their exertions which extorts respect for their abilities. Though they never produced a single man of genius, or a first-class historical character, yet two Premierships, the Viceroyalty of Ireland, the Speakership of the House of Commons, a Chancellorship of the Exchequer, a Secretaryship for Foreign Affairs, the Chancellorship of Oxford University, a ducal coronet, and sundry other aristocratic distinctions, show how successfully they disputed the prizes of public life with "the great families" of the last and present century.

The two volumes now before us range from 1800 to 1810,—a period during which "the Grenvilles" occupied a peculiar and almost an equivocal position. The Union with Ireland introduced into English politics "the Catholic Question"; and the Grenvilles followed upon it the course of Mr. Pitt. After his decease, as is evident from these papers, they felt themselves much embarrassed, not only by a certain incompatibility between them and the Grey Whigs, but also by the rise in power, at the other side, of Lord Castlereagh and Mr. Canning. A recollection of the latter fact supplies the key for deciphering the letters in this correspondence, the reticence of which is often significant.

The letters about the "Irish Union" disappoint us, but the interest of the subject has been exhausted by the 'Castlereagh Papers'; and in some other portions of these volumes we feel that the previous perusal of the diaries of Lord Malmesbury, Sir Samuel Romilly, Mr. Wilberforce, and Mr. Horner had anticipated the effect of many of their statements. But there are abundant revelations of interest to arrest attention in many of these papers. On the characters of George the Fourth and the Duke of Wellington there are some very valuable letters. In Court scandals, the affairs of the Duke of York and Mrs. Clarke are brought under notice; and in what we may designate as public scandals, the "horrors of routine" receive abundant illustration in the letters about the Walcheren Expedition, and on the Peninsular War. We shall first notice the last of these interesting topics.

Thus, the following letter is not from "Our

Own Correspondent," and its post-mark is not "Crimea." It is dated from "Lisbon, September 10th, 1809." It is written by Admiral Berkeley, and addressed to the late Duke of Buckingham (then Earl Temple).—

"I really believe there never was so infamous a proceeding as Cuesta's towards Sir A. Wellesley, as owing to either his incapacity, age, or treachery, the campaign has terminated more as if we had sustained a defeat than gained a victory; and our commissaries are equally to blame, as really, in every part of that department, such ignorance and delay appears, that it makes my heart ache. I have, however (in all which relates to their transactions with me), made formal complaints, and I hope it will show how very wrong a principle that department has been acting upon. Twice has the army been stopped for money, and twice for provisions. The horses starved, while ships, loaded with hay and oats from England enough to furnish all the cavalry were rotting and spoiling in the Tagus. The medical staff is as bad—as our army were dying away for want of medicines, while more than sufficient were in ships in the river. The medical staff as well as the commissariat, instead of being with the army, are in Lisbon, keeping their houses, horses, and ———s, and the Commissary-General, at Cintra, taking his diversion."

—And elsewhere, in the same letter, we read:—

"I have saved the army's starving, by sending for bullocks from Barbary, and by the same channel have supplied three hundred mules; a responsibility I was obliged to take on myself, as, notwithstanding I urged the Commissary-General upon the point, I could not get him to stir. But Sir Arthur Wellesley has thanked me for my interference and approval of the measure."

Many more passages might be quoted; but, at the present time, we peruse, with painful interest, the proofs of the criminations and re-criminations about the various "departments" in these pages. On the calamity of Walcheren, and the retreat of Sir John Moore, abundant evidence is shown how careful people ought to be in charging particular individuals on *ex parte* statements. Thus, the conduct of Sir Arthur Wellesley, in relation to Cintra, exposed him to great odium. There are some admirable private letters from him, addressed to the Marquis of Buckingham, from which we shall quote.—

"I am accused of being the adviser of persons over whom I had no control, and who refused to follow my advice, and am made responsible for the acts of others. The real share which I have had in the transactions, which, in my opinion, have deservedly incurred the displeasure of the public, cannot be known till they will be inquired into; and in the meantime, Sir Hew Dalrymple has left the Government and the public so completely in the dark respecting the military expediency of allowing the French to evacuate Portugal, that that part of the question, which is the only one in which I am involved, is as little understood as the rest. I know of no immediate remedy for these difficulties of my situation, excepting patience and temper; and I thank God that the undeserved abuse which has been heaped upon me has not altered the latter."

—He continues; and we quote a sentence giving us the Duke's opinion upon the uses and the fairness of "inquiry":—

"In respect to the conduct of my case, I have determined that I will publish nothing; nor will authorize the publication of anything by others. This forbearance is particularly incumbent upon me, as the whole subject must be inquired into. I have also determined that I will not involve others in scrapes because they differed in opinion with me. * * I will endeavour not to bring others (viz., Sir Harry Burrard) into a scrape, not only out of regard to him, but because I think it fatal to the public service to expose officers to the treatment which I have received, and to punishment for acting upon their own military opinions, which opinions they may fairly entertain."

There are great nobleness and decision in

the following passage, taken from a subsequent letter, but still referring to the Convention of Cintra:—

"I signed it, notwithstanding my objections to it, because I would not, in the face of the whole army, set myself up in opposition to the commander of the forces on the very day he joined his army. His task was sufficiently difficult, without adding to it that additional difficulty. I agreed with him upon the main point, viz., the evacuation by the French troops. My refusal to sign would not have prevented the execution of the instrument, and would only have tended to raise my character, at the expense of others: and probably at that of not a little outrage and want of discipline in the army. These were my motives."

Again, from a private letter of Sir Arthur Wellesley's to Lord Temple, we observe the vast difficulty of a contemporary public in getting at the actual relations of official individuals behind the scenes. Alluding to Sir Harry Burrard, the letter says:—

"I proposed to him the pursuit with the left wing, and the march to Torres Vedras with the right; to which he objected, and desired me to halt the pursuing troops on a neighbouring height. You will observe that I then reported to him the circumstances of the action, and he as my commanding officer reported them to the Secretary of State, and certainly never mentioned to him that he had stopped the pursuit of the enemy. This circumstance would probably not have been known, if the discussion between Sir H. and I on the field of battle had not been heard by above twenty officers; but it has not been, and cannot be, in any manner stated officially. Under these circumstances, Government may have sufficient reasons to remove him from his command, not to trust him, and not to employ him again; but there are none for inquiring into his conduct."

Never had any man more difficulties to contend with than Wellesley,—and we see how little was expected from him by Lord Grenville. Thus, Lord Grenville, the shrewdest man in the connexion, writes to Lord Buckingham:—

"I return you Sir Arthur's letters—they make but an indifferent case for him, and I am sorry to see that public opinion runs more and more against him. There is something quite inexplicable about his protest. Are we to suppose it was all pure invention?"

And even after the glorious exploit of the battle of Talavera, here is the disparaging way in which Lord Grenville referred to the ablest Englishman then living.—

"I now suppose these troops will be sent to Spain; but, I trust, not under Lord Chatham. *Not that I think our friend Sir Arthur has given this year any very favourable specimen of his talents, except in the field, and in the actual day of battle.* For if we were to admit the truth of his boast of having beat double his force, the next question must be, how came you into a situation where you could be attacked by twice your numbers? Still Wellesley is a soldier, and a man (*though very rash*) yet of considerable talents. What the other is, we both know."

In Lord Grenville's opinion, the strategic qualities necessary for a campaign were wanting in Sir Arthur Wellesley! In our review last year of the 'Memoirs of King Joseph' [*Athen.* No. 1396], we showed how astonished Napoleon was at the exploits of the English General at Talavera with his handful of troops. The Editor of these volumes asserts that it was to Lord Castlereagh the country was indebted for discovering the talents of Sir Arthur Wellesley, and supporting him. "Routine" was broken through, as Sir Arthur was *only* a Major-General. But let us see how the system worked in those days. Thus, under date of September 4, 1808, Mr. Thomas Grenville wrote to Lord Buckingham about how the Marquis should provide for his second son, Lord George (afterwards Lord Nugent). He says:—

"In former times, a noble younger brother with less talents than George possesses, might much more

easily have looked to a provision by office or sinecure, than he can now hope to do."

—So it would appear that the army ought to be selected for "George's provision in life." We shall extract the whole passage.—

"Mr. Bankes's Committee is much more popular than many people suppose it to be, and I am very much mistaken if the temper of the times will not be such as to produce regulations very unfavourable to those views which appear to be forward in your hopes respecting George's provision in life, arising from any parliamentary pursuits, and from those particular objects which are to supply the place of a regular profession. The army, on the other hand, is increasing in estimation; and the protracted state of warfare which must be looked to in Europe is likely to add to that estimation in this as well as in every other country; and when you look at Lord Moira, Lord Mulgrave, Lord Chatham, Lord Cornwallis, &c., it may surely be safely said, that talents less than those which George possesses offer from the military profession a fair and open road to the greatest situations which this country has to give."

We shall not stay to dwell on the sentence, "those particular objects which are to supply the place of a regular profession." The logic of the letter appears to be, because mediocrities, like Lord Mulgrave and others, do well in "the army," it would be a capital provision for life for "George." So, also, in another letter we get a peep at the use made of the Royal Navy. The Marquis of Buckingham writes to Lord Bathurst,—the italics in the passage being our own:—

"You will easily believe the anxiety with which I have considered fully the situation of our brother, George Berkeley, and the whole of our discussions respecting him. I am most unaffectedly very unhappy to have misunderstood you on the point which I had considered so far settled in your view of the subject, as to offer the means of assisting him by our advice on a matter so deeply interesting to him, to his dear wife, and to both of us. * * I shall write by my friend Sir J. Warren to him, and shall certainly press him to avail himself of Lord Mulgrave's attention to your suggestions, by which the frigate is left at his disposal at Bermuda, so as to ensure to dear Lady Emily every advantage, both of time and of convenience."

What follows is even still more significant of the system in which "dear Lady Emily" was so carefully considered.—

"I am in hopes that we may urge the Admiral, from considerations of her health, to delay his voyage from Bermuda till late in February, particularly if Warren does not sail till the 20th of December—and I see so many political reasons that may make it wise for Government so to detain Warren, till they can judge further on some of the important points now pending, that I am inclined to hope that what I wish, from motives personal to Berkeley, may in reality take place from considerations of a very different description."

The letter contrasts strangely with our first extract, describing the neglect of the troops at Lisbon.

We proceed to cite some of the letters which throw additional light on the character of George the Fourth. Many have thought that the disclosures about the Prince of Wales and the Duke of York, in the two preceding volumes of these papers, narrated the most disgraceful things ever known of these princes. We allude to their heartless conduct during the awful malady of their royal parent in 1787. When the Duke of York got into the grave scrape about Mrs. Clarke, let us see the depth of the fraternal affection of his elder brother. Lord Temple (the late Duke of Buckingham) wrote to his brothers after paying a visit (by appointment) at Carlton House, when the Prince of Wales said—

"That his opinions were that his brother had brought all this upon himself, that he had behaved shabbily to the woman to whom he had promised an allowance which, small as it was, he had not paid;

that a 'gentleman's word was sacred, and that he could not talk of his honour as a prince, who could not keep his promise as a gentleman'; that he had no wishes upon the subject, as he was determined not to interfere one way or the other. He had not been consulted either by the King, the Duke, or the Ministers; and therefore he would not meddle in the matter. He was no party to the Duke's irregularities; he never knew any of the women with whom his brother had been connected; he disliked such 'society'—*chacun à son goût*—and he thought his taste was better than the Duke's."

After much more to the same effect, Lord Temple told the Prince of Wales—

"I hereupon ventured to express my joy that he had determined to adopt the line he had suggested to me, that the times were tremendous, and that, however harsh it might appear to his ears, as an honest man I must tell him, the opinion of the country was taken as to the Duke, and that its eyes were now turned upon him; that if he pursued the line he had mentioned, he would be carried to the throne upon the shoulders of his people; whereas, if he joined in saving the Duke, provided his guilt appeared manifest, my firm opinion was, that he would have a struggle."

—"The line he had mentioned,"—that is, to remain perfectly neuter. The letter then goes on, and makes us think of the awful lectures read by old George Grenville to George the Third, in his younger days. The tone of the Prince about public opinion is worthy of notice.—

"Of all this he said he was aware, but he could not rise upon his brother's fall, that vigorous measures must be resorted to, for the purpose of keeping the people in order, and mentioned the old Sedition Bills. I told him he must pardon me, such measures could not, and must not be resorted to. The tranquillity of his people depended upon parliament doing its duty, and his forbearance. He said that was true, and, however bitter the pill, it must be swallowed, but that the debating clubs must be kept in order. The occasion of the whole of this cry, was Mrs. Clarke's becoming the instrument of the printers against whom prosecutions were pending on the Duke's behalf, and that Wardle, Folkestone, and Whitbread were at the bottom of the conspiracy."

—And further on we get fresh revelations of the cold duplicity of the Prince.—

"He then put an end to the conversation by the warmest expressions of kindness to myself, by authorizing me to say, that he meant to keep an exact and a *bond fide* neutrality, but expressing his hope that it would be recollected that the attack was made upon the throne, and that an attack upon the throne was an attack upon the vital principles of the country."

Observe the pledge to "neutrality,"—and the admission at the same time of "the attack upon the throne." But the following passage is even worse, and reminds us of the revelations in the antecedent volumes. Lord Temple writes:—

"The Prince sent me word, at five o'clock yesterday evening, that the King had sent to him in great agony of mind, upon the subject of his neutrality, which he represented as condemnation, and had urged him to re-consider his determination; that the Queen had written to him to say the King's health and life depended upon the result, as well as the honour of the family; that in consequence of this, the Prince had determined to make no change in his determination, except to send down one of his household, viz., McMahon to vote for the Duke, to prove that he did not mean to condemn the Duke; but that all the other votes, Duke of Norfolk and Duke of Northumberland, &c. &c., were to remain as before. Such is the nature of the man!"

Of the excitement of public opinion, and the parliamentary paralysis consequent on Walcheren, the Corunna retreat, the Cintra Convention, and the "Mrs. Clarke" scandals, there are various proofs in these letters. The following letter from Mr. Fremantle is a good picture of the period.—

"All power and influence of Perceval in the House is quite gone by; he speaks without authority

and without attention paid to him; and Canning has made two or three such rash declarations that he is as little attended to. You may judge the situation of the House when I tell you we were last night nearly three-quarters of an hour debating about the evidence of a drunken footman, by Perceval suggesting modes of ascertaining how to convict him of his drunkenness. Charles Long, near whom I was sitting, telling me at the time what a lamentable proof it was, of the want of some man of sense and judgment to lead the House. There is no government in the House of Commons. You may be assured the thing does not exist, and whether they can ever recover their tone of power remains to be proved; at present, Mr. Croker, Mr. D. Brown, and Mr. Beresford are the leaders."

And elsewhere the same writer describes the torture of the Royal Family at Windsor.—

"Every part of the royal family at Windsor, excepting the King, is overwhelmed with despair at the Duke of York's business. The Queen very ill, and two of the Princesses dying. The King is said to bear it very firmly; but I have reason to believe he is indignant at his Ministers for having suffered it to come forward at all. The Duke of York, I am told by those who have seen much of him since, is quite sunk under it."

Those were, indeed, most painful times. Many of our readers must often have heard their older relatives talk of the grievous results to public morals that arose from the frequent obtrusion of domestic scandals in the highest places in the land. Ample illustrations of the injurious results of these scandals are to be found in the work before us.

There is less about Nelson than we expected in these volumes, and all the Grenvilles, we observe, are very cold in their acknowledgments of naval and military services. On Nelson's grand exploit at Copenhagen we get some interesting views. Writing to the Marquis of Buckingham, Captain Fremantle shows us what a difficult and dangerous measure was the storming of Copenhagen.—

"Since I wrote you, we have had two or three different plans for attacking Copenhagen, and I think whenever we pass Cronenberg Castle, we may probably have to alter it again. I told you in my last, that my private opinion was, that we ought to pass Cronberg, take up a position off the Island off Møen, and from thence form our mode of operations. I confess I feel the difficulty of explaining exactly all that *has passed* on this business, which I hope may yet succeed."

He then says—"Lord Nelson is very sanguine, and will certainly undertake something." He then gives a sketch of Nelson's plan; and in a subsequent letter records how it was carried out.—

"For our action, I shall refer you to Lord Nelson's letter, which, in confidence, he dictated to me on board the 'St. George' while I wrote it; but to make the business more clear, I inclose a draft of the situation of the Danish ships and ours as opposed to them. The fatigue of firing so long was great, but our unexampled good fortune in the Ganges is surprising. I felt much flattered at being appointed second to Lord Nelson, as well as to the Commander-in-chief. We followed the Elephant, and I dropt my anchor in the spot Lord Nelson desired me from the gangway of the Elephant. In passing the line, my master was killed, and my pilot had his arm shot off, so that I was obliged to carry the ship in myself, and I had full employment on my hands. The Monarch and Defiance are dreadfully cut up, as they were exposed to the Crown batteries; the Bellona got on shore on both sides the Channel, and, notwithstanding all that may be said, never could fire a shot with effect. They, however, did fire, and her loss of men was principally occasioned by the bursting of two guns on the lower deck, which has hurt the ship much. I visited Sir Thomas Thompson with Lord Nelson this morning, and he is doing as well as can be expected. The Russell got on shore and could do nothing; Agamemnon totally *hors de combat*; so that we were but nine

sail of two-decked ships. I consider all this business as Nelson's, to whose ability and address we are certainly indebted for a conquest instead of a defeat."

But the hazard run was enormous, as even the writer frankly confesses.—

"At this time, Nelson put into my hand a letter, which he meant to send immediately to the Prince in a flag of truce, threatening to burn every ship captured if the batteries did not cease firing. At this time, he was aware that our ships were cut to pieces, and it would be difficult for to get them out. We cut our cables and ran out. The ships were so crippled, they would not steer. The Elephant and Defiance both ran on shore. We ran on shore, and the Monarch; and at this period when the batteries had not ceased firing, we counted no less than six sail of the line, and the *Désirée* fast on shore. Luckily we had to contend with an enemy much beaten, and who did not take advantage of our situation; otherwise all those ships must have been lost."

And the following is interesting.—

"I was much pleased at Lord Nelson's manner on board the Elephant, after we ceased firing; he thanked me before everybody on the quarter-deck, for the support I had given him, &c. I have to attribute our good fortune in losing so few men to the bad gunnery of our opponents, and beating them most completely in less than an hour. Lord Nelson, with whom I breakfasted this morning, has just been giving me an account of his reception on shore, when he went to treat with the Prince. He was hailed with cheers by the multitude, who came to receive him at the water-side, and 'Viva Nelson' resounded until he got to the palace, much to the annoyance, I believe, of His Royal Highness and his ministers. During dinner, the people were allowed to come in to look at him, and on going down to the boat, again he was saluted the same way."

But what follows in another letter may be worth attending to, and suggests considerations not without importance when our eyes are turned to our fleet in the Baltic.—

"The ships begin to grow short of water; and it strikes me, that had we been under the necessity of proceeding to the Gulf of Finland, we should have been much straitened for it. I anchored yesterday, with leave, off the Small Island, on rocks of Christiansö, or Entholmar, which lie to the northward of Bornholm. The seven rocks together, do not cover much more than a mile; but should it ever be found necessary to send a fleet of men-of-war in these seas, we ought to possess ourselves of this island, as the tops of them are full of water preserved in tanks, which by conductors may be brought down to the boats. Besides which, two of these rocks are so near each other, as to make a harbour for small vessels, and on occasion would serve to heave down a seventy-four gun ship—there being twenty-six feet of water."

Here, for the present, we must stop. Our extracts sufficiently show the high interest belonging to these volumes. We may return to them next week for some curious illustrations of some of the leading Parliamentary characters mentioned in them.

The Story of the Legion of Honour. By W. Blanchard Jerrold. Routledge & Co.

Mr. Jerrold argues, from the history of Napoleon's Legion of Honour, in favour of a similar institution in England. He would have it named the Order of Victoria, to be distributed as the reward of civil and military merit throughout all ranks of society. There is, perhaps, too much inclination on the part of such advocates to imitate the character and details of the First Consul's plan,—which was essentially adapted to France, but would require numerous modifications before it could be suited to the necessities or tendencies of England. The decorations of the Legion of Honour, though not conferred on soldiers only, derive their historical brilliance from the *souvenirs* of Napoleon's army,—from the memorable fields on which so

many gallant warriors of the Empire deserved and claimed them. Should it at any time seem good in the sight of the powers that be, to establish an Order for Great Britain, equal in dignity to the ancient military ribbonds and stars, more liberal than the Bath,—which is reserved for public servants,—and more honourable than simple Knighthood,—which appears to be reserved for provincial mayors,—the scheme will not succeed unless it implies a desire to place Literature, Art, and Science—as represented by their most distinguished Professors—on the highest levels. Such honours may, by cynics, be counted as toys—but practically they signify public recognition; and for what but public recognition, which means fame, do the emulous students of Letters, Arts, and Sciences contend? But it is necessary that the Order of Merit should not be created as a military honour, to be conferred occasionally, condescendingly, and exceptionally, as the mark of civil distinction.

However, it was well to revive the story of the Legion of Honour. Mr. Jerrold tells it neatly and pleasantly, interweaving his argument with his narrative, and setting a strong plea for the inferior military ranks, though this, as we think, should be discussed as a separate question. Napoleon designed his order for Military or Imperial purposes;—the founders of a similar institution here would act in another spirit, and with different objects. Mr. Jerrold brings this point strongly into the light.—

"Towards the end of March, 1805, Napoleon proposed to the crowned heads of Europe the exchange of the Grand Eagle for their respective Orders. The King of Spain hastened to return the Golden Fleece; the King of Portugal sent the Order of Christ: after some hesitation, the King of Prussia forwarded his Black Eagle to the conqueror."

He proposed to the Austrian Court for the Order of St. Stephen, in exchange for his Grand Eagle, and was refused. To Russia he made no offer, for the present, and none, of course, to England; but it was not long before the Czar bartered his Order of St. Andrew for the new decoration;—and, as we have lately seen, the Garter is at last worn by a ruler of France.

The English Order of Merit should not be created as a political coin, to be used as Napoleon used the decorations of his Legion: it should be all that Mr. Jerrold suggests in the following paragraph—and more:—

"Thus, should an Order of Merit find a place among the liberal institutions of England, the hand that distributes its honours must be guided by an eye as comprehensive as that of Napoleon. Its chancellor must be of no party, of no sect; he should represent no government; his place should be beyond the control of party warfare, and his grand council should be drawn from every section of the nation. It should include, not simply political men, but also men eminent as authors, professors of science, painters, and manufacturers. The lower grades of the order should be freely distributed to men of promise, not simply to men of ripe experience, who have accomplished all the promise of their life."

It should be more than Napoleon's Legion, because Napoleon refused it to the younger Lafayette to avenge the contumely of the elder.

A Narrative of the Cruise of the Yacht Maria among the Feroe Islands, in the Summer of 1854. With Illustrations. Longman & Co.

To those who are always on good terms with the sea, or who are able, after a few hours of seasoning, to strike a balance betwixt *Dolores* and *Delicia Maris*, a yacht voyage must be one of the "highest expressions" of pleasure in travel that can be found. The yacht, to make the joy perfect, should number among its crew, cook, draftsman, and journalist, and the voyage be directed to unfamiliar shores. These things granted, the result of the venture—a book—

can hardly fail to be welcome. At all events, this book is an agreeable tale for summer reading:—especially so at a moment like the present, when so many, glad of respite from the grave excitements of the hour, are still too thoughtful to be accessible by merely fictitious enchantments.

After a cruise from Dublin of about eleven days, including stoppages and stormy weather, the yacht *Maria* got within sight of the Feroe Islands, and came to speech with the *Feroese*. We cannot give a fairer specimen of the powers of the yacht's man of letters than by allowing him to tell in what manner the *Maria*'s "jack," or signalled request for a pilot, was "honoured," as men of business say, from shore.—

"In a few minutes we observed a boat put off from a village there, which, when it neared us, proved to be an open boat, sharp at both ends, fully twenty feet long, and containing twelve men, two of whom sat side by side on each bench. They were tall, leggy fellows, in pointed caps, brown jackets, and knee-breeches; and rowed with very short small bladed oars, fastened to the gunwale by leather thongs, in a manner which made it impossible to feather them. The boat was not painted, but well covered outside with tar, and finished at each end by prows, which serve as handles with which to pull it upon the beach. The first words the natives spoke when they came within hearing were 'any sick men on board'; for it appears the islanders have suffered very severely from the introduction of infectious diseases by strangers, and entertain a great dread of them. We were greatly relieved to find they spoke a little English, (though it has become so much the universal language of the sea, that a few nautical words are current on almost every coast); and we soon set their fears at rest as to our health, upon which they came alongside, and two of them scrambled over our quarter, while the rest remained towing after the yacht in their boat. In answer to our anxious inquiries, they declared, 'Thorshaven was a gut harbour, very gut,' which was highly satisfactory, as the gale was rising and the mists were thickening around us every minute, and they pointed it out to us immediately opposite, about three miles to leeward on the other side of the sound. All we could perceive was a black church steeple, the roofs of the houses being covered with grass, which makes it impossible at a distance to distinguish them from the surrounding hills. After a short stare of curiosity round, one of the men took possession of the helm, and steered the vessel towards Thorshaven, while our sailors were taking in the sails preparatory to anchoring. As we neared the town, its various features became clearer; flags were hoisted in several places to welcome us; and so rare are arrivals even in this the chief port of the Islands, that in spite of the heavy rain which had set in, the inhabitants flocked in crowds to the shore to see who the new comers were. The situation of Thorshaven is in no respect striking. It does not contain more than 120 single-storied houses, which extend round two little bays, each about 150 yards long, by half that breadth; and over a tongue of land some fifty yards broad, which divides them from one another. In the background are barren turf hills, not precipitous enough to be picturesque. The shores are rocky, and the ground the little town stands upon is broken into hillocks, over which the houses are crowded together without any order, the front of one facing the side of another; the streets between them being only steep uneven paths never more than six feet broad. The pilots steered us into the south-western bay, and let go our anchor in the middle of it, in nine fathoms of water, at six o'clock p.m., within a stone's throw of either side. It proved to be a very fair harbour, being protected by the Gloversness point from the full force of a south-easterly sea; but as the vessel dragged slowly, we moored her by ropes from both bows to rings on either shore, and with this additional security she rode very safely. The pilots asked a pound for their work, though, when given them, they looked so inquiringly at it, that we fancy they can only have seen it before in the shape of twenty shillings. After it was explained to them they seemed much pleased,

and before leaving they shook hands with all on board,—a ceremony which takes place between the highest and lowest in this primitive land. There was only one other vessel in Thorshaven, a little Danish sloop of forty tons. Immediately after we anchored, a Feroese gentleman came on board, who introduced himself to us as Mr. Müller, the Sysellman, or, as he would be called in England, the stipendiary magistrate of the district."

The Sysellman went on to explain that his excellent English had been perfected by a visit to the Great Exhibition in 1851, at which he was the solitary Feroese present. He remained for some time with the party. Their reception was generally marked by that primitive hospitality and wonderment which one must now go so far as the Feroe Islands to seek. The coast scenery, moreover, repaid the yachters—being of the grandest kind:—as, indeed, is shown, unless the artist of the Maria has exaggerated some of its features, as artists will do. The giddy, perpendicular promontory of Myling Head, two aspects of which are given, is a passage of scenery, the sketch of which will give dreams to persons of quick fancies. We are contented to mount it by deputy.

There is sport, too, to be got by those who visit the Feroes,—nothing less than fishing for whales.—

"These whales are not the large Greenland species, but a much smaller fish, about twenty-four feet long at maturity, with an extreme girth of twelve feet, known in the Shetland Isles as the Caaing whale. Though usually spoken of as whales, they are in reality a kind of gigantic dolphin, which follows a leader in large herds or shoals of from fifty to one thousand, and have in consequence been christened by Dr. Traill, of Edinburgh, *Delphinus deductor*; while Cuvier gave them the name of *Delphinus globiceps*, from the round shape of their heads. When they are seen approaching any island, messengers are despatched, and hay fires lighted on the hills, to summon aid; while the boats close at hand drive them, by shouting and splashing the water, into the nearest convenient bay, and keep them there until men arrive in sufficient numbers to begin the onslaught. We found the whales, in this instance, were being hunted into the harbour of Westmannshaven, a place sixteen miles distant by water. * * The fiords, usually so quiet and lonely, were now dotted all over by boats hastening to the spot, their crews rowing against one another in famous spirits; for, besides the capture of a herd of whales affording a valuable supply of food for the winter, the Feroese enjoy the excitement of the chase as much as we do a fox-hunt or horse-race. The row from Welbestadt occupied three hours—a time spent by us in a state of great suspense lest the whales should have been killed, or escaped before our arrival; and as soon as we opened Westmannshaven bay, we looked eagerly up it to re-assure ourselves that we were not too late. There we espied them, to our great delight, just perceptible in the distance, spouting numerous jets of water. It was a most curious sight, and the scenery was well calculated to set it off to advantage. The bay is about three miles long by three quarters of a mile broad, and surrounded by steep rugged mountains, which looked particularly gloomy in the sombre twilight. Between the whales and the outlet to the sea, fully sixty boats were collected together, with crews of six or eight men each, who were lying lazily on their oars, while about a hundred natives, on either side, were employed in dragging a net of ropes, some five hundred yards long, across the entrance. This net is only used in Westmannshaven, where there are no sloping shallows on which to drive the whales; it is, of course, not intended to catch them in, for no net could be made sufficiently strong, but it is supposed to retard their escape when they attempt to get out to sea. The boats were the ordinary ones in common use; the only difference observable in them being, that they had now lances stuck upright, like masts, at the stem and stern, and attached to the benches by several fathoms of rope. More boats came dropping in for some time after our arrival, until at eleven o'clock we counted the number up

to ninety; so that, including the men on shore, not fewer than eight hundred must have been present—all of them dressed in the rusty brown jackets and black knee-breeches of the country, with as much uniformity as a regiment of soldiers. The net was drawn farther and farther up the bay, great care being taken to avoid frightening the whales, who swam quietly before it, or rolled about at their ease, evidently quite unconscious of danger. When matters seemed approaching to a crisis, our party separated. Each of us got into a boat, and stood in the bows with a lance in our hands ready for action, and the fray commenced. Half of the boats remained outside the net to support the buoys, and the remainder, about fifty in number including ours, closed round their prey, and drove them, by shouting and throwing stones, towards the shore, the animals tamely submitting until they got close to it. They then turned, evidently in great alarm, and bore down upon us, looking most formidable, and surrounded by a great wave, which their impetus carried with them. Not knowing how the boats would behave, we tyros awaited the charge with no small misgivings, under an assumed air of great calmness. The natives, on the other hand, became frantic with excitement, yelling like maniacs, splashing the water with their spears, and seeming about to throw themselves into it, in the intense desire to head them back. All their efforts, however, were to no purpose. The whole herd broke through our ranks, though they were severely speared in passing. Many of the boats were lifted half out of the water in the collisions; while the cries of the boatmen, mingling with the loud blowing of the whales, made a wild and not inappropriate chorus, which rang through the surrounding hills. When clear of us, the animals continued their career at the same rapid pace, and came in contact with the net, which they carried back, as well as all the line of boats supporting it, several yards; and in a few seconds escaped, either under or through it, leaving a few of their number entangled in its folds, lashing the water up twenty and thirty feet high, in their desperate struggles to disengage themselves. In the end they all got away, and swam half a mile out towards the sea, when they dived under water, and remained nearly a minute out of sight. We then pulled after them as fast as we could. The scene resembled an enormous regatta, with a herd of whales as the turning buoy; and by dint of stones and shouts, they were headed back, again speared, and again broke through all the barriers opposed to them."

Further to rifle this agreeable book would hardly be fair. We have given enough to recommend it; and it will not surprise us if, even now, when the adventurous and the thoughtless are talking of "pleasure trips to the Crimea," this Narrative of the yacht Maria's cruise tempt other yachters to take a look at the good people and the grand scenery of the Feroe Islands.

The Formation and Progress of the Tiers Etat, or Third Estate in France. By A. Thierry. Translated by the Rev. F. B. Wells. 2 vols. Bosworth.

M. Thierry composed this admirable book as an introduction to the documentary history of the *Tiers Etat*. It is, he tells us, the summary of his labours relative to France. In the Third Estate of the French realm were included, not only the *bourgeoisie*, but all orders of people with the exception of the clergy and the nobles. The object of this work is to mark the stages by which civil society progressed under the descendants of Louis le Gros, through six varied centuries, to the death of Louis the Fourteenth. From the confusion of manners and laws, which followed the ruin of the Roman Empire, a social development took place that seemed to augur peace, harmony, and splendour for France during a long course of ages. The monarchy and the nation travelled side by side. New compacts at the close of every era consecrated their union, for each decisive epoch

in the annals of French industry and politics corresponded to the name of some great king or minister. Louis Quatorze led the people in a wild pursuit of glory, which exhausted them, and helped to turn the feeling of the Tiers Etat against the throne it had long supported. A fatal divorce then happened between the First and Third Estates of the realm; they parted in mutual rancour, and their jealousies were exasperated rather than appeased by the patrician and ecclesiastical orders. France was thus prepared for a revolution. It had advanced towards the assimilation of monarchical traditions with popular freedom; but the broken bond could not be renewed, and when peace ceased to exist on the basis of common desires and common benefits, discord could not be distant. M. Thierry explains the action of the people—apart from priesthood and chivalry—on the destinies of the country and the throne; but touches on the sacerdotal as well as on the aristocratic classes in their relation to the general mass. His treatment of this subject, from the point of view we have described, is luminous and philosophical. It opens French history to its full dimensions, and surveys from an elevated range the sources, the currents and the issues of those mighty events which in the eighteenth century accomplished the work of the Tiers Etat—and left the Third Estate, as well as the old monarchy, mere traditions in the French realm. To this outline, which is replete with profound observations and suggestive criticisms, the author has added fragments on the origin and vicissitudes of the ancient municipal institutions of France. The first of these, to which he has given a geographical as well as a political arrangement, reveals the early glimmerings of French liberty,—the experiences of men to whom freedom was new, and partially connects the legislation of modern Europe with the laws and governments of the Middle Ages. The second is a study on the communal constitution of Amiens,—a monograph which, the author admits, will only interest those who find pleasure in minute historical analysis.

We may select from the rapid narrative in the first volume some passages to illustrate the view of M. Thierry, as above condensed. The reigns of Francis the First and Henry the Second are noted as those in which the material prosperity of France increased to an extraordinary extent.—

"In spite of the exhaustion of resources, caused by foreign expeditions, and a frequent alternation of conquests and defeats, the country displayed a degree of luxury in the arts of the Renaissance unknown till then. The Italians themselves were amazed by the number and magnificence of new constructions of palaces and mansions. These buildings covered with sculptures, the very fragments of which excite our admiration, gardens ornamented with statues, porticos, fountains playing into marble basins, replaced, in many of the country seats, not only around, but at a distance from Paris, the towers and the warrens of the seignorial manors."

The Tiers Etat was now at a social height which appears strange when we remember the pride of the nobles and the adroitness of the clergy. But the nobles despised civil offices.—

"It was the plebeian order which supplied, on the recommendation of university honours and other proofs of qualification, more or less numerous, the chancellor, keeper of the seals, the secretaries of state, the masters of requests, the attorneys and solicitors-general of the king, the whole judicial body composed of the grand council, the court of appeals and of reserved cases, of the Parliament of Paris with its seven chambers, of the court of exchequer, of the court of aids, of the eight provincial parliaments, and of a multitude of inferior courts, at the head of which figured the presidial."

One of the results was seen in the culture of learning by the Tiers Etat.—

"A minister from Venice, a shrewd observer, remarks, as a characteristic trait in the families of this last class, the care which the parents took that some one of their sons should receive a literary education, with a view to the numerous employments and the high positions which it procured. He attributes to this ambition the great number of universities which France possessed at that time, and in the university of Paris the great number of students, which amounted to more than fifteen thousand. Another Venetian ambassador observes that these students are for the most part very poor, and are supported by foundations made in the colleges—a certain proof, as regards the sixteenth century, of that aspiration of the inferior classes towards literature and knowledge, which discovers itself by so many signs in the two following centuries."

The darker chapters of the story soon follow. We now perceive the Monarchy setting an example of that violence which recoiled upon it, with retributive fury, at a later day:—and yet, says M. Thierry,—

"The *bourgeoisie* of Paris—the fact must be confessed—was an accomplice of the royal power in that day of execrable memory. Deceived by the fable of a plot, and led away by fanatical hatred, the municipal body received and accepted the orders which were to insure the cold-blooded massacre, in which thousands of Frenchmen perished, in all the security of peace, by the hands of Frenchmen. We behold here one of the most painful moments of our history; and the king upon whose name the memory of that deed rests heavily—Charles IX.—remains marked for one single act with the stamp of an eternal infamy."

Under Louis the Thirteenth the precursors of a separation between royalty and the people appeared. Savaron delivered his bold speech in the Louvre:—

"What should you say, Sire, if you had seen in your countries of Guyenne and Auvergne, men feeding, like beasts, upon grass? Would not this new misery, unheard of in your state, excite in your royal breast a desire worthy of your Majesty to render assistance in such a great calamity? And yet the truth of this is so certain that I engage to confiscate my property and my appointments to your Majesty, if I am convicted of a falsehood."

—This address to the king was accompanied with charges against the nobles and clergy—charges which, a century afterwards, were repeated by myriads of voices. At another audience, the nobles retorted, and complained that the *Tiers Etat* declared itself to be one of the children of the state—bound by fraternal ties to the patrician order. The scene that ensued has an important bearing on the history of a subsequent period.—

"As they retired, the assembly of the nobles who accompanied their speaker expressed their unanimous assent by gestures and such words as these: 'We do not choose that the sons of shoemakers and cobblers shall call us brothers; there is as much difference between us and them as between the master and the valet.'"

The events of the eighteenth century were, to some extent, rehearsed in the seventeenth. Two hundred years exactly before the fall of Louis Philippe—that is, in 1648—in Paris, says Cardinal De Retz—

"Everybody, without exception, took up arms; children of five or six years old were seen with daggers in their hands; mothers were seen who themselves supplied their children with them; there were more than twelve hundred barricades erected in Paris in less than two hours, lined with flags and with all the arms which the League had left fit for use. In the street Neuve Notre Dame, among other things I saw a lance which certainly belonged to the times of the old wars with the English, dragged along rather than carried, by a little boy eight or ten years old."

A climax came when Louis the Fourteenth declared that he intended to rule alone:—

"Fifty-one years had elapsed since the death of Henry IV., and in this interval, by means of the order which had been powerfully established or ably maintained by the ministerial dictatorship, the social

and moral state of France had made immense advances. At its escape from the civil wars of the sixteenth century, the nation, henceforward withdrawn from the double current of religious passions, which had dragged it in opposite directions into the great European contest, fixed its thoughts upon itself, and applied itself to look for its original position in the political and intellectual order of things. Thence sprung for the seventeenth century, two simultaneous tendencies, which consisted, the one in rendering the influence of France free and personal abroad; the other in developing the French spirit in its peculiar individuality, and its native character."

The personal character of the monarch who undertook to be the autocrat of such a people is thus suggested by M. Thierry:—

"In wishing to make but one object of his own happiness and the welfare of the State, he was too much inclined to confound the state with himself, to absorb it into his own person. He too frequently mistook the voice of his passions for that of his duties, and the general interest, that which he boasted to love the most, was sacrificed by him to his family interest, to an ambition which knew no limits, and to an unregulated love of applause and glory. His long life exhibits him more and more rapidly carried down this dangerous descent. We behold him, at first, modest, and at the same time firm of purpose, loving men of superior minds, and seeking the best advice; next, preferring the flatterer to the man of information, welcoming advice, not because it was the soundest, but most conformable to his tastes; lastly, listening only to himself, and choosing for his ministers men without talent or without experience, whom he took upon himself to form."

—And the crisis to which he brought France naturally follows.—

"When the reign, which was to crown under such auspices the ascendant march of the French monarchy, had falsified the unbounded hopes which its commencements had excited; when in the midst of fruitless victories and continually increasing reverses, the people beheld progress in all the branches of public economy changed into distress,—the ruin of the finances, industry, and agriculture,—the exhaustion of all the resources of the country,—the impoverishment of all classes of the nation, the dreadful misery of the population, they were seized with a bitter disappointment of spirit, which took the place of the enthusiasm of their confidence and love."

In the second volume are some curious details on the early political institutions of France. M. Thierry's work is a fine historical study, and will add to the writer's high reputation. Mr. Wells has translated it clearly and gracefully.

Institutes of Metaphysic. By J. F. Ferrier, A.B. Blackwood & Sons.

WE may fairly welcome this production of Prof. Ferrier as a rare specimen of conscientious earnestness in the department of metaphysics. Although he occupies the Chair of Moral Philosophy and Political Economy at the University of St. Andrew's, the author energetically avoids all those attempts to reconcile speculation with "common sense," which have given rise to so much philosophical insipidity on the northern side of the Tweed. With equal care he shuns that obscure style, bred between German transcendentalism and English humbug, which has so much contributed to bring the name of metaphysics into disrepute. Far from assuming the character of "Sir Oracle," Prof. Ferrier is anxious to exhibit to his reader the straits and shallows of his own wisdom, and is never more candid than when he confesses his ignorance of a predecessor's philosophical intentions.

The form of his book is partly after the fashion of Spinoza's *Ethics*,—that is to say, he lays down his propositions in a rigid order of logical sequence, accompanies each with a demonstration in the geometrical style, and then adds "observations and explanations," in which he reviews or elucidates the opinions already entertained by previous philosophers. This less

rigorous portion of the book is by no means the least instructive, and it is (though this perhaps is a doubtful commendation with respect to a philosophic work) unquestionably the most amusing. Prof. Ferrier examines every opinion with acuteness, and always interprets with lucidity. Familiar and even comic illustrations he rather seeks than eschews, and now and then he has no objection to a little pleasant satire.

As for the system of metaphysics which Prof. Ferrier proposes to establish in his *Institutes* we may reasonably doubt whether he has so completely set at rest every speculative difficulty as he seems to imagine; nay, we are not clear that his theory (apart from the form in which it is couched) establishes any new principle whatever. The first proposition of his "Epistemology," or theory of knowing, declares that, "along with whatever any intelligence knows, it must, as the ground or condition of its knowledge, have some cognizance of itself"; and, as we proceed further, we find evolved, among others, the successive propositions:—that the object of knowledge is always object *plus* subject,—that the objective part of knowledge is inseparable in cognition from the Ego,—that matter *per se* and all its qualities are absolutely unknowable,—that the Ego cannot be known to be material, nor known at all *per se*,—that mere objects of sense cannot be objects of cognition,—that the material universe *per se* is not only unknowable but unthinkable,—and that the only independent universe which any mind or ego can think of is the universe in synthesis with some other mind or ego.

These propositions merely make up that sort of subjective idealism which, in the language of Fichte, may be formulized thus:—"The Ego posits itself as limited by the non-ego." Prof. Ferrier, we are aware, thinks he has soared above this point of view, by making his propositions apply, not merely to human intellect, but to intellect in general, of whatever kind. We suspect this flight is merely imaginary, for however we may generalize on the subject of intellect,—an intellect that is not human (save when accepted as an item of a theological creed) is a metaphysical phantasm about which nothing can be proved. Notwithstanding the wide manner in which the first proposition is expressed, it only appeals to a fact of consciousness in the human mind, and its extension beyond that precinct is what an old Kantist would have styled "dogmatical."

The "Epistemology," or theory of knowledge, is followed by an "Agnoiology," or theory of ignorance. The propositions in which this science is contained are to the effect that ignorance is an intellectual defect, *possibly* remediable—that we can only be ignorant of that which can possibly be known—and that, consequently, we can neither be ignorant of matter *per se* nor of the ego *per se*. Prof. Ferrier attaches great importance to the discovery of a category unknown to his predecessors in speculative science; but, after all, does not this "Agnoiology" rather settle a question on the application of terms, than introduce any really new element into philosophy? It positively affirms that the term ignorance cannot be applied to that of which no knowledge is possible,—namely, to that which is in itself contradictory. We may be ignorant of the Chinese language, but we cannot be ignorant of a round square. Neither can we be ignorant of matter *per se* or the ego *per se*, for it has been already settled in the "Epistemology" that these are inseparable elements in every thought and perception; and that, therefore, their separation would involve a contradiction.

The great use of the "Agnoiology" is to pave the way for the third part of the system,

the "Ontology," or theory of being. Absolute Being, not involving a contradiction in itself, is an object of which there can be knowledge or ignorance, wherefore it is neither the *ego per se* nor matter *per se*, but the synthesis of the subject and object,—the connexion of the ego and non-ego. Thus the result of the "Ontology" corresponds with that of the "Epistemology." A conscious ego is all that can be known,—a conscious ego is all that *is*. From this point Prof. Ferrier attempts to leap from contingent absolute existences to necessary absolute existences; in other words, to the *a priori* demonstration of a Deity. We ascribe this attempt rather to a desire to conciliate the theologians, than to an exigency of the system, which comes to its proper apex in the conscious ego. When the absolute is divided into the necessary absolute and the contingent absolute, it begins to wear a suspicious appearance, and reminds one of those two sizes of nothing, wherewith indifferent expositors of the Differential Calculus are wont to perplex their hearers.

If we cannot regard Prof. Ferrier's system as a new creation in its essentials, we can cordially recommend it to metaphysical students as an acute and entertaining exposition of the doctrine which is popularly called Idealism.

Minute Book kept by the War Committee of the Covenanters in the Stewartry of Kirkcudbright, in the Years 1640 and 1641. Kirkcudbright, J. Nicholson.

THIS contribution to Scottish local—and in a smaller degree to Scottish general—history has been printed from a manuscript in the charter-chest of an old Galloway family, the Maxwells of Cardyness. In its getting-up and general appearance it does credit to a small provincial town. Our Northern countrymen, though famous even in Erasmus's days for the way in which they plumed themselves on their antiquity, are by no means over careful of the documents by which that antiquity is illustrated. Scotland has several good antiquarian clubs, yet we still hear of parochial and other records finding their way to snuff-shops and book-stalls. The country gentlemen and burghesses should feel a pang of reproach on hearing of such events;—they should remember that even the merest business entries of their ancestors are of value in aiding the historian to give the colouring of real life to his pages, and that such reality is not only the most attractive but the most valuable quality a history can possess.

In this 'Minute Book' we may see with what energy the Scotch set about a war in days when the material facilities for conducting war were very different from what they are now. It opens on the 27th of June, 1640,—seven weeks before their army crossed the Tweed at Coldstream, and forcing their way to Newcastle, drove Charles to summoning—what turned out to be—the Long Parliament. All the world knows how they had risen against the King and Laud's 'Service Book,' when it made its appearance in St. Giles's Church, Edinburgh, on Sunday the 13th of July, 1637;—how the Solemn League and Covenant had been signed far and wide by high and low in 1638;—how a "pacification," which did not last, was patched up, the year after;—and amidst what earnest excitement they were now advancing another step in the cause. The proceedings of one county may give us a picture in little of what was going on all over Scotland in that most important crisis of its history.

The War Committees consisted of the leading landed men in each county, appointed by Parliament to raise the share of horse and foot re-

quired of their district. Thus, in the first meeting of that for the Stewartry, we have Sir Patrick M'Kie, of Larg, chosen "preses," and so many troopers ordered from each parish, with directions that "the samyn hors be put furth at the sight of the persons eftir-spezifit,"—whereupon follow the names of Gordon, Lord Kenmure, other Gordons, Maclellans, Maxwells, M'Kies, according to the position of their lands. Very summary measures were taken to procure the support of the forces. If a person was "ane cold covenantar" or a "non-covenantar," so much of his rent was at once "up-lifted," or his crops seized, and a certain allowance made for his family's maintenance out of them. We shall give a specimen, in their own language, of the stern decrees which the lairds made at their committee meetings. They had little compassion on "ane loyterar,"—a character known, it seems, in that age—as in all ages.—

"The quhilk day, David Macmollan, loyterar, being convent for saying, that Galloway should not keip Mr. Ilew Henderson, his minister, and him bothe; depones, out of his awn mouth, that if Mr. Hew did not freithe him of ane sclander laid upon him be the parochen, in reporting him to be the person that said he wald be drunken with Armacannie, that the said minister and he should not keip Galloway. The Committie ordaines, for the said caus and uthers foirsaid, quhairin he was decernit in a fyne befoire, to pay for all ane hundred merks, and to stay in ward untill the samen be peyit, and to sit the morn in the stockes betwixt ix and xij houres, with ane paper on his heid beirand this device, AS ANE LOYTERAR, with the foirsaid speech of his minister."

"Allegit monied men" were called before the committee to be inquired of,—what they had to lend "to the use of the publick"? Some answer "nihil,"—some that they had so many merks, and some that what they had was "owand to creditors." "Base fugitives" are rigidly provided for by measures which prevent such persons from moving without a "pass," and by compelling "maisterless" men to attach themselves to some "trade, maister or captaine."

Yet, it would be a mistake to suppose that the enthusiasm for the cause was not general. There are curious entries illustrative of the sacrifices made. Witness the following:—"Erlistoun," is Gordon of Erlston, a distinguished branch of the family from which came "the young Lochinvar."

"The said day delyverit by Erlistoun, to the Commissioners, ane silver peice and ane dussane spoones, weght, ij pund ij unce ix dropes. Maire, ten silver spoones, weight, ane pund ij unce ix dropes. Maire, ane silver coupe and ane silver peice, weght, xij unce xj dropes. Item.—Maire by Erlistoun, vj silver spoones, ane paire belt heides, ane pair silver weires, and foure uther little peices of silver, broken and hailt, weght, xj unce xv dropes. Item.—Maire by him, sex silver spoones, weght, x unce xij dropes. Whairof delyverit back again of evill silver, ane pund ane unce xij dropes."

"Cardyness' Wyff" is, of course, the wife of the Laird of Cardyness,—very unceremoniously introduced.—

"Cardyness' Wyff.

"Delyverit by the Lady Cardyness, in name of her husband, ane silver coupe, ane stak of ane fann, and sex silver spoones, weght, xv unce xv dropes. Delyverit back ane unce xij dropes."

"Delyverit by Robert Gordoun, for himself and certain uthers, certain silver worke, weght, thrie pund thrie unce xij dropes. Delyverit back v unce twa dropes."

They were very minute in their knowledge of the persons to be relied on:—

"The quhilk day, Alexander Gordon of Knockgrey, Captain of the parochen of Carsfarnie, declares no cold or uncovenanters within that parochen.—Alexander Gordon of Erlistoun declares no cold or uncovenanters to be within the parochen of Dalry, whereof he is Captain, except Johne Newall.—Alexander Gordon of Gairlart, Captain of the parochen

of Kelles, declares no cold or uncovenanters to be within the said parochen of Kelles.—William Gordon of Shirmers, Captain of the parochen of Balmacellan, declares no cold or uncovenanters within his parochen.—George Glendonnyng of Mochrum, Captain of the parochen of Partone, declares the lyke.—George Livingstone, Captain of the parochen of Balmaghie, declares the lyke.—William Gordon of Kirkconnell, Captain of the parochess of Buittie, Crocemichael and uthers, declares no cold or uncovenanters within his bounds except John Maxwell of Mylnetone; William Maxwell of Midkeltone; Gilbert Maxwell of Slognaw; Mr. Patrik Adamson, sumtyme Minister at Buittie; Mr. James Scott, sumtyme Minister at Tunland; George Tait; Paul Reddik; John Browne of Mollance; Robert Browne, his brother; John Maxwell of Colignaw; James Maxwell of Brekansyde; Thomas M'Gill at Keltone."

This is in various points of view an interesting volume. The economist might refer to it for hints on prices, and so forth: we read, for instance, that the worst horse was to be worth "jc. lib. monie,"—somewhat above eight pounds. To social history it contributes,—more especially by showing us how property has changed hands; for of the families then predominant, some have disappeared, and many are now much reduced. The Jacobite cause—personal extravagance—the spread of commerce, and gradual decay, have played havoc with the historic names which lord it over this 'Minute Book.'

Rahab.—[*Rahab, ein Frauenbild aus der Bibel*].

By Max Waldau. Hamburg, Hoffmann & Campe; London, Trübner & Co.

THIS is the last work of a young poet, very recently deceased, who was regarded as one of the most rising men among the revolutionary bards of Germany. As a general rule, the name of the publishers, Hoffmann & Campe, may be taken as an index that the author whose title-page they adorn is inimical to the powers that be.

In forming the title of his poem, Max Waldau made use, we think, of a wrong preposition. His *Rahab* is not a female figure taken out of the Bible ("ein Frauenbild aus der Bibel"), but, on the contrary, a creature of his own brain, by him thrust into the Jewish annals. The connexion of the famous Rahab with the fall of Jericho, according to Max Waldau's narrative, is not dissimilar to that of Masaniello's sister with the great Neapolitan insurrection, as set forth by that original historian, M. Scribe. One might almost imagine that, after witnessing an inspiring performance of 'La Muette de Portici,' he went home to pass the remainder of his evening in reading over the early chapters of the Book of Joshua, and that the misfortunes of the dumb Fenella (her dumbness certainly *not* included), somehow or other, became blended in his dreams with the acts of that lady who was so useful an ally to the Hebrew leader.

However, motives are a poet's own, as well as matters of detail, so far as they do not militate against an essential idea of history. All that we have respecting Rahab from the sacred record amounts to the fact, that she concealed the spies sent by Joshua from the pursuit of the King of Jericho, and that, amid the general massacre of her fellow citizens, she and her household were alone spared by the victorious Israelites, as a reward for the good service she had done them. Why she thus showed herself an enemy to her own country is an open question, which any person is at liberty to answer after his own fashion; and if we point out the unbiblical way in which Max Waldau put in his response, it is not by way of censure, but to warn the unsophisticated that they are not to expect what, in this country at least, could be considered a Scriptural work.

Though Max Waldau's 'Rahab' is in the narrative form, it may be likened to that most primitive state of the Greek drama, in which the action that takes place before the eyes of the spectator is as minute as possible; while on the other hand, the poet does not shrink from any multiplicity of events that he can assemble within the limits of a speech. The storming of Jericho has already begun when the poem opens; but the preceding events of Rahab's life are told by the heroine herself, who from the top of her residence, situated (as we are informed by Josephus) near the wall, utters a huge soliloquy, as she vengefully anticipates the destruction of the city. She has deeply loved the son of the King of Jericho; and with the most indefatigable accuracy she depicts the rise, progress, and fatal consequences of this unfortunate passion. Not only was her love, and the sacrifices it involved, rewarded with ingratitude by the royal seducer, but when she ventured to call upon him she unexpectedly found herself the sport of a drunken revel,—and after being subjected to every sort of insult and outrage on the part of the prince and his companions, was literally cast out into the street. She was eyed with scorn by the citizens; the destruction of her father's house, which was burnt down, was unjustly laid to her charge by the voice of rumour; and the police regulations of Jericho compelled her to reside at a house of ill repute, on the extreme boundary of the city. Bent on vengeance, and making the most of her position, she has become what the Parisians call a *lorette*; and in this capacity, she has not only conquered universal contempt, but is the fashionable beauty among the *haut monde* of Canaan. For a while, she has contented herself by destroying the peace of private families; but such particles of vengeance are insufficient for the appetite of a Rahab. As a *grand coup*, she has betrayed her city to the invading Israelites; and when she admits us into her confidence, the moment of her triumph is close at hand.

The pleasing spectacle that greets her eyes, when she rises from the couch on which she has surveyed her past life, will serve to show the descriptive power of Max Waldau. The measure, it should be observed, is peculiar. At the first glance, his line looks like a very bad specimen of modern hexameter; but on closer investigation, it turns out to be a series of five anapaests and an extra syllable, with the antique licence of putting in the anapaest's place a spondee, which often, through modern exigencies, becomes an iambus.—

The storm is proclaim'd from without by the psalm and the trumpet,
And howling, and stamping, and clatt'ring raise billows to heaven.
She rises in haste, and in haste girds her garment around her;
She sweeps from her forehead her hair and her dark meditations,
And hurriedly bends herself over the parapet, watching,
Until, with a wild-flaming glance, she has found out the sought one,—
The bravest of all, who tow'rs o'er the rest on the rampart.
Down, down, ever cleaving their skulls, does he hurl the assailants;
Now whirling his axe in the air, and now dashing it downwards.
Not a blow does he deal but a life by the weapon is shattered;
If all were like him in the battle, the foe would ne'er conquer.
Already the Ark is receding, and six times defeated
By Jericho's force is the throng of unwearied assailants;
When struggling along to the wall, and for stepping-stones using
The corpses of comrades that lie heap'd together before him,
A giant approaches—a ponderous club is his weapon;
The best fall before him; they fall who with firmness resist him.
He stands at the breach wide-swinging his club in a circle;
His followers clamber behind him with shoutings triumphant.
The repell'd press forward again, for new courage inspires them,
And the walls, it appears, have been suddenly gained by the foe-man.

No! the cry that the peril proclaims has the vict'ry retarded,
And fearless the leader of all hurries on to the rescue,—
Drives back to the edge of the wall the gigantic invader;
And as blows are exchanged loud thunders the clang of the weapons.

Must skill be by force overcome, or at last be triumphant?
How heavy the fate that depends upon this single battle,
Is shown both above and below by a breathless attention;
The foot that was climbing the ramparts now suddenly pauses;

The hand remains fix'd in the air, that was using the jav'lin;
For no one would dare to disturb those two in their combat.
The club, dull whizzing, is whirl'd round the head of the giant,

And widely extending its blows, presses hard on the hero.
The nimble opponent has watch'd the assault, and eludes it,
Then darts on his foe with the menacing spring of a panther,
When the premature shout of the giant, too early exulting,
Is chang'd by his failure to howlings of mad disappointment.
Now totters the bulwark of Isra'el, for swift as the lightning,
The steel has descended anew, and has entered his shoulder.
He staggers—he feels that his muscular arm is relaxing;
The men of the city are shouting, the foemen are howling,
And reckless of order are climbing the walls to the rescue.
That all may be brought to an end e'er the peril increases.
The hero well-watching his time, flings down the war-axe:
He stoops to the ground, and he picks up a sword that is near him—

An ownerless sword, straight-shap'd, and well-sharpen'd for thrusting.

And now with a dexterous leap he advances, and plunges
The weapon as far as the hilt through the ribs of the giant,
Who, foaming forth blood, falls back as one mortally stricken;

But e'en as he falls, down tumbles his club, and it shatters,
With the force of its weight unaided, the skull of the victor,
Who proudly had turn'd him around to seek living opponents.

Now down from the battlements rolls that carcass unwieldy,
A terror to those it had led, while twenty it crushes.

But cast down for ever is likewise the city's defender,
Who writhes in the dust, which his hands are convulsively clutching.

All this cutting, thrusting, lunging, tumbling, rolling, which Rahab witnessed from her house-top, was especially pleasing to her on account of the catastrophe,—for the fallen hero of Jericho, who unluckily allowed the club to tumble on his head, and kill him by its own weight, was the author of her wrongs. The enjoyment produced by such a series of strong "effects," required strong language to give it full expression; but Rahab was equal to the emergency.—

This humble house, may I ever regard it with blessing!
The joys which the living bestow can by life be demolish'd;
The pleasure which death gives, death will endow with duration;

And so this hour, this place, give pleasures eternal.
A worm, lowly crawling, while hope is the bride that checks it,

Is misery, life's slow car ever tardily dragging;
But happiness uses its wings, and it soars like the falcon,
And, swifter than lightning, as high as the stars it exalts us.
Then why should the happy repine at the past and its sorrows?

No more it affects them than obstacles rais'd in the valley
Encumber the falcon who pierces the clouds far above it.
This house is the height from which I, as the falcon, in safety

Escap'd from the woes of the earth, and with radiance drunken

Look down on the banquet which Death is thus spreading before me!

Oh, glorious spectacle! Nobly are loaded the tables!
How active the servants! How busy the boys with the wine-cups!

Their number is countless;—no monarch his guests ever feasted
More royally;—none ever revell'd more proudly than Rahab.

The steam of the viands is rising,—the wine-cups are foaming,—

And dish upon dish is with grand prodigality pressing,
Although long ago has the rarest and choicest been eaten.
Right precious and dear to my sight was that gem of the table!

Rahab, if not a strong-minded, is a strong-speaking lady. We often hear of a banquet on horrors, but only in a vague sense. Rahab carries out the idea by ranging her horrors into first and second courses, with proper footmen to bring them to table. Alas! "These violent delights have violent ends." Unhappily, Rahab's boy-brother, the only being she loves, wanders out of his sister's house, is wounded by a stray arrow, and, perceiving Rahab's understanding with the Israelites, dies cursing her as a traitress. The shock is too much for her senses, and she drops into a state of mental oblivion, that lasts for the remainder of her days. It is, of course, needless to say that this catastrophe is wholly independent of the Hebrew record; but we may

observe that altogether Rahab has nothing antique in her composition. She is purely a creature of modern reflection.

The Memoirs of Philip de Commynes, Lord of Argenton. Edited, with Life and Notes, by Andrew R. Scoble, Esq. Vol. I. Bohn.

THE ever-attractive Philip, who wrote so pleasantly and pictorially the histories of Louis the Eleventh and Charles the Eighth, and that of the more redoubtable Charles of Burgundy, met with no incompetent critic in Montaigne. The latter told us that, "in Philip de Commynes are to be found an excellent disposition, the language of true simplicity, and a pure narrative"; and that in Philip's pages the good faith of the author is everywhere apparent, without vanity or affectation.

We do not, indeed, think that the Lord of Argenton was entirely free from vanity, but he was certainly void of affectation. He lived at a time when men committed dark deeds for the sake of brilliant profits, and asked the saints to help them towards success. When they were not ashamed to implore such aid to such an end, we need not be surprised at the alacrity with which they made confession to their fellow men. Success was then the apology or authority for any crime committed by king of men or lord of acres. Triumph made a virtue of the crime; at all events, it took from the latter its proper name,—just as, according to Harrington's old rhyme,

Treason ne'er succeeds,—and what's the reason?
Because, when it succeeds, it is not treason.

We are sure that few readers can peruse the memoirs of Louis the Eleventh without being forcibly convinced that there is a portion, at least, of Europe in as barbarous a condition as that which the government of Louis inflicted upon France. Louis was for ever protecting his neighbours for the purpose of preying on them. He was insulting in his protection, mercilessly cruel in his rapacity, pious of protest, and habitually mendacious. The sacrament on his lips met the lie fresh coming from his heart. For the felonious ends he had in view, he seldom lacked an accomplice among his nobility. The most noble stooped to the vocation of spies, and even the ladies of his family could condescend to so scurvy a profession.

Of the translation before us, we may say that, generally, it is rendered with vigour and correctness. The notes are not more frequent than necessary, and they are laudably brief, without becoming thereby obscure.

The Life of the author, written by Mr. Scoble, is a neat biographical contribution; and in some forty pages contains much that is matter of interest agreeably narrated. It may be said of Commynes that he merited the appellation that was once conferred upon Prince Radzivil, who was so ready to do any work which the Czar would intrust to him that men called him by the name of "the Black Officer." Philip, who was born on the Belgian side of the river Lys, with France in full view before him, served the sovereign of the latter country after deserting his own. Besides being a deserter he was a defrauder, despoiling orphans of their right, and unblushingly lying in order to preserve the wealth that had been ill acquired. In modern days, were a man with such a character to address himself to the task of writing the memoirs of the times in which he lived and the courts in which he served, he would be rewarded with nothing better than distrust for his story and contempt for himself. Commynes was all we have said, and yet no one disbelieves his book or despises the author. His confessions are not "crapulous," like those of Rousseau; but he who makes them, or who comments

upon the deeds and motives of others, is only more dignified because he wears steel instead of broadcloth, and because, with many of the vices of the day, he had virtues which were not common to his time.

We subjoin an extract which shows at once the temper of the times, of the King, of Communes, and of the Parliament. It is only necessary to premise that Louis the Eleventh had conferred on Communes a share of property from which the heirs of Louis d'Amboise had been unlawfully excluded. The Parliament had, only on compulsion, and under protest, registered the royal decree which did wrong to the defrauded heirs.—

"Communes was in possession, it is true; but, finding himself disturbed in his possession by ceaseless lawsuits, he requested the Procureur du Roi, in conformity with the terms of the letters-patent granting him the property in question, to secure him from all future hindrances to his peaceable enjoyment of the same. The Procureur du Roi consequently interfered; and thenceforward the parties to the suit, in appearance at least, were Louis XI. and those whom he had spoiled. The parliament, with an independence which does it honour, availed itself of every pretext for securing to the oppressed family some remnant of their ancient domains. A great deal of the property had been sold to the king by the last possessor, but the conveyance had been illegally made, and of this the La Tremoilles furnished abundant proof. Louis XI. then adduced the letters of confiscation issued by his father against Louis d'Amboise: and if this property had been subsequently restored to that nobleman, it was, urged the king's advocates, on conditions which had not been accomplished—among others, on condition that Jéanné d'Amboise should not marry without the consent of Charles VII. That permission, replied La Tremoille, had been obtained; but where was the proof? doubtless in the archives of the Château de Thouars, the ancient residence of their ancestors. Louis XI., it will be remembered, had ordered the Seigneur de Bressuyre to take possession of this château at the beginning of the last illness of Louis d'Amboise. After his decease, no member of his family, not even his widow, was allowed to enter it. A very summary inventory of the furniture was hastily prepared, and great care was taken not to particularise the contents of the charter chests. In order to sustain his pretended rights against the persistent opposition of the La Tremoille family, and to cloak the most revolting iniquity with a show of justice, the king appointed a commission of inquiry to search the archives of Thouars for letters likely to serve his case. Two documents of great importance were found, under the hand and seal of Charles VII.; one granting the Vicomte de Thouars the restitution of all his confiscated property, and the other giving him permission to marry his daughter to the Prince of Bretagne, or any other husband he might select. Communes, who was one of the commissioners, saw at once that these papers would destroy all his chances of success, and he threw them into the fire. Jean Chambon, another commissioner, took them out again immediately, expressing his indignation at such culpable conduct; and the papers were transmitted to the king, whom Communes had informed of their character. On receiving them from the Seigneur de Bressuyre, the wily monarch threw them into the fire, saying, 'It is not I who burn them, but the fire:' and he required all present to swear never to divulge what they had seen."

We cannot detail how Communes was at length ejected from the estate which he usurped,—for which, however, he received compensation from a succeeding King! Assuredly, they were a long-enduring people that were loyal to such kings; and that they were so till the monarchs forgot that a people existed is proved by the remark of Lord Lyttelton, who was in Paris at the birth of the first Dauphin, son of Louis the Sixteenth, and who found the half-famished people so frantically exultant thereat, that, as he tells us, one poor fellow "gives notice that he designs to draw teeth for a week together,

upon the Pont Neuf, gratis!" Enthusiasm for royalty has seldom exceeded that exhibited in the act of this jubilant dentist.

A History of Modern Italy: from the First French Revolution to the Year 1850. By Richard Heber Wrightson. Bentley.

THE half-century that has elapsed since Napoleon was crowned by a Pope has added many interesting and some heroic passages to the annals of Italy. Within that interval, every State on the peninsula has been convulsed, and almost every city alarmed by the roar of batteries or the more portentous tocsin-bell. There have been invasions, civil wars, and the struggles of an undying nationality: and these present aspects at once inconsistent, complex and variable; but through them all the main line of Italian history may be traced in the unsteady yet progressive career of a revolution. This political sequence appears most distinctly in the connexion between events which were separated by considerable lapses of time: as the rise of the Carbonari,—the Paris plot,—and the agitation of Rome before Pio Nono was elected. These were but the successive phases or developments of the long contest between Italy and the foreign elements which pressed on it from without. If we seek the physical type of this moral warfare we find it in the continual strife between the dykes of Holland and the waters inclosing them, especially at that period in which the sea threatened to master the land and to expel its tenants. But even since the accession of the reigning Pope, a grand series of anecdotes and pictures has been supplied to the historian. Anecdotes and pictures we say, because these are the illustrations which a mere annalist omits and which a dull commentator disdains, though they really reflect the character of states and nations. The centenary festival, to commemorate an Austrian defeat,—the popular meetings imitative of England,—the terror of the alien garrisons,—the revolts,—the march of the Romans under Durando,—and the adhesion of princes to the national cause, brought to a climax the lengthened drama of Italian vicissitudes,—and, failing, left the people once more to wait, and once more to endeavour.

Such was Mr. Wrightson's opportunity. His materials were not scanty, his authorities not few. But he has quoted, among Italian writers, only Ugo Foscolo,—the most vain and eccentric of men,—Gaulterio, Farini, Cibrario, Colletta, Pepe, Le Masson, and some of earlier date, neglecting, as we think, to consult the less formal, though not less important, depositories of national history, such as journals, pamphlets, flying circulars, and the uncensored press of the Secret Societies. To a diligent student such materials would be forthcoming. Mr. Wrightson's plan, however, is essentially defective. He is satisfied with a mere glance at the externals of his subject. Italy, from his point of view, is a map, on which armies are moved and diplomatic boundaries defined. State negotiations, battles, and treaties, and such obvious matters, form the substance of his volume. Nothing is analyzed, nothing is coloured,—all is bare outline, broken and confused; for even this meagre narrative is not skilfully conducted, but traced in a zig-zag course, with one chapter referring to another, with Mazzini going off the stage that Charlemagne may come on, and A.D. 1848 disappearing to be followed by A.D. 1500. This results from the writer's inability to treat Italian history upon a comprehensive plan. He isolates the different kingdoms and provinces, and is therefore compelled to repeat himself whenever an event of general importance falls into the narrative. But the most serious deficiency in

the book is this: that of the Italians as a nation, as a social body, changing, learning, growing and living, we are told nothing. Mr. Wrightson offers a desultory sketch of political events, and no more.

This want of scope and continuity in the narrative agrees with the broken surface of Mr. Wrightson's historical view. He considers the political actions of the half-century as a tissue of revolutionary failures, which have led to no results. It is never suggested to him that all these should be marshalled processionally, as one great movement progressing to a known end, and not yet ripe for success. The least philosophical criticism is that which attributes the condition of a great people to the perverse influence of little malicious fraternities, conspiring in the dark and forcing governments to be oppressive in spite of their benevolence. Apply such a rule to English history, and it loses all unity and grandeur. Isolate the episodes of our great progress, and what a fickle, infirm and purposeless nation we appear! The dynastic changes, insurrections and explosions of the Middle Ages seem like the confused warfare of tribes in a desert. From that time our developments assumed more distinct proportions, yet they wore the aspect of inveterate inconstancy. We repealed one religion by statute and by statute enacted another. We executed a tyrant and submitted to a dictator. We restored to the throne, amid bonfires and a bloody holocaust of patriots, a proscribed family, which we afterwards expelled. We had two rebellions, of which one barely failed. We lived through the Georgian reigns in a state approaching barbarism, until Horace Walpole said he would bury his MSS. in a garden, "to lie there until these islands are re-discovered." We adopted finality as a prelude to reform; and have yet maintained our character as a nation that knows itself, and only alters according to the varying issues of one long conflict between two principles of government. A country thus operated upon is fickle as plants are fickle when they grow from sprouts to full flower. So it has been with the Italians. From the time when shadows gathered over the bright day of their history they have suffered and resisted, and uniformly, from the Alps to Trapani, advanced towards a single and distinct result.

Mr. Wrightson adopts the meanest form of historical composition; though he also generalizes courageously. His chief axiom is, that Secret Societies have prevented Italy from attaining happiness. Her existing governments, he allows, have usually been harsh and narrow-minded,—not severe, but disobliging, as the Austrians say of themselves;—yet, had the national party ceased to conspire, many good official works would have been performed.—

"The governments, harassed by incessant alarms, and engrossed by dangers which threatened their existence, were constantly compelled to defer administrative and commercial reforms, of which they acknowledged the necessity."

It is not easy for Mr. Wrightson, or for any one else, to determine what the Austrians would have done which they did not do. Of their actual policy, General Pepe gives a far better account. He wastes no words on unfulfilled intentions; but describes the blight of Lombardy, the extortion of stupendous sums for the Imperial treasury, the restraint of commerce by prohibitive laws, and the system of police, spies, and prisons which demoralized that country. Charles Albert said that when he sought reforms, he was threatened by the daggers of the Carbonari as well as by the chocolate of the Jesuits; and on this text Mr. Wrightson sermonizes, imputing to the occult arts of the charcoal-burners more evil than to

fiscal extortions, censorship, or martial law. Inoperative for good, he says, these associations are powerful for evil. It would take more logic than he possesses to prove this point; but China and America, we may add, by way of illustration—not of approval—both exhibit instances of Secret Societies existing to some purpose.

There is one interesting chapter in Mr. Wrightson's volume—that in which he notices the political writers of Italy,—though even here he falls from the level of an historian to that of an advocate by describing only those of "the moderate party." This tendency is fatal to the integrity of his work. We do not judge whether his opinions be false or sound; we simply regret that historical views, though drawn on so cold a surface, should be so discoloured by partiality. The writer is "mild as a star in water" when he reflects on the asperities of Austrian rule; he attributes high virtue and policy to his favourite Italian leaders; and he might have dealt more justly with the great party which he stigmatizes as the bane of Italy, capable only of destroying, and chargeable with having exasperated the oppressions of the land. Literary reasons preclude quotation from his work, which contains no pointed criticisms,—no luminous summaries,—no dramatic scenes. Scarcely a colouring touch is bestowed on the defence of Rome and Venice; and Brescia, which suffered and dared enough to inspire a canto of an Iliad, supplies matter for five lines!

OUR LIBRARY TABLE.

De Foe and Churchill. By John Forster. In Two Parts. (Longman & Co.)—These essays have been reprinted, with additions, from the *Edinburgh Review*. They are masterpieces of fresh and spirited writing. We doubt whether any fragmentary piece in the language contains more life-like pictures of the age of pillories, libels, and courtly bribes than Mr. Forster's account of Defoe. It is a real mirror of the time, reflecting the manners of the town, the characters of public men, and the features of politics and literature in full and bright perspective. Mr. Forster's opinion of Defoe is well known. He regards him as the father of the English Novel,—the original of Swift, the model of Richardson, the teacher of Fielding, Smollett, Sterne, and Goldsmith, no less than of Scott, Bulwer, and Dickens. This is much to say,—perhaps too much to prove;—but the author of 'Robinson Crusoe' deserved a partial critic, for he had been marvellously neglected. Possibly, Mr. Forster's essay may suggest to future historians the justice of giving more distinction to this noble English name; but it will hardly have the effect of reviving popular interest in the "whole works" of a writer who devoted himself so much to local and ephemeral satire. Perhaps Defoe himself, could he revisit the glimpses of the moon, would be more than satisfied to find one of his books read by everybody and a dozen others read pretty widely. Nevertheless, this loving analysis of his life and acts, itself a specimen of style, will not leave his reputation where it was; nor, assuredly, ought that of Churchill, though Mr. Tooke might have thought so. The satirist finds a steady critic and a candid biographer; and many of the old ideas of him are examined and set aside. For instance, Warburton said that he died of a drunken debauch; and we often hear this falsehood adopted as "a point" by a moralizing lecturer. But Churchill was not a man to die without enemies, who could diffuse their mercenary libels the more freely when thus released from the fear of his reply. "He is dead," wrote Horace Walpole, "to the great joy of the Ministry and of the Scotch." Mr. Tooke's notes, also, are riddled by Mr. Forster's criticism; though Mr. Forster himself has to correct errors in the Essays, as originally printed. The 'Speculum Crapegomorum,' which was attributed to Defoe, he now suspects was from another pen. But, for the most part, the

"additions" are developments of the subject, and render its treatment more perspicuous and entertaining.

Willy Reilly and his dear Colleen Bawn: a Tale founded on Fact. By William Carleton. 3 vols. (Hope & Co.)—This is a charming story, a kind of Irish chivalry poem. Mr. Carleton has the good luck never to leave Irish ground, nor to go far from the Irish peasantry, amongst whom his strength of delineation chiefly lies. There is a good deal of extravagance and exaggeration, no doubt; but the whole story is founded upon incidents so romantic that no fiction can exaggerate the actual truth. The character of old Squire Follard is true to the Irish human nature as developed in that class and in that day. As to the "dear Colleen Bawn," Mr. Carleton succeeds admirably in impressing upon the reader the reality of her beauty,—a matter somewhat difficult, in spite of the elaborate descriptions that are bestowed upon heroines in ordinary. The appearance of the "Colleen Bawn," when she raises her veil at the trial of Willy Reilly, has the effect of a burst of sunshine. Willy Reilly himself is a darling, and there is an atmosphere of romance and nobleness about him which can scarcely fail to win all hearts. The picture of the state of the country under the pressure of the terrible "penal laws" against Catholics is done well and vigorously, but without needless bitterness. Exeter Hall declaimers would do well to read this novel while the May Meetings are on: it will show them how things look when "the Lion" is allowed "to turn painter."

Eugenia Carnot; or, Reputation's Struggle: an Original Play, in Five Acts. (Strange, jun.)—There is no deceit in this title—'Eugenia Carnot' is original from first to last. "The character of Eugenia," says our author, "is no fiction, but a being, with all her faults, I once ranked as a friend, though long since, by an untimely fate, numbered with the dead; and her memory I still esteem, however Saints may carp at my confession." Original, too, is the writer's fullness of self-content,—since, while speaking of his play, "he has the satisfaction of knowing," he says, "with all its faults, it is superior, rejected as it has been, to the wretched abortions which weekly desecrate and disgrace the English stage, through the influence and agency of a certain class of writers and translators. Its principle is very different to the usual hash of milk-and-water and clap-traps served up for the playgoer's edification; sarcasm and irony are largely blended. Perhaps in no drama was it ever more so; but when rightly used, nothing is more effective."—The style of 'Eugenia Carnot' is as original as the character of the heroine and the prefatory modesty of the dramatist. The diction is neither rhymed, like Corneille's; nor every-day blank verse, such as Shakespeare's; nor in free choral metre, analogous to that used by Milton in his 'Samson Agonistes,' but has modes and cadences all its own. To exhibit these, we need merely transcribe the opening soliloquy of the "original" heroine:—

A drawing-room in CARNOT'S house.

Eugenia (seated with a book in her hand). All pleasures seem distasteful.

The witching interest of the novelist—
The poet's fire—philosophy's deep research
Of the powers—wondrous principles in nature,
Developed day by day—the gem to me,
Though with mind o'ercast, of an existence
I loath—abhor—but still struggle to uphold.
O! Nature, that it should be so.
The painter's genius awakens no kindred
Emotions within my soul. Too oft
There is a shadow—reflection's stern reality
Poisoning the illusion—
Recalling the bitter remembrance of my being—
A creature dishonoured. [Rises and comes forward.
Oft have I tried to reveal the sad story
Of my early days to Carnot—how basely sold—
Betray'd; but the darkened brow but too well
Told with what hatred he'd regard me.
If he thought a dishonour'd woman he had taken
To his arms; that his hate, contempt,
I could not—dared not—to encounter:
Imperill'd as his love, my reputation would be;
For those I live—all else contempt.

We will spare the reader further specimens of "the irony" promised in the Preface: sufficient is it to assert that so far from the fun failing, it becomes only more fast and furious as "Reputation's struggle"

struggles on. In page 13, Eugenia and her partner say as many cutting things concerning the present state of the stage, as if they were qualifying themselves to criticize it in epigrams. In page 39, the Struggler quotes from Mr. Emerson. In pages 36, 41, 49, and 83, the original dramatist owns to having resembled, paralleled, rivalled Shakespeare in his 'Hamlet,' 'Macbeth,' and 'Othello,' vindicating the difference betwixt the two great men in little foot-notes. By way of closing the drama, Eugenia goes merrily mad.

A Long Look Ahead; or, the First Stroke and the Last. By A. S. Roe. (New York, J. C. Derby; London, Trübner & Co.)—There is much in this book that may by impatient readers be deemed "long winded," but the book is a good book notwithstanding. It has a healthy, hearty, out-of-doors, country air about it, and the details of real American farm life are charming in their natural homely delineations. There are some long conversations in which different religious sects are made to talk to one another, but it is managed in so kindly and pious a spirit, and the results are so full of pleasant incident and good feeling that to lay the good counsel to heart would more profit the reader than to be critical and find fault because the action of the story is somewhat delayed. The character of the hero, who goes about his work "right off," is drawn with spirit. The book has a decidedly American accent, but it is that of a healthy nationality and not a vulgar provincialism; and as a genuine picture of American country life we recommend it to our readers.

Recollections of the Mess-Table and the Stage. By Henry Curling. (Bosworth.)—The late actor, Samuel (or Jerry Sneak) Russell, is said to have been an excellent story-teller. Some of his stories are here re-told, and very dreary and witless they are. "Dead men," they say, "tell no tales," and if "Jerry" Russell recounted no better than what may be found here, it would have been as well if he had been silent when living. What harm he can have done Mr. Curling we do not know, but the latter gentleman has taken bitter vengeance by thus exhibiting the old actor. The Mess-Table stories have a little more spirit in them, but even these are very mild. The most useful portion of the volume is an intercalary chapter against cruelty to cab-horses. It will be read with approbation by the subscribers to the Society for the Prevention of Cruelty to Animals.

Adventures of Frank Ogilby. By the Rev. W. Wickenden, B.A. (Hall & Co.)—"The Bard of the Forest" (such is the romantic name of the Rev. W. Wickenden, B.A.) praises himself in his Preface so comfortably—making use of an imaginary "fat friend" in a coffee-house as panegyrist—that we have not the heart to disturb his complacency by severely reviewing 'Frank Ogilby.' After the praise, too, he puts forward a plea, which though it be not in good taste, nor having the slightest relevancy to his authorship, we will acknowledge by an act of concession, and be silent concerning the worth of the work produced under the difficulties recounted. There is a mode of criticism employed by some of our French contemporaries on like occasions, which we will describe by an example,—permission to digress being requested. M. A. (writing of the appearance of Madame B.) assures the readers of his *feuilleton*, that she "has as much grandeur as passion,"—that "the brilliancy of her execution is equalled by the lustre of her voice." Innocent English opera-goers who have witnessed the exhibition and found it deplorable, may well exclaim—"How can a man like A. write such utter falsehoods?"—"What has A. written?" is the rejoinder.—"He said, that Madame B. had as much grandeur as passion."—"Did he say that she had either?"—Mr. Wickenden's book and Preface are calculated to tempt civil critics to deal with them "in the French style." Being, however, English, and not polite, we will confine ourselves to the above anecdote; and leave "the Bard of the Forest" to his rural readers.

Biographical Sketch of Dr. Rudolph Bird. By J. H. Balfour. (Edinburgh, Constable & Co.)—In this outline of Dr. Bird's career—embodied in an address to the Medical Missionary Society of Edin-

burgh—there is a disproportionate amount of notice bestowed on his private character and feelings, as separated from his scientific life and labours. The students were told by Dr. Balfour that Dr. Bird was "eminent,"—why or how he was eminent, the lecturer was at less pains to set forth. In fact, the memoir places us in a dilemma. If there were materials for a biographical sketch, this little volume does not bring them to light; if there were not, its well-meant generalities do not supply the deficiency. So trivial is its substance, indeed, that several pages are filled with an account, by an anonymous "accomplished Lady," of a day with the Doctor in the caves of Kerby. There and then occurred a gossip; but the only characteristic trait remarked on by the Lady is one which, if she be correct, would sadly reduce our estimate of her friend's intellect. We hope Dr. Bird was not so weak as this injudicious eulogist would make him appear; there can be no harm, however, in holding up to the young men of Edinburgh the example of a successful predecessor, who, whether or not he deserved the reproach contained among these reminiscences, won his way by patience and integrity.

The History of the Chartist Movement, from its Commencement to the Present Time. By R. G. Gammage. (Hollyoake.)—Mr. Gammage concludes his records of personal squabbles "with loathing and disgust." The sixth part of his narrative, however, is scarcely more encouraging than the fifth, if viewed as a statement of the capacities put forward by the "Chartist" body in the course of its agitation. We notice, however, as an illustration of the writer's integrity, that his account of the official preparations made in April, 1848, for a battle in the streets of London affirms nothing which is not corroborated by the historian of the Sappers and Miners.

Some Account of Mrs. Clarinda Singlehart. By the Author of 'Mary Powell.' (Hall & Co.)—Another novel by the Author of 'Mary Powell' has followed quickly upon the heels of the last—'The Old Chelsea Bun-House.' There is much dexterity and neatness of workmanship in the present story, as there is in all its predecessors, but their number takes from their value;—they resemble each other, like roses growing upon the same bush,—and the bush would have been stronger had a few of the flowers been nipped off whilst in the bud. There is a mechanical dexterity and facility of handling which is fatal to any intrinsic or abiding worth in the work. Nothing can be prettier than the picture of Mrs. Clarinda shelling peas in the arbour in her picturesque dress of the period;—nor need there be anything more touching than the scene of her desolate sorrow over the discovery, in after years, of the letter which her brother William had taken up in absence of mind and forgotten;—but the author has done so much in the same style, that the whole story has a mannered, manufactured air, as though done by machinery, and not by hand or head, for the occasion. The author's faculty for delineating quaint pictures of bygone times, and of displaying pure natural emotions, must inevitably sink down to the low-water mark of mediocrity and dullness, unless she ceases to write so much and so constantly in imitation of herself. If she were more unequal, and actually did worse, we should have more hope of her; but it is the quality of dullness "ever to be regular," by which we would be understood to mean—monotonous.

We have on our table an unusual weight of theology. *The True Doctrine of the Holy Eucharist* is a work of pretentious size,—a "feeble effort," in five hundred pages, by the Rev. J. Taylor. It is a reply to Archdeacon Wilberforce's statement of his theory; but the writer, not satisfied with a great show of ecclesiastical reading, has an angry Preface, full of "bitter bad" words.—*The Truth and the Life*, by Bishop McIlvaine, of Ohio, is an earnest treatise, less polemical than admonitory.—So, also, are the Rev. H. Goodwin's sermons on Lenten fasts, preached before the University of Cambridge, and entitled *Christ in the Wilderness*.—Scriptural history, from the Jewish point of view, is ably illustrated by Dr. Phillipsohn, in twelve lectures, delivered at Mag-

deburg, on *The Development of the Religious Idea*. His volume has been well translated by Miss A. M. Goldsmid, who adds some pointed annotations.—We see nothing in Mr. Ambrose L. Phillips's *Mahometanism in its Relation to Prophecy*, except a confused recapitulation of the arguments tending to exhibit the Arabian teacher as a predestined blasphemer, and the most deadly foe of the human race. Such reasoners, of course, prefer our Latter-Day prophets to old-fashioned historians. Possibly such a fragment as the *Last Scene in the Jewish Drama* may enjoy their favour. It is "the text of a conversation"; and indulges in not the sweetest wild flowers of rhetoric. The authoress turns to her task "with ineffable complacency,"—describes the Euxine as having "spued out a prophet,"—and drowns herself at last in a deluge of rhapsody about "spiral minarets," "transparent loveliness," and "earthly sabbatics, thrilling antepast of heavenly elysiums."—A style the reverse of this is adopted by Mr. J. Kennedy, in a paper on *The Question of the Supposed Lost Tribes of Israel*, with two interesting appendices 'On the Six Days of the Creation,' and on 'The Chronology of the World.'—Relating to 'War are Mr. James Douglas of Cavers's tracts on *The Coming of the Kingdom*, which set forth that the Turks and the English aristocracy are wasting away,—and a supplement to Sir Culling Eardley's *Correspondence of the Government of England on Christianity in Turkey*. In this pamphlet Sir Culling Eardley is the "round and top" of the discussion, the Baronet being glorified in every page.—A vigorous debater on ecclesiastical affairs appears in the *Lav. W. Morgan*, of Tregynon, who writes *An Appeal to the People of England on the Church and its Corruptions in Wales*. He has significant facts to exhibit.—Spirited enough, but totally without reference to facts of any sort, is *A Reply occasioned by Remarks made on a recent Pamphlet, entitled 'The Seventh Angel.'* The disputants consign one another to "the mire," because they cannot agree whether the mystic number 666 was made up by the Act of Union between Great Britain and Ireland.

On social topics, one of the best essays we have lately met with is the Rev. C. Marriott's argument, that the *Co-operative Principle* is not opposed to true political economy. The writer treats his subject broadly and liberally, criticizing various recent works on labour, capital and consumption.—Mr. St. André's *Board of Supply and Demand*, which we have elsewhere seen improved upon, obtains considerable notice from Mr. Marriott.—Addressed to a similar class of readers, though in the guise of fiction, is *The Strike*, a workman's story, advocating patience, respectability and mental no less than physical temperance.—*Appropos of temperance*, Mr. W. P. Roberts asks, pertinently, *What is a Traveller?* and develops the subject until he allows every wayworn Sunday walker to urge, "Am I not a man and a traveller?"—To similar purpose, "A Pedestrian" calls the attention of Sir Benjamin Hall to *The Plague Cradles of the Metropolis*. London, he affirms, is a stench under the nose of civilization, whereupon he advances a theory, that perfume is necessary to human life. Every month of the year has its peculiar sweetness, from January ivy to May blossoms and the roses of July. As the egg to the crocodile, he says, so is dirt to disease.—Less fanciful are Mr. J. J. Scott's publications:—*A Manual for the Clerk to a Local Board of Health*,—*Burial Fees and Charges*,—*A Guide for Burial Boards*,—and the *Burial Acts of 1852*, 3, 4, with an explanatory analysis of each.—On reforms in another department, Mr. George Cochrane writes *The Economy of the Law, especially in relation to the Court of Chancery*, a well-considered pamphlet. Mr. Cochrane offers to raise immense new revenues for the State, from Chancery fees. He asks for no salary until he has increased the public income by ten millions sterling annually!

LIST OF NEW BOOKS.

Agnes Hope, by Miss Byers, 8vo. 3s. 6d. cl.
Anderson's (W.) Little Vocabular, 4to. 1s. 6d. bds.
Bellenzer's Modern French Conversation, 2nd edit. 2s. 6d. cl.
Bell's English Poets, 4th ed., 7s. 8vo. 2s. 6d. cl.
Bloomsbury Lent Lectures, 1855, 'Gifts of the Kingdom,' 5s. cl.
Bohn's Brit. Class. Burke's Works, Vol. 3, 5s. 6d. cl.

[ADVERTISEMENT.]

THE AUTHORITY FOR THE NON-OBSERVANCE OF THE SEVENTH DAY.

It is recorded in Holy Scripture, Gen. ii. 2, 3, That, on the Seventh Day of the creation, Almighty God "blessed and sanctified the Seventh Day;" this He did, without exemption of any Nation, or limitation to any time; the command, therefore, is universal and imperative.

It is asserted, in direct contradiction of the expressed declaration in this record, That God did not deliver this command, on the Seventh Day of the creation; but as there is no command in Holy Scripture for the observance of the Seventh Day, but this, previous to the time of the Seventh Day being treated of, as a commonly known and observed Institution, see Exod. xvi. 23, &c.; this assertion cannot be regarded.

It is asserted, That though our Blessed Lord or His Apostles are not recorded in Holy Scripture to have commanded, yet the Apostles and first Christians, in addition to their observance of the Seventh Day as a Sabbath, are recorded to have observed a Second Day in each week as a day for assembling together for Religious purposes, namely, The First Day of the week; and further, it is asserted, That this day in Holy Scripture is called "The Lord's Day."

This is all that Holy Scripture does, or is asserted to record on this subject; and as our inquiry has relation to a command of God, we cannot give heed unto Tradition, without incurring our Blessed Lord's condemnation of the men of His time, seeing He condemned them, not for any fallacy in the argument they had constructed; but for the impety of constructing any argument on Tradition, to change any command of God. See St. Mark vii. 13.

It therefore appears, That there is no authority for the Non-observance of the Seventh Day, above, Dogmatic Teaching; or, The Edict of a Living Infallible Head.

May Almighty God grant us to consider, Whether if the Non-observance of the Seventh Day is not preached by St. Paul, and where is it preached by him? we are not cursed by the apostle, if we so Preach, even though we claim to have powers equal to the Angels of Heaven. See Galatians i. 8.

HERMAN HEINFETER.

17, Fenchurch-street,
1st Sabbath of 1855.

P.S. May 1, 1855. Again, for the One Million One Hundred Thousand time, I inquire, "Hath the Lord as great delight in burnt offerings and sacrifices, as in obeying the voice of the Lord?"

SIR HENRY ROWLEY BISHOP.

Mr. Mitchell's advertisement, put forward some days ago, which stated, that the increasing illness of Sir H. R. Bishop rendered necessary a curtailment of the vocal concerts at which the composer had presided—has been followed closely by tidings that "the play" is "played out."—Since the week came in the most popular and excellent of modern English musical composers has died—aged, states the *Times*, sixty-eight years.

From an English Dictionary of Musicians we learn that Sir H. R. Bishop was a native of London—and that his principal musical instructor was the Signor Francesco Bianchi who established himself in London as opera composer for Billington and Banti towards the close of the last century.—In the year 1806, young Bishop was employed

(possibly at Bianchi's instance) at the Opera House in the composition of *ballet-music*.—Two years later he began to write for the English theatres by producing the music for 'Caractacus,' a pantomimic *ballet* at Drury Lane. In 1809 he fairly took his place as composer of operas by contributing to the same theatre his 'Circassian Bride,' which was only performed once,—since, ere it could be performed a second time the theatre was burnt down, and the score with it.—From that period to the year 1826, when Sir H. Bishop's career may be said to have terminated by the failure of his 'Aladdin' (an opera produced in injudicious rivalry of Weber's 'Oberon'), he wrote incessantly for the two great theatres; operas, *burlettas*, melo-dramas, incidental music to Shakespeare's plays, patchings and adaptations of foreign operas—the list of such productions, original and concocted, numbering more than seventy efforts.—Besides stage-music, Sir H. Bishop composed glees, ballads, canzonets in ample number, succeeded by Sir John Stevenson as arranger of the airs selected by Moore for his Melodies—and, later still, attempted gravely to emulate the foreign composers by producing, at the instance of the Philharmonic Society, a serious *cantata* or two, which were less successful than his more hastily-written and less imitative music of other days had been. No due consideration was denied to Bishop. He enjoyed for many years popular fame and reaped large gains. He was one of the first Philharmonic Directors,—for some years conducted the Antient Concerts,—was elected Professor at Edinburgh under the unsatisfactory provisions of the Reid Legacy,—and held an appointment also at Oxford. He was knighted by our Queen shortly after she came to the throne.

The *Athenæum* need hardly, on this occasion, once again declare the value of Bishop as an English composer. Had he possessed more of the true artist temperament, more self-respect and more energy, with the gifts which he owned and the opportunities which he commanded he might have founded a school of dramatic music in this country. No ordinary grace, delicacy and freshness distinguish his melodies. In the best of his airs and stage-glees the words are followed and set with taste (and some of his best words, when not Shakespeare's, were the spirited opera lyrics and choruses of Mr. Planché). The concerted pieces in his dramas, though demanding less action than is now required, are constructed with an ease and natural fancy referable to no model. His treatment of the orchestra was simple and clear,—neither feeble nor thin,—always appropriate, often elegant, generally effective. But whether the cause was too great indifference or too obsequious a readiness to please, by accommodating himself to every manager's humours, it matters not now;—certain it is, that Bishop wasted his genius in frequent trivialities,—brought the name of English music-director into disrepute on the Continent, by tampering with the scores of foreign composers, under pretext of naturalizing them,—and when he attempted to retrieve himself, did so rather uneasily than conscientiously, by assuming a style which was not his own, and by measuring himself against the Webers and Rossinis who ruled Europe, not in his, but in *their* fashion. There is music in 'The Slave,' 'The Miller and his Men,' 'Guy Mannering,' 'Maid Marian,' 'The Virgin of the Sun,' 'The Englishman in India,' and half a score beside of his operas,—there are settings by him, for one or two voices, of Shakespeare's choicest words,—delicate, melodious, and English enough to make us express our regret anew, that Bishop never comprehended his own strength or his own responsibilities as a master and an inventor. Even as matters stood—though no one lent himself more readily than Bishop did to lower the tone of our musical managements,—no one has enriched our stores of English concert-music with so many beautiful and real contributions, to which it has been proved that singers and audiences return with delight, after a thousand works, more grim, more assuming and more elaborate in semblance, have been tried, tested and laid aside.

Something more remains to be stated, sad and strange;—though only, perhaps, an ultimate con-

sequence of the apathetic character of the man which interfered with the public career of the composer. It has been no secret for some time that Sir H. R. Bishop's fortunes have been long in an embarrassed condition. He has died without leaving provision for the future of a son and daughter,—without even having provided for their education. How and why no better fruits of past fame and profit than these should have been realized, it is not needful at the present juncture to reckon. We call attention to the fact, not in reproach to the dead, not to pain any who survive to be pained, so much as to open the door to lovers of English music, who recollect pleasures enjoyed by them in former years. To another class of the public the case may be propounded—we mean to those actively beneficent persons who are perpetually appealing to the musician in aid of their beneficence. Let the myriad bounties done by "the profession" to the sick, the improvident and the impoverished of other classes be now remembered by more than sentimental thanks.—Even in the last weeks of the composer's life active measures were begun by a few of his friends to relieve him from immediate anxiety and to supply that which was wanting to his survivors. These will now take more positive form and address themselves to the kindly and the liberal with a louder and more direct appeal. We have no doubt of their success any more than we have of the lasting musical reputation of him to whose aid they were and will be devoted.

THE VALLEY OF THE ASHES.

REFERRING to the letter from Mr. Finn, Her Majesty's Consul at Jerusalem, whose courtesy and hospitable kindness it has been my privilege to share, I beg to make one or two remarks.

I visited Palestine in 1852, it having beforehand been mutually arranged with Dr. Robinson that I should meet him there, and accompany him on his journey. Finding, when I reached the country, that our plans and objects did not coincide, I gave up the arrangement; and thereafter visited almost every place of interest "from Dan to Beersheba," accompanied only by my Arab attendants.

While at Jerusalem, some remarks of my friend Mr. Calman, of the London Jews' Society's Hospital there, in reference to the mounds to the west of the Damascus gate, suggested the probability of the view referred to in Mr. Finn's letter. I proceeded, in company with Mr. Calman, carefully to examine the mounds; believing that if I were correct in supposing that they were the ashes of the ancient temple-sacrifices, proof to that effect might probably be found.

Digging, both at the top and near the base of the largest heap, I was struck with the fact that the whole seemed homogeneous, there being no earth, stones, pottery, or rubbish of other kind apparently mixed with the grey-blue mould. This seemed unfavourable to the popular idea of their being formed from soap-boilers' ashes. Continuing to dig, I was greatly interested soon to find among the ashes, (which appeared to me to be *animal*, though I never have had them analyzed) small portions of bone, still strengthening my belief that I was surrounded by the remains of the burnt-offerings of Israel during a thousand years. But the proof appeared to amount to demonstration when I discovered, a foot or more from the surface, fragments of bone sufficiently large to leave no doubt as to the kind of animal to which they belonged. I have in my possession a number of specimens, among which is one, three inches long, evidently the leg-bone of a sheep or lamb; another, a fragment of the skull or nose-bone; and two others, fragments of ribs, which it seems impossible to mistake for any other but the same animal. The first mentioned of those specimens has marks, in some parts, of having been charred or blackened by the action of fire.

Since I returned from the East, I have frequently, both privately and in public, mentioned the above circumstances, and my intention to have the ashes analyzed, that it might be ascertained whether they consisted chiefly of animal matter. Further inquiry on this point is rendered unne-

cessary by the analysis of Dr. Roth, as stated in the letter of Mr. Finn.

While upon the spot, I was also struck with the light which the position of those mounds seemed to throw upon the vexed question of the ancient course of the city wall. It seemed to confirm the theory of Dr. Robinson, that instead of running considerably *within* the present city boundary, as is contended for by those who maintain the authenticity of the so called Holy Places,—the ancient wall must have run considerably to the westward of the present Damascus gate, it being most probable that the ashes would be deposited *immediately* outside the wall, and not carried so far from it as the heaps are now found.

If these ideas be correct, do they not seem to throw light also upon an expression,—to which I am not aware any definite meaning, as to the locality, has ever been attached,—in the boundaries of the city referred to in Jeremiah xxxi, 40?—"the valley of the dead bodies, and of the ashes." If by "the valley of the dead bodies" is meant the Valley of Hinnom, it seems likely, from the connexion of the passage, that by "the valley of the ashes," is meant the locality where the ashes are now found. It is not improbable that anciently, when the wall ran close by, there was a descent outside to the westward, accounting for the expression *valley*, the hollow now being filled up or levelled by the accumulated rubbish of the city's "long desolations."

While I am glad that the attention of others has been directed to this interesting matter, I trust it may not seem uncalled for thus to advert to it, that I may not seem to be entering into other men's labours, should I ever be able to publish notes of my journey.

I am, &c.,

WILLIAM DICKSON.

20, George Square, Edinburgh, April 24.

MEETING OF DR. BARTH AND DR. VOGEL.

ON the 1st of December, 1851, it fell to the share of Dr. Barth—he who had already been believed dead—to meet in "very good health and spirits" Dr. Vogel:—to see once more the face of a European and grasp the hand of a countryman who had been sent to join him.

Dr. Vogel had left Kuka in the latter end of November, to proceed in a westerly direction *en route* for Zinder, the north-western frontier town of the Empire of Bornu,—being anxious to extend his astronomical and other observations to that place. Happily, in the beginning of the journey, he received a letter from Dr. Barth, dated Kano, the 24th of October; and this was the first direct news he had received from him. According to this letter, Dr. Barth had left Kano *en route* for Kuka, about the same time that Dr. Vogel had departed from the latter place to proceed westward, on the very road which the former had chosen. Thus, both travellers had started to meet without knowing it themselves. Dr. Vogel, keeping on the Kano road, and leaving Zinder on the right, had the happiness to fall in with Dr. Barth at Bendi, a small town situated about 110 geographical miles north-east from Kano, and nearly 200 geographical miles due west from Kuka. As only a few preliminary hasty lines from Dr. Vogel, written in pencil, have come to hand, the particulars of this event have not yet transpired; but it may easily be conceived what it must have been to Dr. Barth. It was exactly six years since he left Europe, in company with Mr. Richardson and Dr. Overweg; and since the decease of the latter, on the 27th of September, 1852, not only had his communications with Europe been all but entirely cut off, but he had indeed been isolated from the civilized world, and left to battle with manifold hardships and dangers.

Dr. Vogel writes, that Dr. Barth had moved on to Kuka, whence he intended to proceed, without further delay, home, *via* Murzuk and Tripoli. As to himself, he continued his journey to Zinder; whence he despatched a letter with the above news, dated the 7th of December last, and which took nearly four months to reach Tripoli by way of Ghadamis. He intended to return to Kuka "within four days" from the date of his letter *via* Minyo. The meeting with Dr. Barth, and the

inviting prospects of returning home in his company, had proved unavailing to lessen the zeal of this youthful explorer for the cause he is engaged in; on the contrary, he intended to proceed as speedily as possible to Yakoba and Adamaoua, in which plan he seems to have been encouraged by some acceptable and important passports, in the shape of letters of recommendation, from the powerful Fellata Chief at Sokoto, which Dr. Barth had brought with him, and handed to his countryman. Dr. Vogel had not received any communication from Tripoli or Murzuk since the 27th of February, 1854, in consequence of the state of the Saharan countries, which seem again involved in general war and bloodshed.

Since the above was written, letters from Dr. Barth himself have come to my hands, which, though written before his meeting with Dr. Vogel, are of great interest, as they contain the first news respecting his journey from Timbuktu back to Sudan, and the first positive information ever received from a European traveller of the River Kowara between that place and its lower course.

It appears that Dr. Barth had been detained at or near Timbuktu several months beyond the date of his last letters despatched from that region, namely, the 23rd of March, 1854, between which date and the time of his arrival at Kano, which took place on the 17th of October last, nearly seven months intervene. Dr. Barth himself says:—"After a protracted stay of nearly a year at Timbuktu—the 'Queen of the Desert,' as it is justly called by the natives—I retraced my steps eastwards along the shores of that magnificent river, which the undaunted Scotchman [Mungo Park] descended about fifty years since, fighting his way through numerous fleets manned by Tuaricks and Sudans—lost labour to science, his journal having perished with him;—while I went along reconciling and befriending these very people, and obtaining full security from their chiefs for any English visiting their territories, whether by land or by water." Thus, Dr. Barth has been able to realize his great wish, namely, to trace this river between Timbuktu and Say; which latter place is situated in about 13° 10' north lat. and 3° east long., Greenwich. This, its middle course, seems everywhere navigable and enlivened with large fleets, its shores densely inhabited by people, who received and treated Dr. Barth most kindly, and implored him to stay with them altogether, or to return soon in an English ship. They learned from him with astonishment as to whence the river—which forms the basis of their existence and wealth—comes from, and where it terminates.

Dr. Barth alludes to a large map of the river drawn by him, which he had sent to the Foreign Office. He has also transmitted with the present letters some of a former date, which had been despatched by him while on his way to Timbuktu, but which, as he found on his return to Sudan, had not been forwarded, probably, because their envelopes and addresses had been lost. These letters are dated "Dore, in Libtako, 16th July 1853," which is about midway between Sokoto and Timbuktu (see map in my 'Geographische Mittheilungen,' part I.), or in lat. 14° 30' north, and close upon the meridian of Greenwich, and they contain a full account respecting that region, which was entirely unknown before.

Libtako forms a portion of the very extensive Fellata dominions, and is a very important commercial point. The principal article of trade is the salt of Taodenni, which is brought thither by the Arabs of Timbuktu, while the Tuaricks bring corn and butter, the people of Mosi their celebrated donkeys and their famous cotton manufactures, cheap black shirts and a large peculiar kind of guro nuts. The inhabitants of the country supply sweet and sour milk, and their manufactures consist chiefly of very handsome and cheap shawls made of cotton and wool, and of various colours. The market at Dore, the chief place of Libtako, is held every day. Cowries are almost the sole medium of interchange.

Libtako occupies an elevated, dreary plain, devoid of trees and shrubs, and suffering from the want of rain. Granite protrudes in many places

out of the soil. Dr. Barth made many inquiries respecting the town of Adafudia, reached by Mr. Duncan, and which, according to the position assigned to it by that traveller, ought to be within 100 geographical miles from Libtako—but in vain; he could hear nothing whatever of it. Though the country was in a state of anarchy when Dr. Barth passed through it, he did not suffer on that account, but rather from the too exalted manner in which he was received everywhere, the inhabitants flocking from all quarters to receive his blessing. The Arabs looked upon him as no common Christian, owing to the information he possessed of topics specially interesting to themselves, and to the fact of his coming from the East. The Tillahas had christened him "Môdibo," by which name he was universally known in those countries.

It was near Libtako where Barth was so fortunate as to make the acquaintance of one of the followers of the Sheikh el Bakay—the Pope of Timbuktu,—who subsequently became his best friend and greatest benefactor. This person exercises his influence over a very extensive region, nearly as far as Sokoto in the east; and he may be said to have created of Timbuktu a kind of African Rome,—the centre of the power of Islam.

The region between Libtako in the west and the river Kowara (here called Tsa, Say or Mayo) in the east is occupied by territories belonging to the large country of Gurma, only the northern part of which belongs to the Fellatas. The language of Gurma has a few words in common with that of Benin. Within Gurma are various rivers, all tributaries of the Kowara, the largest being the Sirba, which Barth found twelve feet deep in the beginning of July, and which he had to cross by means of immense bundles of reeds fastened together, as boats are entirely wanting. The valley of the Sirba is very ill-famed, as being most destructive to all kinds of cattle and horses. The soil along the course of the river swarms with black worms.

Dr. Barth's letters contain interesting extracts from the 'Tarikh el Sudan,' an important work on the history of Sudan, hitherto unknown.

On his arrival at Kano, in October last, Dr. Barth, instead of finding letters and supplies from home, received information of the rumour of his death having been spread in Sudan, and even reached Europe, about which, not knowing exactly the origin and circumstances connected with it, he felt very sore and indignant, while the absence of all needful supplies put him to great straits and inconvenience. Happily these, as we know, he subsequently got over. His longing to reach Europe knew no bounds, as he declares that the being exposed to another rainy season (the sixth), or to remain much longer without the refreshing influence of European atmosphere and proper food, would be his certain death. Yet in the same sentence he speaks of ultimately returning to the field of his labours, and trying to penetrate into the interior of Africa from the coast of Zanzibar, after having strengthened his health!

The only cause of joy which awaited him in Kano was the news of the success of the Chadda Expedition, of which he seemed to have learnt all the particulars from the natives. Among others, he met an old acquaintance, the Governor of Hamarrua, a country situated on the shores of the upper course of the Chadda. This person told him that the exploring steamer Pleiad had also reached his country, that he had received the Expedition very friendly, and had made the commander a present of six oxen.

AUGUSTUS PETERMANN.

OUR WEEKLY GOSSIP.

THE Council of the Royal Society have recommended the following gentlemen for election out of the Candidates for the Fellowship:—Messrs. A. Connell, W. Farr, W. L. F. Fischer, I. Fletcher, W. J. Hamilton, J. Hawksshaw, J. Hippisley, J. Luke, A. F. Osler, C. B. Vignoles, C. V. Walker, A. W. Williamson, G. F. Wilson, and Drs. T. Thomson and R. Wight.

We owe an explanation to our readers. In common with our contemporaries, we last week

announced the decision of the French Government to open the Palace of Industry on the 1st of May; and on the information laid before our readers we ourselves acted. We left for Paris to assist at the inauguration. When we arrived, we found the chief edifice in the hands of a crowd of workmen; in some places they were taking down, in other places they were erecting; many exhibitors were still ignorant of the position and extent of the space allotted to their use; in a word nothing was prepared for the great day. Yet, within and without the palace, it was universally believed that the opening would take place. To guard against mistake, we made inquiries late on Friday, and received an assurance that, whether prepared or unprepared, the Palace would be opened by the Emperor on the 1st of May. This was official. We state so much in proof that we did not trifle with the convenience of our readers. We had such assurance of the truth of our statement as must have satisfied reasonable men. On Saturday morning, to the astonishment of Paris, the *Moniteur* declared the inauguration postponed to the 15th of May. Will it then take place? The official journal says so: yet the work to be done is so vast, the means appear so inadequate, and the system is so variable, that we shall not be greatly disappointed in a second postponement. In the Palace of the Fine Arts—a separate edifice, half a mile from the main building, and covered from it by a line of *cafés*, booths and restaurants,—the work is well advanced. The English department is ready. France has hung a few of its many acres of canvas. Germany, Spain, Belgium and Italy are less prepared; but all their several galleries will be soon complete. A long tunnel-like building—ugly outside, but effective within—is in progress for the reception of machinery; and is likely to be ready at Midsummer. Greater activity is seen in the chief edifice, where alone the ceremonial will be held. Our Indian collection throws its gorgeous colours across the left-hand galleries; and our Astronomer Royal's mysterious wheels excite the wonder of a crowd of artisans on the ground-floor. But the French portion is much in arrear. Without a recollection of the marvellous rapidity of our preparations in Hyde Park, it would be difficult to believe that order could be evoked from such confusion in the short time intervening between this day and the 15th of May.

Our readers will remember that an astronomical determination of the difference of longitudes of Greenwich and Brussels took place in 1853. Last year a similar determination was made for Greenwich and Paris. The triangle is now to be found; and M. Leverrier, we understand, is in Brussels for the purpose of arranging with the Directors of the Belgian Observatory the needful experiments.

The recommendation of Sir R. I. Murchison as the successor of Sir H. De la Beche, which has been sent to Her Majesty's Government, was signed by many leading men in various branches of science, including the Presidents of the Royal, Geological, Linnean, and Geographical Societies.

We print with pleasure the following announcement from the friend and biographer of Campbell.

"I beg to inform you that Mr. Marshall's statue of Campbell the Poet was erected on Tuesday, the 1st inst., in Poets' Corner, and is now ready for inspection. Subscribers to this monument, both at home and abroad, will be glad to learn this fact through the pages of the *Athenæum*, to which the Poet's admirers, and particularly his executors, are so much indebted.

"I am, &c., W. BEATTIE, M.D."

"18, Tavistock Street, Bedford Square, May 3."

A pleasant gathering of the Surrey Archaeologists was held last week at Chertsey, in the great room of the Town Hall. The walls were adorned with a collection of architectural fragments and encaustic tiles discovered during recent excavations made upon the site of Chertsey Abbey; a series of carvings from the Palace of Cardinal Wolsey, at Esher, representing the armorial bearings of the Bishops of Winchester; a variety of ancient arms and armour; rubbings of Surrey and other monumental brasses; an early painting by Turner of Walton Bridge by moonlight, and one by Russell, of St. Catherine's Hill, Guildford; various water-

colour drawings and photographs. On the tables were a number of ancient deeds, books, coins, models, seals, and specimens of ancient pottery, glass, and jewelry. Mr. Pocock read a paper 'On Chertsey Abbey,'—Mr. Boutel one 'On a Description of a Series of Encaustic Tiles recently discovered on the site of the Abbey,'—and Mr. Corner one 'On an Anglo-Saxon Grant of Land made by Alfred the Great to the Abbey.' A promenade of the Members and their fair visitors led to Cowley House, dear to the lovers of old poetry as the residence of Cowley, and afterwards to the Abbey. A dinner and speeches closed the day.

Majesty, it seems, has heard of the success of the Mimes who lately gave a representation at the Olympic Theatre, and has intimated a desire—in such a case, a command—to see the cleverness and the eccentricities which have furnished so large a share of the small talk and pleasant gossip of London society. Next week the Mimes will repeat their play at Drury Lane: this time also in the cause of charity. Mr. Planché's 'Romantic Idea' will be followed by the pantomime. Whether the fun, which ran so fast round the benches of a small house, where every man caught up club allusions and personal phrases, will find itself at home in a larger house and a more public presence, we shall see. But with royalty in the front and the Wellington College in the background, we cannot doubt of a success worthy of the pleasant gentlemen who lend their services to amuse the town.

As we said some weeks ago would be the case, a portion of Burlington House—now public property—has been handed over to the Committee of the Fine-Art Contribution to the Patriotic Fund, and on Thursday last four noble rooms were thrown open to the public. London has therefore an opportunity of seeing the interior of its new property, as well as the pictures generously contributed by their authors towards this glorious endowment of the widows and orphans of British heroes.

Some curious particulars respecting the Bronte family, of which "Currer Bell" was the literary chief, are given in the *Belfast Mercury*. "They were natives," says our authority, "of the county Down. The father of the authoress was Mr. Patrick Prunty, of the parish of Abaderg, near Loughbrickland. His parents were of humble origin, but their large family were remarkable for physical strength and personal beauty. The natural quickness and intelligence of Patrick Prunty attracted the attention of the Rev. Mr. Tighe, rector of Drumgooland parish, who gave him a good education in England, and finally procured him a curacy in Wales. In his new sphere he was not unmindful of his family claims, for he settled 20*l.* per annum on his mother. Prunty was the name which the family bore in their own neighbourhood of the county Down. The patron of Mr. Patrick Prunty, disliking the name, requested him to take that of Bronte, from the fanciful idea that the Greek word *Bronte* would appositely signify the singular quickness and intelligence of his intellect. After Mr. Bronte had assumed the duties of his clerical office, he married, and the issue of that marriage were the three gifted women who delighted the reading world under the titles of Currer, Acton, and Ellis Bell. Of this triad, Currer was the 'bright particular star,' and her fictitious title of Currer Bell was not less revered by her readers than was her real name of Charlotte Bronte by her aged relatives in the county Down, to whom she presented very lately the sum of 120*l.*, with copies of her works."—Of course we must leave the responsibility of these statements to the local chronicler.

Herr R. Luther, of the Observatory of Bilk, near Düsseldorf, begins to rival the fame of our own Planet-finder. On the 19th of April, it is said in the German papers, he discovered a new asteroid planet of the eleventh magnitude.

Herren Ranke, Grimm, and Lepsius, have been elected members of the Royal Academy of Amsterdam. Mr. Macaulay has also been elected.

On Wednesday next, the 9th of May, it will be fifty years since Schiller died. The day, we hear, will be solemnized in almost all the more important towns of Germany; especially at Berlin a "*Todtenfeier*" in grand style is in preparation.—Another

jubilee, and one of a different character, will take place at Fulda in June next, when a thousand years will have elapsed since the remains of St. Bonifacius, the "apostle of the Germans," were buried there.

We observe with pleasure that M. Billault, Minister of the Interior in France, has refused to grant the permission requested by those speculators who wished, among the other summer shows of Exhibition-time in Paris, to establish there an arena for bull-fights.

The following has been received from a Correspondent in China—to whom we must leave the full responsibility of the views expressed about the "Rebels."—"The attempts which Sir John Bowring has lately been making in China to obtain copies of the ancient Buddhist works introduced into that country by a succession of Chinese travellers who visited Hindostan, and for many centuries continued to inundate 'the flowery land' with translations from the Sanscrit, have led to many curious incidents. Several places have been discovered where the blocks exist from whence the Chinese text has been printed;—the largest collection, consisting of many thousand volumes, being in Peking. The Buddhist monks at Kiaking, in the province of Kiangsoo, possess a considerable number of the blocks, and have been induced by the offer of liberal sums of money from Sir John Bowring, to print off some copies of various works he has caused to be selected. Not long ago, the priest, with whom Sir John has been in correspondence, was sent for by the Tartar General commanding in the district, to answer the inquiry whether he had sold books—the gift of the Emperor of China—to foreigners,—the blocks having been originally sent by one of the ancient Chinese sovereigns to the Monastery at Kiaking. The priest replied, that as the blocks had been deposited by Imperial favour, for the purpose of making known the doctrines of Buddhism to the whole world, he imagined that he, in assisting their distribution, was only giving effect to the gracious intention of the Son of Heaven. The excuse could not but be received; but an enemy of the priest who had endeavoured vainly to extort from him a portion of the money paid by Sir John Bowring, denounced the priest as a correspondent of Lang-sew-ping,—the Eastern King—a self-declared Holy Ghost, of the Tae-ping-wang movement, averring that he had seen, in the street, a letter addressed by the rebel monarch to the Buddhist priest. But the accuser failed in establishing the accusation, and the priest remained unmolested,—though, being the subject of suspicion, he is under the surveillance of the police. He is continuing to print the books purchased by Sir John Bowring; and this object is more interesting and important as the Nanking rebels destroy the libraries wherever they prevail. They will allow circulation to none but their own books, which are written in the most vulgar style, and an object of great contempt to the literary people of China. Indeed, were there no other impediment to the successful progress of the insurrection, and its final triumph, the utter absence of education in its leaders and followers would prevent its ever becoming popular among a people so proud as are the Chinese of their ancient sages and their sacred books."

More may be said on some future day concerning the state of the British Museum, as set forth in the annual Report, just laid before Parliament. For this week, however, two facts will suffice us. The acquisitions during the twelvemonth have been in every department considerable—in some important. For instance:—"In the manuscript department 906 manuscripts, 695 charters and rolls, and 18 seals and impressions had been added to the general collection; and 20 manuscripts to the Egerton collection; among the acquisitions more worthy of notice may be mentioned the official and private papers and correspondence of Sir Hudson Lowe, from 1799 to 1828, embracing the whole of the transactions in St. Helena; a collection of 60 original court rolls, and 350 charters relating to the counties of Sussex, Surrey, Norfolk, and Suffolk, extending from the reign of Henry the Third to the seventeenth century; a very fine copy of the 'His-

toria Miscella,' with the 'Historia Ecclesiastica' of Cassiodorus; an extremely fine copy of the French translation of Crescentius, executed for Charles the Fifth, of France, in 1373; some early Greek manuscripts, on vellum, eight Armenian manuscripts, on cotton paper, including a copy of the Gospels, and several scarce works in Hebrew, Samaritan, Arabic, Persian, Turkish, and Hindustani; a beautiful copy of the Persian poem 'Khawar Nama,' composed by Ibn Hassam, at the commencement of the fifteenth century, in praise of the exploits of Ali, son-in-law of Mohammed (written at Mooltan in 1686); the original Account-book of the privy purse expenses of Henry the Eighth, signed with his own hand throughout; an autograph deed of agreement of Spenser the poet; 17 autograph poems and letters of Robert Burns; 15 original letters of Fénelon; and an original charter of Eudes, King of France, executed in 888 or 889."—As a set-off to these and other gains to our national collections, it is stated, that "in every department the number of visitors has fallen off":—among these, be it noticed, not merely the sight-seers, whose "figure" may be decided by such facts as war or peace, commercial distress or prosperity, bad or good weather, but the number of those who repaired to Great Russell Street for the purposes of "study and research."

It is intended, we read in the German journals, to publish, in a judicious selection, the Diaries of Count Platen, which, ever since their author's death, have been in the hands of one of his most intimate friends. They fill twenty manuscript folios, and refer to the whole life of the poet, but mostly to his abode and his learned researches in Italy. The publication is looked for with anxious expectation, and will give, it is hoped, a fresh impulse to the subscriptions for the poet's monument.

The Report laid before the Zoological Society at its Annual Meeting seems on the whole satisfactory,—giving record as it does of losses and gains during a year of war and pestilence. If the number of visitors decreased during the past fatal autumn, the number of Fellows has been augmented; and the additions to the attractions of the gardens have been steadily carried on and carried out. Floriculture is, apparently, becoming an increasing object of care and cost in the Regent's Park; nor has architecture stood still. A strong house has been built for the hippopotamus, and the palace of the monkeys has been made more healthy by repairs and improvements. The health of the large and miscellaneous family of "furred and feathered creatures" (as Hood called them) has been on the whole satisfactory, the very unusual inclemency of the past winter considered. The family of the elands has increased, and the Australian bush-turkeys have a son and heir,—an important fact, since (according to Mr. Gould) the bird may probably prove as well worth naturalizing as those uncouth Cochinchinese creatures, the rage for which is somewhat going by. Lastly, the Aqua-Vivarium keeps up its strength and spirits; and this not altogether by aid of renewal, since the Report states that some of the original tenants of the tanks are still alive and flourishing. In short, there seems on every side tokens of increased care, and as much enterprise as may be prudent in our not very cheerful times.

ROYAL ACADEMY OF ARTS, Trafalgar Square.—The EXHIBITION of the ROYAL ACADEMY WILL OPEN on MONDAY NEXT, the 7th inst., at Twelve o'clock.—Admission, 1*s.*; Catalogue, 1*s.*

JOHN PRESCOTT KNIGHT, R.A. Secretary.

SOCIETY OF PAINTERS IN WATER-COLOURS.—The FIFTY-FIRST ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East, close to Trafalgar Square.—Admission, 1*s.*; Catalogue, 6*d.*

JOSEPH J. JENKINS, Secretary.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.—The TWENTY-FIRST ANNUAL EXHIBITION of this Society IS NOW OPEN, at their Gallery, 53, Pall Mall, near St. James's Palace, daily, from 9 till dusk.—Admission, 1*s.* Season Ticket, 5*s.*

JAMES FAHEY, Secretary.

THE SECOND ANNUAL EXHIBITION of the FRENCH SCHOOL of the FINE ARTS WILL BE OPENED to the Public on MONDAY NEXT, the 7th inst. Daily, from 10 to 6 o'clock, at the Gallery, No. 121, Pall Mall (opposite the Opera Colonnade).—Admission, 1*s.*; Catalogue, 6*d.*

PHOTOGRAPHIC EXHIBITION.—An Exhibition of the finest English, French and Italian Photographs IS NOW OPEN at the PHOTOGRAPHIC INSTITUTION, 105, New Bond Street. —Morning, from 10 to 5. Admission, with Catalogue, 1s. Evening, from 7 to 9. Admission, 6d.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—The Railway at Balaklava, Battle of Inkermann, Storm in the Black Sea, Battle of the Alma, Cavalry Charge at Balaklava, Pictorial Map of Sebastopol, &c. are now exhibited in the Diorama, illustrating 'Events of the War.' The Lecture by Mr. Stoqueler. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

SIEGE OF SEVASTOPOL.—GREAT GLOBE.—All the New Approaches and Siege Works are placed on the MODEL of SEVASTOPOL, including Inkermann, Balaklava, and the Tchernaya, at the GREAT GLOBE, Leicester Square. Open from 10 A.M. to 10 P.M. Admission, 1s. to the whole building. Children and Schools, Half-price. A large Collection of Russian Trophies from Bomarsund, &c.

MADAME TUSSEAU & SON'S.—New Additions: Emperor and Empress of the French, Emperor and Empress of Austria, Marshal St. Armand, Emperor of Persia, Sultan of Turkey, Emperor of Russia, Prince Alexander, &c. &c. Napoleon Golden Chamber, various relics, &c. Open from 11 A.M. till 10 P.M. Bazaar, Baker-street. Admission, 1s. Napoleon Rooms, 6d. extra.

ZOOLOGICAL CONCERT.—LOVE'S ENTERTAINMENTS.—**VENTRILOQUISM EXTRAORDINARY.—REGENT GALLERY, 69, Quadrant.**—Every Evening at 8, except Saturday; Saturday, at 3.—Monday and Tuesday, Mr. LOVE, universally accepted as the first Dramatic Ventriloquist in Europe, will present his NEW ENTERTAINMENT, called 'THE LONDON SEASON.' Wednesday, Thursday and Friday, the entertainment, LOVE IN ALL SHAPES, to be followed by a ZOOLOGICAL CONCERT, and LOVE'S LABOUR'S LOST. Saturday, at 3, LOVE IN ALL SHAPES, and other entertainments.—Pianoforte, Miss Julia Warman.—Stalls, 3s.; Area, 2s.; Gallery, 1s.—Tickets at Mitchell's, 33, Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 3.

THE GABRIELUNZIE WALLET.—Mr. ANDREW HALLIDAY'S NEW COMIC AND PICTORIAL ENTERTAINMENT, with New Songs and Original Music, by Mr. Leo Kerbusch, and numerous splendid Dioramic Views by an artist of eminence, will be submitted to the public on TUESDAY, May 8, at 8 o'clock, and every evening during the week, at Burlington Hall, Saville Row, Regent Street. Instrumentalists: Pianoforte, Mr. Leo Kerbusch; Cornet & Piston, Mr. M. Seaman; Vocalists: Mr. W. Adams and Mr. Charles Weston. Tickets at the Hall, and at the Libraries and Music-sellers. Stalls 2s. 6d.; Hall 1s.

ROYAL POLYTECHNIC INSTITUTION.—PATRON: H. R. H. PRINCE ALBERT. —Monday Evening, LECTURE on the COMPARATIVE ANATOMY of the EYE, by GEORGE PILCHER, Esq.—Thursday Evening, the 10th inst. DRAMATIC READING, by MRS. CHATELAIN, MUCH ADO ABOUT NOTHING.—Explanation of the ART of POTICHOMANIE, by MRS. MAKEPAIN, and LECTURES by GEORGE BRICKLAND, Esq., on SONGS and SONG WRITERS.—LECTURES, by J. H. PIERCE, Esq., and by Dr. BACHOFNER.—NEW DISSOLVING VIEWS of the LATE BATTLES, and of SINDBAD the SAILOR.—SPLENDID MOVING DIORAMA, depicting the PASSAGE from LIVERPOOL across the ATLANTIC, and embracing VIEWS of the CITIES in the UNITED STATES.—STEAM GUN, COSMORAMAS, &c. &c.

SCIENTIFIC

SOCIETIES.

ROYAL.—April 26.—Sir B. Brodie, Bart., V.P., in the chair.—The following papers were read:—'Observations on the Ova of the Salmon,' by Dr. Davy.—'On the Position of Aluminum in the Voltaic Series,' by C. Wheatstone, Esq.

GEOGRAPHICAL.—April 30.—The Earl of Ellesmere, President, in the chair.—Viscount Brackley, the Hon. and Rev. C. Harris, Capt. Maclure, R.N., Dr. W. B. Baikie, and Messrs. D. J. May, R.N., R. O. Byrne, and T. F. Robinson were elected Fellows.—Sir R. I. Murchison explained the cause of the delay in the erection of the monument to the memory of Lieut. Bellot, which he said arose from the difficulty in procuring sufficiently large blocks of granite for the purpose. He next exhibited the drawing of the obelisk intended to be raised at the Quay at Greenwich, which he stated would be 32 feet high and 4 feet at its base. Sir Roderick, regretting that the monument had not been completed, more especially on account of the recent visit of the Emperor and Empress of France, was glad to announce that, after paying the cost of its erection, a surplus of about 1,500*l.* would be left for the provision of the five sisters of the gallant Frenchman, a portion of which had already been devoted to that object.—The President directed the attention of the Fellows to a number of beautiful sketches, bequeathed to the Society by the late Dr. Kirk, of the Bombay Army, made when engaged on the survey of the Red Sea, and when attached to the mission to the Court of Shoa, in Southern Abyssinia, under Sir William Harris; and also to an Atlas, by M. Jomard, of Paris, entitled 'Les Monuments de la Géographie, &c.,' exhibited by Messrs. Williams & Norgate.—The papers read were:—'Commercial Notes on the State of California,' by Mr. G. Aiken, Consul at San Francisco, communicated by the Foreign Office.—Letter from Dr. Vogel to Consul Herman, dated Kuka, September 15, 1854, announcing his return from Mandara

without having heard of the Chadda Expedition, which was navigating that river from August 7 to October 20, and has since safely arrived here. Dr. Vogel intended to proceed to the Chadda river by way of Jacoba, but he was compelled to turn back at Mandara, by the chief of that country. His future progress is intended to be directed towards Lake Fitri, and the eastern side of Lake Chad; but in the event of obstacles being insurmountable, he purposes to direct his steps to the Niger, by way of Nyffi, and descend that river on his way to Europe.—Letter from Dr. Barth to Vice-Consul Gagliaffi, dated Kano, November 12, 1854, communicated by the Foreign Office. Dr. Barth disclaimed all desire of having his tomb prepared for him, as had been done by Dr. Vogel; on the contrary, he hoped, within three months, to be in Mursuk, on his return to Europe.—Letter addressed by Lieut. Richard Burton, of the Bombay army, to the Secretary, dated Aden, February 25, 1855. Lieut. Burton had just returned to Aden from his venturesome journey to Hurrur, in Abyssinia.—The fifth paper gave a detailed account of the recent earthquake at Brussa, in Asia Minor, addressed to the Earl of Clarendon, and communicated by his Lordship's direction to this Society.

ASIATIC.—April 21.—Lord Ashburton, President, in the chair.—Sir Moses Montefiore, Bart., was unanimously elected a Resident Member. The Director presented a communication from Sir John Bowring, containing some additional notices by Mr. Edkins of the Buddhist works carried from India to China, and translated into the Chinese language in the early centuries of the Christian era. Some notices of original Chinese works on Buddhism were added. Several of the translated works are still extant in Sanscrit, their original language, and have been partially examined by M. Burnouf. The Director also submitted a translated extract from the Memoirs of Hinan Tsang, the Chinese traveller in India, which had been forwarded to him by M. Julien, of Paris. As mentioned in the notice of the last meeting of the Society, the Memoirs of Hinan Tsang turn out to be in part translations of original Sanscrit documents. The extract now translated contains a notice of a sovereign named Mahira Kula, who inhabited a city named Cheka, on the banks of the Vipasa; and who had gained for himself the supremacy over the surrounding country. The violent character of this king excited a rebellion against him; and being driven from his country, he fled to Cashmere. Here he was received and protected by the King of the country; but, in the course of a few years, the refugee led a revolt against his protector, killed him, and occupied the throne in his place. After which he killed all the chief men of the kingdom, and destroyed the various monuments and establishments of the Buddhists.—Prof. Wilson remarked that the character given of the king, Mahira Kula, was quite in accordance with that found in the Raja Tarangini, the only real Sanscrit history yet discovered.—The Assistant Secretary read an extract from a letter of Col. Rawlinson, written at Babylon a few days before the departure of the Colonel, who quits his political duties, and is daily expected in this country,—where he intended to devote himself exclusively to the elaboration and publication of the immense stores of Assyrian and Babylonian learning which he has gathered in Mesopotamia. The intelligence communicated in this letter is of some interest to persons engaged in the investigation of Assyrian archaeology. A fragment of still another obelisk has been found at Koyunjik, with an inscription upon it in the hieratic character, like that on the Shamasphul obelisk, and on Lord Aberdeen's black stone. Col. Rawlinson believes it to be a record of the Biblical King Pul; but, until the rest of the monument shall be discovered, nothing can be said of it decisively. A duplicate of the genealogical list, No. 70, of the Inscriptions published by the British Museum, has also been found, with two lines wanting in the published list. This gives the name of Taulil, father of Belkapi. The Colonel is much inclined to believe that all the names in the list are in really direct succession; and not in a double line, as supposed,

though he admits that the point is open to doubt. A mound has lately been opened near Bushire, and very many bricks have been found, with Scythic legends. The only name the Colonel has found is that of Tirhakeh. A similar mound has been opened at Taurieh, the ancient Siraf, further to the south, and in this the bricks found have also Scythic inscriptions, proving the early Cushite or Ethiopian dominion over the eastern shores of the Persian Gulf, as it was in the days of Herodotus. A ruined city named Zerghul, which appears promising, has been discovered on the skirts of the Arabian desert. The Colonel's letter concluded with the very probable conjecture that the Shinar of the Bible is really Shin-ar, or Shih-nahar, the two rivers, the real Assyrian original name of Mesopotamia, which an Indian of this day would call by the exactly similar name, *Doo-ab*.

SOCIETY OF ANTIQUARIES.—April 23.—*Anniversary Meeting.*—The following were elected as Council:—President, The Earl Stanhope; Vice-Presidents, J. P. Collier, Admiral W. H. Smyth, and Viscount Strangford; Treasurer, F. Ouvry; Director, Sir H. Ellis; Hon. R. Cornwallis Neville, J. H. Parker, W. D. Cooper, Rev. T. Hugo, W. Tite (eleven Members from the old Council), H. Stevens, W. S. W. Vaux, the Right Hon. Sir R. Harry Inglis, S. Birch, R. Cole, N. Hollingsworth, H. Reeve, Lord Talbot de Malahide, W. M. Wylie, J. Young (ten Members of the new Council); Secretary, J. Y. Akerman.

BRITISH ARCHAEOLOGICAL ASSOCIATION.—April 25.—S. R. Solly, V.P., in the chair.—Three Associates were elected.—Mr. Patrick presented a small brass Medallion of Ignatius Loyola, represented in profile. The legend S. IGNAT. S. I. F. (Sanctus Ignatius Societatis Jesu Fundator) on the reverse, the sacred monogram within a rich circle.—Mr. Sherratt exhibited a Club from one of the islands of the Marquesas group, representing two nimble heads, as in the instance shown at a former meeting.—Mr. Meyrick exhibited a rare and highly interesting specimen of the Dague-à-roille of the time of Edward the First or Edward the Second, found a few years in the Tower ditch. The old Saxon fashion of wearing a dagger on the opposite side to the sword was revived in the reign of Edward the First,—and this specimen from Mr. Meyrick's collection offers an example of the earliest type of this revival. Mr. Meyrick also exhibited a Fibula of yellow bronze, belonging to the later Roman period, found at Bicester, in Oxfordshire,—a locality whence many Roman and Saxon remains have been procured. The fibula is in the shape of a harp, and the bow is beautifully wrought, and the spring of the acus curiously convoluted.—Mr. Syer Cuming exhibited the impression of an Ecclesiastical Seal, the matrix of which was discovered in 1854 in a stone coffin along with some human remains in digging up the site of the altar of St. John the Baptist,—a church which stood at the corner of Cloak Lane, and was destroyed in the Great Fire and never rebuilt. The seal is of the vesical form, and probably belongs to the fourteenth or the early part of the fifteenth century. The device is a *fleur de lis*, and around we read S. CRISTINE DE WERTINGG.—The remainder of the evening was occupied in the reading of obituary notices of members deceased during 1854, which had been postponed to this meeting from the Annual General Meeting, in consequence of the indisposition of Mr. Pettigrew. The notices contained various particulars relating to the members deceased and observations on the subjects of their several works. Those by the late Mr. Brayley, Mr. Patrick Chalmers, and the Rev. Dr. Whitaker excited interest, and gave rise to a discussion particularly relating to the peculiar Scottish sculptured stone monuments of Angus. A deserved tribute of respect was paid to the memory of the late Thomas Saunders, Comptroller of the City of London, for his zeal in effecting the restoration of the Lady Chapel of St. Saviour's, Southwark; and the notices terminated with a well-deserved eulogy on the late President, Ralph Bernal, Esq., which gave rise to remarks upon his extraordinary collection of antiquities, now in the course of dispersion

by auction, in which Mr. Planché, Mr. Meyrick, Mr. Cruikshank, Mr. Pettigrew, and others took a part.

NUMISMATIC.—April 25.—The Lord Londesborough, President, in the chair.—Mr. Evans read a paper, 'On Coins of Cunobeline with the Legend TASCIOVANI. F.,' in which he called attention to the great variety of opinion which had existed among antiquaries with reference to the meaning of the word TASCIA, which, under various forms, more or less lengthened, is the usual legend of the coins of Cunobeline. Mr. Evans also mentioned one new, and at present unique, coin, which he has lately acquired, on which the legend was distinctly TASCIOVANTIS.—Mr. Pfister read a paper, 'On a Rare Coin of Berengarius the Second, King of Italy, A.D. 950-962.' The coin bears on the obverse the legend BERENGARIVS R^X in the field, REX; and on the reverse, ALBERTVS R^X (the name of his son who was co-regent with him), and in the field, PAFIA. (i. e., Pavia, where the coin was struck). Mr. Pfister observed, that the character and form of the coin were almost identical with those of Hugo, King of Italy from A.D. 931-945, where the names of the father and his son Lotharius are, in like manner, placed on different sides of the coin.—Mr. Vaux read a paper, 'On Two Coins of Nineveh and Tennesus, in Persia,' which had been lately procured by Mr. George Finlay, of Athens. The first, though not unique, is a very curious coin of Nineveh when a Roman colony, and bearing the name of *Niniva Claudopolis*. On the obverse is the bust of the Emperor Trajan, and on the reverse an eagle with expanded wings, and the legend COL. AVG. FELI. NINI. CLAVD. The second is an unique coin of Tennesus as a free state. The Greek inscription on its reverse has been abbreviated or blundered, but has been explained, by Col. Leake, to refer to the period when the right of freedom (AYTONOMIA) was conferred on the city by the Romans, A.U.C. 682, B.C. 72.

SOCIETY OF ARTS.—May 2.—Mr. E. Carleton Tufnell in the chair.—Mr. Jelinger Symons, one of Her Majesty's Inspectors of Schools, read a paper 'On Juvenile Crime as it affects Commerce, and the best Means of repressing it.'

ROYAL INSTITUTION.—March 30.—W. R. Grove, Esq., Q.C., V.P., in the chair.—'On the Application of Chemistry to the Preservation of Food,' by the Rev. J. Barlow.

May 1.—*Annual Meeting.*—The Duke of Northumberland, President, in the chair.—The Annual Report of the Committee of Visitors was read and adopted. It states that the contributions from members and annual subscribers in 1854 have been very satisfactory, as well as the receipts for attendance at the courses of lectures. The general income has exceeded the expenditure of the year by the sum of 795*l.* 2*s.* 4*d.*; and the managers have been enabled, in addition to the annual investment of the accumulating funds, amounting to 184*l.* 10*s.* 1*d.*, to lay out 500*l.* in the purchase of 3*l.* per cent. consols, and to buy an Exchequer Bill for 100*l.* A list of books presented accompanies the Report, amounting in number to about 175 volumes, and making a total, with those purchased by the managers and patrons, of nearly 900 volumes (including periodicals) added to the library in the year. The following were unanimously elected as officers for the ensuing year:—*President*, the Duke of Northumberland; *Treasurer*, W. Pole, Esq.; *Secretary*, Rev. J. Barlow; *Managers*, W. H. Blaauw, Sir B. C. Brodie, Bart., J. B. Cardale, T. Davidson, G. Dodd, Sir C. Fellows, A. A. Goldsmid, Sir H. Holland, Bart., H. B. Jones, M.D., G. Macilwain, Rt. Hon. Baron Parke, J. Percy, M.D., Lieut.-Gen. Sir G. Pollock, A. S. Taylor, M.D., C. Wheatstone; *Visitors*, H. Browning, J. C. Burgoyne, J. R. F. Burnett, A. Crichton, H. W. Diamond, M.D., E. M. Foxhall, T. Hankey, jun. M.P., Admiral Sir T. Herbert, M.P., J. Hicks, J. Holdship, O. Morgan, M.P., R. R. I. Morley, J. North, Rev. C. Page, Rev. W. Taylor.

INSTITUTE OF ACTUARIES.—April 30.—Charles Jellicoe, Esq., V.P., in the chair.—Two candidates were elected Associates.—'On the Valuation of Government Securities,' by E. J. Farren, Esq.—The author commenced by stating, that among the indirect advantages derived by the public from the establishment of insurance companies, might be fairly cited that of fostering a system of elaborate calculation so closely allied to the fiscal requirements of the age, that, allowing for hyperbole, the nation's finance minister might in the present day in some degree be characterized as the nation's Actuary. The proper valuation of Government securities in their balance-sheets was still, however, a vexed question amongst the profession, in consequence of the very different conditions under which national, as compared with private loans, were contracted. In ordinary cases, on good security, the principal was repayable intact, either under date, or under notice from either party. In Government loans, the right of giving notice was withdrawn from the lender, and a power of transfer substituted. The realization by perpetual annuities of his exact principal was thus no longer certain even to the first lender; for the transaction of transfer immediately became one of mere profit or loss between him and successive parties, whose wants and views might have been wholly artificial and temporary, and would have scarcely any reference to the nature of a pure loan, considered as a simple investment for principal at interest. If, however, the money was borrowed by Government on terminable annuities, the public loan then retained, according to its form, all the principal features of a commercial one, because the original money thus lent was *de facto* returned in substance to the lender, instalment by instalment; and could thus be treated as an ordinary matter of account, of half-yearly payments of part principal, part interest. The mechanical uniformity of the Income Tax on all annual incomes alike had upset this distinction between principal and interest as a matter of practice; and thus terminable, like perpetual annuities, no longer maintained the primary relations of exact repayment of principal, so openly insisted on in private transactions, but became a matter of profit or loss like other speculations. In dealing with this expectation of profit or loss on Government securities, actuaries in their valuations appeared to have instituted four different methods. The author referred to them under the names of the "purchase price," "selling price," "interest price," and "average price methods." His own opinion tended to a modified form of the last. He determined the average to be taken by the four terms represented by the price given, the price of the day, and the highest and lowest market prices that had occurred between the day of original purchase and the day of making up the valuation account.

MEETINGS FOR THE ENSUING WEEK.

MON.	Entomological, 8.
—	Society of Arts, 8.—Special.—Adjourned discussion.—'On Public Works for India.'
—	Royal Institution, 2.—General Monthly.
TUES.	Horticultural.
—	Syrio-Egyptian, 7½.—'Notes on Syria,' by Mr. Sharpe.—'On Nergal,' by Mr. Harle.
—	Institution of Civil Engineers, 8.—Renewed Discussion 'On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams.'—Description of the Landore Viaduct, on the South Wales Railway, by Mr. Fletcher.
—	Zoological, 9.—Scientific.
—	Royal Institution, 3.—'On Voltaic Electricity,' by Dr. Tyndall.
WED.	Royal Society of Literature, 4½.
—	Society of Arts, 8.—'On the Manufacture of Steel as carried on in different Countries,' by Mr. Sanderson.
—	Graphic, 8.
—	Ethnological, 8½.—'On some Remains of a Primitive People in the South-east corner of Yorkshire, with some Remarks on the Early Ethnology of Britain,' by Mr. Wright.
—	British Archaeological, 8½.
THURS.	Society of Antiquaries, 8.
—	Royal, 8½.
—	Royal Institution, 3.—'On Christian Art,' by Mr. Scharf, jun.
FRI.	Astronomical, 8.
—	Philological, 8.
—	Royal Institution, 8½.—'On Nature Printing,' by Mr. Bradbury.
SAT.	Royal Institution, 3.—'On Electro-Physiology,' by Dr. Du Bois-Reymond.

FINE ARTS

SOCIETY OF PAINTERS IN WATER-COLOURS.

The fifty-first Exhibition of this Society opened last week at the Gallery in Pall Mall with three

hundred and twenty-two pictures of more than ordinary merit.

Every gardener knows that what he calls "a good plum year" and what he calls a "good apple year" seldom go together, so unequal is nature in its gifts. It is much the same in Art: few Exhibitions are equally good every year. This spring, about the time of buds and flowers, the Pall Mall walls have bloomed with a cluster of works that, with all the freshness and promise of May, boast much of the riper perfection of the fuller summer. Mr. Gilbert is unusually picturesque, and in manipulation magical.—Mr. Haag original and broad.—Mr. Fripp poetical.—Mr. Richardson bright.—Mr. Branwhite calm,—and Mr. Callow pure.

We begin with Mr. Gilbert because his two pictures, *Shylock and Jessica* (No. 9) and *An Alchymist* (54), are almost the only works of real invention in the whole Gallery. The first, a scene from 'The Merchant of Venice,' represents the well-known subject of the Jew entrusting his keys, with many cautions, to the fair Jessica, while Launcelot watches them in the background. The whole is wonderful as a rich-coloured piece of mechanism; but every face seems to us a failure. Shylock's pale parchment physiognomy may contrast very well with the rich brown tones of his daughter's cheek, but Jessica is heavy and sensual; and Launcelot is not the smart Shaksperian youth, full of repartee, but a swinish lout, very thievish and very cunning. The drapery is bold, broad, Flemish, and flowing; but the colour is much impaired by Mr. Gilbert's method of using opaque streaks in the midst of deep transparencies. The 'Alchymist,' a picture still more masterly in the vigour and daring of its execution, has a peculiarity which it shares with its companion, that the head is the least finished parts of the picture. There is no sentiment or thought in the face or in the scene; yet we delight to wander over the tinted bricks of the furnace, the motley contents of the shelves, guess at the contents of the bottles, and study the old chemist, from the loose string of his dressing-gown and the duster hanging from his pocket, to the cork of the phial he holds in his hand. Mr. Gilbert's two other pictures, smaller, but running over with talent and an executive dexterity, which has grown into instinct, are *The Letter-writer of Constantinople* (136)—in which the white turban of the old scribe quite lights up the dark low room,—while the attentive spectators are full of character, hungry sallow opium-eaters and full-faced calm Mussulmans that remind us more of the Arabian Nights than the Turkish Deys;—and *The Stage Coach of the Last Century* (151), in which we see a ponderous vehicle travelling over a village bridge, while Uncle Toby, with cocked hat and broad cuffs, is looking out at window, speaking to some beggars who run behind.

Mr. C. Haag delights us this year with wild Montenegrin scenes, with matchlock men and beautiful peasant maidens. His *Montenegrin on Guard* (20) is a view of a mountain outpost,—the soldier leaning on his matchlock, and looking down into a ravine. The dress is picturesque, with the fringed plaid, the embroidered grieves and pointed buskins. But this, though deep-toned almost as oil, is a mere sketch compared with a *Morlack Bard singing the History of the Destruction of Salona* (65). The bard, with up-turned eye and extended hand, stands on the steps of some old palace beside a few pillars, all that remains to tell of old Dalmatian glory. His auditors of soldiers and citizens and maidens are grouped around him, some smoking and chatting, others listening with kindling look and burning heart. Nothing can surpass the "hard and soft" of this picture—its combination of breadth and touch, its firmness and tenderness of handling. The colouring is bright and warm, and the atmosphere pure, mild, and sunny. The *Head of an Armenian* (199) is grand in feeling, but not equal to the other pictures of this artist. A *Peasant Girl, Montenegrin*, (240) is a beautiful face. The costume, singularly picturesque, with its yellow and its red striking against the blue of the sky. The *Montenegrin Princess* (293) is a pretty child's head, with a sly and startled expression as if afraid of the artist's "evil eye." The coins of the head-dress

resemble scales of mail, and give a wild character of barbaric splendour to the large, frightened eyes beneath. A *Venetian Lady* (75) is a face of true Italian charm, the cheek just suffused with that tint of rosy twilight that fades away when the moon rises. This being might be a spirit, so idealized is the character of its beauty. In one picture alone Mr. Haag leaves Montenegro to visit the Highlands: we mean in *Their Royal Highnesses the Prince of Wales and Prince Alfred returning from Salmon Spearing* (201). The likenesses are good, and the colour is mellow and deep. Prince Albert, grasping a salmon spear, is guiding his children over a cleft of rock,—one of them rides upon his shoulder, and another hurries on by his side.

We have seldom seen unostentatious and unaffected poetry thrown with greater delicacy and subtlety into a domestic scene—daily life is so easily vulgarized and so difficult to elevate—than has been done by Mr. W. Goodall in *Grandfather's Watch* (12). It merely represents a shrewd old labourer holding an enormous timepiece to his little grandchild's ear,—and yet there is such playful love in the old man's face and such innocent wonder in the child's eyes that it delights every one at the first glance.

Mr. Topham is thoroughly national in his Spanish scenes; but his *Andalusian Letter-Writer* (141) looks like the reverse of Mr. Phillips's picture of last year. There is the same grey, deaf old Spaniard, and the same pretty *muchacha*, with the addition of a sly bystander whose smile indicates the nature of the letter.

Mr. Jenkins, although somewhat melo-dramatic, is successful in his *Hopes and Fears* (266), from a certain vividness of contrast and some honest passion, which he has thrown into his work. The subject is a returning soldier looking through the window of his cottage at his wife, who is tearfully watching her child. The one figure is blue and cold in the moonlight; the other warm with the reflection of the fire. To our mind, there is a want of vigour and manliness about the soldier, who looks somewhat sneaking and burglarious. The scene is, however, natural, and must touch all who remember the terrible apprehension that sometimes clouds the joy of a return and slakes the heart with superstitious fears.

Mr. S. P. Jackson's four drawings are all good; his largest, *Tintagel* (72), the least so, as the contrast of colour in it is not wholly clear of harshness. But his *Coast of Devon, Evening*, (95) is charming. There is air in the firmament, there is distance on the water, and the fishing boat moves placidly but not tamely. Mr. Jackson's *Summer Day on the Coast* (186) has the heat and the haze of noon in an intensity without excess which has seldom been exceeded. The treatment of this fragment of shore scenery is as original and attractive as the first of those delicate down-landscapes which Copley Fielding was so often afterwards invited to repeat. We have seen little marine painting more unaffectedly true than the last-mentioned drawings, both of which justify the good promises made by us for Mr. Jackson some two or three years ago on his first exhibiting among the water-colourists.

Mr. F. W. Burton's *Peasantry of Upper Franconia waiting for Confession* (239) is among the drawings which are found most attractive this year,—not merely because it is by a new hand, but from the innocent and deep feeling which pervades the composition,—the truth to peasant-nature of the heads, and the richness (too chargeable, perhaps, with suffusion of tones) with which it is coloured.—A larger composition, also, of Franconian peasants in *The Cathedral at Bamberg* (181), is less happy, because more embroiled as a composition, is feebler in handling, but reveals quickness of observation and novelty of manner.

Of Mr. Stephanoff's umbrery mistakes we can venture to say nothing, and still less of Mr. Riviere's vulgar faces, that seem to have grown uglier and redder since they sat to him last year.

Mr. Hunt is in full bloom this year, with quite a school of ruddy boys, equally quaint and clear, but less hideous than usual. *Le Malade Imaginaire* (229) represents himself about to take medicine, and with one of the most grotesque faces we

have seen since Hogarth. It is singular how under all the distortion there seems to lurk a smile, which shows the actor. A little more vigour would have improved the execution.

Mr. Lewis is the same as ever,—flat, full of detail, and grey and creamy in colour. *The Well in the Desert, Egypt* (135), wants sun and brilliancy, and Oriental profusion of colour.

Mr. Alfred Fripp is poetical in his groups of Italian peasants, though rather vapoury and fanciful in colour. *A Woman from the Mountains of Suviaco* (110) is exceedingly original. No peasant woman was ever more fully employed. On her head is poised a cradle; her hands twirl a distaff, and her eyes are bent homeward. The face is beautiful, although, as in Mr. Fripp's faces in general, there seems a slight contraction about some of the features, and a feeling of atmosphere is allowed to unduly preponderate even in the colour of the flesh. *The Vintage* (133), clever as it is, is more careless than Mr. Fripp's other works. There is a want of abandonment in the dancing reaper, and a set air in the laughing lasses, who follow the banner of the Virgin and the sturdy sickle bearers.

Mr. F. Tayler is essentially the Cavalier painter. About all he does there is a gay, courtly abandonment, that makes him the Watteau of cocked hats, French hunting horns and flap waistcoats. He is in full strength this year; but still too sketchy and rough, and too fond of a neutral purple, with which he paints earth, horses and drapery indiscriminately. His steeds are full of motion,—his dogs of life and force,—his cavalier huntsmen of polish,—and his ladies (Die Vernons generally) of arch gaiety. His *Stag-Hunt, Full Cry* (206) is bright with the gold lace and flowered coats of the Hanoverian race. His *Woodland Hunting* (311) is full of character, and reminds us of Scott's scenes with the Osbaldistons in 'Rob Roy.'

In landscape Messrs. Branwhite, Richardson, Callow, Fripp, and Nash bear the palm. Mr. Branwhite's marked manner is conspicuous in a *Pool of the Conway, North Wales* (26). The overhanging trees, dyeing the water green with their shadows, leave here and there in the clear deep water sapphire spots which the sky colours. Broken rock and feathery boughs fill the scenes that Mr. Branwhite loves to reproduce with Wordsworthian tenderness and fidelity. His object is not microscopism, but, without shunning labour, to produce the effect of nature with the least toil.

Mr. Callow contributes a rich collection of Continental scenes,—*On the Grand Canal, from the Leone Bianco, Venice*, (6), *Church of St. Pierre, Caen*, (36), *Mayenz, on the Rhine*, (43), *Oberwesel* (56), *San Giorgio, Venice*, (157),—all marked by his peculiar clearness and brilliancy of style.

Mr. Richardson delights us with some marvellous scenes of quite epical size and minuteness. One of the best of these is *Scene on the Black Mount, Argyleshire* (5); but the crown of all is the *Scene in Glencoe* (81),—remarkable for its leagues of distance, and its pines writhed and twisted by the storm that has reeled howling down these gorges.

Mr. W. C. Smith's finest picture is the panoramic one of *The Golden Horn* (190), in which we embrace at a view the Sultan's palace, the Genoese wall, the bridges of boats, the towers of Galata, a thousand mosques and minarets and dark spiral cypresses, and further than all the blue reach of sea, swept in by the golden shore, the great white barracks of the Scutari Hospital, and, beyond, the mountains of Asia,—presenting such a glimpse of two continents as would have made an Alexander's or a Cæsar's heart leap for joy. In wonderful contrast to this work is a *Day in Windsor Park* (159); a quiet bit of woodland, with glimpses of sky, and full of that dreamy repose with which the majestic calmness of nature, always progressing yet never in visible motion, fills the meditative mind,—soothing the senses like the drowsy syrups of Egypt after the fever and turmoil of worldly life.

Mr. J. Palmer's *Dell of Comus* (73), though not delicate in colour, is a happy attempt to realize the revel that the prying shepherd overawed.—Mr. Dodgson, true to his wonted taste, has some clever

seventeenth-century groups on battlements and terraces.

Mr. F. Nash is prolific in his contributions. *Ruins of Junieges on the Seine* (10),—*The Market-Place at Dieppe* (18),—*Keswick New Church* (40),—*Die Katz on the Rhine* (47),—*View in Arundel Park* (48),—*Rivaux Abbey* (13),—*View of Brighton* (89),—*Windsor Castle* (92),—*Fountains Abbey* (93),—and many others show an artistic industry only equalled by the artistic talent.—Mr. Gastineau contributes *View near Magadeno, Lago Maggiore* (200),—*Dover Harbour* (222),—*Loch Lomond* (305),—*Narrow Water Castle, Ireland* (318),—and *Killicry Bay at Dublin* (321),—all fresh and vigorous in colour and execution.—Mr. W. Evans shares in the general improvement. His *Haymaking, Glen Tilt* (126), is better than usual.—Mr. Naftel and Mr. Duncan, with their Guernsey and sea-coast scenes, are remarkable for their force and freedom of style.—Mr. D. Cox still sends in his masses of drenched storm and grey skies; and Mr. W. Turner shows an advance in his art.

In passing through this Exhibition there can be but one feeling,—that of pleasure at the results of competition. There can be no doubt that if oil painting does not make a greater advance than it has done during the last few years, it will be fairly rivalled by its brother art. At present, water-colour painters for the most part confine themselves to landscape,—but Messrs. Gilbert, Corbould, and Haghe show them what may be done with the figure,—and we see no reason why High Art should not be as attainable by water as by oil. There can be no question that there is a certain demand amongst the rich for water-colour paintings, both as copies and for ornaments; and no good water-colour painting remains long unsold. English artists may soon enjoy an advantage unknown even to their Italian predecessors; namely, a public who shall be critically and technically conversant with the art they practise.

NINETEEN COURT AT SYDENHAM.

As the subject of the polychromatic decoration of the ancients is exciting so much of the attention of the artistic world at the present moment, I hope you will allow me to state as briefly as I can the authorities for the colouring in the Assyrian Court at the Crystal Palace, which has been condemned in such unmeasured terms by the writer of the article on the Crystal Palace in the present number of the *Quarterly Review*, and which was also questioned in your columns some time ago by Mr. Nasmyth.

Every one is familiar with the passage in Ezekiel describing the men of Assyria painted on the walls with vermilion; and the general impression derived from the Books of Esther, Daniel, &c. is such as would certainly lead us to believe that the Palaces of Assyria were brilliantly coloured.

The same is asserted by Herodotus, Diodorus, Josephus, and indeed all the Greek and Roman historians who speak on the subject. The seven coloured walls of Ecbatana were a more daring piece of polychromatic decoration than has since been attempted, and the fact that this was no fable has been most singularly confirmed by the last discovery of Col. Rawlinson. He found that the Birs Nimroud was a seven-storied temple, each story of which was coloured with one of the symbolical colours of the planets, one, for instance, was gold or gilt, one a fiery red, a third blue, and so on. A people who could thus colour a building 150 feet high and 300 feet square, were not likely to be alarmed at trifles in the way of coloured decorations.

The great and indisputable fact, however, is that almost all the slabs when first discovered were more or less coloured, and many of those in the British Museum, and nearly all those in the Louvre, do still retain traces of this colouring, even after all the scrubbing and cleanings they have undergone; not, perhaps, sufficient to enable us to restore every detail, but quite sufficient to prove that they were all originally painted.

There were, however, no slabs in Babylonia, and half, at least, of the rooms in the Palaces of Assyria were only plastered,—and even those which were

revêted with slabs in the lower part had plastered walls above; and these too were certainly painted. The coloured plates of Mr. Layard's two folio works, those published by Mr. Botta, and the specimens brought home by these two gentlemen, show how this plaster was painted, and prove incontestably, as far as I can judge, that the general style of Assyrian decoration was painted plaster, and the colouring generally more intense than that employed at Sydenham.

I may perhaps add, that the painting on the upper part of the walls in the large room at Sydenham and the archivolts of the arch at the back, are transcripts, as near as could be made, of paintings now on their way home to the Louvre, and which had, in the mean time, been most carefully drawn by the artist employed by the French Government,—the only difference being, that the colours of the originals were glazed, and therefore more brilliant than those employed here.

The argument that the relief is lost by colouring might be allowed to pass in England, where we are all striving to get the greatest possible amount of effect at the least possible expense. But if any one will only turn to the Egyptian Court, they will see at once how little such an idea prevailed in ancient times. The general effect of an Egyptian bas-relief is, that it is a painting on a flat surface. Yet, with scarcely an exception, every figure and every hieroglyphic is carefully counter-sunk into the wall, and every part of it carefully modelled; yet without one single exception, so far as I know, they were all painted afterwards, and we all know with what brilliant colours. Supposing it a mooted point, is it improbable that the Assyrians should do what we know was the universal practice of the contemporary Egyptians? The great difference between the two styles, it appears to me, was, that the Egyptians carving in intaglio, used a light ground,—the Assyrians employing rilievo, used a dark ground to give effect to their sculptures.

So far as I know, every one who has examined the buildings themselves admits that they were coloured. Those who have published restorative illustrations of their researches have coloured them as brilliantly as those at Sydenham; and the specimens brought home have been followed as literally as possible in the restorations at the Crystal Palace.

Against all this authority—historical, monumental, and personal—what have we? Certainly nothing in the *Quarterly* but the expression of the personal feelings of the writer of the article in question.

The question whether the colouring is in good or bad taste, is one the Directors of the Crystal Palace Company, or those employed by them, never, so far as I know, asked themselves. Their object was to reproduce the arts of antiquity with the utmost possible fidelity, and leave the public to form their own judgment as to the merits of the style. I, of course, can perfectly understand a person accustomed to the grey atmosphere of our climate, or the smoky dinginess of London, finding such decorations too brilliant for their enfeebled nerves; but under the glowing sunshine of the East, the case, I take it, would be widely different.

Again, let any one look at the gigantic limbs of the men strangling lions at the side portals, or the muscles of the five-legged bulls, their great wings and human heads, and he will admit, I think, that the character of the art was singularly bold and vigorous, not to say coarse and barbarous; and delicate patterns and subdued colouring certainly had no place in such a style. The men who used the chisel so vigorously handled the paint-brush in as daring a manner, and produced a style, to which the modern laws of criticism seem to be wholly inapplicable.

If the question of Colour should still remain an open one with the artists of the West, it is one which has long ago been decided in the East,—as the gorgeously coloured mosques and buildings of Ispahan, Teheran, and Tabreez can testify; and even at Agra and Delhi, ask any of the natives which of the ruined buildings of his ancestors he most admires, and he will turn to the "Cheena Mesjid" or "Cheen ka Rozah," meaning

thereby those revêted with glazed tiles of the most startling brilliancy, and he will tell you these are by far the most beautiful; and in that climate it would be hard to say that he does not judge rightly.

With all these facts and inferences, I think it must be admitted that there is sufficient authority for the colouring of the Nineveh Court, and that it would have been absurd to attempt a reproduction of Assyrian Art without using a style of decoration at least as brilliant and intense as that employed at Sydenham. If, however, any one likes to assert that the taste of the Assyrian was bad, and their Art barbarous, that is a matter of opinion which I do not propose to discuss at present. Yours, &c. JAS. FERCUSSON.

Langham Place, April 30.

FINE-ART GOSSIP.—On Friday—yesterday—was held the private view of the Royal Academy. The pictures are as numerous as ever; but the Exhibition is not, as it should be, the best of the series. Some of our chief masters are entirely absent: others are represented by works of less labour and pretence than usual. The Forty are assuredly not so strong this year as is their wont, though they have contributed some remarkable pictures: we may instance Mr. Stanfield's 'San Sebastian,' Mr. Roberts's 'Rome,' Mr. Hart's 'Captivity of Eccelino,' Mr. Macleise's 'Orlando,' and Mr. Herbert's 'Lear.' Comparison and criticism we reserve until next week. One of the finest pictures in the Exhibition—painted in the true, as distinguished from the modern, Pre-Raphaelite style—is 'The Procession of Cimabue,' the work of Mr. Leighton, a young painter of twenty-four. This fine picture was bought by Her Majesty at the private view for 600*l*.—This evening the annual dinner will be eaten, and the usual speeches will be made. Perhaps Lord Palmerston, or in his absence some other Minister, will be gracious enough to tell us whether the National Gallery is still "under consideration."

A series of lectures will be delivered on successive Wednesdays, commencing on the 16th of May, by Signor Monti, on Ancient and Modern Sculpture.

To-day the Exhibition of French Pictures—so useful and so successful last year—opens for the second season. Next week we shall report on the character of the present collection.

The Oxford Museum Delegacy have resolved that it is desirable that the University should accept the tender of Messrs. Lucas & Son, of London, amounting to the sum of 29,041*l*. for the erection of a Museum according to the plan of Messrs. Dean & Woodward, approved by Convocation on the 8th of December last, modified in some respects with the approbation of the Delegacy. It will be proposed, in a Convocation held next Tuesday, to affix the University seal to a contract with Messrs. Lucas.

An architect who has addressed our readers before on the subject of this Oxford competition, and who writes with the authority of a wide experience, says:—

"Now that the competition for the Oxford University Museum has been brought to a close, and the building contracted for, I may, perhaps, be allowed, without risk of misconception, to direct your attention,—and through you that of the University and the public at large,—to certain points in its management, of which, I think, the competitors have a right to complain, though at the same time I gladly state my conviction, that every credit is due to the Delegacy for the desire for impartiality evinced by them, and that the errors in their proceedings have been the consequence of inadvertence or some similar cause. It was most unfortunate that, at the outset, no decision was arrived at, as to the style to be adopted, as such a decision would have spared the competitors much toil and anxiety, and would seem to have been specially called for, in reference to a place like Oxford, where discussions on Architecture and its numerous styles are apt to assume the semblance of party questions. There is, moreover, reason to fear, that matters foreign to the subject were imported into its consideration, and that preferences for particular styles have interfered with the due appreciation of the merits of the various designs. It will be remembered, that before making their final selection, the Delegacy chose six designs out of the whole number; and while it is creditable to their taste, that five out of these six designs had been favourably reviewed by the *Athenæum* and *The Builder*, it is also a remarkable fact, that the design selected for adoption has, up to the present moment, received no notice whatever from either of these periodicals. It is therefore especially to be regretted, that the designs were not submitted to eminent professional

judges, for a comprehensive report on their merits. Such a course, with its obvious advantages, was due to the University, as the best guarantee for a sound decision, and would have been a mere act of justice to the competitors, who had spared neither thought nor labour in the service of the Delegacy, who cannot be supposed to have possessed the necessary critical judgment for so difficult and complicated a task, as the selection of the best design out of the many sent in. When the Delegacy requested the opinion of two distinguished architects, whether any of the six designs could be carried out for 30,000*l*., another error was committed,—such a question being obviously one rather for a tradesman than a professional man; and this has been practically shown by the fact, that whereas the professional referees expressed the strongest opinion that none of the six designs could be executed for the sum named, a contract has been entered into with a London builder for the execution of the selected design for 29,500*l*.; while another of the six has likewise been tendered for at a similar rate. While, therefore, we must regret that such a mere question of *£. s. d.* should have been the only one submitted to professional judges, we have, I think, also much reason to complain of an opinion so discouraging to the competitors, so decided in its condemnation of their labours, and so erroneous in fact."

The Venetian Academy has been enriched by a legacy of thirty pictures, the gift of a lady of the city.

Mr. Baily's statue of the Lord Chief Justice Mansfield, of the fine proportions and artistic merits of which our readers have already heard, is now in Westminster Hall, preparatory to its erection among the other statues in the vestibule of the Houses of Parliament.

The Bernal sale has been brought to a close this week; some 10,000*l*. having been realized beyond the estimated value of the collection.

This is the prime of the year for water-colourists and their patrons. This day week, besides the two established shows in Pall Mall, Messrs. Foster & Co. were bidding all whom it concerned to a view of the collections of Messrs. Rowney and Foster,—and Herr Werner, a foreign water-colourist of some standing, opened his rooms that his drawings might be viewed. These are mostly of Italian scenes,—details of Venetian and Dalmatian architecture, executed with conscientious finish, not excluding effect,—and busy scenes of the Roman Carnival, the artists' *fête* at Cervaro, and like gatherings, touched with truth and minuteness, though elaborated so as to trench on a stiffness of which English eyes are impatient. The collections of Herr Hildebrand excepted, we recollect no water-colour drawings of foreign origin superior to Herr Werner's.

New churches rise daily. In one week we hear of one contemplated in the Westminster Road, one completed at Chippenham, another at Hoe, in Devonshire, and a third at Gallyhurst, in Lancashire.

A Correspondent, whose views we cannot altogether indorse, though we are willing to lay them before our readers, reverts to an original argument—very properly open to debate when, as Lord Palmerston says, "the whole subject of the National Gallery is still under consideration." He says:—"The common-sense question of a National Gallery is this. Can it give pleasure, amusement, instruction, and cultivate taste in amateurs, professors and the public? It may do this, if very superior works of Art constitute the collection; not a mere chronological and wearying succession of examples from various schools. The latter belongs to a Museum of Antiquities; the former to the purpose of information,—religious, moral, historic, artistic,—and to establish a fine taste, from which the eccentricities of artists and the extravagant fancy of individuals cannot easily be tolerated. This might be done without a tedious history of the Art, as exists in the Gallery of Berlin, the least interesting to the public of all the galleries in Europe. That the National Gallery of Britain is not as perfect as it might be, results from a want of judicious decision in the purchasers of pictures for the collection. If Trustees fixed on six eminent artists and six distinguished picture-dealers to give their opinion on the work to be purchased, much information might be gained by the Trustees. The artists to give their opinion as to the excellence and the originality of the work: the dealers to state their opinion as to the master and the history of the picture. In both cases each individual should give his judgment in writing, and alone. This must prevent the recurrence of such mistakes as have

occurred. To place before the public and artists a bad work, is injurious to the tastes of the country and injurious to the reputation of the artist, for the picture may be a copy, may be ruined by bad restoration, and may impress the spectator with a very false notion of the master; for instance, look to the Perugino, the 'Magdalen,' by Guido, the 'Tribute Money,' by Titian, in the National Gallery. If such specimens only could be obtained, it is better to be without them, and but ordinary justice that the public should rest on the reported abilities of these masters rather than be led astray in their judgment by such bad examples, even if such pictures be original. The history of the art of painting, — that is, the progress of the art, is not the art itself; it is the art we want, to delight, to instruct, and prevent bad taste. To realize a great School of Art, it would be better to restrain than to extend the national collection; in this case, it would necessarily be small, but the public taste would not be distracted by various indifferent examples, so that at length the best works would be considered as the standard of taste, and all works would be referred to such a collection for comparison. This would instruct and form the artist, would assist the private collector, defeat fraud and imposition, with a certainty of gratifying the public.

"M. M."

MUSIC AND THE DRAMA

MR. ALFRED MELLON respectfully announces that his SECOND GRAND VOCAL AND INSTRUMENTAL CONCERT will take place, at St. Martin's Hall, on MONDAY EVENING, MAY 7, to commence at 8 o'clock. On which occasion, Madame Bottesini will make his first appearance in England these three years, and perform a new Concertino on the Contra-Basso. Vocalists: Madlle. Louise Cellini and Mr. Sims Reeves. Pianist, Mr. F. E. Bache. Leader, M. Saluton. The band will consist of fifty of the finest living instrumentalists, and will perform during the evening Mendelssohn's celebrated Symphony in A minor, also Overtures by Beethoven, Weber, Auber, &c. Conductor, Mr. ALFRED MELLON.—Tickets, 1s., 2s., 6d., 5s., and 7s. 6d. To be had of Mr. Mellon, 134, Long Acre; Cramer & Beale, 201, Regent Street; St. Martin's Hall, and the principal Music-shops.

MISS EMMA BUSBY'S SOIRÉE MUSICALE, NEW BEETHOVEN ROOMS, 27, Queen Anne Street, THURSDAY, May 10, Half-past Eight o'clock.—Vocalists: Miss Milner, Miss Lascelles, Mr. Benson. Instrumentalists: Miss Emma Busby, Herr Molique, Signor Piatti. Conductor: Mr. C. Salaman.—Tickets, Half-a-guinea, at the Music-sellers, or of Miss Busby, 18, Upper Gloucester Place, Dorset Square.

SIGNOR and MADAME FERRARI beg to announce that their ANNUAL CONCERT will take place at the HANOVER SQUARE ROOMS, on WEDNESDAY EVENING, May 16, to commence at Eight o'clock. Vocalists: Miss Dolby, Madame Ferrari, Mr. Augustus Braham, and Signor Ferrari; Misses Augusta Thomson, Banks, Haack, and Pavelli (Pupils of Signor and Madame Ferrari). Instrumentalists: Mr. W. Sterndale Bennett, Mr. Aguilar, Herr Jansa, Signor Piatti, and Signor Regondi. Accompanist, Signor Pinuti.—Tickets, 7s., to be had at the principal Music-sellers; Reserved Seats, 10s. 6d., to be had only at Signor and Madame Ferrari's residence, 69, Upper Norton Street, Portland Place.

MISS P. HORTON'S ILLUSTRATIVE GATHERINGS.—ST. MARTIN'S HALL, every Evening, at Eight o'clock (Fridays excepted).—Mrs. T. GERMAN REED (late Miss P. Horton) and Mrs. T. GERMAN REED will present their NEW ENTERTAINMENT from Real Life, including English, French, and Italian Songs.—Tickets to be had at St. Martin's Hall, 3s.; Centre seats, 2s.; Admission, 1s.—Morning Performances every Friday, at Three o'clock.

SACRED HARMONIC SOCIETY. — We doubt whether Handel's matchless 'Israel' has ever been performed so well in England as it was performed yesterday week by the *Sacred Harmonic Society*. To hear it in perfection, possibly, a double set of double choruses should be secured, since the two choirs are so largely employed, that only lungs of brass can be counted on for retaining a perfect intonation during the twenty-five choruses, which form the grand attraction of the work. Less Utopian is it to wish for *solo* singers, who besides being as vocally efficient as Mesdames Novello and Rudersdorff, Miss Dolby, Mr. Sims Reeves, Herr Formes, and Signor Belletti were, should have studied the noble words of the Bible, as great actors study great poetry, and should feel the text as intimately as the notes to which it is set. The two foreign *bassi* were encored deservedly, in 'The Lord is a man of war,' but the words of their verse in the hymn of triumph went for nothing.—Madame Novello's tones again, in 'Sing ye unto the Lord,' are superb, unparagoned possibly among *soprani*; but the spirit of the prophetess with "the timbrel in her hand" did not rise to her lips. The *contralto* and tenor were more equal to their high duties—yet, except the last two fragments of recitatives for the latter voice, neither of the two

has words so noble as those which we have specified. Mr. Sims Reeves, however, sang his *bravura* 'The enemy said,' with such power and brilliancy as to merit his *encore*. In the above longings for a still finer finish and higher aspiration, we have rather expressed our sense of the loftiness of the Oratorio, than offered censure on those who interpreted it. The entire work, we repeat—especially the delicate and difficult choruses in the second act—went better in tune and more steadily than we have ever heard it go before; to the credit "of all and sundry."

ENGLISH APPRECIATION AND ENGLISH TALENT. —Those who desire to learn how Herr Wagner, like "a second Daniel come to judgment," has, at last, shown the ignorant Londoners which way music should go,—with further particulars of his unprecedented triumphs in this city,—are referred to certain American Art-journals, in which these facts and feats are gloriously chronicled, together with many hard and cutting things concerning wicked British journalists, who have been deaf to Herr Wagner's charming. In London, we have not heard of the success, neither witnessed any ovation. On the contrary, we continue to fancy and to fear that the evolutions of the "young German" *baton*, diligently seconding the mismanagement of old English directors, are rapidly extinguishing such interest as might still, for awhile longer, have clung to the *Philharmonic Concerts*, in spite of the difficulty of varying the repertory for an audience among whom fastidiousness is cherished for religion. At the *fourth Concert*, it is true, a show of paying attention to native talent was made by repeating a Symphony, written some twenty years ago (as a contemporary reminds us) for the *Society of British Musicians*;—and in those days, by certain critics, like all the music there produced, "borne up to the skies" with raptures as loud as the American praise of Herr Wagner, and vitriolic contempt launched against those who refused to accept such exercises as revelations. Now, others besides ourselves, *à propos* of this very Symphony, are asking, what has that Society done for British composition?—why have so many men of promise there brought forward not advanced beyond the threshold of promise. Others, too, are beginning to reckon with "young England," for having stuck fast where it began, as a dependency of Germany.—Reasons may be found for this non-ripening of fruit that formed itself well, in the safe considerations which have led many English musicians to prefer the security of professorship to those more capricious chances of fortune which always attend creation. But there has been another influencing cause in the case in question: the advocacy of false praise, on the part of those who now own the necessity for qualification. What need was there, when A, B, and C. were indiscriminately hailed as *our* Mozart, *our* Beethoven, *our* Rossini, for A. or B. or C. to work at self-improvement? How can it be wondered at, if, soured by neglect on the part of a public that was deaf to genius so loudly trumpeted, they retired into the silence of greatness unappreciated? The story has a moral full of meaning for artists as well as for journalists to come.

This week, too, the tactics which we have always recommended have been illustrated more variously than usual. The appeal in favour of Sir H. R. Bishop,—as our only national composer who still holds his public, and this after some twenty-five years of silence,—may be referred to here, as well as in another column: seeing that during some fifteen years of that quarter of a century the *Athenæum* was the only journal treating of music that referred to the composer of 'Bid me discourse,' and 'By the simplicity,' as more English, more individual, and therefore worthier, than all the home-made second-hand German composers, whose triumphs were so loudly heralded.—Tuesday, again, afforded us a concert-illustration of the honest certainty with which every good thing—whether foreign or English—will make its way, with or without puffery—which is germane to the spirit of these paragraphs. At Mr. Ella's second *Musical Union*, Mr. Cooper was leader, Mr. Carrodus second violin. Both played to the

entire satisfaction of an audience which is tuned up to a pitch of exclusiveness not the most favourable to fair construction. Mr. Cooper led with force, passion, spirit, and capital mechanism; Mr. Carrodus seconded him like a thoroughly-trained *second*, whom experience should make a capital *first*. Yet both these artists happen to be English, and both have made, and are making, their way quickly, without any pains having been taken, save what the two themselves have taken by labour and preparation, to bring themselves forward.

Mr. W. S. Bennett's *Third Soirée*, held on Tuesday evening, with one of the most crowded audiences ever assembled in the Hanover Square Rooms, would furnish us with further text for "improvement" in the matter of English appreciation and English talent, did we not feel that, even in a sermon on Self-help, the preacher must not become prosy. That a man will end where he has placed himself, not where others place him, is a truth that cannot be too deeply pondered,—but its exemplification must not be worn threadbare. Suffice it to say, that the *programme* was well varied, including, among other specimens of interest, a Romance by Mozart, and a *Rondo* from the 'Invocation' *Sonata*, by Dussek,—but including no new composition by the Concert-giver more important than an elegant setting of a song by Barry Cornwall. Mr. Bennett, however, was playing in his best manner, with that animation and clearness of finger which we have sometimes missed in him.

Strangely long as this notice will seem to those who love to bemoan the neglect of English talent, and who have neither considered its deficiencies nor allowed for its progress,—we have still to add, in emendation of a remark made last week, that good chamber-music is being given in new places, and under new auspices,—by Mr. Willy, in St. Martin's Hall, and by Mr. Cooper, at the rooms in Queen Anne Street.—We can merely further name Mr. Harold Thomas as among the Chamber Concert-givers.

Another English performance—of Anthems and Sacred Music, including an extract from Sir F. G. Ouseley's 'Martyrdom of St. Polycarp,' was given on Thursday evening at the Hanover Square Rooms.

ROYAL ITALIAN OPERA.—The stilted 'Ernani,' of Signor Verdi, was repeated this day week, with Madame Bosio as *Elvira*, Signor Tamberlik as the hero, and Signor Graziani as *The King*. The Lady sings her *cavatina* brilliantly, and smiles through her part with great amenity; but she has not the weight or the passion which alone can carry off the strained writing of Signor Verdi. The new *baritone* possesses one of the most mellifluous voices with which mortal was ever blessed; but he has much of the singer's art to learn, as regards accent, *verve*, and the power of advantageously displaying his rare gifts. Perhaps, like Madame Bosio, he may profit by his being compelled here and in Paris to study other music and another manner of execution than such as warm and enchant a public in Italy. Time merely increases our conviction that, in England and France, the operas of Signor Verdi only pass because there is nothing else, and that the first more elegant and gracious Italian composer who arrives can sweep them away to the limbo of forgotten frenzies. We are more and more satisfied that the progress of music is not of necessity a progress in exaggeration.

SADLER'S WELLS. — Our expectations of the success of the Adelphi drama at this house were realized on Monday and Wednesday. 'The Green Bushes' and Molière's 'Tartuffe' both attracted good audiences. Opposed in nature and structure, no two productions could be marked by broader differences than these distinguished examples,—one of the classic, the other of the ultra-romantic play. But of both the intrinsic merit is indisputably great; and it were to affect most idly the character of a purist to contend in such cases exclusively for form or treatment. Let the drama vary as much as possible in both,—the number of acts may stretch from one to seven,—

the subject may be "tame and domestic," or "wild and majestic";—where genius is present, the utmost licence in these respects may be readily permitted. One of the works before us is a translation; but then it is of a *chef-d'œuvre*,—a copy of an old master, made by a most competent hand (Mr. John Oxenford),—not the hasty transference from foreign boards of some trifle of the hour, by which the native author is a loser, and the native stage no gainer; a class of piece, in fact, well recognized at all times in our dramatic literature as a legitimate aid to, not as a substitute for, original talent. Nations in this, as in other arts, may properly learn from one another by the mutual study and appreciation of their greatest works; but to live by the constant copying of foreign products, however wanting in excellence, if not wanting in popularity, were degrading to any country. Madame Celeste in *Miami* proved to be in a high state of efficiency, and acted with uncommon vigour and pathos, as if ambitious of teaching the Islington audience that there were actors beyond that famed theatrical village, and other walks of histrionic art besides those to which the former had been accustomed. She manifestly aimed at a triumph, and attained it. With Mr. Webster the case was different. In *Tartuffe* the actor was on the usual level of the place; with him, it was a matter not of contrast, but comparison. The power and finish of his performance in this especial part left him nothing to apprehend; and his assumption was marked by all his usual point and ease. Nor did the audience fail to appreciate the excellent art by which this difficult character was illustrated.

SURREY.—While Mr. Webster is acting at the Wells, we find Mr. Phelps transferred for a week or two to the boards of the transpontine theatre, performing *Othello* and *Iago* alternately with Mr. Creswick. The result has been a smooth and efficient performance of the tragedy, highly to the credit of both actors. *Brutus* and *Cassius* have been underlined for the same kind of alternate illustration.

STANDARD.—'Macbeth' has been added to the revivals at this house; and has given us the opportunity of witnessing Mr. Marston in the character for the first time. Though somewhat deficient in compass and weight for the complete impersonation of the usurping Thane, there was so much elegance in the general movement that we came away with a higher opinion of Mr. Marston's capacities for the support of leading parts than we had previously entertained. We may add, that the audience were thoroughly satisfied, and insisted on the performer receiving a final ovation. Miss Glyn's *Lady Macbeth* was rendered with her usual vigour. Some points were indeed made with a rapidity and brilliance entirely new to us, and for which we were exclusively indebted to the originality of the *artiste's* genius. The house was crowded.

MUSICAL AND DRAMATIC GOSSIP.—The following obliging communication has been received.—"In your 'Musical Gossip' of Saturday last you ask if 'any friend or enemy' can tell you something concerning Louis Böhner's *Concerto*, No. 5. Though I do not presume to style myself either the one or the other, perhaps my communication will not be the less acceptable. Some years ago I found, after some unsuccessful hunting, an old copy of the *Concerto* in question at Klemm's, the music-seller, in Leipzig, and I convinced myself that there are certainly some ideas in it which occur also in 'Der Freischütz'; but in the latter work they are, as one might expect, infinitely more beautifully applied and developed. Thus, for instance, at the beginning of the first movement of the *Concerto*, which is in A major, in the orchestral introduction, occurs the universally known melody of the *Vivace, con fuoco*, in *Agatha's* great *aria*, bar 12; but Böhner has only four bars of it with a hackneyed conclusion. I remember also that several years ago there was a dispute upon this subject in the *Allgemeine Musikalische Zeitung*, in which Böhner asserted that he had

written his *Concerto before* 'Der Freischütz' was composed, and that Weber was acquainted with it. Others believe—and Dr. Hand also expresses this opinion in his 'Ästhetik der Tonkunst'—that Weber, as well as Böhner, adopted those melodies from national songs. I, however, doubt this being the case, as I have never met with the melodies, though I have always taken much interest in collecting national songs, and am acquainted with most of the published collections.—If I am permitted to add a few words about Gluck's *ballet*, 'Don Juan,' I must confess that I am at a loss to account for the origin of the supposition, so often put forth in musical papers, that Mozart for his 'Don Giovanni' has pilfered Gluck's *ballet*. If such very slight resemblances—as for instance, the piece, No. 5, in the *ballet* with Mozart's *duel-scene*, or the piece, No. 21, with Mozart's *minuet*—are considered sufficient evidence to justify a verdict of guilty, which composer can hope to escape being convicted of larceny? Not Mozart only, but Gluck himself, has drawn from the *ballet* of 'Don Juan,' as may be seen in 'Armida,' 'Iphigenia in Aulis,' and 'Orpheus,' and of which you undoubtedly are aware.

"I am, &c. CARL ENGEL."
It does not rain so much as "pour" opera speculations just now. Besides what is going on in Covent Garden, Drury Lane, the Haymarket and the Strand, where Miss Rebecca Isaacs keeps alive a sort of *guerrilla* opera, the Lyceum Theatre now bears on "its frontispiece" an invitation from Madame and M. Thillon to the public, to come and see the Lady take leave of the stage in a series of representations. We cannot suppose that Madame Thillon, in these, professes to take leave of public life; since, though time is time, her time of retreat should not yet have arrived. Meanwhile, these openings and shuttings, these *extra* playings, singings, and "starrings" (rendering discreet and deliberate preparation impossible, and spoiling every opportunity for which a composer might hope) belong to a state of manufacture—not of Art,—of imperfect civilization, or else of "decline and fall." While they rivet every conviction we have and hold of the existence of a public in England for opera, they adjourn our hope of seeing any establishment of opera in English deliberately and permanently accomplished here. The materials are not wanting, but organization and purpose are.

The Musical Festival of the Lower Rhine for 1855 will be held at Düsseldorf, and commence on the 27th of this month.—Among the principal compositions announced are, a Symphony by Herr Ferdinand Hiller, Haydn's 'Creation,' Mendelssohn's Overture to 'Meerestille,' Dr. Schumann's *Cantata*, 'Paradise and the Peri,' and Beethoven's C minor Symphony.

Not to interrupt the thread of an argument, we must here state that at Mr. Ella's *Musical Union* on Tuesday last, M. Halle performed Beethoven's *Sonata Pastorale* in his best style,—thereby proving in the most welcome of fashions his complete recovery from the late serious accident to his left hand.—Signor Bottesini has arrived from America, and is promised for Mr. Ella's next meeting.

Among other arrivals for the season may be mentioned that of Mrs. Eascott, the American Lady, who has, we have more than once mentioned, sung during a season or two at Naples in light opera with success.—Madame Fiorentini has, also, returned to the Old World.

The 'Te Deum' by M. Berlioz, which was to be performed in the Church of St.-Eustache at Paris on Monday last, is described as unique in its combination. There is in it only one *solo* part for the tenor,—with two choirs of three parts (which in Paris were each to consist of one hundred voices); and, in addition to these, five hundred children singing in unison a *corale* or theme, which re-appears throughout the hymn of thanksgiving. The idea of this last effect was probably suggested by our yearly exhibition in St. Paul's, which has moved and interested every musician who has heard it in no common degree, as M. Berlioz himself has testified. Further, whereas the orchestra and choruses are to be arranged in the choir of the

church, the great organ, placed above the grand entrance, is to be employed also, as an integral and important feature. Are peculiar combinations like these to be often, to be *ever again* obtained? If they cannot, it is to be regretted that a composer should have spent so much leisure, pains, and calculation in assembling them. The 'Requiem' of M. Berlioz, supposing its musical value ever so great, is virtually shut from the public by the vastness and peculiarity of means demanded for its execution. It would be a pity should his new 'Te Deum' be called on to bear his funeral service company.

The other musical news, from Paris, is not very important. Those who are familiar with the tune of the French "trumpeters" may form their own speculations as to the probable chances of Signor Verdi's new work, 'Les Vêpres,' at the *Grand Opéra*, from observing the amount of preliminary stress laid on—the *ballet* which it is to contain.—The *Historical Concert* given, by M. Fétis, the other day, as first of a series, seems not to have attracted a large audience, nor the music to have been well executed. The latter, indeed, was hardly to be expected, since no magic can initiate the imperfectly trained singers and musicians of our day into the difficulties and peculiarities of elder Art.

New attempts to extend the province and to vary the forms of music continue to abound. M. Offenbach, we perceive, the graceful violoncellist and composer, has been offering at his concert a 'Décameron,'—this being a Neapolitan legend of the 'Grotto Azurra,' told in verse by M. Méry, and alternately recited and sung by ten ladies.

Yet another memoir of Mozart, by Herr Jahn, is announced as in preparation, with new correspondence. When shall we hear of a *first* biography of Weber, whose life we have been often told in its vicissitudes, of which record was kept by him, furnished ample material for such a book!—when of one of Mendelssohn!—While we are on the subject of musical and dramatic memoirs, it may be stated that the MS. diaries of M. Joanny, who for many years was "père noble" at the *Théâtre Français*, were the other day disposed of at an autograph sale in Paris. An extract from these published in *La Presse*, journalizing the production of M. Victor Hugo's 'Hernani,' in which M. Joanny created the part of *Silva*,—the fierce controversies of which that play was made the subject, and the nightly contests for and against among the audience,—seems to indicate that a pleasant chapter of theatrical anecdotes, if not a book of theatrical memoirs, may be looked for among these papers left by "le vieil Horace."

Among other events of the week must be mentioned the sale, by Messrs. Puttick & Simpson, of some musical books and manuscripts, among which a few curiosities were to be found; with them a renowned Stradivarius violin, which brought the high price of 200*l.*,—and the well-known violoncello of the late Sir W. Curtis, the latter disposed of for 100*l.* From this, as well as from the Bernal sale, and the picture-auctions of the spring, it would appear as if the pressure of the war had not yet reached amateurs and Art-collectors.

Mr. Albert Smith's thousandth Ascent of Mont Blanc was sung and said this week. It may be doubted if any entertainment ever before ran its thousand and one nights in the same place. But the public for pleasures of this sort seems to be on the increase. We are told, and not by the speculators themselves, that money is turned away from Miss P. Horton's medley at *St. Martin's Hall*.—Mr. Woodin announces another entertainment; while for those who love to hear great plays read, in despair of seeing them thoroughly acted, Mrs. Chatterley, like Mrs. Kemble and Miss Glyn before her, is taking up her book, and preparing to make the tour of the "Institutes."

An English company, under the direction of Mr. James Wallack, is about to proceed to Paris, and will, it is said, commence a series of dramatic performances on the 21st inst. at the *Théâtre Ventadour*.—Mr. C. Mathews, and others of his *Lyceum* Company, have engaged themselves with Mr. Smith at Drury Lane, to appear there in Autumn.—Mr. C. Mathews, to act as stage manager.

M. Janin has hardly ever been more bitterly civil, or more civilly bitter, in his *feuilleton*, than while praising, with faint condemnation, a new comedy, 'Pérol en la Demeure,' by M. Feuillet, which has just been produced at the *Théâtre Français*.

MISCELLANEA

Paris Exhibitions.—An official publication states that the idea of a French Exhibition of Arts and Manufactures is due to François de Neufchâteau, Minister of the Interior, who organized the first Exhibition, in 1798, which took place in the Champ de Mars, and was inaugurated with much pomp and solemnity. On that occasion there were 110 exhibitors, and 26 medals awarded. The following table shows the dates of the succeeding Exhibitions, with the number of exhibitors and medals awarded.

Exhibition.	Exhibitors.	Medals awarded.
1801 .. Second	220	69
1802 .. Third	540	119
1806 .. Fourth	1,422	119
1819 .. Fifth	1,662	360
1823 .. Sixth	1,648	470
1827 .. Seventh	1,795	425
1834 .. Eighth	2,447	697
1839 .. Ninth	3,381	807
1844 .. Tenth	3,919	1,258
1849 .. Eleventh	4,500	2,172

—Such was the progress of the Paris Exhibitions, which have been hitherto limited to national arts and manufactures. The Exhibition about to open will not be confined to the products of France, and it is expected that the total number of exhibitors will amount to upwards of 20,000, of whom 8,000 will be French, and these numbers would be higher if the space in the Exhibition building were greater. The total superficial area for exhibition purposes in the new Paris Exhibition buildings is 95,000 metres, which is 2,000 more metres than our Crystal Palace in Hyde Park contained.

Authorship and the Post-Office.—Now that a reduction in the postage of books is in contemplation, a case bearing upon the question which came under my notice may serve to indicate some of the advantages likely to be derived from the Government measure. A young friend, who by long study had mastered a difficult subject, was induced to communicate the results of his experience to the world. With some effort and personal sacrifice he produced a readable book,—nay, public critics pronounced it well written. How to get the thing into circulation was the next question, for, the theme being of special rather than of general interest (spite of commendations), the book did not sell. It was offered to the public, and the public declined to buy it. The next proposition was to give the book away. It was thought that if it could be put into the hands of those for whom the subject had undoubted interest, reward and professional advancement might yet await the author. But here the postal difficulty presented itself. Two or three hundred sixpenny stamps might be a small matter, but yet sufficient to drain the purse of a poor author,—and in consequence the books still remain on hand. Reduce the rate of postage and many a young writer in like circumstances will be enabled to secure that publicity and attention indispensable to success; for in proportion to the expense will he be in a position to circulate his productions among provincial reviewers and the artistic and scientific people scattered over the empire; and then in the event of failure and loss it will be some solace to the writer to know that his work has at least had some sort of chance to make its way in the world. Nor would the advantage rest altogether with the author. Men of position in the State, official or scientific, requiring intelligent assistants, would by the same means get to know where young men of promise might be found, and at the same time become acquainted with views which they might otherwise never hear of.

I am, &c.

1, Woburn Buildings, Tavistock Square.

Paris Municipal Library.—The Library of the Hôtel de Ville has just had classified the political and historical manuscripts which were bequeathed to it by M. Thourret, Member of the last Constituent Assembly. A number of manuscripts relative to Dramatic Art, and particularly to the French Opera and the *Théâtre Français*, bequeathed some time back by M. Beffara, Commissary of Police, have also been arranged, and may now be consulted by the public. About 5,000 volumes on the policy, history, geography, &c. of the United States, have been placed in two special rooms, which are to be thrown open to the public at the commencement of the Exhibition. The total number of volumes in the City Library is at present about 70,000; and amongst them are many relative to the history of Paris and of ancient France.

TO CORRESPONDENTS.—A Reader of the *Athenæum* from No. 1.—C. E.—A. B.—R. S.—R. C.—W. C. B.—C. F.—received.

MORAL PHILOSOPHY. By GEORGE COMBE. 2nd edition. 12mo. 7s. 6d.; People's Edition, 2s. London: Longman & Co., and Simpkin & Co. Edinburgh: Maclellan & Co.

NEW WORK.

O L Y M P U S. London: Simpkin, Marshall & Co. Price 3s.

WAR WITH RUSSIA.—HISTORY of the ORIGIN of the WAR with RUSSIA. Drawn up from the Parliamentary Documents. London: Ward & Co. Paternoster-row; and Peace Society, 19, New Broad-street, City. Price 3d. each; or 2s. a dozen.

LASÈGUE'S FRENCH PROSE recommended by the Rev. T. K. ARNOLD, M.A. 5th edition. Price 5s. 6d. Rivingtons, Waterloo-place, Pall Mall.

LECTURES FOR THE TIMES; or, Illustrations and Refutations of the Errors of Romanism and Tractarianism. By the Rev. JOHN CUMMING, D.D. F.R.S.E. New Edition. Arthur Hall, Virtue & Co. 25, Paternoster-row.

HUNT ON STAMMERING.

Just published, price 3s. 6d.; by post, 4s.

A TREATISE ON THE CURE OF STAMMERING. With a Memoir of the late T. Hunt, Esq. Author of 'The System for the Cure of Defective Articulation.' By JAMES HUNT M.R.S.L. &c.—'Mr. Hunt's extensive proofs of his skill in curing this malady.' *Athenæum*.—'The mass of evidence is sufficient to satisfy the most sceptical.' *Morning Post*.—'A valuable treatise.' *John Bull*.—London: Longman & Co.; and by post only from the Author, at his Institution for the Cure of Imperfections in Speech, No. 8, New Burlington-street (late of Regent-street).

THE PUPILS' EDITION.

Price 6d. weekly.—Part I. May 12.

J. D. HARDING'S LESSONS ON ART. In Parts containing four descriptive and illustrated Lessons, teaching from the first holding and cutting a pencil, until the power is acquired of drawing artistically from nature or painted studies. From this work drawing may be learnt in the absence of a master, and properly taught in every public or private academy and village school, or by governesses in private families, to be completed in Thirty Parts.

Part I. London: Lithographers to the Queen, Gate-street, Lincoln's Inn-fields; D. Bogue, Fleet-street; Winsor & Newton, Rathbone-place.

WORKS ON ART.

By D. R. HAY, F.R.S.E.

I.

THE HARMONIC LAW OF NATURE APPLIED TO ARCHITECTURAL DESIGN. In royal 8vo. with Illustrations, 2s. 6d.

II.

THE NATURAL PRINCIPLES OF BEAUTY, as DEVELOPED in the HUMAN FIGURE. In royal 8vo. with Illustrations, 3s.

III.

THE ORTHOGRAPHIC BEAUTY OF THE PARTHENON referred to a LAW OF NATURE. In royal 8vo. with Illustrations, 3s.

IV.

FIRST PRINCIPLES OF SYMMETRICAL BEAUTY. In 8vo. 109 Plates, 6s.

V.

THE PRINCIPLES OF BEAUTY in COLOURING SYSTEMATISED. In 8vo. 14 coloured Diagrams, Second Edition, price 15s.

AHN'S SIMPLE METHOD OF LEARNING the FRENCH LANGUAGE. Adapted from the Seventy-Eighth German Edition, by CHARLES GRAESER.

London: Williams & Norgate, 14, Henrietta-street, Covent-garden.

THE INFALLIBLE PROCESS in PHOTOGRAPHY.

Just ready, 2s. 6d. bound in cloth; by post, 3s.

THE CALOTYPE PROCESS.—A HANDBOOK to PHOTOGRAPHY on PAPER.

By THOMAS SUTTON, B.A. of Caius College, Cambridge.

* * * The Process described in this treatise is so certain that it may fairly be called Infallible. It gives the utmost clearness and sharpness of definition, and renders admirably the atmospheric effects of landscape. The certainty of this Process consists in the fact, that the mode of development is adapted to the exposure that may have been given to the picture, so that over-exposure is scarcely possible, and the details of the deepest shadows may in this way be fully brought out without injury to the lights; and intense blacks may always be obtained. It is peculiarly the Process for the tourist, and pictures of immense size may be taken with great certainty.

The author will be in attendance at the Photographic Institution for a few weeks, for the purpose of demonstrating the Process to Pupils, at a charge of Three Guineas each.

Photographic Institution, 168, New Bond-street; and Low & Son, 47, Ludgate-hill.

THE PHOTOGRAPHIC PRIMER, for the Use of Beginners in the Collodion Process. With a Facsimile of a Photograph as Frontispiece. By JOSEPH CUNDALL. Price One Shilling; by post, Eighteen Pence.

Photographic Institution, 168, New Bond-street; and Low & Son, 47, Ludgate-hill.

Just published,

THE PRACTICE of PHOTOGRAPHY: A Manual for Students and Amateurs. By PHILIP H. DELAMOTTE, F.S.A. With a Photograph of the Colosseum of Aboo Simbel at the Crystal Palace. Price 4s. 6d.; by post, 5s.

Photographic Institution, 168, New Bond-street; and Low & Son, 47, Ludgate-hill.

Just published, 2nd edition.

THE PRACTICE of PHOTOGRAPHY: A Manual for Students and Amateurs. By PHILIP H. DELAMOTTE, F.S.A. With a Photograph of the Colosseum of Aboo Simbel at the Crystal Palace. Price 4s. 6d.; by post, 5s.

Photographic Institution, 168, New Bond-street; and Low & Son, 47, Ludgate-hill.

Just published,

PRACTICAL PHOTOGRAPHY, on GLASS and PAPER: a Manual containing simple Directions for the Production of Portraits and Views by the Agency of Light, including the Collodion, Albumen, Calotype, Waxed Paper, and Positive Paper Processes. By CHARLES A. LONG. Price 1s. 6d. per post, 1s. 6d.

PHILOSOPHICAL INSTRUMENTS.

GENERAL and DESCRIPTIVE CATALOGUE of Philosophical Apparatus and Chemical Preparations Manufactured and Sold by BLAND & LONG, Opticians, &c., 153, Fleet-street, London: comprising Twenty-one Sections on various branches of Natural Philosophy. Price 1s.; per post, 1s. 6d.

Published by Bland & Long, Opticians, Philosophical and Photographical Instrument Makers, and Operative Chemists, 153, Fleet-street, London.

NATURAL HISTORY.

Post 8vo. price 12s.

A MANUAL OF NATURAL HISTORY, for the Use of Travellers; being a Description of the Families of the Animal and Vegetable Kingdoms; with Remarks on the Practical Study of Geology and Meteorology. To which are appended, Directions for Collecting and Preserving.
By ARTHUR ADAMS, M.R.C.S. V. BALFOUR BLAIRIE, M.D.; and CHARLES BARRON, Curator of the Royal Naval Museum at Haslar.
John Van Voorst, 1, Paternoster-row.

LOBSTERS, CRABS, PRAWNS, SHRIMPS, ETC.

A HISTORY OF BRITISH STALK-EYED CRUSTACEA.

By THOMAS BELL.

President of the Linnean Society, F.G.S., F.Z.S.; Professor of Zoology in King's College, London.

The volume is illustrated by 174 Engravings of Species and tail-pieces. It is uniform with the Histories of British Quadrupeds, Birds, Reptiles, Fishes, Star-fishes, &c. 8vo. 14. 5s.; royal 8vo. 27. 10s.

John Van Voorst, 1, Paternoster-row.

8vo. price 15s.

A HISTORY of the BRITISH MARINE TESTACEOUS MOLLUSCA, described in their Natural Order, on the basis of the Organization of the Animals; with References and Notes on every British Species.

By WILLIAM CLARK.

John Van Voorst, 1, Paternoster-row.

Fcap. 8vo. 2s. 6d.

THE SEA-WEED COLLECTOR'S GUIDE; containing plain Instructions for Collecting and Preserving; and a list of all the known Species and Localities in Great Britain.

By J. COOKS, M.D.

John Van Voorst, 1, Paternoster-row.

Post 8vo. 8s. 6d.

ILLUSTRATIONS of INSTINCT, deduced from the Habits of British Animals.

By JONATHAN COUCH, F.L.S.

Member of the Royal Geological Society, and of the Royal Institution of Cornwall, &c.

John Van Voorst, 1, Paternoster-row.

8vo. with three coloured Plates, price 12s.

GEODEPHAGA BRITANNICA: a Monograph of the Carnivorous Ground-Beetles Indigenous to the British Isles.

By J. F. DAWSON, LL.B.

John Van Voorst, 1, Paternoster-row.

A HISTORY of BRITISH MOLLUSCA and their SHELLS. By Professor ED. FORBES, F.R.S. &c. and SYLVANUS HANLEY, B.A. F.L.S. Illustrated by a Figure of each known Animal and all the Shells. Engraved on 203 copper-plates. vols. 8vo. 64. 10s.; royal 8vo. with the Plates coloured, 134.

John Van Voorst, 1, Paternoster-row.

Fcap. 8vo. with many Illustrations, price 5s.

THE SEA-SIDE BOOK; being an Introduction to the Natural History of the British Coasts.

By W. H. HARVEY, M.D. M.R.I.A.

Keeper of the Herbarium of the University of Dublin, and Professor of Botany to the Royal Dublin Society.
Third Edition, with a Chapter on Fish and Fish Diet, by Mr. YARRELL.

John Van Voorst, 1, Paternoster-row.

8vo. 10s. 6d. the first volume (embracing the Topography and Botany) of a

NATURAL HISTORY of the EASTERN BORDERS.

By G. JOHNSTON, M.D.

Author of 'A History of British Zoophytes,' &c.

John Van Voorst, 1, Paternoster-row.

Post 8vo. with 13 Plates, price 14s.

A SYNOPSIS of the MOLLUSCA of GREAT BRITAIN; arranged according to their Natural Affinities and Anatomical Structure.

By W. A. LEACH, M.D. F.R.S. &c.

John Van Voorst, 1, Paternoster-row.

8vo. with an Illustrative Plate and numerous Woodcuts, 7s. 6d.
PRINCIPLES of the ANATOMY and PHYSIOLOGY of the VEGETABLE CELL.

By HUGO VON MOHL.

Translated, with the Author's permission, by ARTHUR HENFREY, F.R.S. &c.

John Van Voorst, 1, Paternoster-row.

Post 8vo. sewed, price 1s.

ON WARDIAN CASES for PLANTS and their Application; the substance of a Lecture delivered at the Royal Institution, on Friday, March 17th, 1854.

By STEPHEN H. WARD, M.D. London.

John Van Voorst, 1, Paternoster-row.

THE AQUARIUM;

AN

Unveiling of the Wonders of the Deep Sea.

By PHILIP HENRY GOSSE,

A.L.S. &c.

Post 8vo. with coloured and uncoloured Illustrations, 17s.

"While in some respects a continuation of the 'Rambles on the Devonshire Coast,' from the pen of the same author, the present work is infinitely more interesting, since it treats of the deep-sea animals and plants collected by him for the purpose of that novel contrivance in natural science—the Marine Aquarium. The physiology of such of the inhabitants of the great deep as fell under his observation in the prosecution of this arrangement, their structure, their habits and instincts, are described with all that intelligence and ready sense for the wonders of nature for which the author is so distinguished, and the descriptive text is accompanied by illustrations of the most admirable character, beautifully printed in colours. The volume also contains ample directions for the formation of the marine aquarium on every scale, from the ornamental vase in the drawing-room to the tank of the professed naturalist."—*John Bull*, July 8, 1854.

"Those who have had the gratification of spirit-companionship with Mr. Gosse in his former rambles, will rejoice to find themselves again by his side on the shores of Dorset. He has the art of throwing the 'purple light' of life over the marble form of science; and while satisfying the learned by illustrations and confirmations of what they knew before, he delights the seekers of knowledge, and even of amusement, by leading them into profitable and pleasant paths 'which they have not known.'.....The volume ought to be upon the table of every intelligent sea-side visitor. It would be injustice to close these remarks without paying a tribute to the singular beauty, both of design and execution, of the plates which accompany the work."

Globe, June 22, 1854.

"To the style of a Gilbert White, are added all the blandishments which the arts of the printer, the binder, and the artist sometimes combine now-a-days to offer to the eye.....Its pictorial portion is even more lavish in exquisite illustrations than the volume to which that before us professes to be a sequel."

Brighton Gazette, June 22, 1854.

"We recommend Mr. Gosse's volume,.....written throughout in Mr. Gosse's usual felicitous style."

Microscopical Journal, July, 1854.

"Among Mr. Van Voorst's many beautiful books, none exceeds, we know not if any equals, the delicate beauty of Mr. Gosse's 'The Aquarium.'.....This charming volume.....The illustrations are of ravishing beauty, quite miracles of tinted lithography."

Christian Remembrancer, July, 1854.

"The object of Mr. Gosse's book is to give information on [the keeping of marine animals, &c.]; and that he does this in an agreeable and interesting manner, is only to say that Mr. Gosse has done in this book what he has done in all his other works."

Athenæum, August 19, 1854.

"The ever fresh and various aspect of nature imparts some of its own character to the book."—*Spectator*, June 24, 1854.

"Mr. Gosse's former publications on natural history are, we doubt not, known to many of our readers, and we can assure them that although, as usual, there is in the present volume a good deal of scientific information, there is also a good proportion of what is interesting to general readers, and deserving of their attention. The letter-press is illustrated by some exceedingly well executed plates in coloured lithography, presenting much of the spirit, accuracy, and brilliancy of original drawings, and conveying a notion of the beauty as well as 'the wonders of the Deep Sea,' which will astonish many persons."—*English Churchman*, July 6, 1854.

"To all who have looked with interest upon the collection of marine aquatic animals in the Zoological Gardens, and observed with attention their wondrous development of form and function, this book, by an eminent lover of Nature's marvels, will be a delightful and welcome companion. Mr. Gosse has himself dived into the bejewelled palaces which old Neptune has so long kept reluctantly under lock and key, and we find their treasures set before us with a freshness and fidelity which afford welcome and instructive lessons to naturalists of all ages..... It is a charming little volume, and an admirable pocket companion for visitors to the sea-side."—*Literary Gazette*, July 15, 1854.

"The beautiful little work now before us.....Every page of this fascinating work is quotable.....A fitting ornament for the drawing-room table."—*Chambers's Journal*, August, 1854.

JOHN VAN VOORST, 1, Paternoster-row.

This day is published, a first Reprint of

MR. MULREADY'S EDITION OF

GOLDSMITH'S VICAR OF WAKEFIELD.

The Thirty-two designs in this volume have been wholly engraved by Mr. THOMPSON.
Square 8vo. 10s. 6d. in richly gilt cloth; or 21s. in unguilt morocco by Hayday.

John Van Voorst, 1, Paternoster-row.

Post 8vo. Illustrated, price 12s.

AN ELEMENTARY COURSE of GEO-

LOGY, MINERALOGY, and PHYSICAL GEOGRAPHY.

By DAVID T. ANSTED, M.A. F.R.S. &c.
Late Professor of Geology at King's College, London; late Fellow of Jesus College, Cambridge.

By the same Author, a Second Edition of
The ANCIENT WORLD. Post 8vo. 10s. 6d.

John Van Voorst, 1, Paternoster-row.

BIBLIOGRAPHICAL CATALOGUE

of PRIVATELY PRINTED BOOKS.

By JOHN MARTIN, F.S.A. Librarian, Woburn Abbey.

Second Edition. 8vo. 21s.

John Van Voorst, 1, Paternoster-row.

Just published, price 7s. 6d. with entirely new Illustrations by WOLF.

A THIRD EDITION OF

ORNITHOLOGICAL RAMBLES

in SUSSEX; with a CATALOGUE of the BIRDS of that COUNTY, and Remarks on their local Distribution.

By A. E. KNOX, M.A. F.L.S.

"Already our readers perceive that we are introducing to them a genuine enthusiast. In truth, though written by a man whose profession and habits differ in many respects from his, the volume continually reminds us of our old delight, White of Selborne. Like White, Mr. Knox is a scholar bred at Oxford; and like White, he is a close observer of Nature, who jots down what he sees in his own neighbourhood or excursions from mere love to that of which he writes, and not to make a book."

Quarterly Review.

By the same Author, price 9s.

GAME BIRDS and WILD FOWL: their

Friends and their Foes. With Four Illustrations by WOLF.

"This fascinating book does not contain a single heavy page, and well deserves the same praise as was awarded to the 'Ornithological Rambles' by so many competent critics."

Fraser's Magazine.

London: John Van Voorst, 1, Paternoster-row.

Just published, fcap. 8vo. price 5s. with 10 illustrative Plates.

PRACTICAL METEOROLOGY.

By JOHN DREW, Ph.D. F.R.S.

Corresponding Member of the Philosophical Institute of Bale.

This work, the result of many years' experience, gives ample directions for the advantageous use of the BAROMETER, THERMOMETERS, HYGROMETERS, RAIN-GAUGES, and other Meteorological Instruments; suitable Formulae and Tables for the Reduction of Observations; an Account of the Photographic Registration at Greenwich, and of the present state of the Science in this Country. It affords exactly the kind of information in request with private observers, as well as with the Officers of the Royal Navy and Mercantile Marine, in connexion with the arrangements lately entered into between the Governments of this country and the other Maritime States.

John Van Voorst, 1, Paternoster-row.

THE EDUCATION QUESTION.

This day is published, in crown 8vo. (pp. 374), cloth, 5s.

LEARNING and WORKING; and other LECTURES.

By FREDERICK DENISON MAURICE, M.A.,

Chaplain of Lincoln's Inn.

Macmillan & Co. Cambridge. Bell & Daldy, 186, Fleet-street, London.

NEW ORIGINAL PLAY.

This day is published, price 2s. 6d., post free for 36 stamps,

A NEW ORIGINAL PLAY, in Five Acts,

entitled **EUGENIA CARNOT**; or, Reputation's Struggle.

London: W. Strange, jun. 15, Ivy-lane, Paternoster-row; and all Booksellers.

NEW HISTORY of CHRIST'S HOSPITAL.

In 8vo. price 2s. 6d.; by post, 3s.

SOME ACCOUNT of the HOSPITAL of

KING EDWARD VI. in the City of London, called

CHRIST'S HOSPITAL; its Past and Present Condition.

By W. H. HALE, M.A.

Archdeacon of London; one of the Governors of Christ's Hospital.

Rivingtons, Waterloo-place.

Just published, in 12mo. price 5s. cloth lettered,

THE HERO'S CANTICLE; and other Poems.

By ROBERT FLETCHER.

* * * The First Canto may be termed a Life-and-Death Ode on

WELLINGTON; the Second, a Death-and-Life Ode for us ALL.

The entire Poem is supposed to be recited on the day of the

Duke's FUNERAL.

London: Jackson & Walford, 18, St. Paul's Churchyard.

This day, post 8vo. 2s.; post free 2s. 6d.

BAL MORAL: A SKETCH.

By ALEXANDER MACALISTER.

With an Introduction and Notes.

By ARCHIBALD HAMILTON, Esq.

London: Thomas Bosworth, 213, Regent-street.

Now ready, price 6s. (624 pages), cloth neat,

THE LIFE, TIMES, and COTEMPORARIES

of LORD CLONCURRY, embracing the Period from 1775 to

1853; with a Selection from his hitherto Unpublished Correspondence.

By WILLIAM JOHN FITZ-PATRICK, Esq. M.R.D.S.

London: Simpkin, Marshall & Co.; and all Booksellers.

THE GREAT PROTESTANT TALE.

492 pp. price 2s. (former edition, 11. 18s. 6d.)

BEATRICE; or, the Unknown Relatives. By

CATHERINE SINGLAI.—It will have a million of

readers. *New York Independent*.—"The main objection against

it is that those who commence the reading of it forget to eat and

drink till it is finished."—*Chamk Gazette*.—"Should had its way

into every family." "Every female especially should read it."

"Aman and a woman I suggest to all Protestants to read the book."

Gazette. The above are selected from upwards of 100 highly recom-

mendatory notices.

London: Simpkin, Marshall & Co.

THE DUBLIN UNIVERSITY MAGAZINE

for MAY, price 2s. 6d., contains:—

1. To the Loire.
2. Life of William Eddy, R.A.
3. Sermons on Stones—Coal.
4. The Dramatic Writers of Ireland.—No. V.
5. Deire Poetica.—Part II.
6. Scottish Cavaliers and Jacobite Chieftains.
7. The Sea.
8. Ninette Pompon.—Part I.
9. Hans Christian Andersen, his Life and Writings.
10. The War Budget.

Dublin: James McGlashan, 50, Upper Sackville-street; William S. Orr & Co. Paternoster-row, London. And all Booksellers.

This day is published,

THE RAMBLER for MAY,

Price 1s. 6d., by post, 2s. Contents.

1. THE IMMACULATE CONCEPTION.
2. COMPTON HALL, Chaps. X. and XI.
3. A CONVERSION UNDER THE OLD PENAL LAWS.
4. EDUCATION: the MAYMOOTH REPORT; WEISSE'S LETTERS ON EDUCATION, &c.
5. HOW DID SCOTLAND BECOME PRESBYTERIAN? 3rd Article.
6. RECENT GERMAN POETRY.
7. Notices:—Drummond's Reply to Willerford.—Manual of Third Order of St. Dominic.—Colenso's Three Weeks in Natal.—Constance Herbert—Galton's Art of Travel.—Mrs. Jameson's Sisters of Charity—Shea's Missions in the United States—Turnerelli's Nicholas—Massacre of the Carmes—Oxford Essays, &c. &c.

London: Burns & Lambert, 17, Portman-street, and 63, Paternoster-row.

THE ONLY AMATEUR MAGAZINE.

THE BOUQUET (No. XLVIII.), called

from Marylebone Gardens, by BLUE-BELL and MIGNONETTE, and arranged by THISTLE.

Contents.—The Young Artist.—Story of Bradamant and Rogero, Chap. IV.—Doris and Cathar, Chap. XI.—The Artist's Daughter, Chap. II.—Uberto Visconti and the Dragon.—Blythwood, Chap. IV.—Poetry, &c. &c.—The Last Struggle of the Florentines for their Liberty.

This Periodical offers an admirable medium to those who are desirous of cultivating a literary taste without the risk and expense of acknowledged authorship. Ladies or Gentlemen who may wish to become Subscribers are requested to forward their names to the Editors, care of the Publishers.

Hope & Co. Great Marlborough-street, London; and J. C. Jack, 92, Princess-street, Edinburgh.

THE HERALD OF PEACE, for MAY,

Contains:—

- The Prospects of Peace and War.
- History of the Origin of the War.
- The Conduct of Russia towards Turkey in 1832, compared with that of France and England.
- The Religious Press and the Peace Question.
- Correspondents.
- Dr. Adam Clarke's Remarks on the Three Great Christian Powers and Turkey.
- Reviews.
- Peace Operations.
- Increased Number of Desertions from the Army, the Navy, and the Militia.
- Poetry.—War Lyrics.

London: Ward & Co. Paternoster-row; and Peace Society, 19, New Broad-street, City.

PRACTICAL MECHANICS' JOURNAL.

Part LXXXVI., APRIL, 1855.—1a.

Illustrations.—Large Copperplate Engraving of Messrs. Taylor & Cranston's COUPLING and UNCOUPLING GEAR for RAILWAY CARRIAGES, and 40 Wood Engravings.

Contents.—The Royal Society. American Notes.—Sand Bricks, Fusing Frankfort, American Corn Planter, New Colour Printing Presses, Typographer or Printing Writer, Duplex Action Writing Machine, Writing Apparatus for the Blind. Great Works of Antiquity. Iron Roof in the United States Government Navy Yard at Brooklyn. Coupling Gear for Railway Carriages. Society of Arts' Exhibition of Inventions. Sheriff's Moulding Apparatus for Cast Iron Pipes. Clow's Horse Muzzles. Tindall's Mangle. Rawlinson's Sewer Trap and Drainage Valves. Hackworth's New Steam-Engine and Governor. Scott's Metallic Pipe Joints. Andrew's Gutter Percha Bobbin Flanges. Johnson's Air Compressing Machine. McNaught's Solid Wood Saddletrees. Protection of Inventions at the French Exhibition. Duplex and Screw Guide Windlasses. Maynard's Combined Thrasher and Dresser. Lightning Conductors at the Westminster Palace. Vice-jaw Railway Chair. Compound Action Chisel-Crusher. Blenheim Buckhorn Hall Stand. Du Trembley's Combined Vapour Engine. Great Crane at Glasgow. Railway Viaduct over the Boyne. Reviews of New Books. Proceedings of Societies. Monthly Notes. Lists of all New Patents.

Hebert, 88, Cheapside, London.

Editor's House (Office for Patents), 47, Lincoln's Inn-fields.

THE LOAN.—See No. 29 of the LAND AND BUILDING NEWS, Now Publishing. Price FOURPENCE.—Gilbert, 49, Paternoster-row; and all Booksellers and News-vendors.

ENLARGEMENT OF THE BRITISH MUSEUM.—See No. 29 of the LAND AND BUILDING NEWS, Now Publishing. Price FOURPENCE.—Gilbert, 49, Paternoster-row; and all Booksellers and News-vendors.

Just published, APRIL Number of the

DEUTSCHES ATHENÆUM,

Zeitschrift für Deutsche Literatur und Kunst. Subscription, 6s. per annum; 8s. by post. 1855 complete, 6s.—Published by Franz Thimm, 3, Brook-street, Grosvenor-square.

Second Edition (with considerable Additions) with a Coloured Plate. Price 2s. 6d.

THE ENTOMOLOGIST'S ANNUAL FOR 1855.

"From all interested in the progress of British Natural History, the volume before us will be sure of a welcome."

"A valuable little book, and will be hailed as a desideratum by many a lover of the science of Entomology."

"We much admire the tone and spirit which characterize the little work before us."—Derby Reporter.

"A very clever and useful companion to the youthful entomologist; it contains instruction in the whole art of insect hunting and presents, in a very valuable Catalogue of New British Species."—Reading Mercury.

London: Van Voorst, 1, Paternoster row; and to be had of all Booksellers and at all Railway Stations.

PRINTED FOR

WALTON & MABERLY,

Booksellers and Publishers to University College,

28, UPPER GOWER-STREET, and 27, IVY-LANE, PATERNOSTER-ROW.

DARLEY'S SCIENTIFIC LIBRARY,

FOR THE USE OF

SCHOOLS, PRIVATE STUDENTS, ARTISTS, AND MECHANICS.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics these little works will be particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

I.

FIFTH EDITION.

A SYSTEM OF POPULAR GEOMETRY;

Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading truths and great principles.

By GEORGE DARLEY, A.B.

Price 4s. 6d. cloth.

II.

NEW EDITION.

COMPANION TO THE POPULAR GEOMETRY;

in which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of life, with numerous Cuts.

By GEORGE DARLEY, A.B.

Price 4s. 6d. cloth.

III.

THIRD EDITION.

A SYSTEM OF POPULAR ALGEBRA;

WITH

A Section on PROPORTIONS and PROGRESSIONS.

By GEORGE DARLEY, A.B.

Price 4s. 6d.

IV.

THIRD EDITION, Just Published,

A SYSTEM OF POPULAR TRIGONOMETRY,

Both Plane and Spherical;

With POPULAR TREATISES on LOGARITHMS, and the Application of Algebra to Geometry.

By GEORGE DARLEY, A.B.

Price 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—Library of Useful Knowledge, article 'Mechanics.'

CRYSTAL PALACE, 1855.—The OFFICIAL GUIDE and HANDBOOKS, illustrative of the Contents of the Exhibition, are always on Sale, and may be had separately, at prices varying from Threepence to Eightpence; or, handsomely bound in Three Volumes, price 4s. 6d. each. To be had at the Palace, and at all Booksellers and Railway Stations, and of Bradbury & Evans, Printers and Publishers to the Crystal Palace Company, 11, Boulevard-street.

Just published, price 10s. 6d. cloth.

RATIONAL GODLINESS after the mind of Christ, and the Written Voices of his Church.

By ROWLAND WILLIAMS, B.D.

Fellow and formerly Tutor of King's College, Cambridge, and Professor of Hebrew at Liverpool.

"The Letter killeth; but the Spirit giveth Life."—St. Paul. "But we have the mind of Christ."—1d. "The Church is His Body: the fulfilment of Him that filleth all in all."—1d.

"There can neither be true wisdom without religion, nor true religion without wisdom; but where wisdom is religious, and religion wise there is truth."—Lactantius. "The Law of the Spirit is what is written with no letters soever."—1d. "The Law of the Letter is whatever is written with letters."—Lactantius.

Cambridge: Deighton, Bell & Co. London: Bell & Daldy.

Just published, New and Cheaper Edition, price 1s. or, by post for 1s. 6d.

THE SCIENCE OF LIFE; or, How to Live

And What to Live for; with ample Rules for Diet, Regimen, and Self-Management, together with Instructions for securing health, longevity, and that sterling happiness only attainable through the judicious observance of a well-regulated course of life. By P. H. R. LANE.—London: Elder, Brothers & Co., 29, Paternoster-row; Hanway, 63, Oxford-street; Mann, 39, Cornhill; and all Booksellers.

A BOUND COMPANION FOR RAILWAY TRAVELLERS.

Now ready, a New Edition, handsomely bound in cloth, reduced from 6s. 6d. to 3s. 6d.

JOE MILLER'S JEST BOOK:

A work everybody quotes, and few have read. A reprint from the genuine edition, with copious Additions. The first edition of this work having been exhausted, it has been reprinted equal to the original, and now issued at a greatly reduced price. London: Whittaker & Co.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo 4s. 6d. bd. with 220 Diagrams engraved for the Work.

EUCLID'S ELEMENTS OF PLANE GEOMETRY; with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. COOLEY, A.B.

Author of the 'History of Maritime and Inland Discovery,' 'The Neerland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning. The few remarks on Geometrical Analysis in the Appendix are of great value; and the Supplementary Propositions will be found useful both to pupils and teachers."—Athenæum.

"A neat and cheap edition of the universal introduction to mathematical study, divested of the diffusiveness with which the great Alexandrian clothed his expositions. Mr. Cooley has added an Appendix of additional matter to exercise the student, and prefixed a very sensible Preface on the utility of the study and the best mode of pursuing it."—Spectator.

"Mr. Cooley seems almost to wish to contradict his own motto, that 'there is no royal road to Geometry,' for following in the steps of Ptolemy, he has considerably diminished both the volume of the work, as well as the labour of the student. Prefixed to the Elements are some remarks on the study of mathematics, as valuable for the elegance of their style as for the correctness of their reasoning."—Civil Engineer and Architect's Journal.

Mr. Cooley has produced an edition of Euclid's Elements, which for brevity, clearness, and discriminating attention to the wants of learners, cannot be easily surpassed. When we add, that it is remarkable for its typographical neatness, that its form is convenient and price moderate, we feel justified in predicting for it an extensive circulation."—Dublin University Magazine.

"The introductory essay to this edition of Euclid, 'On the Study of Mathematics,' contains some sensible and judicious remarks, especially as the Editor intends his book for the use of schools.... On the whole, we consider the Editor to have done all that could be done to make the study of Euclid easy to beginners."—Cambridge Chronicle.

II.

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"The propositions are demonstrated, in most instances, in the plainest and neatest manner; so that the work may justly claim what it professes to be a HELP TO TEACHERS."—Scholastic Journal.

"The Key contains a collection of deduced propositions calculated to make the learner familiar with the chief properties of geometrical figures."—Dublin University Magazine.

"Will be found of considerable value as an aid to teachers of the Mathematics."—New Monthly Magazine.

"The propositions, given as exercises in the valuable Appendix, are demonstrated in the Key, which must, therefore, become a very important volume in the eyes of the ambitious and inquiring class of students."—United Service Gazette.

III.

In fcap. 8vo. price 1s. 6d.

COOLEY'S FIGURES OF EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations printed separately for Use in the Classroom.

Whittaker & Co. Ave Maria-lane, London.

Just published, the 32nd edition, price 1d.

CRIMSTONE'S HISTORY of an EGYPTIAN

PEA, discovered amongst others by the Committee of the British Museum, in a Vase, presented to them by Sir Gardner Wilkinson, the Egyptian Traveller. Three were presented to Mr. W. Grimstone by Mr. T. I. Pettigrew, who assisted in opening this relic of the time of the Pharaohs, being 2,844 years old. The growth of this pea is different to those of this country; the taste is unequalled, they boil much greener than ours, and so prolific, being planted thus, a eight inches apart, the 2d bag will produce enough for a small family, they require no sticks, and the bloom hangs in clusters. Remember the only genuine is sold in bags, 2s. 6d.; three times the quantity, 5s.; seven times the quantity, 10s. Each bag weighed and sealed by William Grimstone, H. Harry, High-street, dep. 23, High-street, Bloomsbury, London. Eye Snuff and Herb Tobacco Warehouse, 3d. per ounce.

Now ready, fcap. 8vo. 1s.; cloth extra, 1s. 6d.

CHRISTIAN THOUGHT ON LIFE, in a Series of Discourses. By HENRY GILES. The Worth of Life—The Personality of Life—The Continuity of Life—The Struggle of Life—The Discipline of Life—The Weariness of Life—Mystery in Religion and in Life.

"More glowing and thrilling productions were never committed to the press."—*Philo.* Gazette.

W. Allan, Aldine Chambers, Paternoster-row, London.

FRENCH IN ONE VOLUME.
Just published, a New and Improved Edition, price 6s.

THE COMPLETE FRENCH CLASS-BOOK;
or, Grammatical and Idiomatical French Manual: with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and original plan. By ALFRED HAVET, French Master in the Glasgow Athenæum, &c.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.

"One delights to luxuriate among its ample pages, replete as they are with excellent and clearly-arranged matter, explanatory and illustrative of the French language."—*Scottish Educational Journal*.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French Manuals yet published in this country. The new features that it possesses are chiefly that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language."—*The Educational Examiner*.

London: Dulau & Co.; W. Allan.

PHOTOGRAPHIC CHEMICALS, APPARATUS, and LENSES.

R. W. THOMAS,
CHEMIST, &c., 10, PALL MALL,
SOLE MAKER OF THE XYLO-IODIDE OF SILVER,
AND
MANUFACTURER OF PURE PHOTOGRAPHIC CHEMICALS and APPARATUS.

In the APPARATUS DEPARTMENT of this Establishment every kind of first-class Photographic Apparatus may be seen, including—

CAMERAS, folding and rigid, of superior construction.

Folding and other **STANDS**, of the best make.

GLASS BATHS, arranged for carrying the Silver Solution, thus dispensing with the use of a bottle and funnel.

GUTTA-PERCHA BATHS, mounted, to carry the Silver Solution for Glass Plates, up to 15 by 12 inches.

Jointed LEVELLING-STANDS and SPIRIT-LEVELS.

COLLODION PLATE-HOLDERS, for preparing large plates with facility. Pneumatic, ditto.

PLATE-CLEANERS.

COLLODION GLASSES.

A Choice Collection of **PASSEPARTOUTS**, made expressly for this house, from original patterns.

Albumenized and other **PAPERS**, French and English.

A great variety of Glass, Porcelain, and Gutta-Percha **DISHES**.

Also, a large assortment of **ROSS'S** Portrait and Landscape **LENSES**.

PHOTOGRAPHY ON PAPER.

Every requisite for practising the Calotype process may also be seen in the Apparatus-room, including Buckle's Brushes; Shallow Glass Dishes for developing negatives, with case and covers, Deep Porcelain Dishes, for Washing the Iodized Paper, &c. &c.

An excellent Negative Paper, well adapted for Iodizing, after the method followed and recommended by Mr. Sutton, price 4s. per quire, or 3l. 10s. per ream, 19 by 15.

N.B. The stock (50 reams) has now been kept two years. This paper may also be had ready Iodized.

XYLO-IODIDE OF SILVER.

This important photographic preparation is exclusively used at all the Photographic Establishments. Its superiority is universally acknowledged. Testimonials from the best photographers and principal scientific men of the day warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action.

In all cases where a quantity is required, the two solutions may be had at wholesale price in separate bottles; in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each bottle is stamped with a red label, bearing my name and address,

RICHARD W. THOMAS, CHEMIST,
10, PALL MALL,
to counterfeit which is felony.

NITRATE OF SILVER BATH for the above preparation may be always obtained of R. W. THOMAS, ready made, at a cost little more than the price of ingredients used.

CRYSTAL VARNISH.
PREPARED FROM THE FINEST AMBER.

This valuable Varnish, for protecting Negative Pictures, does not require the application of any heat to the plate. The coating will be found free from stickiness, hard, and transparent. It dries immediately.

HYPO-COLOURING BATH.
FOR RENDERING THE POSITIVES ON PAPER DARK AND RICH IN COLOUR.

CYANOGEN SOAP.
FOR REMOVING ALL KINDS OF PHOTOGRAPHIC STAINS.

The genuine is made only by the inventor, and is secured with a red label, bearing this signature and address,

RICHARD W. THOMAS, CHEMIST,
No. 10, PALL MALL,
Manufacturer of Pure Photographic Chemicals and Apparatus.

And may be procured of all respectable Chemists, in pots, at 1s., 2s., and 3s. 6d. each, through Messrs. EDWARDS, 67, St. Paul's Churchyard; and Messrs. BARCLAY & Co., 95, Farringdon-street, Wholesale Agents.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual-and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

PHOTOGRAPHIC LENSES, CAMERAS, CHEMICALS, and APPARATUS, at C. BAKER'S OPTICAL INSTRUMENT WAREHOUSE, 243 and 244, HIGH HOLBORN.

PORTRAIT LENSES, of Double Achromatic combination, with Rack adjustment, for size 4½ by 3¼, 1l. 10s.

LANDSCAPE LENSES, with Rack adjustment, from 22s. 6d.

Larger Lenses, for Views or Portraits, of the first quality, at equally low prices.

WALNUT WOOD CAMERAS complete, from 14s.

FRENCH POLISHED MAHOGANY ditto, from 25s.

TRIPOD STANDS from 10s. 6d. and every article required in the practice of Photography at equally low prices.

C. BAKER begs to call attention to his first-rate **ENGLISH MANUFACTURED LENSES**, At prices but little higher than the Foreign. Every one is warranted to give the finest and most correct depiction, or immediately exchange.

Catalogues by post free upon application.
ESTABLISHED 1765.

THE NEW COLLODION, manufactured by **BLAND & LONG**, 153, Fleet-street, London, will bear comparison with any other preparation offered to Photographers. Price 9d. per oz. Can be had separate from the Iodizing Solution, 1s. 6d. per oz.; or, Peracetic Acid, 6d. per oz.; or, Potassic Iodide, 6d. per oz.; or, Glacial Acetic Acid, 6d. per oz.; Hypsulphite of Soda, 1s. per lb.

CAMERAS, LENSES, and every description of Apparatus, of first-class workmanship.

Chemicals of **ABSOLUTE PURITY**, and every material required in the Photographic Art, of the finest quality.

Instruction in all the processes.

Catalogues sent upon application.

BLAND & LONG, Opticians, Photographical Instrument Makers and Operative Chemists, 153, Fleet-street, London.

REMOVAL.—HOCKIN & CO., from 289, Strand, to 38, DUKE-STREET, MANCHESTER-SQUARE.

IODIZED COLLODION, unsurpassed in sensitiveness and density of negative.—**LENSES**, warranted achromatic, Quarter Plate, double, 2l. 2s.; Half, 1l.; Whole, 10l.—Waxed and Albumenized Plates.

PRACTICAL HINTS on PHOTOGRAPHY, by J. B. HOCKIN. Price 1s.; per post, 1s. 4d.

PHOTOGRAPHY, WHOLESALE, RETAIL, AND FOR EXPORTATION.

Empowered by Special Act of Parliament.

Parties desirous of INVESTING MONEY are requested to examine the plan of this Institution, by which a high rate of interest may be obtained with perfect security.

The Interest is payable in January and July at the Head Office in London; and may also be received at the various Branches, or through country bankers, without delay or expense.

PETER MCKINSON, Managing Director.

Prospectuses and Forms for opening Accounts sent free on application.

ST. GEORGE ASSURANCE COMPANY,
118, PALL MALL, London.

Chairman.—Viscount RANELAGH, Park-place, St. James's.

Deputy-Chairman.—HENRY POWNALL, Esq., Ladbroke-square, Notting Hill.

Indisputable Policies, Annuities, and Provision for Families and Children on the most favourable terms. Unmarketable titles assured.

Loans granted on a new and liberal principle.

For further particulars apply at the Office as above.

W. C. URQUHART, Secretary.

WESTMINSTER and GENERAL LIFE
OFFICE, established 1836, at the Westminister Fire Office, 27, King-street, Covent-garden. Founded 1707.

Assurances effected during the current year, on the participating scale, will share in the ensuing division of profit to be declared 1857.

The additions made to sums assured by Policies in the Participating Class up to the 31st December, 1851, have averaged one-half of the Premiums paid on them.

W. M. BROWNE, Actuary.

ANNUITIES and REVERSIONS. LAW REVERSIONARY INTEREST SOCIETY. Offices, 68, Chancery-lane.

Trustees.

The Right Hon. the Lord Chief Baron.

The Hon. Mr. Justice Coleridge.

The Hon. W. C. Spring Rice.

Nassau W. Senior, Esq.

John Ellis Clowes, Esq. Temple.

Chairman.—Russell Gurney, Esq., Q.C. Temple.

Deputy-Chairman.—Nassau W. Senior, Esq., Hyde Park Gate.

Annuities immediate and deferred; also Endowments granted on favourable terms. Reversions and Life Interests purchased and exchanged.

RAILWAY ACCIDENT INSURANCE.—

1822, &c. have already been paid as compensation for Fatal and other Railway Accidents, by the
RAILWAY PASSENGERS' ASSURANCE COMPANY.

EXAMPLES.
 1860, was paid to the Widow of J. G. killed on the 24th February, 1853, secured by a payment of 10.
 1861, was paid to H. C. J. who had his leg broken on the 24th Aug. 1853, secured by a payment of 10.
 1862, was paid to W. P. severely injured on the 19th September, 1854, secured by a payment of 10.

For the convenience of frequent travellers, Periodical Insurances are granted, which now cover the risk of Fatal Accidents while travelling in any class carriage on any Railway in the United Kingdom or on the Continent of Europe, and insure Compensation for Personal Injury in any Railway Accident in the United Kingdom only.

To insure 1,000*l.* at an Annual Premium of 3*0s.*
 Ditto 200*l.* ditto 1*0s.*
 Insurances can also be effected securing the same advantages for terms of five or ten years, or for the whole of life, at greatly reduced rates, which may be learned from the Company's Prospectus, to be had at the Offices, and at all the principal Railway Stations.
 A new class of Insurance has also been established in case of Death by Railway Accidents alone, without compensation for Injury.

To insure 1,000*l.* at an Annual Premium of 3*0s.*
 Ditto any sum not exceeding 1,000*l.* for the whole of life by a single payment of 6*0s.* per cent. thus one payment of 3*0l.* will secure 1,000*l.*

The Premiums charge include the Stamp Duty, this being the only Company Insured against Railway Accidents empowered by the Act of Parliament to pay a commuted Stamp Duty.
 Railway Passenger Assurance Office, **WILLIAM J. VIAN,**
 3, Old Broad-street, London. Secretary.

PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION AND BENEVOLENT FUND.—Established 1840.

Trustees.
 Thomas Baring, Esq. M.P. W. G. Prescott, Esq.
 T. Hankey, Esq. M.P. Baron L. de Rothschild, M.P.
 Treasurer of the Bénévolent Fund.—John Abel Smith, Esq. M.P.
 Attention is especially directed to the advantages offered by the above Association, and to the following figures:
 Policies have been Insured since its establishment amounting to 300,000
 Claims have been paid to Deceased Members to the extent of 31,000
 The Annual Revenue exceeds 31,000

BENEVOLENT DEPARTMENT.
 This department was established for the Assistance of Clerks being Members by means of Gratuitous Loans, and Annuities. It has an accumulated Fund of 15,000*l.*, and a Revenue of more than 1,000*l.* per annum. By Order of the Board.
WILLIAM THOMAS LINFORD, Secretary.
 Chief Office, 15, Moorgate-street, London.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.
 The SCALE OF PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.
 Four-FIFTHS, or 80 per cent. of the Profits, are assigned to Policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future Premiums.
 One-THIRD of the Premium on Insurances of 500*l.* and upwards, for the whole term of life, may remain as a debt upon the Policy, to be paid off at convenience; or the Directors will lend sums of 50*l.* and upwards, on the security of Policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect Insurances with this Company are protected by its Subscribed Capital of 700,000*l.*, of which 140,000*l.* is invested, from the risk incurred by Members of Mutual Societies.
 The satisfactory financial condition of the Company, exclusive of the Subscribed and Invested Capital, will be seen by the following statement:—

At the close of the last Financial Year the Sums Assured, including Bonus added, amounted to 23,500,000
 The Premium Fund to more than 800,000
 And the Annual Income from the same source, to 169,000
 Insurances, without participation in Profits, may be effected at reduced rates.

 W. Anderson Peacock, Esq.
 Ralph Chas. Price, Esq.
 Thos. G. Sambrook, Esq.
 William Wybrow, Esq.

Actuary and Secy. genl.
CHARLES JELlicoe, Esq.

The business of the Company comprises Assurances on Lives and Survivorship, the Purchase of Life Interests, the sale and purchase of contingent and deferred Annuities, Loans of Money on Mortgage, &c.

This Company was established in 1807, is empowered by the Act of Parliament (5 Geo. III., and regulated by Deed enrolled in the High Court of Chancery.

The Company was originally a strictly Proprietary one. The Assured now participate quinquennially in four-fifths of the amount to be divided.

To the present time (1854) the Assured have received from the Company, in satisfaction of their claims, upwards of 1,350,000*l.*

The amount at present assured is 3,000,000*l.* nearly, and the income of the Company is about 130,000*l.* per annum.

At the last Division of Surplus, about 120,000*l.* was added to the sums assured under Policies for the whole term of life.

The lives assured are not limited, in respect of age, without extra charge, to reside in any country (Australia and California excepted north of 34 degrees north latitude, or south of 40 degrees south latitude, or to pass by sea (not being seafaring persons by profession) on between any places lying in the same hemisphere, and not within those limits.

Assurances effected by persons on their own lives are not rendered void in the event of death occurring by suicide, duelling, or the hands of justice, unless such death take place within a year from the date of the Policy.

All Policy Stamps and Medical Fees are now paid by the Company.

The Annual Reports of the Company's state and progress, Prospectuses and Forms, may be had, or will be sent, post free, on application at the Office, or to any of the Company's Agents.

SPECIAL NOTICE.—BONUS OF 1855. THE SCOTCH NATIONAL INSURANCE COMPANY. Established 1841. 69, Lombard-street, London.

London Board of Directors.
 Charles Cowan, Esq. P.R.S.
 David Grant, Esq. Grant, Baldwin & Co. Sugar Refiners.
 Geo. G. Macpherson, Esq. Director of the Agric. Bank.

 Established 1823.
 Empowered by Act of Parliament, 3 William IV.

Directors.
 Henry Frederick Stephenson, Esq. Chairman.
 Robert Bidolph, Esq. Deputy-Chairman.
 A. Kingsford Barber, Esq.
 A. Kett Barclay, Esq. F.R.S.
 Henry Barnett, Esq.
 The Right Hon. E. Pleydell
 Bouverie, M.P.
 Thomas Edgar, Esq.
 Sir Alex. Duff Gordon, Bart.
 Capt. Robert Gordon, R.N.
 Archibald Hastie, Esq. M.P.
 Charles Morris, Esq.
 William Routh, Esq.

Auditors.
 Edward Charrington, Esq.
 Francis P. Duff, Esq.
 Physician—John A. Paris, M.D. Cantab., Hon. D.C.L. Oxon., F.R.S., President of the Royal College of Physicians.
 Surgeon—Benjamin Travers, Esq. F.R.S.
 Solicitor—Henry Young, Esq.
 Actuary—James John Downes, Esq. F.R.A.S.
 Secretary—Alex. Macdonald, Esq.

MANCHESTER LOCAL BOARD.

Directors.
 Henry Houldsworth, Esq. Chairman.
 John Bannerman, Esq.
 Archibald Findlay, Esq.
 George Parr, Esq.
 William Shorter-Stell, Esq.
 Robert Stuart, Esq.
 Samuel Watts, Esq.
 Acting Director—Joseph Clements, Esq.
 Physician—Sir James J. Bardsley, M.D.
 Surgeon—J. A. Ransome, Esq.

The advantages offered by this Society are—Economy combined with Security, and Lower Rates of Premiums than those of any other Office, which entitle the Assured to participate in the Profits, and considerably lower than those of any other Mutual Assurance Society.

The WHOLE OF THE PROFITS are divided every fifth year among the Assured, and a Bonus is added, after the Payment of the Fifth Annual Premium, to every Policy effected on the Participating plan, if a claim accrue thereon prior to the next division of Profits.

The sum of 307,000*l.* was added to Policies at the last Division, which produced an average Bonus of 67*l.* per cent. on the Premiums paid.

Number of Policies in force, nearly 7,000.
 The Assurance Fund exceeds 1,402,522*l.* Income upwards of 23,000*l.* per Annum.
 No charge for Policy Stamps, nor for Service in the Yeomanry or Militia Corps.

Prospectuses and full particulars may be obtained on application to
ALEXANDER MACDONALD, Secretary.

GREAT WESTERN RAILWAY.—COALS.

—Orders for the best RUABON HOUSE COALS, equal to the finest Durhams, may be executed at 25*0s.* per Ton (cash price), delivered within 4 miles of the Paddington Station.
 These Coals are bright and durable in burning, and contain only one-half per cent. of dust.

They are now for the first time introduced into the London Market by the recent opening of the Great Western Railway into North Walsingham.

Address the Superintendent of the Company, Paddington Station.

F. DENT, 61, STRAND, and 34 and 35,

ROYAL EXCHANGE, Chronometer, Watch, and Clock Maker. by appointment to the Queen and Prince Albert, sole Successor to the late E. Dent in all his patent rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical, Turret, and other Clocks, Diodeoscopes, and Patent Ships Compasses, used on board Her Majesty's Yacht, Ladies' Gold Watches, &c.; Gentlemen's Loggins. Strong Silver Lever Watches, &c.

MESSRS. J. & R. MCCRACKEN, FOREIGN AGENTS, AND AGENTS TO THE ROYAL ACADEMY, No. 7, Old Jewry, beg to remind the Nobility, Gentry, and Artists, that they continue to receive assignments of Objects of Fine Arts, Bagnage, &c., from all parts of the Continent, for clearing through the Custom House, &c.; and that they undertake the shipment of effects to all parts of the world. Lists of their Correspondents abroad, and every information, may be had on application at their Office, as above. Also, in Paris, of M. M. CHENE, No. 28, Rue Croix des Petits Champs (established upwards of fifty years), Packer and Custom-House Agent to the French Court and to the Musée Royal.

"CRYSTAL PALACE" WATHERSTON & BROGDEN'S GOLD CHAINS,

AT MANUFACTURERS' PRICES.
 CRYSTAL PALACE, Central Transept,
 No. 29, GALLERY OF PRECIOUS METALS.
MANUFACTORY,
 16, Henrietta-street, Covent-garden, London.

ELKINGTON AND CO., PATENTERS OF THE ELECTRO-PLATE.

MANUFACTURING SILVERSMITHS, BRONZISTS, &c. Respectfully urge upon Purchasers to observe that each article bears their Patent Mark, "E. & Co. under a crown," as no others are warranted by them.
 The fact frequently set forth of articles being plated by "Elkington's process," affords no guarantee of the quality. These productions were honoured at the late Great Exhibition by an award of the "Council Medal," and may be obtained at either Establishment.

22, REGENT-STREET, LONDON;
4, MOORGATE-STREET, LONDON;
5, HALL-ENTRY, BIRMINGHAM.
 Estimates, Drawings, and Prices sent free by post.
 Replating and Gilding as usual.

RECONNOITERING TELESCOPES.—

These well known Instruments to be had of the Maker, **JOHN DAVIS, OPTICIAN, DERRY.** The Telescope, when closed, measures 34 in., and shows Jupiter's moons. Price, sent through the post, 3*0s.* The same Instrument fitted up with an additional Eye-piece and Stand, price 4*0s.* Thus fitted, it will show Saturn's Ring.—Map Motes in case by post, 3*0s.* 6*d.*

NO MORE TOOTHACHE nor EXTRACT-ION OF TEETH.—Every one should use CRAMPTON'S TOOTH ELIXIR, for the PRESERVATION and BEAUTIFYING OF THE TEETH. Toothache, that hitherto incurable malady, can now be effectually cured, and what is better, prevented, by the use of this Elixir, which entirely suppresses extraction and all the present INFELICITOUS METHODS.—Sold in boxes at 6*0s.* and 2*0s.* 6*d.* each, or postage stamps, by **GEORGE J. JAS. HOLLEN,** 21, Salisbury-street, Liverpool.

FLOWER-POTS and GARDEN SEATS.—

JOHN MORTLOCK, 250, Oxford-street, respectfully announces that he has a very large assortment of the above articles in various colours, and solicits an early inspection. Every description of useful CHINA, GLASS, and EARTHENWARE, at the lowest possible price, for Cash.—250, Oxford-street, near Hyde Park.

GARDEN VASES, FOUNTAINS, &c.—

THOMAS SOMERVILLE, Landscape Gardener, Nurseryman, Seedsman, and Florist, Garden-road, St. John's Wood, London, begs to inform the Nobility, Gentry, and his Patrons generally, that he has entered into arrangements with an eminent Company in Scotland for the sole disposal in London of their highly ornamental and very durable VASES, FOUNTAINS, &c., samples of which may be seen at his Grounds, in the Garden-road, as above. T. S. has much pleasure in being the first to introduce to the notice of the public a highly ornamental Vase capable of resisting the most severe weather, and at little more than half the cost of any other possessing the same qualities, and he has no hesitation in stating that a more suitable Vase for the growth of plants cannot be manufactured.

OSLERS' TABLE GLASS, CHANDELIERS, &c.—

L. T. OSLER, Esq., 44, Oxford-street, London, conducted in conjunction with the late Messrs. Broad-street, Birmingham. Established 1807. Richly cut and engraved Decanters in great variety, Wine Glasses, Water Jugs, Goblets, and all kinds of Table Glass at exceedingly moderate prices. Crystal glass Chandeliers, of new and elegant designs, for Gas or Candles. A large stock of Foreign Ornamental Glass always on view. Furnishing orders executed with despatch.

DURABILITY OF GUTTA PERCHA TUBING.—

Many inquiries have been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT.

"Second Testimonial.—"March 1855. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER OF THE ISLE OF WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTERS, 18, WHARF-ROAD, CITY-ROAD, LONDON.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON & Co., 45, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this Grate, of which the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

FISHER'S DRESSING-CASES, FOR LADIES and GENTLEMEN. FISHER'S STOCK IS ONE OF THE LARGEST IN LONDON AT PRICES TO SUIT ALL PURCHASERS.

Catalogues post free.

189 and 189, STRAND, corner of Arundel-street.

ONE THOUSAND BEDSTEADS TO CHOOSE FROM.—

HEAL & SON have just created extensive Premises, which enable them to keep upwards of one Thousand Bedsteads in stock. One Hundred and Fifty of which are extra good, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures complete. Their new Ware-rooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanese Bed for Servants' Rooms, to the most and most superb designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE OF BEDSTEADS, and PRICES LIST OF BEDDING, sent free by post.—HEAL & SON, 136, Tottenham Court-road.

THE PEN SUPERSEDED.—MARK YOUR LINEN.—The most easy, permanent, and best method of Marking Linen, Silk, or Books, is with the **PATENT ELECTRO-SILVER PLATES**. With these Plates a thousand articles can be marked in ten minutes. Any person can use them. Initial Plate, 1s.; Name, 2s.; Crest, 5s.; or, to suit the taste, 10s. Sent free, with instructions for use, by the Inventor and sole Patentee, **T. CULLETON**, 2, Long-acre, one door from St. Martin's-lane.

LOOKING-GLASSES, Console Tables, Window Cornices, Grandolles, and Gilt Decorations of every description.—**C. NOSOTTI**, Manufacturer (established 1823), 398 and 399, Oxford-street, has the most extensive assortment of Looking-glasses in every variety of style. The taste and superiority of workmanship, combined with the pure colour of the glass, must insure patronage. C. Nosotti being the largest consumer of Plate Glass, has made arrangements with the principal British and foreign Plate Glass Companies, by which he is enabled to offer advantages in prices as cannot be excelled by any other house. Books of Designs free on receipt of six stamps for postage.

AT MR. MECHI'S ESTABLISHMENTS, 113, REGENT-STREET, and 4, LEADENHALL-STREET, London, are exhibited the finest specimens of British Manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and other articles of utility or luxury. A separate department for Paper Manufactures and Bagatelle Tables, Table Cutlery, Razors, Scissors, Penknives, Strops, Paste, &c. Shipping Orders executed. Superior Hair and other Toilet Brushes.

FENDERS, STOVES, and FIRE IRONS.—Buyers of the above are requested before finally deciding, to visit **WILLIAM S. BURTON'S SHOW-ROOMS**, 39, Oxford-street (corner of Newman-street), Nos. 1, 2, and 3, Newman-street, and 4 and 5, Perry's-place. They are the largest in the world, and contain such an assortment of FENDERS, STOVES, IRONS, FIRE IRONS, and GENERAL FURNISHING WARE, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto with ornamental ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; Bronzed Fenders complete, with standards, from 2s. to 4s.; Steel Fenders from 2l. 15s. to 6l.; ditto, with rich ornamental ornaments, from 2l. 15s. to 7l. 7s.; Fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other Patent Stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.—Firstly—From the frequency and extent of his purchases; and Secondly—From those purchases being made exclusively for cash.

BATHS & TOILETTE WARE.—WILLIAM S. BURTON has ONE LARGE SHOW-ROOM devoted exclusively to the DISPLAY of BATHS and TOILETTE WARE. The stock of each is at once the largest, newest, and most varied ever submitted to the public, and marked at prices proportionate with those that have tended to make his Establishment the most distinguished in this country. Portable Showers, 7s. 6d.; Pillar Showers, 3l. to 5l.; Nursery, 15s. to 35s.; Sponging, 15s. to 32s.; Bathing, 30s. to 45s.; Large assortment of Gas, Furnace, Hot and Cold Plunge, Vapour, and Camp Shower Baths.—Toilette Ware in great variety, from 15s. 6d. to 45s. the Set of Three.

THE BEST SHOW OF IRON BEDSTEDS in the KINGDOM is **WILLIAM S. BURTON'S**. He has TWO VERY LARGE ROOMS, which are devoted to the EXCLUSIVE SHOW OF IRON and BRASS BEDSTEDS and CHILDREN'S COTS, with appropriate Bedding and Mattresses. Complete Iron Bedsteads, 18s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with retracting joints, and patent packing, from 17s. 6d.; and Cots from 20s. each. Handsome Ornamental Iron and Brass Bedsteads, in great variety, from 2l. 13s. 6d. to 15l. 15s.

PAPIER MACHÉ and IRON TEA-TRAYS.—An assortment of Tea-Trays and Waiters wholly unprecedented, whether as to extent, variety, or novelty. New Oval Papier Maché Trays, per set of three from 20s. 0d. to 10 guineas. Ditto, Iron ditto from 15s. 0d. to 4 guineas. Convex shape, ditto from 7s. 6d. Round and Gothic waiters, cake and bread baskets, equally low. **WILLIAM S. BURTON** has SIXTEEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY, Iron and Brass Bedsteads and Bedding (including Cutlery, Nickel Silver, Plated and Japanned Wares), so arranged and classified that purchasers may easily and at once make their selections. Catalogues, with Engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, **NEWMAN-STREET**; and 4 and 5, **PERRY'S-PLACE**.

CLEOPATRA NEEDLES.—Never Rust.—Manufactured and warranted by **LINNEUS GEORGE BANKS**, (son of George Banks, F.L.S., designer and founder of the Royal Devonport Arms, &c.), Cleopatra's Needle Works, Redditch. N.B. These Cleopatra Needles, the very best, and in never-rust enamel, do not rust, but the elements nor strew the needle drawer all "sixes and sevens," same as the old style of paper knives, paper paste, and gum wrappers, &c.—Caution: Beware of base imitations and base imitations, as none are genuine except on which this name is stamped, "L. G. Banks, Redditch." Sold by all respectable houses in London and throughout the known world. Samples of 100 sent free on receipt of 15 stamps.

GLENFIELD PATENT STARCH.—USED IN THE ROYAL LAUNDRY. And pronounced by **HER MAJESTY'S LAUNDRESS** to be THE FINEST STARCH SHE EVER USED. Sold by all Chandlers, Grocers, &c. &c.

GENTLEMEN purchasing their own Material will find one of the most extensive and best-assorted STOCKS of WOOLEN GOODS, &c. for Spring and Summer wear, at **HILL & SON'S**, 88 and 89, St. Martin's-lane, Charing-cross. Every article is marked at the lowest price, and in plain figures. A good Tailor can be recommended if required.

BERDOE'S SPRING OVER-COATS and CAPES rendered (without extra charge, or confining perspiration) thoroughly impervious to rain, a fact established beyond contradiction by ten years' extensive trial, superseding unhealthy artificial materials. A very large stock of superior Garments, intended not merely for winter weather, but general use.—CAPES, 30s. to 40s.; COATS, 40s. to 50s. **W. BERDOE**, 96, New Bond-street, and 69, Cornhill (only).

BLACK CLOTH SUITS. A useful Black Cloth Coat, Vest and Trousers £1 15s. ditto ditto 2 2s. Saxony ditto 2 2s. Spanish, Hussar, or Polka Suit (for Juniors) 1 8s. Superfine ditto 1 8s. Messrs. **SKINNER & Co.**, Tailors, Clothiers, and Contractors, Brunel-street, No. 18, Aldgate High-street, City; and 50, Hodge-row, Islington-green.

S. W. SILVER & CO., OUTFITTERS, CLOTHIERS, CONTRACTORS, and MANUFACTURERS of Outfitting Requirements, WATERPROOF CLOTHING, and the various INDIA RUBBER APPLIANCES. CABIN PASSENGERS' Outfitting 66 & 67, Cornhill. Branch 3 & 4, Bishopsgate-street, opposite the London Tavern; also at Liverpool. Second CLASS and EMIGRANTS' Outfitting Branch Portsea and Romsey, Hants. CABIN FURNITURE Do. North Woolwich, London. WATERPROOF CLOTHING Do. (North Woolwich) opposite H.M.'s Dock Yard.

Thus, passengers and purchasers generally may be supplied at a GREAT SAVING OF COST, and embrace the HOME quality at SHIPPING PRICES.

RUPTURES.—BY ROYAL LETTERS PATENT. **WHITE'S MOC-MAIN LEVER TRUSS** is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often harmful in its effects, is here avoided; a soft and elastic band, worn round the body, while the requisite relaxing power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer, **MR. WHITE**, 208, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c. For VARICOSE VEINS, and all cases of WEAKNESS and SYMPHYSIS OF THE PELVIS, while the requisite relaxing power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer, **MR. WHITE**, 208, Piccadilly, London.

IMPORTANT to INVALIDS.—The delicious GERMAN MILK LOAVES, manufactured by P. McLachlan, 144, Holborn-bars, stands unrivalled as an article of diet for the invalid. They are highly nutritious, and at the same time remarkably easy of digestion. Only to be had genuine at 144, Holborn-bars, and 6, Birch-lane, Cornhill.

BERMUDA ARROWROOT, unremoved from the tin cases in which it is shipped, weight, case exclusive, 204lb. price 20s. Small quantities can be had at 2s. 6d. per lb. **JAMES EPPS**, Homeopathic Chemist, Egyptian Hall, Piccadilly; 112, Great Russell-street, Bloomsbury; and 82, Old Broad-street, City.

GREENWICH WHITEBAIT DINNERS.—**THOMAS QUARTERMAINE** respectfully informs the Nobility and Public that he has opened his New Tavern the "SHIP," which he intends to conduct on the same principle as the old one, the "CROWN AND SCEPTRE," and solicits their patronage to both houses—Orders can be given at the York Hotel, New Bridge-street, Blackfriars. May 5, 1855.

HARVEY'S SAUCE.—The admirers of this celebrated Fish-Sauce are particularly requested to observe, that none is genuine but that which bears the name of **WILLIAM LAZENBY** on the back of each bottle, in addition to the front label used for many years, and signed **ELIZABETH LAZENBY**, 6, Edwards-street, Portman-square, London.

LEA & PERRINS' WORCESTERSHIRE SAUCE imparts the most exquisite relish to Steaks, Chops, and all Roast Meat Gravies, Fish, Game, Soup, Curries, and Salad, and by its tonic and invigorating properties enables the stomach to perfectly digest the food. The daily use of this aromatic and delicious Sauce is the best safeguard to health. Sold by the Proprietors, **LEA & PERRINS**, 6, Vere-street, Oxford-street, London, and 65, Broad-street, Worcester; and also by Messrs. Barclay & Sons, Messrs. Cross & Blackwell, and all respectable Grocers and Dealers; and generally by the principal Dealers in France.—N.B. To guard against imitations, see that the names of "Lea & Perrins" are upon the label and patent cap of the bottle.

DINNEFORD'S FAMILY MEDICINE DIRECTORY, containing a variety of Practical Information especially adapted for the Clergy, Ladies, Schools, and Heads of Families, in the absence of Professional Assistance. New Edition, price 2s. 6d., by post 3s. MEDICINE CHESTS in great variety; a large Assortment of Patterns, at prices from 10s. to 10l. 179, New Bond-street, London.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession in Great Britain, and is the best remedy for Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during Pregnancy; and it prevents the Food of Infants from turning sour during digestion. Combined with the ACIDULATED LEMON SYRUP, it forms an Effervescent Aperient Draught, which is highly palatable and efficacious. Prepared by **DINNEFORD & CO.**, Dispensing Chemists, and General Agents for the improved Horse Hair Gloves and Belts, 179, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

KNOW THYSELF!—Professor **BLINKINSOP** continues to receive from individuals of every rank the most flattering testimonials of his success, in describing the CHARACTERISTICS of Persons from their HANDWRITING, pointing out their mental and moral qualities, whether good or bad.—Address by letter, stating age, sex, and profession; enclosing 13 uncut postage stamps, to Dr. Blinkinsop, 344, Strand, London.

YOURSELF! WHAT YOU ARE! AND WHAT YOU WANT.—The secret Art of DISCOVERING the CHARACTER of INDIVIDUALS from the peculiarities of their HANDWRITING, has long been practised by Miss **GRAHAM** with astonishing success. Her startling delineations are full and detailed, differing from anything hitherto attempted. All persons wishing to "know themselves," or any friend in whom they are interested, may send a specimen of their writing, stating sex and age, enclosing 13 penny post stamps to Miss **GRAHAM**, 10, GIFFORD-PLACE, KING'S-CROSS, LONDON, and they will receive a minute detail of the mental and moral qualities, talents, tastes, affections, virtues, failings, &c. of the writer, with many other things hitherto unsuspected.—A copy of Clairvoyant revelations sent post free for six penny stamps.

MISS KIRBY, 23, Mortimer-street, Cavendish-square, having received numerous orders for her EMOLLIENT POMADE for RESTORING the HAIR, has appointed the following Agents:—Forster, 52, and Barton, 77, King's-road, Brighton; Savory & Moore, High-street, Cheltenham; Wells, Swanage-street, Dover; Chater, Chemist, Watford; Mowbray, 29, High-street, Harrogate; Davies, Chemist, Bridge-street, Row, Chester; Holloway, 2, High-street, Islington; M'Dougal, 174, Regent-street; Adolphus, 195, Oxford-street; and Barclay, Farringdon-street.

OLDRIDGE'S BALM OF COLUMBIA promotes the Growth of Hair. It acts unerringly by going to the root of the evil in defects of the Hair. In bottles, with full instructions for Use, 3s. 6d., 6s., and 12s. 13, Wellington-street North, Strand.

VIOLETS. **H. BREIDENBACH**, Distiller of Flowers and Eau de Cologne to the Queen, has now in great perfection several EXTRACTS of that favourite flower the **WOOD VIOLET**. It has a lasting odour, and will not stain the handkerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant. 137 b, New Bond-street, facing Redmayne's.

THE TEETH AND BREATH. **ROWLAND'S ODONTO**, or PEARL DENTIFRICE, Compounded of the choicest and most recherche ingredients of the ORIENTAL HERBAL, and of inestimable value in PRESERVING and BEAUTIFYING the TEETH, STRENGTHENING the GUMS, and in rendering the BREATH SWEET and FRESH. Price 3s. 6d. per box. CAUTION.—The words **ROWLAND'S ODONTO** are on the label, and **A. ROWLAND & SONS**, 29, Hatton-garden, engraved on the Government Stamp affixed on each box. Sold by them and by Chemists and Perfumers.

METCALFE & CO'S NEW PATTERN TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose, &c. An improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the durable unbleached Russian bristles. Fresh Brushes of improved graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at **METCALFE, BRIDLEY & CO'S** Sole Establishment, 130 b, Oxford-street, one door from Holles-street. Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box. **DR. DE JONGH'S LIGHT BROWN COD LIVER OIL.** THIS OIL, long known, extensively prescribed, and highly appreciated on the Continent, has now, in consequence of its proved superior power and efficacy, acquired the general and entire confidence of the medical profession in this country. It is of the purest and finest quality, free from admixture and adulteration, or the statements of the usual spurious and dangerous imitations. It is the pale Oil, or of the coarse Brown Oil commonly sold, though totally unfit for medicinal use. It is as low in price per ounce as any other genuine Cod Liver Oil, whilst its regular and speedy effects render it incalculably cheaper. Medical and scientific testimonials of the highest character delivered or forwarded *gratis* on application. Sold in bottles, capsuled and labelled, with Dr. de Jongh's Stamp and Signature, WITHOUT WHICH NONE ARE GENUINE, by **ANSAR, HARFORD & CO.**, 77, STRAND, LONDON. Dr. de Jongh's sole accredited Agents; and by respectable Chemists in Town and Country.—Half-pints (16oz.) 12s. 6d.; Pints (20 oz.) 14s. 9d.; Quarts (40 oz.) 19s. IMPERIAL MEASURE.

DEAFNESS and NOISES in the HEAD.—Free of Charge, for the Protection and Instant Relief of the Deaf, a Book of 30 pages.—An extraordinary Discovery.—Just published, sent free by post, to any deaf person writing for it, A STOP TO EMPYRICISM and Exorbitant Fees! Sufferers extremely benefited, by means of the book, permanently cure the Deafness, in any distant part of the world, without pain or use of any instrument. Thousands have been restored to perfect hearing, and for ever rescued from the snares of the numerous advertising dangerous unqualified pretenders of the present day. It contains details of many cases, published in the *Lancet*, and in the *Edinburgh Medical Journal*, and in the *London Royal College of Surgeons*, May 2, 1845; L.A.C. April 30, 1846; Consulting Surgeon to the Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London, where all letters are to be addressed.—Personal consultation every day between 11 and 4 o'clock.—Sufferers deaf 10 or 20 years have their hearing perfectly restored in half an hour without a moment's inconvenience. Testimonials and certificates can be seen from all the leading members of the Faculty, and from Patients cured.

CAUTION TO MOTHERS. **MRS. JOHNSON'S AMERICAN SOOTHING SYRUP.**—This efficacious Remedy has been in general use for upwards of Thirty Years, and has preserved numerous children from Convulsions arising from Colic and Spasmodic Distention. As soon as the Syrup is rubbed on the Gums, the Child will be relieved, the Gums cooled, and the inflammation reduced. It is as innocuous as efficacious, tending to produce the Teeth with ease, and so pleasant, that no Child will refuse to let it. Gums be rubbed with it. Agents should be very particular to ask for **MRS. JOHNSON'S AMERICAN SOOTHING SYRUP**, and to notice that the Names of **BARCLAY & SONS**, 95, Farringdon-street, London (to whom Mrs. Johnson has sold the receipt), are on the Stamp affixed to each Bottle.—Price 2s. 4d. per Bottle.

SPRING MEDICINE OF GREAT EFFICACY. **KAYE'S WORMS' PILLS** thoroughly purify the blood, and promote the healthy action of the liver, stomach, and bowels.—Sold Everywhere, 1s. 12d., 2s. 9d., and 4s. 6d. Wholesale Depot, 22, Broad-street, London.

STUDENTS, TEACHERS, CLERGYMEN, and others, whose care and most anxious thought is constantly being called forth, can hope for but little pleasure in their high and important undertakings, unless seconded by a proper buoyancy of spirit and vigour of mind. To secure this, then, becomes the first consideration of every thoughtful individual; and the fine-benefit of **HOLLOWAY'S GREAT PILLS**, of all medicines is without dispute the best calculated to produce a fine flow of animal spirits, a clear head, and a ready perception. Sold by E. Edwards, 67, St. Paul's Churchyard; Barclay & Sons, Farringdon-street; Sutton & Co. Bow Churchyard; Hannay & Co. 63, and Sangar, 150, Oxford-street, London; and all respectable Grocers, and all the principal Vendors in Town and Country. In Boxes, price 1s. 12d., 2s. 9d., and in Family Packets, 11s. each. *** Ask for **PARR'S LIFE PILLS**.

HOLLOWAY'S OINTMENT and PILLS the MOST EFFECTIVE REMEDIES for WOUNDS. Mr. Rutherford, of Ballinamore, County of Leitrim, 41, writes a letter to Professor Holloway, dated 18th Dec. 1854, that Mr. Rutherford, the parish of Clow, was nearly cured to death by his own bull, whereby he received some very severe wounds, and from their awkward appearance there was no disposition in them to heal, notwithstanding he had the best medical attention, who tried various remedies without any good effect; however, at his suggestion, Holloway's Ointment and Pills were used, which in a very short time soundly healed every wound.—Sold by all Medicine Vendors; and at Professor Holloway's Establishments, 24, Strand, London, and 80, Maiden-lane, New York.

MR. HEPWORTH DIXON'S

HISTORICAL MEMOIRS.

I.

FIFTH EDITION.

JOHN HOWARD:

A CONTRIBUTION TO THE SOCIAL HISTORY OF ENGLAND IN THE EIGHTEENTH CENTURY.

"The adventures of Howard are recorded in a loving and energetic spirit. The reflections are just, often ingenious and eloquent, almost always striking. The book contains many satisfactory evidences of an independent and vigorous intellect."—*Examiner*.

II.

SECOND EDITION.

WILLIAM PENN:

AN HISTORICAL BIOGRAPHY.

Founded on Family and State Papers.

"Mr. Dixon's sketch of the Governor's life in his American dwelling is tempting and picturesque. His style is good and easy. There is life in his narrative and vigour in his descriptions."—*Edinburgh Review*.

III.

ROBERT BLAKE:

ADMIRAL AND GENERAL AT SEA.

Based on Family and State Papers.

"The subject is noble; and Mr. Dixon has treated it with rare vigour, spirit, and conscientiousness. The glorious victories won by Robert Blake are universally known; but to find out *how* they were won, and what sort of man achieved them, we must apply to the famous Republican Admiral's latest, best, and completest biographer. His narrative is not only historically valuable, but is terse, vivid, and dramatic in no ordinary degree. We especially like the manner in which the extraordinary events of Blake's period are interwoven with Blake's life; and the rigorous and masterly clearness of the descriptions of the sea-fights."—*Leader*.

IV.

THE LONDON PRISONS:

WITH SOME ACCOUNT OF THE MOST CELEBRATED PERSONS CONFINED IN THEM.

"The London Prisons' is an enchanting volume. It is a book no less of great principles, which all statesmen and philanthropists would do well to ponder."

Evangelical Magazine.

V.

THE FRENCH IN ENGLAND;

BOTH SIDES OF THE QUESTION ON BOTH SIDES OF THE CHANNEL.

"The author wields a skilful pen, and tells his story with true historical fervour. The circumstances were worthy of his powers. The sketch of Bonaparte's measures for the concentration of his troops, and those for rendering Boulogne and the other harbours on that coast capable of containing his powerful armaments, and the description of the various kinds of troops and vessels, are admirable. The power and force of despotism stand before us in their grandest and most imposing characters. But far nobler and more inspiring is the account of what was meanwhile going on upon our own shores. The description of all this is brilliant."—*Gentleman's Magazine*.

DEDICATED BY SPECIAL PERMISSION TO THE QUEEN.
Post 8vo. cloth, price 1s. 6d.

ANNE OF BRITTANY,

TWICE QUEEN OF FRANCE,
By MISS LOUISA STUART COSTELLO.

"Miss Costello's heroine will win general sympathy and admiration."—*Morning Post*.

"Few stories possess more interest than does that of the last Duchess of Brittany."—*Morning Chronicle*.

"We know of no character during the chivalrous and eventful times in which she lived so amply entitled to our sympathy and admiration as that of the youthful daughter of Francis, last Duke of Brittany."—*Morning Herald*.

"For the record of the times and of their moving accidents, we refer our readers to the most admirable volume for which we are yet indebted to the pen of Miss Costello."—*Athenæum*.

III.

Second Thousand, post 8vo. cloth, price 7s. 6d.

CURIOSITIES OF LONDON LIFE;

Or, PHASES, PHYSIOLOGICAL and SOCIAL, of the GREAT METROPOLIS.

By C. M. SMITH.

"In one sense this volume belongs to the class of light literature; in another, it possesses far higher pretensions, for it not only amuses but instructs."—*Illustrated London News*.

"Few persons whose lot it is to circulate the streets of London can fail to recognize and to find the reality of the portraits which Mr. Smith has drawn."—*Morning Post*.

IV.

Crown 8vo. cloth, price 4s.

THE HALF-CENTURY:

Its HISTORY, POLITICAL and SOCIAL, 1800 to 1850.

By WASHINGTON WILKS.

Second Edition, revised, with a Supplementary Chapter.

"Containing an intelligent digest of contemporaneous history from the pen of a decided reformer and earnest thinker."—*Western Times*.

"A concise and well-brought together history, clearly written and full of useful information."—*Economist*.

"In a style at once unpretending and agreeable—full of well-digested information."—*Church of England Quarterly Review*.

V.

Second Thousand, post 8vo. cloth, price 5s.

THE WORKING MAN'S WAY IN THE WORLD;

Or, the AUTOBIOGRAPHY of a JOURNEYMAN PRINTER.

"It is full of amusement and instruction, and at the same time suggestive of cheering and ennobling thoughts."—*Chambers's Journal*.

"We have seldom read a book that keeps the attention so perpetually awake, by the variety of situations it depicts, such as graphic skill and the strong common sense with which the author looks at men and things."—*Edinburgh Review*.

"The stamp of reality marks out this autobiography."—*Leader*.

VI.

Tenth Thousand, fcap. 8vo. cloth, price 5s.

THE PASTOR'S WIFE:

A MEMOIR of Mrs. SHERMAN, of SURREY CHAPEL.

By HER HUSBAND.

"This constitutes one of the most tender, beautiful, instructive, and edifying narratives that for a long time has come under our notice."—*Christian Witness*.

"This volume deserves a large circulation; and we feel it a pleasure to commend its perusal to the various classes of our readers, especially to those whose sex may enable them to tread in Mrs. Sherman's steps."—*Nonconformist*.

VII.

Second Thousand, post 8vo. cloth, price 6s. 6d.

STRUGGLES FOR LIFE:

AN AUTOBIOGRAPHY.

"It is long since we have read a narrative so true."—*Daily News*.

"This is a remarkable book. Many of the incidents related are of the most striking and affecting character."—*Nonconformist*.

"We have tried to identify him with some of the living generation; but so well has he balanced the mask, that we have not been able to do so in anything like certainty."—*British Banner*.

LONDON, SATURDAY, MAY 12, 1855.

PRICE
FOURPENCE
Bought 2.11.11. 54

[illegible]

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation $f(x) = \int_0^x f(t) dt$. It is shown that $f(x)$ is a continuous function and that it satisfies the differential equation $f'(x) = f(x)$. The solution of this equation is $f(x) = Ce^{x}$, where C is a constant. The value of C is determined by the initial condition $f(0) = 1$, which gives $C = 1$. Therefore, the function $f(x)$ is $f(x) = e^x$.

[illegible]

DR. ALTSCHUL, EXAMINER Royal College of Preceptors, Member of the Philological Society, London, gives LESSONS in the GERMAN, ITALIAN, and FRENCH LANGUAGES and LITERATURE. Pupils may study TWO Languages in the same Lesson, or alternately, without addition to their terms.—CHANDOS-STREET, CAVENDISH-SQUARE.

SOCIETY for the DISCHARGE and RELIEF of PERSONS IMPRISONED for SMALL DEBTS throughout ENGLAND and WALES. Established 1772.
President—THE EARL OF ROMNEY.
Treasurer—BENJAMIN BOND CABELL, Esq. M.P. F.R.S.

CAPEL CURE, Esq., and H. HARWOOD HARWOOD, Esq.
At a MEETING of GOVERNORS, held in Craven-street, on WEDNESDAY, the 2nd day of May, 1855, the Cases of 27 Petitioners were considered, of which 12 were approved, 12 rejected, and 3 inadmissible.

Since the Meeting held on the 4th of April, THIRTY-FOUR DEBTORS, of whom 25 had Wives and 68 Children, have been discharged from the Prisons of England and Wales; the expense of whose liberation, including every charge connected with the Society, was 561. 11s. 4d.; and the following

Benefactions received since the last Report

Miss M. M., per Messrs. Hoare, £1 1 0
Miss Anne Harland, per Messrs. Hoare, A. 2 2 0

Benefactions received by Benjamin Bond Cabell, Esq., the Treasurer, No. 1, Brick-court, Temple; also by the following Bankers:—Messrs. Coombs, Drummonds, Herries, Hoares, Vases; and by the Secretary, No. 7, Craven-street, Strand, where the books may be seen by those who are inclined to support the Charity, and where the Society meet on the first Wednesday in every month.
JOSEPH LUNN, Secretary.

SEVEN PER CENT. BONUS.—The CONSERVATIVE LAND SOCIETY.—NOTICE is HEREBY GIVEN, that WARRANTS for the PAYMENT of the GUARANTEED INTEREST on completed Shares, and on Subscriptions of Shares in progress, of a year in advance upwards, at the rate of 5 per cent. per annum, will be ISSUED on and after the 26th of April, for the half-year ending March 25, and will be forwarded to the respective members in due course.

The holders of completed shares will also be entitled to receive an additional 2 per cent. in order to make every payment in the Society, by shareholders prior to last Michaelmas, realize 7 per cent., being the Bonus declared by the Executive Committee of the Conservative Land Society for the second financial year, ending September 29, 1854.

By order of the Board.

CHARLES LEWIS GRUNSEIN, Secretary.

Persons who may be desirous of investing capital and savings with complete security and freedom from personal liability, may use the society as a bank of deposit or savings bank, and the taking of land being quite optional. All will be open to the members at the time to select plots, on eligible estates, in various counties, so as to secure the freehold franchise and first-rate ground-rents. A completed share, which is at once entered on the register of rights to choice pieces of land, costs £25. 5s. 6d., including the conveyance of the lot, if taken, and all charges. An uncompleted share, paid a half-yearly, as on the completed shares, is 5s. 3s. 6d. Monthly subscriptions on shares in progress are 8s. 6s. per month, with 1s. quarterly to cover working expenses, and 2s. 6d. entrance-fee per share.

Prospectuses and forms for taking shares will be forwarded, free of expense, on application to the Secretary, at the Central Office, No. 33, Norfolk-street, Strand, London; or to the agents for members in the chief towns in the United Kingdom. All subscriptions on shares paid into the Society can be withdrawn, under the rules, at ten days' notice.

ENGRAVINGS BROUGHT WITHIN THE REACH OF ALL.—Immense quantities of first-class Subjects (chiefly from Sales), at unheard-of prices. One instance:—"Morning" and "Evening" (pub. at 21s.), 3s. 6d. per pair. Such an instance has never before occurred to adorn the Wall and enrich the Folio.—For Catalogue of some of the chief subjects, see the *Athenæum* of March 31st, 1855.—J. MABLEY, 9, Wellington-street North, Strand

INSTITUTE OF PHOTOGRAPHY, 179, REGENT-STREET.—Portraits, Copies of Pictures, Sculpture, &c. taken, and INSTRUCTION in the Art given daily, by Mr. ARCHIBALD LEWIS COCKE. Photographic Apparatus of all kinds, and with the necessary Chemicals, constantly on Sale.

MR. LAROCHE begs to inform his Patrons and the Public in general, that having succeeded in the late important action of Talbot v. Laroche, in establishing that the Photographic process as practised by him is different from, and very superior to, the Talbot type, he continues to take these much-admired PORTRAITS, by his instantaneous method, at his Rooms, 65, Oxford-street, two doors from Wells-street, where an inspection of the life-size and other Portraits is respectfully solicited.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyll-place.
DAGUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life * * * without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected."—*Athenæum*, July 29, 1854.

"Mr. Mayall's portraits represent the high art of the daguerretype: they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

MUDIE'S SELECT LIBRARY.—All the best New Works may be had in succession from this extensive Library by every Subscriber of One Guinea per Annum. The preference is given to Works of History, Biography, Religion, Philosophy, and Travel. The best Works of Fiction are also freely added.

Now ready. Gratis, postage free.

A LIST of NEW and CHOICE BOOKS recently added to MUDIE'S SELECT LIBRARY. Also, a LIST of SUPPLIES of RECENT WORKS withdrawn from circulation, and offered at greatly reduced prices for cash.
CHARLES EDWARD MUDIE, 510, New Oxford-street, London, and 76, Cross-street, Manchester.

A CATALOGUE of SECOND-HAND BOOKS, containing many of the County Histories, Antiquarian and Genealogical Works, may be had on application to J. NEWMAN, Bookseller, 235, High Holborn.

TO PUBLISHERS.—Under the head of "OUR LIBRARY TABLE," a considerable space is devoted weekly to the Literature of the day, in the MANCHESTER WEEKLY ADVERTISER, which has a selected circulation according to the Government Stamp Returns for 1854 of 7,265 copies of each impression amongst the reading part of the community in Manchester and the surrounding district. Advertisements and Books for Review can be sent to the Proprietors, GALT, GENT & Co. 55, Market-street, Manchester.

TO FANCY STATIONERS, BOOKSELLERS, and OTHERS. Near to Brompton.—To be disposed of, the old-established TRADE of a FANCY STATIONER and NEWS-AGENT, together with a Public Library. The concern has been many years established, and yields a satisfactory income. About 2000. required. Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

TO BOOKSELLERS, STATIONERS, and OTHERS.—In a First-Class Situation at the West-End.—To be sold, a First-Class BOOKSELLING and STATIONERY BUSINESS. The Trade has been conducted upwards of thirty years with families of the highest respectability. The returns are nearly 8,000l. per annum; and can be entered upon for about 1,200l.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

TO STATIONERS, BOOKSELLERS, and OTHERS.—In the Midland Counties.—To be disposed of, the TRADE of a PRINTER, BOOKSELLER, and STATIONER, carried on for upwards of forty years, and now yielding a liberal profit. About 5000l. required.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

FOR SALE, a STATIONER'S BOOK-SELLING and NEWS BUSINESS, situated in the immediate vicinity of the principal railway terminus in the metropolis, and conducted by the present proprietor with great success for several years. Ample proof will be given of the amount of returns, which are of a highly profitable character, and a thorough introduction to the connexion. Possession will require about 5000l., including the valuable Lease of the Premises. Apply to Mr. MOORE, Auctioneer and Valuer, 16, Melton-street, Euston-square.

By the Rev. JAMES INMAN, D.D.

Late Professor at the Royal Naval College, Portsmouth.

Livingtons, Waterloo-place.

THE WORLD and ITS BEAUTIFUL LIGHTS and SYMPATHIES.

By JAMES WAYMOUTH.

London: Blackwood. Edinburgh: Menzies. Price 5s.

"It cannot fail to establish your reputation as a poet."

Author of the 'Marriage Covenant,' &c. &c.

"In these poetical effusions the author has attempted a high flight, and his, at any rate, will not be the fate of Icarus. Many portions of the work are highly poetical and quite refreshing after the trash misalled poetry, with which the literature of the country has recently been flooded." &c.—*Bristol Mirror*.

"It is characterized by an elevated moral purpose and feeling, and considerable facility of expression."—*The Sun*.

"This is a volume of superior merit, comprising no inconsiderable amount of thought upon subjects of the latest moment. The title is not very explicit in itself, nor is it very expressive of what we really find in the book; which comprises much excellent water, well veined. The outline indicates a strong and daring fancy, and the execution is in a high degree respectable."—*Christian Witness*.

A GUIDE to LIVING MEDICAL AUTHORS. With a CLASSIFICATION of the SUBJECTS of THEIR WRITINGS, compiled from the 'London and Provincial Medical Directory.'

By reference to this Guide, the sufferer from any disease may ascertain the names and addresses of the most distinguished practitioners whose time and talents are devoted to its consideration and treatment, thus affording to the public a complete protection against quacks and quackery.

Published weekly in the 'Medical Circular,' price 4d., stamped office, 20, King William-street, Strand. Send Five Postage Stamps.

THE PRESENT STATE OF HUNGARY, &c.

Just published, in post 8vo. price 5s.

THE BULGARIAN, THE TURK, AND THE GERMAN:

Comprising Studies of the Genius of the Population in the East of Europe, and Impressions of Personal Intercourse with the most eminent Soldiers and Statesmen of the present Crisis.

By **A. A. PATON,**

Author of *Servia, or a Residence in Belgrade*, 'The Modern Syrians,' &c.

OPINIONS OF THE PRESS.

"The production of a well-informed man and a shrewd observer."

"Mr. Paton is never dull or long-winded, but writes in a terse and brilliant style."

"Mr. Paton appears to us to distinguish more dispassionately, and therefore more justly, than some of his precursors over the same disputed ground."

"The subjects of this book are now peculiarly interesting; and they are treated in a manner so lively and agreeable, as would at any time make this an entertaining and instructive volume."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

CHEAP EDITION of LADY MORGAN'S WORKS.

Now ready, in 2 vols. post 8vo. price 3s. 6d. each, bound,

T. BOSWORTH'S NEW PUBLICATIONS.

1.

Napoleon at Elba.

THE ISLAND EMPIRE; or, the Scenes of the First Exile of Napoleon I. Together with a Narrative of his Residence on the Island of Elba, taken from local information, the Papers of the British Resident, and other authentic Sources. By the AUTHOR of 'BLONDELLE.' 2nd Edition, with coloured Illustrations. 8vo. cloth, 12s.

"A monograph which we have read with deep interest.... Many of his (Napoleon's) remarks read like prophecies, and have an interest as pressing in our time as when they were uttered."

"A fresh subject, treated freshly without being overdone. It has interest in reference to present affairs."—*Spectator*.

2.

THE PHILOSOPHY of the FALL. By the Rev. E. C. TOPHAM. Crown 8vo. cloth.

3.

SCIENTIFIC CERTAINTIES of PLANETARY LIFE; or, Neptune's Light as Great as Ours. With some hitherto unconsidered Facts connected with the Residence of Moral Agents in the Worlds that surround the Stars. By T. C. SIMON, Author of 'The Mission and Martyrdom of St. Peter,' &c. Fcap. 8vo. 5s.

"Mr. Simon pursues his chain of reasoning with great ability, and points out with equal acumen the sophistry of most of the arguments in the work above alluded to ('The Essay on the Plurality of Worlds'). This book is one meriting diligent study and perusal."—*New Quarterly Review*.

4.

On the FUTURE DESTINIES of the CELESTIAL BODIES By HENRY DRUMMOND. 8vo. sewed.

5.

THE FORMATION and PROGRESS of the "TIERS ÉTAT," or THIRD ESTATE, in FRANCE. By AUGUSTIN THIERRY, Author of 'History of the Norman Conquest,' &c. Translated from the French by the Rev. FRANCIS WELLS. 2 vols. post 8vo. 16s.

"Mr. Thierry composed this admirable book as an introduction to the documentary history of the Tiers État. It is, he tells us, the summary of his labours relative to France. His treatment of the subject is luminous and philosophical. It opens French history to its full dimensions, and surveys from an elevated range the sources, the currents, and the issues of those mighty events which in the eighteenth century accomplished the work of the Tiers État. M. Thierry's work is a fine historical study, and will add to the writer's high reputation. Mr. Wells has translated it clearly and gracefully."—*Athenæum*.

6.

RECOLLECTIONS of the MESS-TABLE and the STAGE. By HENRY CURLING, Author of 'The Soldier of Fortune,' &c. Post 8vo. cloth, price 7s. 6d.

This amusing volume contains anecdotes of Russell, Downton, Betterton, Sheridan, Sir Lumley Skelington, the Prince of Wales, General Crawford, Picton, Sir Charles Napier, Stephen Kemble, Garrick, Charles Kemble, John Kemble, the Duke of Wellington, Sir David Baird, Liston, the Marquis of Anglesea, &c. &c.

"Connected with so many old and well-known names, there is a good deal of newness in the current of anecdote and its treatment; and as the style is light and vivacious, the book is a very agreeable one."—*Observer*.

7.

THE SPECTATOR. A New Edition, with a Biographical and Critical Preface and Explanatory Notes. Complete in 4 vols. price 10s. in wrapper, or 12s. strongly bound in cloth.

THE SPECTATOR. With NOTES by ALEXANDER CHALMERS, A.M. A new Edition, in six handsome royal 8vo. volumes, price 38s. cloth, or 3l. 3s. whole bound in calf.

8.

A REPLY to the Rev. ROBERT ISAAC WILBERFORCE'S PRINCIPLES of CHURCH AUTHORITY. By HENRY DRUMMOND. 8vo. sewed, 3s. 6d.

9.

THE POETRY of CHRISTIAN ART. Translated from the French of A. F. RIO. Post 8vo. cloth, with Frontispiece by Scharf. Price 9s.

"Perhaps the most delightful book on Early and Medieval Christian Art which exists."—*Rambler*.

"This standard manual of early Art and its genuine appreciation is extremely well translated."—*Spectator*.

10.

THE EXILE; or, a Tale of the Sixteenth Century. By PHILIP PHOSPHOROUS. Crown 8vo. cl. 6s.

11.

HISTORY of the ROYAL SAPPERS and MINERS. By T. W. J. CONNOLLY, Quartermaster-Sergeant of the Corps.
 "His chronicle abounds in matter that should interest the public and the profession.... it is a faithful, instructive, and entertaining record, worthy of being studied by every soldier.... The army just now is a popular topic, and Mr. Connolly's volumes form a popular contribution to its history."—*Athenæum*.
 London: Longman, Brown, Green, and Longmans.

Just published, in 8vo. price 9s.
A TREATISE on the CALCULUS of OPERATIONS: Designed to facilitate the Processes of the Differential and Integral Calculus and the Calculus of Finite Differences. By the Rev. ROBERT CARMICHAEL, A.M., Fellow of Trinity College, Dublin, Member of the Royal Irish Academy, and Examiner in Mathematics in the Queen's University in Ireland.
 "The author's object is to reduce and simplify the processes employed in the calculus, which is effected by a more systematic and complete exhibition of the laws relating to symbols of operations than has yet been put forth. The subject has hitherto been treated only partially and incidentally, in such works as Gregory's *Exercises in the Methodus Invenendi*, and other periodical publications. It is here treated very fully, and in a most masterly manner, many valuable improvements upon previous methods having been introduced."—*Athenæum*.
 London: Longman, Brown, Green, and Longmans.

NOTICE.
 Under the Especial Patronage of Her Majesty and Prince Albert. Corrected throughout by the Nobility.

MR. LODGE'S PEERAGE and BARONETAGE for 1855.
 IS NOW READY.
 The numerous changes in Noble Families and their collateral branches, by decease, during the past year, and in the recent memorable engagements, will render this New Edition of Mr. Lodge's Peerage one of the most important ever issued, as it is the only work in which the type being constantly kept standing, every correction is made in its proper place to the date of publication.
 Saunders & Otley, Publishers, Conduit-street.

Just published, fcap. 8vo. price 5s. with 10 illustrative Plates.
PRACTICAL METEOROLOGY.
 By JOHN DREW, Ph.D. F.R.S.
 Corresponding Member of the Philosophical Institute of Bale.
 "This work, the result of many years' experience, gives ample directions for the advantageous use of the BAROMETER, THERMOMETER, HYGROMETER, RAIN-GAUGES, and other Meteorological Instruments; suitable Formulae and Tables for the reduction of Observations; an Account of the Photographic Registration at Greenwich, and of the present state of the Science in this Country. It affords exactly the kind of information in request with private observers, as well as with the Officers of the Royal Navy and Mercantile Marine, in connexion with the arrangements lately entered into between the Governments of this country and the other Maritime States.
 John Van Voorst, 1, Paternoster-row.

Recently published, in post 8vo. price 5s. cloth.
LECTURES on ANCIENT ART. By RAOUL-ROCHETTE, translated by H. M. WESTROPP, Esq.

WILLIAM BLACKWOOD & SONS, Edinburgh and London.

INTERESTING NEW PUBLICATIONS AND CHEAP NEW EDITIONS OF STANDARD WORKS.

MEMOIRS OF THE RIGHT HON. RICHARD LALOR SHEIL. By TORRENS M'CULLAGH, Esq. 2 vols. with Portrait.

"An able and elaborate biography of Mr. Sheil by his intimate friend Mr. Torrens M'Cullagh. Mr. Sheil played so distinguished and useful a part in the political commotions of his time, and his oratorical powers were of such surpassing excellence, that his biography cannot fail of proving deeply interesting, not only in Ireland, to whose service his brilliant talents and untiring exertions were mainly devoted, but in England also, where his excellent dramas and eloquent speeches had secured him many warm admirers. Mr. M'Cullagh has, therefore, performed a task which will gain him the gratitude of many of the present generation, and, we doubt not, the approbation of several succeeding ones."
Dublin Evening Post.

Also, just published, in 2 vols.

MR. SHEIL'S LEGAL AND POLITICAL SKETCHES.

"In these volumes Sheil has left us a memorial of all the gems of his rich and varied intellect—every phase and hue of his versatile and prolific mind."—*Dublin University Magazine*.

Messrs. RIVINGTON

HAVE THE FOLLOWING BOOKS IN
THE COURSE OF PUBLICATION:—

1.
SOME ACCOUNT of the EXTERNAL GOVERNMENT and DISCIPLINE of the CHURCH of CHRIST during the FIRST THREE CENTURIES. By JOHN KAYE, D.D., late Lord Bishop of Lincoln. In 8vo. *[In the press.]*

2.
CHRISTIAN THEISM: a View of the DIVINE CHARACTER as Exhibited in the OLD and NEW TESTAMENTS, and especially in the Doctrine of Salvation through JESUS CHRIST. By the Rev. ROBERT ARCHER THOMPSON, M.A. (The First BURNETT PRIZE of 1850, for the best Treatise on the Being and Attributes of God, has just been awarded to this Work.) In 2 vols. 8vo. *[In the press.]*

3.
ENGLAND'S SACRED SYNODS: a Constitutional History of the CONVOCATIONS of the CLERGY, from the Earliest Records of Christianity in Britain, to the Date of the Promulgation of the Book of Common Prayer. Including a List of all the Councils of the Clergy held in England. By JAMES WALLAND JOYCE, M.A., formerly Student of Christ Church, Oxford, Rector of Burford. In 8vo. 25s.

4.
A New Volume of SERMONS. By the Rev. ROBERT WILSON EVANS, B.D., Author of 'The Rectory of Valehead,' and 'The Bishopric of Souls.' In small 8vo. 3s. *[In the press.]*

5.
MEDITATIONS and PRAYERS on the ORDINATION SERVICE for PRIESTS. By the Rev. J. H. PINDER, M.A., Principal of Wells Theological College. In small 8vo. 3s. 6d.

Also, by the same Author, lately published,
MEDITATIONS and PRAYERS for DEACONS. 3s. 6d.

6.
A SERIES of SERMONS on the EPISTLE and GOSPEL for the SAINTS' DAYS, and other HOLY DAYS of the CHURCH. By the Rev. ISAAC WILLIAMS, B.D., late Fellow of Trinity College, Oxford; Author of 'A Harmony of the Gospels, with Reflections, in 8 volumes.' In small 8vo. 5s. 6d. *[Just published.]*

*This Work completes the Course of SERMONS on the EPISTLE and GOSPEL for each Sunday in the Year, by the same Author, recently published in 2 vols. 11s.

7.
The Third Volume of the HISTORY of the CHURCH of ENGLAND in the COLONIES and FOREIGN DEPENDENCIES of the BRITISH EMPIRE. With General Index to the three volumes. By the Rev. JAMES M. ANDERSON, M.A., Chaplain in Ordinary to the Queen, Rector of Tomarton, and Preacher of Lincoln's Inn. In 8vo. *[Nearly ready.]*

8.
EVANGELICAL LIFE, as seen in the EXAMPLE of our LORD JESUS CHRIST. By JOHN JAMES, D.D., Canon of Peterborough; Author of 'A Comment on the Collects,' and other Works. In 12mo. 7s. 6d.

9.
LATIN WORD-BUILDING, with an ETYMOLOGICAL VOCABULARY; designed for the Third Latin Book. By the late Rev. T. K. ARNOLD, M.A., Rector of London, and formerly Fellow of Trinity College, Cambridge. To which are added, OUTLINES of FORM-BUILDING, and QUESTIONS. 4s. 6d.

10.
The Third Volume of PAROCHIAL SERMONS, preached in the Parish Church of St. Mary the Virgin, Dover. By the Rev. JOHN PUCKLE, Incumbent of the Parish, and Rural Dean. In 8vo. *[In the press.]*

11.
THE CHRISTIAN CHARACTER: Six Sermons preached in Lent. By JOHN JACKSON, D.D., Lord Bishop of Lincoln. Fifth Edition. In small 8vo. 3s. 6d.

12.
A Second Series of QUEBEC CHAPEL SERMONS, preached in the Latter Half of 1854. By HENRY ALFORD, B.D., Minister of the Chapel; Editor of a New Edition of the Greek Testament, with English Notes. In small 8vo. 5s.

RIVINGTONS, Waterloo-place.

GEORGE ROUTLEDGE & CO.'S NEW PUBLICATIONS.

FOR THE CAUSE OF OUR DISASTERS IN THE CRIMEA
SEE THE ROVING ENGLISHMAN'S NEW BOOK,
WRITTEN THERE.

Price 5s. cloth lettered,
PICTURES FROM THE BATTLE FIELDS.

This Original Work, by 'The Roving Englishman,' contains Chapters on

Scutari and its Hospitals.	The Heights before Sebastopol.
Miss Nightingale.	The Bashi-Bazouk.
Balaklava.	Russian Officers and Soldiers.
The Commissariat again.	The French Officer.
A Snow Storm.	The Zouave.
A Camp Dinner.	

With Illustrations, from Sketches made on the Spot, of
The Zouave—The Camp Dinner—Bashi-Bazouk—
A Street in Constantinople—Bucharast—The Deserted Villa—
Varna—Balaklava.

"The want of able special men has caused most of our late miseries in the East. Our curse has been our ignorance. At the outbreak of the present war we knew next to nothing about the vast empire of the Turks. We were curiously ignorant of its strength or its weakness. Hence the sufferings of our armies at Gallipoli and Varna. Surely it is not to ask too much that honesty should be used in the distribution of the offices of the State. This is a matter on which our common weal depends. It is not an injudicious concession to democracy that we advocate, it is the salvation of the liberties of mankind."—*Extract from Preface.*

With New Illustrations by Birket Foster

In 1 vol. price 5s. cloth lettered,

LOUIS' SCHOOL DAYS.

By MISS MAY.

A New Edition. With Illustrations from Original Designs by BIRKET FOSTER.

"One of the BEST—the very best—we have seen for years."
Sharpe's London Magazine.

Leigh Hunt's Poems.

In 1 vol. price 3s. 6d. cloth gilt.

STORIES IN VERSE.

Now First Collected by LEIGH HUNT.

This Volume contains the following:—

The Story of Rimini.	Aben Ben Adhem.
Hero and Leander.	Godiva.
Perce.	Jaffar.
Ballads of Robin Hood.	The Bitter Gourd.
Mahmoud.	The Inevitable.
The Gentle Armour.	Abraham and the Fire Wor-
The Palmyra.	shipper.
The Glove and the Lions.	Translations, &c.

With Two Illustrations by EDWARD CORBOULD.

Price 5s. gilt cloth,

FOREST SCENES: being a Fisherman's Sketches of NORWAY and SWEDEN. By the Rev. HENRY NEWLAND, Author of 'The Erne, its Legends and its Fly-Fishing.' With Eight Illustrations.

Walker's Dictionary, with New Words, by Dr. Nuttall.

In 1 vol. price 2s. cloth lettered,

WALKER'S DICTIONARY.

By Dr. NUTTALL.

This Edition contains upwards of 2,000 words that are omitted in most Dictionaries—An English Grammar—A Guide to the Rules of Pronunciation—The Laws of English Verification—Alphabetical List of Abbreviations used for Despatch in Writing—Pronunciation of the more important European Languages: French, German, Dutch, Danish, Swedish, Italian, Spanish, Portuguese, Modern Greek—Directions for Addressing Persons of Rank—Chronological Tables, showing the most interesting Events in the History of the World to the present time—and an Alphabetical List of Cities, Boroughs, and principal Towns in England and Wales, their Distances in Miles from London, with the Market Days of each. It is, in fact, a perfect "Treasury of Knowledge."

New Edition, now ready, price 1s. 6d. boards, or 2s. cloth,

LANDMARKS of ENGLISH HISTORY. By the Rev. JAMES WHITE, of Bonchurch.

Extract from the Rev. W. H. Brookfield's (Her Majesty's Inspector of Schools) Report:—

"What is wanting on English History is something brief and cheap, which should be also candid and amusing. I chanced a few days ago, at a railway stall, to pick one up recently published, which seems to me the nearest approximation to this that I had met with. It is not, I think, above the apprehension of a well-instructed first class. It is entertaining, without compromise of fidelity, and humorous, where humour is suitable, without a scoff. It is sketchy, as its title indicates, but the outlines are very judiciously adjusted. The style is graphic, eloquent, unaffected, occasionally rising into poetry; and the book is thoroughly free from cant. It is called 'Landmarks of English History,' by the Rev. James White, of Bonchurch."

New Edition of Con Cregan.

In 1 vol. price 5s. cloth lettered,

CON CREGAN; or, the IRISH GIL BLAS. With upwards of 70 Illustrations on Steel and Wood by PAIZ.

"The most humorous work Mr. Lever has written."

London: 2, Farringdon-street.

LONDON, SATURDAY, MAY 12, 1855.

REVIEWS

The Illustrated Book of French Songs, from the Sixteenth to the Nineteenth Century. Translated and Edited by John Oxenford, Esq. Ingram & Co.

THAT our great British songs—including the trained lyric and the wild verse, the songs of old Ben, and the “wood-notes” of Burns—are, as a whole, fuller of body, soul, and spirit than any other collection of songs in the world, it would be flat heresy to doubt. But alive as we are to their wealth in feeling and fancy, in racy vigour and direct utterance of emotion, there are still fibres and chords in the English frame which respond, with a distinct and peculiar reply, to the “*chanson*” (taking the word comprehensively) of our neighbours. The latter has an air and a grace of its own, which we can never reach. As our best of *Millamants* is a hoyden when she tries to put on patches, powder, and *pouf*, in rivalry of a *Célimène*,—so is the most airy of our island ditties rustic and awkward when it claims comparison with the *chanson* of our lively allies. Perhaps the secret lies in a certain sharpness of rhythm,—possibly, in the epigrammatic idioms of a language the common parlance of which “sounds superior,”—or in that strangeness which gives to a perfume from over sea a mystic charm. We will fight for our own songs to the death: but next to them in dearness, and different from them in daintiness, are to us the *chansons* of France.

We remember no collection of these, in an English dress, equal in extent and variety to the volume before us. The versions are, in general, sensibly and carefully executed: though it may be felt that Mr. Oxenford's knowledge as a linguist is greater than are his accomplishments as a versifier. Nor has he been sufficiently aware, we apprehend, of how much importance time and accent are to the effect of some among his specimens. To give an instance,—that the inexorable jingle of the tune gives some of its spirit to the words of the ‘*Tableau de Paris à cinq heures du matin*,’ by Désaugiers, may be seen by the citation of a stanza. The following is Mr. Oxenford's version.—

Now the gamester's seen;
With a haggard mien,
And his pocket clean,
Swearing, home he goes;
While the drunkard lies
On his path, more wise,
Making music rise
From his blushing nose.

—To sing this to the original ditty would be impossible.—The following are the same eight lines paraphrased in the original French *tempo* (as musicians say), but without the triple rhyme.—

The gamester devoted
Is home madly roaming
With livid lip foaming,—
His all has been lost.
The drunkard besotted
Reels, Bacchus adoring,
Half singing, half snoring,
From pillar to post.

Of course, in all examples where beauty and character lie in thought rather than in form, comparisons and requisitions like the above would become hypercritical. They are not, however, to be overlooked when poetical and musical accent are so inextricably combined as they are in the French *chanson*.—To offer one more technical remark, by way of illustration:—English lyric poetry, when avowedly written for music, permits of a freedom on the part of the musician not possible among our neighbours. There is hardly a single British song we could name—be it as sharply cut in its forms as Moore's ‘*Oft in the still night*’—which could

not be set in either triple or common time without distress to the nicest ear. French metres and accents allow no such complaisance, and hence it may be that hardly a single French singer of any repute is a bad *time-ist*, while hardly an English singer of repute (till within the last quarter of a century) sang in any time at all!

Mr. Oxenford's ‘*Book of Songs*’ is royally opened by *François Premier* with his elegant ballad ‘*Etant seulet*,’ the old-world language of which is nicely reproduced in the English version, as the following stanza shows.—

As gentle Phœbe, when at night
She shines upon the earth below,
Pours forth such overwhelming light,
All meaner orbs must faintly glow.
Thus did my lady, on that day,
Eclipse Apollo's brighter ray,
Whereat he was so sore distressed
His face with clouds he overcast,
And I exclaimed, ‘That course is best,
Your brightness is by hers surpass'd.’

Perhaps it might have been better to have assumed the Elizabethan in preference to the Augustan humour, by way of English equivalent to the gallant monarch's French. That other kings than Francis figure among our neighbours' love-singers it is hardly needful to remind any one. A book like this could no more show its face without a rendering of ‘*Charmante Gabrielle*’ than a book of English songs dare appear without its ‘*Black-eyed Susan*.’ There may be as much of the real song in our Charles the Second's commemoration of “the shady old grove” at Breda, where he “passed all his time,” as in the stately and gracious military minuet of *Henri Quatre*; but the latter has more of the “air and the grace” which haunt us.

The first division of this book is devoted to “*Songs of the Affections*.” We hardly know where, or rather where *not*, to loiter in passing through it. We could dwell on the similitudes which may be traced betwixt the lives and songs of the joyous men of the *Caveau*, a singing-club of diners, to which every member was obliged to contribute a composition. We could speculate on such discrepancies as mark the pastoral ‘*Il pleut, il pleut, Bergère*,’ considered as the offspring of Fabre d'Eglantine, the Terrorist. This pastoral does not belong to that Pompadour Arcady represented by the Bouchers of the Regency, into which it is not hard to fancy the Revolutionary dictators retiring, as into a Paradise of false refinement and real sensuality, where Cruelty and Injustice might play at theatrical pleasures. There is no trace in it of *Lubin's* ribboned crook, nor of *Annette's* sheep fresh washed in *eau de mélisse*! It is an honest rural ditty, breathing perhaps as much real country air as ever is breathed in French verse. But who shall find out a man by his diversions? The most matter-of-fact and practical political economist of modern times (we have been told on good authority) never missed getting up betimes on May morning in search of May dew. The Duke of Wellington, when a young man, was indicted in a satire for his open frivolities in St. Stephen's Green and Sackville Street, Dublin,—along which he used to lounge, playing with “a quiz,” a sort of bandalore.—A Terrorist amongst the songsters “of the affections” is hardly more difficult to accredit than the financier and the warrior,—taken, as above, in their moments of unbending.—In this “affection” department, we have, of course, a version of ‘*Portrait charmant*,’ that *romance* which, to our singing grandmothers, was what ‘*Flouve du Tage*’ was to their daughters,—their one specimen of French song.—We have also the “*Souvenirs*” of Châteaubriand, a lyric dearly beloved by all translators; and—most modern of

all—M. Bérat's ‘*Ma Normandie*.’ Every collector has his own fancies:—ours, we think, would have led us to include another specimen or two by M. Bérat; if not his ‘*Lisette de Béranger*,’ his ‘*Octogénaire*,’ or his ‘*A la Frontière*,’—supposing that the *patois* songs of their author (which is more than probable) resist all attempts to represent them in English. M. Bérat is every inch of him a *chansonnier*, being, as was Moore sometimes, the musician to his own rhymes. Such “centralization of labour,” however, is not uncommon in France, especially of later days. The modern lyricist of the working classes, M. Pierre Dupont, whose songs, for the sake of their real force and honest pathos, might be made the text of a separate article, has mostly contrived his own tunes, which have been noted, arranged in order, and “washed clean” (as we once heard M. Meyerbeer say of a like process), by M. E. Reyer. M. Nadaud, again, now the delight of so many French circles, by the manner in which he sings his own songs—one or two of which almost equal in Horatian grace and tenderness the songs of Béranger—sets his own words; and his little ballad-drama, ‘*La Volière*,’ expressly constructed for the use and comfort of amateurs, has been “the rage” in the *salons* of Paris, during the past war-winter.

In Mr. Oxenford's Preface to this volume, he confesses to its incompleteness,—stating, what indeed is evident, that he has principally relied on “the bulky collection of MM. Dumer-san and Noel Ségur” for the series which he has “discussed in English.”—We, too, may be allowed some incompleteness not disproportionate if we notice this book *alla fantasia* (as the musicians say), in place of dealing with it encyclopedically or chronologically—and of telling in order due how to *lai* and *virelai* and *romance* succeeded the occasional or temporary song, which, mixing itself up with drama—as may be seen in the publications of the *Théâtre de la Foire*—formed the germs of those two characteristic entertainments, the *vaudeville* and the comic opera of France. Leaving to others history, and passing over the first portion of Mr. Oxenford's banquet, we come to his second course, which includes some half-score of Bacchanalian songs. This is a short allowance, considering that we are in a land which gives to Europe its Burgundy,—to Ireland “the good claret” (which the Irish melodists have sung so riotously, not forgetting “*Bumper Squire Jones*”), not to speak of the

Lily on liquid roses floating,

that “*Champagne rose*,” the spell of which made our genial English *Amphitryon* improvise his champagne lyric!—Mr. Oxenford is somewhat too sparing of his “sack.” Though he explains his dryness, in this article of drinking ditties, by declaring that he has packed one or two away in other sections, we cannot admit that the wine-songs of France are duly represented. Seeing that he has selected from M. Béranger's songs so lovingly, we think that among these table-songs he should have gone “to the root of the matter” by drawing on ‘*Brennus*,’ to show how the vine was first set in Gallic ground, and how

Brennus alors bénit les Cieux,
Creuse la terre avec sa lance,
Plante la vigne!—et les Gaulois joyeux
Dans l'avenir ont vu “La France”!

—It cannot have been hesitation to measure himself against *Father Prout* (who reproduced the lyric in question in a rollocking Hibernian metre), which has kept Mr. Oxenford's hand from this spirited poem:—since he has not forbore to render ‘*L'Eloge de l'Eau*,’ by Armand Gouffé, which also, in its Irish undress, figures

among the lyrics of the Holy Clerk of Watergrasshill!

We decline here to embarrass ourselves among the riches of the next divisions of Mr. Oxenford's collection—among his "Revolutionary and Patriotic Songs"—or the "epicurean" maxims, or "the comic and satirical" effusions, which close the book,—again claiming the privilege due to fantasy-makers, since, partly in digression, partly in close of our present notice, we shall merely further say a word or two concerning one who, though talked about and traded on in England "many a time and oft,"—pawed by the coarse,—picked to pieces by the small,—a theme for magazine wits and newspaper writers,

As common as a barber's chair,—

can hardly be talked of once too often,—can still less be overlooked or denied "the Benjamin's mess" by any one holding a feast of the *chansonniers* of France.

To speak fitly, yet without commonplace, of Béranger as one of the greatest poets belonging to modern times,—great in his finish, great in his music, great in his simplicity of life and his political integrity (how rare this last in France!),—is almost as hard as it would be to say something new of the Alps as grand in scenery, or of Mozart as beautiful in music, or of Scott as various in fiction. What if, by way of definition, we assert that he is the most widely beloved modern French author? Old Ladies of the *Faubourg* may hang their garlands of *immortelles* on Châteaubriand's tomb,—angry folk "who can't get in" may watch for and wait on the fulminations of M. Hugo with a sort of lurid sympathy. There is, or rather there *was*, a public for M. Paul de Kock,—a host of readers for M. Sue, and a straggling flock of misunderstood women and misunderstanding men who crown Madame Sand as a sort of Delphic sibyl. But what are any, or all, of these fames, as compared with the fame of the old poet who sang the "old coat," and the great deeds of Napoleon, and 'Roger Bontemps' (here figuring as 'Felix Summerday'), and 'The Fairy and the Tailor'? Rabelais is genial; so is Molière; and so, too, in another vein, is Clément Marot,—but none of the three, nor of any other thirty French male artists, sentimentalists, or playwrights who could be named, in pathetic, honest, graceful humour equals Béranger.—Such sweetness of heart, nicety of hand, variety in blending fancies grave and gay, if not precisely "chaste and noble,"—have never, we think, been combined in any French poet. Kindred qualities, the poetical element excepted, may be found among the choicest French women. We say this, especially recollecting Madame de Sévigné,—but then she was not a woman of literature, albeit *the* woman of letters:—whereas, the life of Béranger,—his struggles,—his persecutions,—his modest old age,—have all centred in, have all been influenced by, his "winged words,"—those few fifties of lyrics, which have given him his place,—kept for him his public,—endeared to him his subjects, and enabled him to satisfy his placid desires, if not his unostentatious beneficence.

Dutifully,—inevitably, perhaps, it should be said—Mr. Oxenford has taken his utmost pains in dealing with M. Béranger's well-known lyrics; and since it is only fair that after so much of our own talk, the book should be allowed its hearing too, we will take leave of it by showing what Mr. Oxenford's best can be. The following is not one of M. Béranger's most popular patriotic songs. Those were reserved for the time when the Poet stirred every French soldier's heart by his recollections of the glory of "Le Petit Caporal,"—or for that

other period when the satirist gave arrow-keen words to the writhings of French wit and intellect in chains, by lashing, with grave and simple humour, the censorship and the superstitions of the restored Bourbons. Still, in the lyric which follows, there is a voice of mingled regret, resignation, and protest, befitting an epoch that follows a popular revolution, which may find an echo in these our own times; and a better specimen of Mr. Oxenford's powers we could not give.—

The Goddess.—(La Déesse).

And is it you, who once appeared so fair,
Whom a whole people follow'd to adore,
And, thronging after your triumphant chair,
Call'd you by her great name, whose flag you bore?
Flush'd with the acclamations of the crowd,
Conscious of beauty (you were fair to see!)
With your new glory you were justly proud,
Goddess of Liberty!

Over the Gothic ruins as you past,
Your train of brave defenders swept along,
And on your pathway flow'r'y wreaths were cast,
While virgins' hymns mix'd with the battle-song.
I, a poor orphan, in misfortune bred,—
For fate her bitterest cup allotted me,—
Cried: 'Be a parent, in my mother's stead,
Goddess of Liberty!'

Foul deeds were done that glorious time to shame,
But that—a simple child—I did not know;
I felt delight to spell my country's name,
And thought with horror of the foreign foe.
All arm'd against the enemy's attack;
We were so poor, but yet we were so free;
Give me those happy days of childhood back,
Goddess of Liberty!

Like a volcano, which its ashes flings
Until its fire is smother'd by their fall,
The people sleeps; the foe his balance brings,
And says, "We'll weigh thy treasure, upstart Gaul!"
When to Heaven our drunken vows we paid,
And worship e'en to beauty dared decree,—
You were our dream,—the shadow of a shade,—
Goddess of Liberty!

Again I see you,—time has fled too fast,—
Your eyes are lustreless and loveless now;
And when I speak about the glorious past,
A blush of shame o'erspreads your wrinkled brow.
Still be consoled; you did not fall alone,
Though lost thy youth, car, altar, flowers, may be,
Virtue and glory, too, are with thee gone,
Goddess of Liberty!

"Béranger, in this song, written some time after the Restoration, looks back in melancholy mood on the hopeful dreams of the French populace, when the so-called 'Goddess of Reason' was paraded through the streets in Dec., 1793, at which date the poet was 12 years of age. He is supposed to address the female who personified Reason on the occasion, and it is impossible not to perceive that something like contempt for the excesses of the revolution is mingled with the regrets of the Republican. M. de Lamartine thus describes the procession to which Béranger alludes: 'On the 20th of December, the day fixed for the installation of the new worship (of Reason), the communes, the convention, and the authorities of Paris proceeded in a body to the cathedral. Chaumette, assisted by Lais, an actor of the Opera, had arranged the plan of the *fête*. Madlle. Maillard, an actress, brilliant with youth and talent, lately a favourite of the Queen, and always admired by the public, had been compelled, by the menaces of Chaumette, to play the part of the popular divinity. She entered, borne in a palanquin, the canopy of which was formed of branches of oak. Women, dressed in white, and adorned with tri-coloured sashes, preceded her. The popular societies, the fraternal societies of women, the revolutionary committees, the sections, besides groups of singers and dancers from the opera, surrounded the throne. Attired with the theatrical buskins on her feet, with the Phrygian cap on her head, and with a blue chlamys over an almost transparent white tunic, the priestess was borne to the foot of the altar, to the sound of musical instruments, and took her seat in the most sacred place. Behind her burned an immense torch, symbolising the flame of philosophy, which was henceforth to be the only light of the churches. The actress lighted the torch, and Chaumette taking the censer from the hands of two acolytes, fell on his knees and offered up incense. Dances and hymns enchanted the senses of the spectators.'

We must now close this treasury, without having touched on a tithe of the topics which are included among its contents. The points indi-

cated at random,—the names and associations conjured up in the foregoing notice,—will satisfy every one regarding the variety and interest of the subject,—whether that subject be considered in its literary, social, or musical aspect,—whether it take us into some *Café Concert*, where a Darcier's singing draws tears from eyes that no amount of tobacco-smoke can make weep,—whether it introduce us into choicer salons, where amateurs warble with more skill of method than charm of voice,—or into those august cabinets of Ministry and Police, where absolute Power decides how little truth may be cried in the streets by ambulant Wisdom for a people—little less fickle than the Athenians—to get by heart and to chorus as they go homeward.

Out-doors at Idlewild; or, the Shaping of a Home on the Banks of the Hudson. By N. P. Willis. New York, Scribner; London, Trübner & Co.

Mr. Willis will be perverse—will follow the promptings of his fancy—will be vagrant, flighty, incomplete—in spite of all critics. A worthy gentleman of New York, seeing that Mr. Willis is possessed of precious gifts and graces—style, fancy, genius, observation—enough to make him an American Scott, Fielding, what he will—advises him, in terms of soothing compliment (all of which, with deprecating modesty, Mr. Willis prints in his Preface), to retire for awhile from street and city,—lay aside his easy habits,—take up serious thought,—essay the higher forms of literary labour,—and contend for the highest crowns of romance. But no; Mr. Willis could win the prize,—but he will not. He will be an idler. Leisure is luxury; and luxury, we learn from this New-York sage, is one of the "new elements in the philosophy of life." Gossamer floats of its own lightness; it is pretty, poetical and fantastic; but temples are not built with it. Mr. Willis's genius is a gossamer genius; he sees and admits it; and, therefore, he will not strive where his strength is not greatest. Out of his own field he could only be the rival of other men: in his own field he is alone. Therefore, he will not write 'Amelias,' 'Waverleys,' 'Vanity Fairs,' let the critics rage ever so wildly; but he will sketch manners, scenes and characters in his old way, with whatever freedom, grace and faculty he may command.

Mr. Willis is right. His genius is discursive, petulant, incomplete. As Richelieu would have said, it is not *en suite*. A great story, with a complicated action,—a broad canvas filled with personages,—would puzzle him to death. His strength lies in the airy sketch—the fine observation—the poetical phrase. Here, at Idlewild, in the country air, on the high lands above the Hudson, among flowers and waterfalls, tangled woods and elegant villas, he is at home in the literary as well as in the literal sense. Sun and cloud are on every page of his book; the brightness of day, the silence of night, the beauty of dawn and sunset, the murmur of springs, the shade of pines and hemlocks, the flow of a mighty river, and the grand movement of nature in a mountain region, have rarely been so firmly seized and so felicitously conveyed to paper as in these letters from Idlewild.

Here is the scene in a nook of which Idlewild lies hid:—

"The Highland Terrace we speak of—ten miles square, and lying within the curve of this outstretched arm of mountains—has an average level of about one hundred and twenty feet above the river. It was early settled; and the rawness of first clearings having long ago disappeared, the well-distributed *second woods* are full grown, and stand, undisturbed by stumps, in park-like roundness and

maturity. The entire area of the Terrace contains several villages, and is divided up into cultivated farms, the walls and fences in good condition, the roads lined with trees, the orchards full, the houses and barns sufficiently hidden with foliage to be picturesque—the whole neighbourhood, in fact, within any driving distance, quite rid of the angularity and well-known ungracefulness of a newly-settled country. Though the Terrace is a ten-mile plain, however, its roads are remarkably varied and beautiful, from the *curious multiplicity of deep glens*. These are formed by the many streams which descend from the half-bowl of mountains inclosing the plain, and—their descent being rapid and sudden, and the river into which they empty being one or two hundred feet below the level of the country around—they have gradually worn beds much deeper than ordinary streams, and are, from this and the character of the soil, unusually picturesque. At every mile or so, in driving which way you will, you come to a sudden descent into a richly wooded vale—a bright, winding brook at bottom, and romantic recesses constantly tempting to loiter. In a long summer, and with perpetual driving over these ten-mile interlacings of wooded roads and glens, we daily found new scenery, and heard of beautiful spots, within reach and still unseen. From every little rise of the road, it must be remembered, the broad bosom of the Hudson is visible, with foreground variously combined and broken; and the lofty mountains (encircling just about as much scenery as the eye can compass for enjoyment), form an *ascending background and a near horizon* which are hardly surpassed in the world for boldness and beauty. To what degree sunsets and sunrises, clouds, moonlight, and storms, are aggrandized and embellished by this peculiar formation of country, any student and lover of nature will at once understand."

Through this region passes the electric wire: in which Mr. Willis points out a poetical element which we do not remember to have seen noticed in print, though we have often heard the music he refers to on quiet evenings in Switzerland.—

"*The news passes to music!* Whether country folks or city *belles* listen, the Æolian harps strung along upon the telegraph poles, play perpetually the same. To the strange beauty of this music (little noticed or valued) I have become quite wedded, in my life out of doors, for the last winter. It is more varied and beautiful than people think. You can always hear it—if not as you walk upon the road, at least by laying your ear against the poles—and, by selecting one that stands near a running stream, you may hear a duet of breeze and brook, a capricious out-singing of each other alternately by wind and water, that is as heavenly to muse by as a voluntary of Nature well could be. The poles differ very much, both in the quantity and quality of sound—partly, perhaps, from difference of size, or kind of wood, or tightness with which the wire is pressed by the leaning—but, by stopping in your walks, you get to know these with their variations, and you may thus choose your standing-place, and have music fainter or louder to suit your mood. There is one telegraph post, by a little bridge which crosses Idlewild Brook, where I have heard a great deal of waking-dream accompaniment. Stopping there with the glow of exercise in the blood, there seems a kind of fellowship in the instrument being, like oneself, independent of the wintry air. The invalid's nerves, too (as much more susceptible to pleasure as to pain), are ready for harmony in its most delicate caprices. What news was going past on those wires—what death or marriage, love or business, was being told in those varied vibrations—I did not lose romance by trying to guess or discriminate. The same tune seldom carries the same language to any two hearts. But there it was, murmuring day by day, in changeable contention with the brook, always somewhat audible when closely listened for, and often as loud as a love-whisper, and as changeably expressive, and I must own to have grown habituated to it as a luxury. How many good things we may have, in this mercenary world, after all, without paying for them! 'Telegraphing is expensive,' but here is its greatest advantage (per my use) and nothing to pay. I trust the stockholders will not take the hint, however, and

put sentry-boxes around the posts, to be let out for roadside operas!"

Mr. Willis, while sufficiently complimentary to his countrymen, for whom he writes, complains of one habit—not, we think, inherited from the old country—the idle disfiguring of trees.—

"With the opening season, the mechanics—Americans, of course—have resumed *their* labours on the unfinished building; and the marks of their passings in and out are very different. They board among our neighbours around, and either way from the public road, on the river or the village side, the approach is through a long avenue of fir-trees. You may track them (seeing any day whether they have gone to dinner or not) by the broken twigs of fresh-green tassels upon the ground. They never pass near one of my beautiful hemlocks or cedars without refreshing the memory of their American thumb and finger as to its being a free country—breaking off a branch, slapping it once or twice against the leg as they walk along, and throwing it away. If it were grass, and only missed in the crop—or if their 'bosses' milked them when they got home—I should say nothing. A trespass on pasture at least benefits the owner of the cow. But the disfiguring of trees, whose very graceful spray, from the ground up, is part of an outline of proportion—destroying what nothing can restore, from a mere wanton non-recognition of any man's property in more than the fuel of a tree—is a thumb-and-finger 4th of July which I must venture to wish somewhat abated. The young gentlemen, of course, intended no special annoyance to me. I would have spoken to them on the subject, but they would have understood it as an economy of fire-wood. The liberty they take is part of a national habit of mind. It is a pimple on the nose of the Republic."

As usual, Mr. Willis is civil to the ladies.—

"Thank Heaven, there is scarce such a thing as a woman insensible to the beauties of Nature. Men are—often I have had curious opportunity to observe the difference—living where I do. Fifty strangers a day, perhaps, ramble through this open-air gallery of pictures; and knowing every turning of a path where they should stop to see a landscape, I observe easily whether they are walking with Nature or with themselves only. One man out of three strolls past the different openings to the glen and river without turning his head; while, in the whole summer, I have scarce seen one lady pass them, who did not loiter, lift her hand to point into the distance, or make some exclamation of pleasure. Such love of beauty is a getting ready for Heaven, I more and more believe. Women are better than we."

Nothing in this exquisite record of country life is wild, or feverish, or theatrical. The book has the repose of Nature and the simplicity of an Old-World dramatic chronicle. We could quote columns without exhausting all the passages scored with an approving pencil. We will content ourselves with one more quotation.—

"Last night we had a bird-visit, which has furnished quite a day of poetry for the children. Writing in my own room at a late hour, I was interrupted by a sudden flutter of wings against the window, which, at first, I thought an accident of some bird startled from her nest and bewildered by the light. I looked out, but could see nothing. The night was dark and stormy; and wishing the flutterer safe from all perils of foxes and tree-toads, I resumed my pen. In a few minutes the attempt to enter was made again, and repeated upon the larger window of the adjoining room, in which slept my infant in her cradle. The nurse raised the lattice, and in came the stranger—circling around and around the cradle, and at last alighting upon the curtains of the bed—a little grey harbinger of spring, who sat and looked about her with the confidence of one sure of a welcome. She alighted presently on the ottoman in the window, and was easily caught by the hand and put under an open-braided basket, to be safe for the night from the unwinged familiars of the house; but, oh, the interest of the story and the bird together, for the children in the morning! Could any mortal persuade *them* that there was no meaning in her visit? They watched the little feathered bosom with its throb of watchfulness, and mused upon its midnight coming

with child-wonder; and it is laid away for life among their vague thoughts of things supernatural."

In his Preface, in reply to the worthy gentleman who bids him turn aside and try another line, Mr. Willis hints that 'Out-doors at Idlewild' may be his last book. We trust not, for the sake of those who love easy, graceful, and poetic prose. In this volume Mr. Willis appears to have opened a finer lode in the hill-side than he has lately mined in:—we cannot think the lode is yet exhausted.

Memoirs of the Court and Cabinets of George the Third, from Original Family Documents. By the Duke of Buckingham and Chandos, K.G. Vols. III. and IV.

[Second Notice.]

AMONG the subjects mooted in these volumes is the question of the political relationship between Mr. Pitt and his successor (Addington) after the Peace of Amiens. The Editor contends that the account of Addington's position given in Dean Pellet's 'Life of Lord Sidmouth' cannot be relied upon. He reminds us, also, of the admission by Dean Pellet, that Addington had destroyed a considerable portion of his correspondence. The main point at issue is whether Pitt looked upon Addington as a mere "warming-pan," or whether the latter stood upon an independent basis. We cannot entirely coincide with the Editor of these papers in thinking that this publication settles the question finally. We have no direct assertions here from Mr. Pitt himself, and many of the statements of third parties go to show that he was "apparently in great uncertainty as to what course he should pursue after 1802. Addington, of course, fancied himself upon sure ground, for the intrusion of the Catholic Question had weakened Pitt's Court connexion; and these letters, we think, indicate that if Pitt's life had been prolonged he could scarcely have regained his previous autocracy in Parliament.

So complicated was the relationship between the various parties of the Court, Pitt, Addington, and the Grenvilles, that we cannot devote adequate space to its elucidation, and we cannot forget that we are still without "the Pitt Papers." In the meanwhile, the long, though rather dry, narrative drawn up by Lord Grenville is of considerable value. Its first paragraph is remarkable:—

"1803.

"About the 21st or 22nd of March, Lord Melville came down to Mr. Pitt at Walmer, and delivered to him a sort of message from Mr. Addington, which Lord Melville said he had undertaken to convey, without adding to it any comment or opinion of his own. This message, after abundant professions of friendship, contained in substance an offer that, if Mr. Pitt was willing to give to the country, in the present arduous crisis, the benefit of his services, Mr. Addington would agree that Mr. Pitt and himself should each of them be named one of the Secretaries of State (N.B. I have since heard that, as an alternative, Mr. Pitt was to be Chancellor of the Exchequer), with a third person, agreeable to Mr. Pitt, First Lord of the Treasury, which person, Lord Melville afterwards explained to Mr. Pitt, was proposed to be Lord Chatham. Mr. Pitt treated this extravagant idea as it deserved."

It was certainly an extraordinary thing to propose such a man as the second Earl of Chatham for a Prime Minister of England! Seldom have we read or heard of such deference to "a great name." He had no parliamentary capacity, and his addiction to long sleep in the morning got him the nickname of "the late Lord Chatham."

It appears that the Grenvilles then urged upon Pitt the propriety of a general coalition,—and they seemed to have been much annoyed at his rejection of the proposal. His difficulties arose

from the "Catholic Question," as he would not consent to annoy the King, and we surmise, also, that he wished to ascertain the feelings of the people of England upon the "Catholic Claims." The latter was a subject on which "the Grenvilles" were consistent,—but they do not seem to have thoroughly understood both the English and Irish difficulties of the question. In 1801, Lord Grenville wrote to the Marquis of Buckingham:—

"We have often talked over some of the measures to be taken with that view. The removal of the remaining disqualifications from Parliament, and from office, seemed to me to be one indispensable feature of such a system. Not so much from any positive and immediate effect which that removal would produce—for the number of Catholics whom it would introduce into Parliament, or into office, must at first be very small—but because it was the best pledge that the United Parliament could give of its general good disposition towards the Catholic body, and because it was naturally regarded by the clergy as a preliminary to their acceptance of the sort of provision which we wished to make for them, in order to render them more respectable in station, more independent of their flocks, and better disposed to the support of the established Government. For if they alone had accepted this favour, leaving to the body of the laity the feeling of having been sacrificed by their clergy, for the sake of temporal emolument, it is easy to see they must lose all influence over their people."

That a provision for the Catholic Clergy was contemplated by Mr. Pitt, we know already from the "Castlereagh Papers," but it does not seem to have entered into the consideration of Ministers, whether their flocks would have allowed the Irish priests to have any connexion with Government. The English statesmen of the Pitt school were anxious to imperialize the Irish priesthood, while the Irish Roman Catholics insisted on keeping them "nationalized." The "Veto Question" for years prevented the concession of the Catholic claims. Recollecting the manner in which the subject was carried in 1829, the conclusion of the following passage is striking. Lord Grenville writes in 1808:—

"Lord Grey is still very anxious for some public declaration on our part, that we will not bring the subject forward without satisfaction on this point; but I can give no such pledge. They have marred their own cause, but that of the country may be wrapped up in it, and if I could unite Ireland in heart and affection with England, I should not care one farthing (comparatively speaking,) how such blockheads as Milner and his colleagues were or were not appointed. Influence, it is clear, they have hardly any now, and in that case they would have none. All this I know, that the good people of England will not feel till the danger is at the door, and perhaps till all remedy is too late, and then they will run headlong the other way, as they did in 1782, and never stop or strain at such trifles as these."

With respect to the public characters of the period of which these two volumes treat, we think that Canning's memory is most damaged. In 1800 Thomas Grenville writes:—

"Canning was as usual—that is to say, with great indications of talents for speaking, but with a want of judgment and an affected vehemence, which told more than one should expect against the merit of his arguments and of his language."

The charge of "want of judgment" is supported in several of the letters. Other accusations, also, are insinuated against him. On the mode in which Canning and his colleagues behaved to Lord Castlereagh, Thomas Grenville thus writes in 1809:—

"That a whole cabinet of gentlemen should consent for six months together to sit in amicable and confidential intercourse with Castlereagh, while they had mutually bound themselves to each other to require his removal, from their sense of his incapacity, is a scene, as far as anything I know and hope, unlike anything that has happened in our history; but if, in this point of view, they appear to have

forgot all the duties of social intercourse, and all the obligations of gentlemen, how will they stand in the duties which they owe to their country, after it is manifested that though they were all agreed in the month of March as to the incapacity of Castlereagh to conduct the war, they suffered him to continue to direct that important department, and to manage the whole course of the campaign till the month of October, for six months together, after they and their master had been agreed upon the absolute necessity of his removal from their own sense of his incapacity. This is all, in my eyes, quite horrible."

And elsewhere he says:—

"What do you think of Canning, four or five days ago only, naming B. Frere Minister Plenipotentiary to the Junta, in Lord Wellesley's absence? I have not all the admiration which G. Rose professes for 'that fine young man,' nor do I like him a bit better for the road which he has chosen to take out of office into Opposition, after six months of political intrigue against Lord Castlereagh."

The English people have in all ages liked what is open and bold. The firmness with which Lord Castlereagh confronted Canning raised him in public estimation even after the disaster of Walcheren.

Not the least curious part of the correspondence in these volumes is the long series of letters from a secret correspondent. They are addressed to the Marquis of Buckingham, and were evidently penned by a practised writer, intimate with several persons of distinction, and studiously concealing the use to which he was putting his private knowledge. We think that the Editor ought to have taken the trouble to investigate their authorship. They are thus introduced:—

"The communications now about to be printed belong to that extremely confidential correspondence that acquainted the Marquis of Buckingham with some of the most secret transactions of state."

The first letter thus runs:—

"Sept. 17, 1808.

"The public indignation this day is at its height. Since the publication of the Gazette, the people seem quite wild. In the city, the discontent and murmur is not in the least restrained, and I must suppose that immediate inquiry must be made into the causes of what is universally considered a great national calamity. To do the Ministers justice, their anxiety and misery, is not second to that which the other classes of people feel. I trust your Lordship does not disapprove of what has been done on our part to put all that in a fair point of view to the world. The black edge has had a wonderful effect, and above five hundred has been sold additional. I did not think it justifiable or wise, in the first instance, to charge this calamity on government, but confine it either to the folly, the madness, or the wickedness of those concerned immediately. The following circumstance I consider very mysterious. Yesterday I received a most kind note from Sydenham, conveying Lord Wellesley's thanks to me for the account of the campaign in Portugal, which he said was very well done, and gave the greatest satisfaction to the friends of Sir Arthur."

Certainly there never was a connexion in politics which had so many secret communications as the Grenvilles. They systematically waged their political war with the help of rotten boroughs and pamphleteers. The writer of the foregoing letter, whose name is not given here, (though, obviously, it must have been known to Lord Buckingham) thus commences a letter.—

"Camberwell, April 25, 1810.

"Severe fits of illness have so much interfered with the fettered opportunities my circumstances afford of hearing anything which might interest your Lordship, that I have forborne troubling you for some time back; accident, however, threw me in the way of my friend yesterday, whose conversation upon the whole, gave me some desirable information."

It is possible that he might have been either a retired journalist or a superannuated Treasury clerk. Another letter thus begins.—

"London, Dec. 11, 1809.

"In the course of yesterday (the only day, and

then with the utmost precaution, that I can see any person), I had ample means afforded me to verify, as far as *ex parte* statements can do, all I wrote already to your Lordship. I there mentioned a communication of Wellesley to Canning, from Spain on the 7th of October. I since saw one of the 30th, the day on which Lord Wellesley wrote home his acquiescence to the joining the present government."

Observe "with the utmost precaution that I can see any person." He was evidently making an underhand use of his knowledge. Again, he writes to Lord Buckingham.—

"Having the means of sending these lines to your Lordship by a perfectly safe hand, I write, as I think in this agitated moment, the subject may not be uninteresting or useless."

"—A perfectly safe hand" indicating still the desire of concealment. He shows us how well acquainted he was with what was going on behind the scenes, in this very letter.—

"The leanings of Lord Wellesley are all towards Castlereagh. There exists between them at present the most perfect understanding—a knot which is drawn closer by the agency of one of the Seymours (Lord George, I believe), who is a brother commissioner, and great friend of Mr. Sydenham's, and who is Lord Castlereagh's uncle, and prime agent in this affair. The great difficulty would arise in taking both these personages into the same Cabinet after what has passed, aggravated by Cooke's next-avowed pamphlet, entitled 'An Answer to the Quarterly Review, &c.,' published by Stockdale, in Pall-Mall, and which, if your Lordship have not read, I request you will; and which, coupled with the information I already gave your Lordship respecting his conduct with regard to Lord Wellesley, shows this gentleman's double intrigue in an integral and entire point of view."

And the correspondence abounds with proofs of his inner knowledge, as it has since been confirmed. In one place he says (*the italics are our own*):—

"When your Lordship will read over what I have written, I trust to your kindness to make allowances for the manner in which I have gone into this long detail; it has been written *under many circumstances of disquietude, uneasiness, and difficulty*, but for the matter, as far as it is connected with facts, I can vouch for its truth to the most minute particular, in the most serious manner."

Elsewhere, he says, "I have seen extracts from the last confidential letters of Lord Wellington." His account of the quarrel between Castlereagh and Canning is excellently penned, and his picture of the Marquess Wellesley is very striking.—

"For the rest, Lord Wellesley complains that he has no weight whatever in Council—that there is nothing doing there which marks energy or activity—that the affairs of the country are quite at a standstill, and are likely to remain so; and that so little is his private interest in any of the departments, that since his accession to office he has not been able to make an exciseman. This is more particularly *à moi*. Add to all this, that he hates, despises, and is out of friendship, or even intimacy, with every one of his colleagues at this moment. Such is the public picture of Lord Wellesley—his private can scarcely be filled up with anything more comfortable. Such is the melancholy career of a man of the greatest abilities, and, I firmly believe, of a tender and sensible heart. He expressed himself, with almost tears in his eyes, of the reception your Lordship gave him in the House of Lords."

There are several marks to identify this writer, who acted under a mask: first, he knew much of Lord Wellesley, and had access to Lord Wellington's letters; secondly, the black edge to which he alludes; thirdly, the residence, "Camberwell." There were certain letters which then appeared in the public prints, and were, as Mr. Larpet records in his 'Journal,' much talked of at head-quarters in the Peninsula,—and they are alluded to also in Hazlitt's 'Political Essays.' Whether Lord Buckingham's secret correspondent was the author

of those letters we shall not discuss. The inquiry, however, will have to be conducted by any investigator searching for materials for the history of those days, and making use of this curious and valuable correspondence.

A Tar of the Last War: being the Services and Anecdotes of Sir Charles Richardson, K.C.B. By the Rev. C. E. Armstrong. Longman & Co.

THE biographer, in this case, is like his hero,—bold, merry and rough, although in holy orders. He tells his sea-tale like a seaman, storing up the anecdotes of the quarter-deck, and even preserving the light incidents of midshipman adventure. Charles Richardson, who died in 1850, aged eighty-two, was in good truth a Tar of the Last War. He took service on board the *Vestal*, in 1787,—was a mate in the *Royal George*,—fought on the glorious First of June, at Camperdown, at Alexandria, in the Basque Roads, and in the Walcheren Expedition;—and was promoted, when past service, to the rank of Vice-Admiral. In relating the brilliant vicissitudes of his career, Mr. Armstrong parenthetically imputes every lost battle and every defeated enterprise to Ministerial corruption or incapacity.

Of the “anecdotes” promised on the title-page, few are very striking, and, if any are new, they resemble the old so closely as to make their originality doubtful. In illustration of the opinion he maintains with respect to the Mutiny at the Nore, Mr. Armstrong repeats several instances of tyranny in the grand cabin.—

“Another captain at this period had, by his cruelty, so exasperated his crew, that although not deficient in courage, he dare not engage any enemy, well knowing that in the heat of battle some injured person would be revenged upon him. He used every precaution, therefore, to keep out of action; but suddenly one morning, on a mist clearing up, he found himself within pistol-shot of an inferior frigate, and he was obliged to fight. Knowing his certain fate, he told a friend to take warning by his approaching end, and, too late, expressed his sorrow for past cruelties. Not ten minutes after the first broadside he fell, pierced with a ball from his own marines; but no individual could be pointed out, although all knew from whence the bullet came that laid him low.”

Another story relates to the State trials after the Dublin riots of 1803. He reminds us of the Irish logician who maintained that two particular fields were of the same size, but, if there was any difference, one was larger than the other. A counsel, equally clear in his perception, was cross-examining a soldier.—

“Witness: ‘We were going up the street when we met three armed rebels with green cockades; one we shot, another we hanged, and the third we flogged and made a guide of!’—Counsel: ‘Which did you make a guide of?’—Witness: ‘The prisoner there, that was neither shot nor hanged.’”

The account of Admiral Richardson’s retirement, in which he used to disturb Bishop Thirlwall, by firing his trophy guns captured at Flushing, is highly characteristic. A novel could not contain two more picturesque veterans than Richardson and his coxswain on field-days.—

“The captain had a favourite coxswain, named ‘Bob,’ who had retired from the service with a good pension and a wooden leg. He always spent some months of the year with his old commander, whose life had been saved, at the battle of Alexandria, by Bob’s cutlass warding off certain death. The 1st of June, Lord Howe’s victory, Camperdown on the 11th of October, and the other days which commemorated triumphs in which Sir Charles took a part, were observed with due honour. The admiral appeared in full uniform; the Flushing cannon were polished up, and the flag-staff in front of the house

was covered with trophies taken from the enemy, while Bob thundered forth his innocent broadsides at the church-steeple. The old sailor was an inimitable pattern of obedience to his commanding officer, and watched his countenance for a kind look as much as a faithful dog does that of his master. He never contradicted the admiral, but had always the same ready answer—‘Yes, sir’—to whatever was said to him, although the reply was often so misplaced as to call forth the ire of the person to whom it was given. He had raised and rigged out a high mast, and half-a-dozen times in the day he might be seen hurrying up the rope-ladders, making signals, and altering the flag, at the stentorian word of command from his captain. The next minute he came down like a cat, and stumped away to the battery, where the guns came in for a share of his attention, since he considered himself part owner, from being one of the captors.”

But the scene was drawing towards its close. The old coxswain was missed from the village, and the Admiral cut down a favourite cherry-tree, that it might be sawed into planks for his own coffin. He selected a spot for his grave, and indicated it to his friend and biographer, and, sixty-three years after entering the service, died of influenza.

The Landing at Cape Anne; or, the Charter of the First Permanent Colony on the Territory of the Massachusetts Company. Now discovered and first published from the Original Manuscript. With an Inquiry into its Authority, and a History of the Colony. 1624—1628. Roger Conant, Governor. By John Wingate Thornton. Boston, Gould & Lincoln.

THE mere antiquary is the same, we fear, all over the world. In England or in America, he is a dull tedious creature, a dresser-up of small “discoveries” in a garment of great words. Here is a plain matter, and lying within narrow bounds, but chancing to fall into the hands of an American gentleman who is fully entitled to take rank with the most prominent of the worthies of our Society of Antiquaries in Somerset House, it is put forth in the manner customary with all the tribe; that is, not over plainly, and, of course, grandiloquently.

According to Mr. Thornton, and we dare say he is right, although he does not quote any authority for his assertion, James the First granted a charter for the colonization of New England in 1620 or 1621. Shortly afterwards, twenty gentlemen, in whom the interest in that charter vested, determined to make partition of the lands granted to them, and drew lots for their shares. One share fell to Edmund Lord Sheffield, afterwards created by Charles the First the first Earl of Mulgrave. On the 1st January 1623-4, Lord Sheffield granted to Robert Cushman and Edward Winslow for themselves and their associates—they being the undertakers of a plantation in New England—a tract of land in that country called Cape Anne, with the use of the bay of Cape Anne, and liberty to “fish, fowl, hunt and hawk,” together with five hundred acres of land to be employed as the site of a town and for the maintenance of ministers and schools, and thirty more acres for every person, young or old, who, “being the associates or servants of the undertakers,” should go and dwell at Cape Anne within the next seven years. The grant is subject to a perpetual quit-rent of twelve pence for every thirty acres, and Lord Sheffield covenanted that as soon as the quantity of land to be taken by the grantees was precisely ascertained, he would grant them a more particular conveyance of all his rights. He also covenanted to procure for the grantees Letters of Incorporation, empowering them to make laws for the government of the persons resident in the colony, and that in the

mean time the grantees, “their heirs, associates and assigns, by the consent of the greater part of them,” should have power to make such laws.

This is the document now “discovered and first published.” Mr. Thornton alleges that “it displays a political wisdom superior to that of Locke or any other theorist. No elaborate system was created.” In very surprising English, he continues:—

“A few concise but comprehensive sentences, embodied the essentials of a free government. The necessities of society creates laws, suited to its position and character in its primitive condition, few and simple, and in its progress becoming more complicated and minute; and thus the charter wisely left the polity of the colony to be developed by and in itself. It establishes, as the basis of the body politic, institutions whose design and legitimate fruits are intelligence and virtue; it secures to all, by fundamental laws, the opportunity of instruction, and of education in the principles of morality and religion; and, thus prepared for the rights and duties of Christian freemen, it guarantees to them the exercise of those rights and duties in self-legislation, and the election of their own officers and magistrates.”

This, we venture to say, is just so much antiquarian eloquence thrown away. Lord Sheffield’s grant gave a present absolute power of legislation to the company of planters of New England, with a future prospect of a royal charter which would in all probability have converted them into a close corporation. Mr. Thornton’s dreams of intended popular government, and his preference by comparison of this charter over the political wisdom of Locke is a mere mistake. This document, so far as it was legal, established an absolute irresponsible despotism in the undertakers of the plantation of New England, which would have been further rivetted and confirmed by such a charter as could have been obtained from James the First.

The anxiety of inquirers in the United States to investigate the origin of the settlements made by our forefathers in their country is highly commendable. Such settlements are the foundation of their history, and constitute a curious and important chapter in ours. Any documentary addition to the historical materials connected with those settlements is valuable; but it is desirable that when they turn up they should fall into the hands of gentlemen who will not only investigate all the circumstances connected with them, but will also put upon them a proper construction. Mr. Thornton has been very anxious to do the former; in the latter we think he has been a little mistaken. He has probably been led astray by his love of liberty and his anxiety to discover its earliest footmarks in New England.

Lives of the Princesses of England, from the Norman Conquest. By Mary Anne Everett Green. Vol. VI. Hurst & Blackett.

THE volume before us, which completes the work, details the concluding scenes of Elizabeth of Bohemia’s chequered life and the scarcely less eventful history of Charles the First’s daughters. In her fifth volume, Mrs. Green traced the happy youth and prosperous fortunes of “the Queen of Hearts” up to her splendid coronation, and then the misfortunes, which so soon followed, and which reached their climax when an exile, penniless and a widow, she sought the protection of the United Provinces for herself and her large family of orphans. At Leyden, she continued some years, and then removed to the Hague, where her Court, although presenting little of royal splendour, continued to be visited by many an illustrious traveller. Misfortune, however, still pursued her. Her fourth son, Edward, much against her will, publicly abjured

Protestantism at Paris; and, a few years after, her second daughter, Louise, eloped from her, at the instigation of Henrietta Maria, and, the following year, took the white veil at the Abbey of Maubuisson, where she ultimately became abbess. Even the restoration of the Palatinate to her eldest son increased the troubles of her later days, for Charles Louis refused her the pecuniary assistance which she was entitled to demand from him, and she became almost reduced to pauperism.

On the Restoration, Elizabeth's prosperity brightened. A vote of 10,000*l.*, soon followed by a similar donation, relieved her pressing difficulties, and placed her in the way of effecting her dearest wish, a visit to England. After some delays, in May, 1661, she again reached the shores of her country, from which she had been absent nearly half a century. And in England she died, after a visit of a few months, and was buried, with her family, in Westminster Abbey. From the correspondence in the possession of Lord Craven, Mrs. Green disproves the tradition that Elizabeth was privately married to her faithful friend and adviser, Lord Craven. "The present Earl is of opinion, that no such marriage took place, since neither family documents nor traditions support the notion; and it is never once alluded to in the extant correspondence of the day"; indeed, "the tone of the confidential correspondence between the Queen and the Earl is in itself convincing that no connexion more tender than that of manly friendship on one side and grateful regard on the other existed between them."

The next "princess of England" is Mary, the eldest daughter of Charles the First, who was affianced, when only ten years old, to Prince William of Orange, and whose claim to notice is that of having been the mother of our third William. On her arrival in Holland, the wise superintendence of her aunt, the Queen of Bohemia, did much to supply the defects of her very neglected education; but as she grew older, the petulant wilfulness of her mother and the true Stuart obstinacy of her father became but too apparent, notwithstanding her general amiability. Over Prince William her influence was singularly injurious. Nursed in all the extravagant notions of regality which prevailed at Whitehall, Mary was constantly urging on her young husband a line of conduct which could not but be most distasteful to a people who had nobly won their own liberties, and who viewed their "Statholder" as the elected head of a veritable republic. There seems little doubt that to the mischievous counsels of Mary, these violent measures of William on his accession to the Stadtholdership may be attributed, which but for his untimely death might have plunged the United Provinces into a civil war. But most unexpectedly was the life of this young prince closed in his twenty-fifth year by the small-pox, in November, 1650.

The situation of Mary, then but nineteen years old, and daily expecting to become a mother, was most distressing; and the sternest burghers of Amsterdam, although they publicly rejoiced at the removal of him who had menaced their liberties, could not but feel for her sorrows. Only eight days after her husband's death, Mary gave birth to a son; and with the most eager joy was the infant welcomed by the mother's relatives,—little aware how in after years he would humble the pride of France, and chase the very monarch from his throne, who now, an exiled youth at his sister's Court, offered to carry his young nephew to his baptism. The differences which took place even at this, his first public appearance, were prophetic, as Mrs. Green truly says of the future career of the "great Nassau." While his grand-

mother, Amelia of Orange, naturally demanded that he should bear the name of both father and grandfather, Mary perversely clung to the ominous name of Charles. Amelia's suggestion was eventually acceded to: but the republican party noticed with angry feelings that the child was robed in regal ermine, and that thirty mourning coaches, each drawn by six horses, formed the procession, while halberdiers rode beside the state coach.

The question whether the infant prince should be at once elected to the offices held by his late father now awakened public attention. The Princes of the House of Orange had hitherto succeeded, but then they had been bold, brave men; but here was an infant on whom it seemed ridiculous to confer either the office of "Statholder" or of "Captain General." Meanwhile, the grandmother and the young mother quarrelled bitterly for the post of guardian to the young prince; and when, chiefly by intrigue, Mary obtained the office, the republican party openly expressed their vexation. Eventually the States-General decided that the tutelage should be divided between the mother and the grandmother; while the election of the infant to the Stadtholdership was postponed. From henceforth, Mary, with all her father's stubbornness and *hauteur*, seems to have determined to render herself as distasteful as possible to the people among whom she resided. She appointed a solemn fast for the 30th of January, which the States-General prohibited; she protected the exiled Royalists, and entered deeply into their projects; but what perhaps was more distasteful than all besides to the sober Dutch was the eager love of gaiety and amusement which Mary, now in constant intercourse with her brother Charles, began to display.

She paid a visit to her mother at Paris, which, as it was undertaken in the depth of the winter, gave rise to many surmises. From one of her letters it would, however, seem that it was "lest all the balls and masques should be over." The marked honours which were paid her on this journey must have yet further irritated her subjects, for they were paid not to the Princess of Orange, but to the daughter of Charles the First.—

"During her brief and chequered existence, Mary had never till now shared in court festivities in a scale of brilliancy comparable with the present; her impressions of them are partially given in a letter to her brother, which still exists in the original; the external part of the sheet is much worn and soiled, for which she offers an apology:—'I have seen the masque again, and in the entry of the performances received another present, which was a petticoat of cloth of silver, embroidered with Spanish leather, which is very fine and very extraordinary; for the first present, I make no doubt but you have heard of it; therefore I say nothing of it. I was, since that, at a supper at the Chancellor's, where the king and queen and all the court were, which was really extremely fine. Two nights ago the king came here in masquerade, and others, and danced here. Monday next there is a little ball at the Louvre, where I must dance; judge, therefore, in what pain I shall be. This is all I have to say, for I have been this day at the Carmelites, and, to confess the truth, am a little weary. I have forgot for three posts to send you verses of my uncle's making, which pray pardon me for, and for the dirtiness of the paper, which is become so with wearing it so long in my pocket.'"

The splendours of the French Court and the dirty letter-paper are in curious contrast. On her return she visited Charles, who now resided at Bruges, and gave yet further offence by her tacit sanction, though not participation in, the wild dissipation of that miscellaneous assemblage which formed his Court there. At length, the restoration more than fulfilled the warmest hopes of his sister. On Charles's visit to the Hague he was received with royal honours.—

"The royal family dined in public daily, at a table formed like the two sides of a triangle, at the apex of which sat the king, with the Queen of Bohemia on his right hand, and the Princess Mary on his left. By her side was her young son, whenever she permitted him to be present, or, in his absence, one of her brothers, the other occupying the vacant place by the Queen of Bohemia. A band of music was regularly in attendance, and after dinner healths were drunk, at which Charles never forgot to propose that of the States-General, and sometimes condescended to drink to each separate province. The evenings were divided by the king between the Queen of Bohemia, the princess royal, and the princess-dowager, at one or other of whose residences a brilliant and cheerful reunion generally took place; but he always returned with his sister to supper, and spent with her most of his later evening hours: it was noted that her influence over him was stronger than that of any of his ministers. Could the veil of the future have been raised, with what strange interest would some of the members of the royal circle have looked upon each other. There, by the side of the gay monarch, the Duke of York, then in the prime of manhood, might be seen with the little sedate, observant, thoughtful Prince of Orange, both successors to his throne; whilst in the Queen of Bohemia and in Duke George William of Lunenburg Zell would have been recognized the ancestors of a dynasty destined to sway the sceptre forfeited by the Stuart line through generations yet unborn! Nor should we omit from our *tableau* the comely figure of Anne Hyde, still to all appearance the unobtrusive maid of honour to the princess royal, but already plighted in private to the Duke of York, and the future mother of two queens of England.

In the following September Mary prepared to visit England, and after taking an affectionate farewell of her son, now ten years old, and whom the States-General she had reason to hope would instal in his father's dignities as soon as he should be of age, she set sail from Helvoetsluys. But never again were the mother and child to meet. After a happy meeting with her brothers and mother, Mary, ere three months had passed, fell dangerously ill. It was the dreaded small-pox; and as in the case of the Duke of Gloucester the Court doctors had been censured for not bleeding him, they "now fell into the contrary extreme, and bled the Princess too profusely." Eventually her strength succumbed, and on the 24th of December she expired, in the twenty-ninth year of her age. A stately, though private, funeral was appointed by the King; but, true to his character, little sorrow did Charles express for the sister who had lavished money, influence, and affection so disinterestedly in his cause,—and only two months after her death Lord Craven writes, "the Princess is as much forgotten here as if she had never been."

The next chapter gives a short biography of the young Princess Elizabeth; and in it Mrs. Green incontrovertibly disproves the assertions of the Royalist writers, that she or her brother were treated with any harshness by the Parliament, further than keeping them under its surveillance. We find that more care was bestowed upon Elizabeth's education than was bestowed upon that of her sisters; that while Mary could not write even English correctly, and never exhibited any taste for literature, and while her younger sister Henrietta's education was of the most frivolous kind, Elizabeth was placed under the care of one of the most educated women of the age, and became, even in childhood, acquainted both with Greek and Hebrew. In 1645, Elizabeth and her brother were transferred from the custody of the Countess of Dorset to that of the Earl and Countess of Northumberland, and some time after to the Countess of Leicester, at Penshurst, where the two young captives found fitting playfellows among her numerous family,—one of them, Algernon Sydney, little dreaming that his life in after years would be sacrificed by their brother.

But Elizabeth's health, which had always been delicate, never seems to have recovered the shock of her father's death. On her removal to Carisbrooke, as is well known, she rapidly declined; and just as the Parliament had granted her petition, that she should be allowed to join her sister in Holland, she died of an attack of intermittent fever on September 8, 1650.

In closing this last review of the work, we cannot finally part from Mrs. Green without again bearing our testimony to the careful research and diligent examination of authorities which each volume displays. Along the line of six hundred years much incidental light has been thrown, not only on English but on Continental history; and as a valuable contribution towards both we recommend these volumes.

A Letter on the Present Condition and Future Prospects of the Society of Antiquaries of London; addressed to the Right Hon. the Earl Stanhope, President of that Society. By the Rev. Henry Christmas, M.A. &c. Partridge, Oakey & Co.

Mr. Christmas inserted an article on the affairs of the Society of Antiquaries, in a periodical of small circulation, of which he is the editor; and now thriftily makes what he had thus written do double duty, by abandoning the editorial character, sinking the periodical, and reprinting his paper in the shape of a Letter to Earl Stanhope. The anonymous article is in this way brought in to help that earnest appeal to fame which Mr. Christmas is making in particular coloured placards at all the street-corners of the metropolis.

The Society of Antiquaries has just gone through the phase of reducing its old exorbitant payments, and altering its laws so as to bring them more into conformity with modern notions. The latter most important work was effected by a committee elected at a special general meeting out of the various parties in the Society. This is therefore a new era in the history of the Society; and we are told that there are evidences of considerable improvements likely to result from the recent changes; that the last and present parts of the *Archæologia* are greatly in advance in point of Art and general character; that the Executive Committee—a new body created under the recent alterations—meets weekly and works diligently; that a local agency has been established in many parts of the United Kingdom; that steps are being taken for carrying out such agency generally, and for the circulation of information which may check the prevalent practice of destroying ancient monuments under the pretence of restoration. Mr. Christmas tells us nothing of this work. Probably he knows nothing about it, for we do not find that he has ever before exhibited any interest in the Society. He has never contributed to its Transactions, nor attended its meetings more frequently than his namesake, who, as the proverb tells us, comes only once a year. All he does in this Letter is to rake up old grievances, culled out of pamphlets published before the recent changes, and with special reference to other questions,—pamphlets of which Mr. Christmas knows so little that he cannot spell the name of the writer of the one he quotes most frequently.

Upon the foundation of the old grievances greatly distorted, the reverend author proposes various new organic changes, the gist of which will be found in his desire to reverse the existing practice of the Society on two important points. At present the Fellows are elected freely, whilst the Council is elected under the recommendation of a house-list. Mr. Christmas proposes that there should be a house-list on the election of Fellows; but that the Council elec-

tion should be open to votes by proxy and by post.

Whether the Fellows will feel disposed to adopt Mr. Christmas's recommendations we cannot tell; but the persons on whom rests the responsibility of carrying out the new laws should accept his Letter as a warning and a call to activity. The agency of the local secretaries should at once be carried out in every possible direction; vice-presidents who cannot attend to their duties should be taught to feel the obligation which rests upon them to resign, without driving the Society to omit their names; endeavours should be made to call into active use, on behalf of the Society, some of the many competent persons who have lately been added to the Society; greater freedom of discussion should be invited at the meetings; and greater care should be taken to appoint on the Council only such persons as are well known to be competent. The formation of a house-list is a dangerous as well as a most responsible office; and if it be not exercised with a single eye to secure the services of the best men, it will and ought soon to come to an end. The power of sacrificing the Society to any feeling—good or bad—ought not to exist.

An Introduction to the Study of Jurisprudence; being a Translation of the General Part of Thibaut's 'System des Pandekten Rechts.' With Notes and Illustrations, by N. Lindley Maxwell.

THE "glorious uncertainty of the law" is one of the standing grievances of Englishmen. Like many of their grievances, it exists more in fancy than in reality; it is not so much that Law is uncertain, as that Facts differ. It has been said, if laws be good, why be for ever changing them? Simply, to keep them good. They *must* be changed in some of their details as society progresses; and the Medes and Persians remained a fixedly foolish people because their code was rendered unsusceptible of change. Half the injustice which men now complain of as worked by the law is, in some instances at least, to be traced to the circumstance of that law being—perhaps a legacy from the old Roman Code—no longer applicable to our uses, an inheritance to be most devoutly renounced. We could wish that these remnants of the past had as completely disappeared as "Mr. Justice Clement's House, in Coleman Street," immortalized by old Ben, or that parlour in Capt. Jackson's cottage wherein Glover was traditionally said by Lamb's magnificent friend to have written the 'Leonidas,' which the Captain had never read.

That our laws are many and complicated, is a fact not to be denied. But this is more the fault of man than of the law. If man would properly educate and discipline himself and his children, the Penal Code would soon become a relic of the past, belonging to history. Diogenes himself, wretched and unwashed Cynic as he was, showed that from his tub he had not watched the tribunal for nothing when he declared, that if the laws be bad the social man is rendered more wicked and unhappy than the natural man. No doubt of it! Man is inclined to immorality; and, as Horace sneeringly asked, "What are laws without morals?"—a query which Montesquieu can scarcely be said to have answered when he launched his great maxim, that we should not effect by force of law what might be effected by power of morals. The most absolutely inclined of monarchs have not been behind the sages and philosophers in uttering their little apophthegms on the law and its application. The sovereign comment is generally characteristic of the utterer. The great Frederick had a stereotyped

phrase, to the commonplace effect that "those laws are the best which are most conformable to equity." It was, on the other hand, the maxim of Francis the First, "That sovereigns command the people, and the laws command the sovereign." "What you call natural law," said the Emperor Napoleon, "is only the law of interest and reason." If we had space for it, we might amusingly show how the above triad of "foremost men" violated the precepts of which they were the authors. Suffice it to say, that they justified the legal critic who declared that the laws are generally violated most by those who put them most rigorously in execution.

We may observe, however, that Pythagoras will be found at issue with the Royal Prussian touching the necessity of making law conformable to equity. "The laws of justice," said he, "are to be delivered to those who are a people. The laws of equity to those who are not." It must be allowed that the dictum of the Hindu-Greek is the rule at least of our Court of Chancery. The system in force there treats suitors as if they were simple savages whom a civilized Chancery might, under solemn phrases, cudgel, despoil, and lecture at its pleasure. Our laws of justice, as Pythagoras calls them, decree a half-year's deprivation of liberty against a hungry man who steals a turnip. The laws of equity will for half-a-century despoil the owner of the land on which the turnips grow. Nay, at the end of the period of litigation, the proprietor may find that the land has melted from him under the fiery heat of costs. He is then really in the condition of the puzzled Irish plaintiff, who remarked, with a smile and a tear, "Faith! here I am, the proprietor of a large estate, and I am kept out of it by the rightful owner." However, the old Chancery system is improving in a Chancery-like way—very slowly. Mr. Dickens's celebrated "fog" still clings thick, heavy, and deadly about the Court of the Chancellor. As King Stanislas once said—for he, too, had his golden dictum upon the Bar—"Natural equity is a better piece of merchandise than all the boasted equity of your law." Stanislas vaunted his knowledge of the law. In this case, the boast reminds one of the saying of the Wise Son of Sirach:—"The knowledge of wickedness is not wisdom." Such knowledge—that of the law, we mean—has often been smallest in some of its professors, and even in some of the more solemn individuals who have to administer it. We have in our mind's eye more than one Judge who has given opinions as elaborately arrived at as any ever recorded, and whom it would have well become to say, with Pliny, "*Fortasse in omni re, in hac certe, per quam exiguum sapio.*"

While we have preserved some portions of the Roman Code, we have retained none of the Roman accessories. Our Courts are not filled with those hired *claqueurs* whose duty it was to applaud the counsellor who hired them. We have also disregarded the old Roman custom of always allowing the advocate defending a client more time to answer a complaint than was permitted to the barrister who brought it forward. The defendant's counsel in this had little more than his right; though there is assuredly much to be said against long speeches, for the complement cannot always be paid to our forensic orators that was paid the other day, in a Cincinnati paper, to an American pleader:—"he spoke an hour and a half, and was sensible to the last." In ancient courts the right was often abused, not for the law's, but for the triumph's, sake. The morality of counsel and clients then was very much akin to the showy, but not sterling virtue of *Figaro*. When *Bartolo* dunned him for his hundred crowns, the scrupulously

delicate shaver asked his creditor if he doubted his probity. "Your hundred crowns!" cried *Figaro*, "I would rather owe them to you my whole life, than deny the debt a single instant." It is this sort of morality, we would observe, that makes law libraries large, and law professors wealthy.

The law student, or the general reader, who may peruse the volume before us will not fail to discover that where the old letter and spirit of the Roman law have been departed from, the result has not been always for the public good. The feudal law was certainly less philosophical than that of the Institutes. For instance, he who finds a treasure that has no owner, transgresses the law if he appropriate such treasure to himself. The proprietorship of *treasure trove* is most absurdly vested in the sovereign, if the treasure be of some value, found beneath the surface of the earth, or in any private place upon it, and the original owner thereof be unknown. This comes of the old feudal fiction, that the land belonged solely to the king. Treasure found in the sea or lying upon the earth, in default of an owner, belongs to the finder, and not to the sovereign. Formerly, could a man be convicted of concealing *treasure trove*, as above described, from the king, he suffered the penalty of death. At present, the same so-called offence is punishable with fine or imprisonment. Now, we learn from the old Reports—from the Report, that is, of the old "Institutes"—that the Roman law took a "natural equity" view of such a case. It decreed, that he who found a treasure beneath the surface of his own ground should be the proprietor thereof; and if he was the means of discovering a treasure on another's estate, the same should be divided between the latter and the discoverer. Nay, the law stringently guarded the rights of the actual discoverer, even though he found the treasure on the very estate of Cæsar himself. In the last case, Cæsar was no more accounted of than a private individual:—"Si quis in Cæsar's loco invenerit, dimidium inventoris et dimidium esse Cæsar's, lex statuit,"—Cæsar and the finder divided the "find" between them. In no Christian court was ever more righteous judgment than this from the Imperial heathen court of old.

But if some of our tribunals have been unjust, it must be confessed that the people themselves have occasionally been unreasonable,—so unreasonable as to complain even when bad laws were abolished. We need only cite, by way of example, the old marriage law. He who has leisure and inclination to turn over the *Daily Post*, or other of the "press" of early days, will see that it was a permitted thing for a lady wishing to place herself under the nominal protection of a husband to enter a prison, be married to a felon, and after giving to the latter a very magnificent fee, which he divided with the gaoler, and undergoing some other ceremony incidental to the occasion, go forth into the world, free there to commit untold extravagancies under the name of her convict consort. Nay, in the times of which we are speaking, husbands for the nonce were in waiting with highly respectable clergymen at the chapels whither ladies were wont to repair who were anxious to enjoy the immunities and impunities of a "*femme couverte*." The men were married half-a-dozen times a day, in half-a-dozen varied names, to half-a-dozen different brides. The latter wanted nothing more than a certificate of marriage, and the husbands (whom they never saw again) required nothing more than to be well paid for helping them to be furnished with what they most needed. Well, when the law decreed the abolition of this infamy, there was a cry raised against the Government as being guilty of a violent in-

fringement of liberty: permission to marry six wives a day being one of the privileges of a "free-born Englishman"! Clergymen got transported rather than give up the exercise of their sacred rights, and the young gentlemen, their sons, turned comic actors.

There were at these chapels so many foolish (rather than felonious) marriages among the loose people of fashion, that the "lower orders," as all below the line of fashion were designated, construed very mildly both the custom and the consequences. Had the abomination been permitted to continue, the law reports of questionable marriages and questioned issues would soon have been more voluminous for a single year than all the now published Law Reports put together. There are very old people who still believe in the commonly-accredited story of their early days, which told of the private marriage, at Curzon Street Chapel (not the present building), of Prince George, afterwards George the Third, and the pretty Quakeress of St. James's Market, Hannah Lightfoot. Of this, it may be said, "*non nova questio, sed tamen questio*."

But to turn more immediately to Mr. Lindley's volume. It is, as described by himself, not speculative, nor devoted to the discussion of the principles upon which laws should be founded, but intended to show "the most general of those principles upon which the laws of all countries more or less depend." A good summary of the elementary principles of Roman Law was much needed,—and it is well supplied in this volume. A knowledge of the leading principles of Roman jurisprudence is indispensable to the law student and practitioner worthy of the name; and such knowledge is here conveyed in as brief and simple a form as the subject would admit of. The knowledge in question, as Mr. Lindley remarks, will be at least indirectly useful to the English barrister, by giving him "a habit of classification," and consequently of duly appreciating points of resemblance and of difference. The notes and illustrations which Mr. Lindley has added to the translation of Thibaut's text will be found useful by the student, not only as aids to comprehend the text itself where the meaning seems obscure, but also in enabling him to compare the Roman with the English jurisprudence. We cannot but wonder that when treating of "birth," Mr. Lindley forgot to cite the celebrated law case touching legitimacy, which makes the most amusing page in Aulus Gellius. He need not have been afraid of it after translating the sections on "sex" and "age." To the illustrative notes on the latter section, it would perhaps have been as well to have added, for the sake of younger students, that "*acerba virgo*" does not mean "a sour old maid," as some fancy, but a maiden too young to marry. The *acerba* is here applied as it is to fruit, signifying "not yet ripe."

We do not know that we can give a better idea of Mr. Lindley's volume than by citing the two paragraphs classed under the head '*Levis Notæ Macula*.'—

"Under the name of *levis notæ macula* the Romans designate something similar to *infamia*, and particularly in this respect that certain persons cannot take by will to the exclusion of the brothers and sisters of the testator. Such persons are under a *levis notæ macula*, but who they are the laws nowhere inform us. Illegitimate children, however, were certainly not amongst them, for no stigma was attached to bastards as such; and persons who carry on disgusting trades do not seem to have been included, although such trades are the objects of special laws. In former times there was a considerable number of persons to whom, according to the prejudices of the Germans, some stigma was attached, and who were consequently not capable of

becoming members of Guilds or Companies; this number is, however, now reduced to knackers (*ab-decker*) and illegitimate children. To these people attaches the German *levis notæ macula*, but if all confusion of ideas is to be avoided, neither this expression nor the word *infamia* should be made use of; for the person who in this sense is disreputable is not one to whom the Roman *levis notæ macula*, *infamia juris* or *infamia facti* would attach. The Prince can remove this German disgrace, and the removal is, in the case of illegitimate children, called *legitimatio minus plena*."

The Roman law is laid down with a decision of tone as if appeal could never lie against it. Judicial decisions under its administration have, however, as often been reversed as under any other system.

It would be a pleasant toil for those who have the necessary time to trace the grounds upon which controvertible decisions have been given. Some Judges appear to have been guided by no better rule than that which influenced the Jewish theologians who had to pronounce upon the matter of original sin and the responsibilities of each person in connexion therewith. It is, we think, in Grove's 'Journal at Bagdad' that we are told how every individual in the human race actually existed in Adam,—in his nails, eyes, toes, mouth, &c.,—and that according to the proximity of each embryo person to the parts in our great father concerned in eating and digesting the forbidden fruit will be his misery here and his punishment hereafter. Job, they said, had evidently sprung from Adam's mouth. From such visionary data the Hebrew theologians argued as to the cause of visitations inflicted upon individuals in this life. Judges have often been quite as blind to cause and effect. Some one has projected a biography of persons neglected by biographers. Kenny, the dramatist, once had an idea of writing a book, to be called 'The Reversal of Popular Judgments.' A lawyer, with leisure, a private fortune and courage, might compose a formidable volume upon the erring judgments of Judges. Such work would not be unworthy of a wealthy barrister,—wealthy in the sense that time is the same as money, and having abundance of the former. It was Lyonnnet who not only had unoccupied hours enough to count the four or five thousand muscles in the caterpillar that feeds on the willow, but to write "as goodly a volume upon them as has ever been dedicated to the human myology";—and Sir Charles Bell tells us, that Lyonnnet was, to the best of his belief, a lawyer, with little or nothing to do. A lawyer, at leisure, might write as useful a book upon the illegality of legal decisions. Such a book would help towards that legal revolution which *Astræa* is hoarse with calling for.

OUR LIBRARY TABLE.

The Heiress of Haughton; or, the Mother's Secret. By the Author of 'Emilia Wyndham.' 3 vols. (Hurst & Blackett.)—Why did not the Author of 'The Two Old Men's Tales' or her publishers acquaint the world that 'The Heiress of Haughton' is the sequel to 'Aubrey'? The interest of the story would have been increased, and its meaning been essentially made clearer by such announcement. Readers, who are absolved from the necessities of critical precision, and who, as Butler says of lovers, can "loll and dream" over the new novel, not very distinctly recollecting the old one, will find themselves here at fault, and naturally enough inquire what Lady Emma's motherly secret and unmotherly sorrow mean?—who had been Alice Craven, and of what nature her confessions?—A page of prologue, recapitulation, or other filip to the memory would have been well bestowed. They are, moreover, especially wanted by so random a narrator.—Our disdainful lady, taking for granted

everything that pleases her, bursts into the midst of this continuation of her former story, by exhibiting, more conceitedly than naturally, two entirely new characters—a couple of Eton boys; and then frisks back to the *dramatis personæ* on whom the curtain fell in 'Aubrey.' These skips and starts and assumptions amount to trifling with the reader's patience. Like the selfish ways of rude people, who, not choosing to learn better manners, trade on a character for simplicity while they help themselves to what they covet, they merit reproof from all who hold that in art, in morals, or in social intercourse, abuse of a privilege (however good-humouredly granted) is unfair, and may trench on impertinence.—In the above we have nearly said concerning this book all that is needed; for impossible would it be to make clear to the reader why the widowed Lady Emma is cold to her own daughter, the titular heiress, in order that she may lavish tenderness on her brother-in-law's child, the rightful heir,—impossible to follow the authoress through the fantastic net-work of that will which she has contrived for the purpose of binding Imogen fast, yet which, with a breath, she breaks through in the last couple of pages, when, to save the Heiress of Haughton's life, by delivering her from a monstrous necessity, she must spell the spell backwards. Neither is it called for that we should tell how an Eton boxing-match, the last round of which terminates in the death of one of the boy-pugilists, with its provocations and its consequences, fills something like a sixth—and the most important sixth—of the tale, the latter half of its second volume. Such talk among boys, the playing-fields and dormitories of Eton never heard, we dare aver. Then, we wish we could fancy that any child-heiress, ever so soon, so sagely, and so sweetly, awoke to her responsibilities of feeding the hungry, and clothing the naked, and educating the ignorant, as the innocent usurper at Haughton. In short, a more patchy, disproportioned, and unnatural story than this has rarely been put forth by a gifted writer;—and the sooner we have cause to forget it, in some new tale of simpler nature and higher quality, the more largely we shall feel beholden to its author.

Stories in Verse. By Leigh Hunt. (Routledge & Co.)—Surely, we may say in all good-nature, never did poet serve himself up so often and so pleasingly as Mr. Leigh Hunt. His well-known 'Stories in Verse,' 'Rimini,' 'The Gentle Armour,' 'The Palfrey,' 'Abon ben Adhem,' and other of his rhymed narratives, are here presented in a new edition,—with a new Dedication to the Duke of Devonshire, sparkling with "apples of gold and pictures of silver,"—and a new Preface, full of agreeable criticism and cheerful egotism,—and of extracts from our author's former books, prefaces, lectures on versification, raptures touching poetry and poets. These, for a new world of readers, may have their charm and their freshness.—It may be base and mechanical on our parts, but we cannot help inquiring how, in days when the world is stirring so busily in the adjustment of copyright law and equity, these reiterated editions, by various publishers, with transfers of the choice bits from one book, and of the sweet sayings from another,—can be effected without harm, loss, and detriment somewhere?—It may be sharp, but we must ask, how one so skilled with the pen as Mr. Leigh Hunt is, should manifest such a disproportionate passion for the use of the scissors,—for the labours of the picker and patcher, as distinguished from the art of the poet? There is something in this perpetual return, which no sympathy enables us to swallow without a gulp of remonstrance.

Romanism in Ceylon, India and China. By the Rev. E. F. Robinson. (Hope & Co.)—An Eastern philosopher wrote a treatise instructing his disciples how to curse the world. One of his maledictions was so long that the devout took a month to learn, and five days to repeat it. Mr. Robinson, without being so voluble, is quite as Robinson. His execrations against those of his brethren in the flesh who happen to preach the same faith from another point of view are of fearful import, and would be terrifying if they were not ludicrous. They resemble the hobgoblin faces

at a children's masquerade, which "grin horribly," but provoke no fear. Mr. Robinson, after telling us much that Sir Emerson Tennent and other writers had already told in better fashion, deserts his subject to deal in vituperation, as weak as it is violent. We have little faith in the earnestness of one who denounces a race of religious ministers as "incarnate fiends," or a doctrinal system as a "dunghill of lies." Such phrases prove that the author is angry, and nothing more.

The Perkins-Shakspeare.—[Der Perkins-Shakspeare]. By Tycho Mommsen. (Berlin, Reimer; London, Nutt).—Herr Mommsen tells his learned countrymen about the folio Shakspeare discovered by Mr. Collier, and he criticizes the discovery. That vague entity, the "general reader" is a creature whose existence he does not contemplate. The general reader would flee aghast from the awful tables of variations, classified into "Words altered at the beginning,"—"Words altered at the end,"—"Words altered in the middle,"—"Words altered at both beginning and end,"—"Undiplomatic alterations,"—with sub-divisions of "Alteration of an initial letter,"—"Addition of an initial letter,"—"Omission of an initial," and so on,—until the huge trunk of erudition and research has sent forth the most delicate twigs of criticism. Woe to him who shall place an ordinary edition of Shakspeare on his right hand, and Herr Mommsen's tabulated learning on his left, with the view of amusing himself by a careless observation of differences! The German critic would despise the luxurious smatterer, who would have the suggested emendations follow each other in the sequence indicated by the play itself, just as a pedagogue of the old school would loath the lazy pupil who read his Homer with a facile "Clavis," instead of turning over the leaves of his lexicon. For all who will not take their learning massed together under huge categories, that pass along in sombre stateliness, Herr Mommsen's book is sealed with the seal of Solomon. On the other hand, for the real zealot in verbal criticism, he has prepared a most sumptuous entertainment. He has loaded himself with all the literature connected with the subject,—he has at his fingers' ends all the controversy that has arisen on the subject of Mr. Collier's discovery,—and he classifies, and he conjectures, and he deduces, and he rectifies in a manner that is perfectly astounding. As a compositor "distributes" his type when enough impressions have been taken, so does Herr Mommsen reduce the whole of Shakspeare to separate words; but stupendous is the edifice he builds with the fragments. It will be good news for the Perkins party when we inform them that this Ajax of criticism is on the side of Mr. Collier,—coming to the result, that by his discovery we have gained the copy of a better original than is to be found in any printed edition, although the copy is not faultless; and that the effect of the discovery is to increase in a slight degree the value of the quarto plays, and to diminish, in a corresponding degree, that of the first folio.

Imperial Bouquet, in Honour of the French Empire and of the British Empire.—[Bouquet, &c.]. By C. Fleury. (Hall & Co.)—Peace and good-will forbid that, by the misuse of irony, we should blow the least chill over any real manifestation of "the brave and tender" spirit now existing betwixt France and England! But when the poets of Moses take up the psalter, we may laugh without, it is hoped, being suspected of a design to cheer the Lion to roar and the Unicorn to exalt his horn against the Gallie Cock.—This 'Imperial Bouquet' is a very posy of politeness and affection. M. Fleury has pressed M. Victor Hugo into his service, because of the odes which M. Hugo wrote in honour of the first Napoleon—just as confidently as if, the other day, in his 'Châtiments,' M. Hugo had not done his fierce utmost to "quail, crush, conclude and quell" Napoleon the Third. Then M. Fleury gives us a new 'Marseillaise,' Rouget de l'Isle's patriotic hymn, served up "à la Burritt,"—a new 'Chant de Départ,' which might have been written by some of the rhymesters in the *Herald of Peace*. What poor work is this,—what an idle attempt to

Bowlerize the past, with all its heats and prejudices, into a tepid present! Of all things in the world, *panada* philanthropy is the most savourless and the least nutritious. Of all labours for a man of letters to undertake, the altering of known and accepted songs is the least profitable. Moore has, in his *Memoirs*, left a pleasant rebuke to Prof. Smyth, who tried to improve on the well-known 'Irish Melodies.' There is nothing much more intolerable in point of composition than the occasional verses to 'God save the King' to which popular tumults, attempts at assassination, "battle, murder and sudden death," have given rise. Therefore, without wishing to wither M. Fleury's nosegay by acrid criticism, we must say that it is artificial and without odour. Friendship is none the worse for the recollection of foeman-ship gone before. The songs of England and of France will no longer cause grief nor stir hatred if they are kept in their integrity, as relics of an old grim time, which, we hope, no less earnestly than M. Fleury, has passed away for ever.

Lectures on English Literature, from Chaucer to Tennyson. By Henry Reed. (Philadelphia, Parry & M'Millan).—The author of these Lectures perished in the "Arctic" steamer, seven days' voyage from Liverpool. His sister was sacrificed with him; and the volume before us is a memorial of fraternal piety, being edited by the writer's brother, Mr. W. G. Reed, who dedicates it to a surviving sister. With a Preface narrating such circumstances, no book would run any risk of vigorous criticism. The Lectures of Mr. Reed, however, may stand upon their own merits. They are the productions of a refined and gentle mind, capable of appreciating the more pathetic and silvery lyrics rather than those who struck their harps in passionate or heroic strains. His intellect seems to have been permeated with a kind of sentimentality, although it could also mount with the aspirations of the mightier order of poets, and of prose-writers as well. His topics include the general as well as the particular. In some of the Lectures, literary principles are discussed with as much success as commonly attends this species of composition—that is, very little; in others the characteristics of individual authors and works are examined, and in these Mr. Reed occasionally presents passages of fine analysis. Perhaps the chief interest of his work consists, however, in the fact that it is an independent American view of English literature.

Dr. Brewer, the author of numerous elementary educational works, has recently added to them, *A Guide to the Mythology, History, and Literature of Ancient Greece*, which, though replete with information, labours under the disadvantages of not being founded on the best authorities, nor always accurate in its phraseology and typography. It is also in the form of a catechism, which we consider another drawback.—We have received an excellent specimen of printing for the blind, in the shape of *The Sermon on the Mount*, published by the Bristol Asylum for the Blind.—*The First-Form Latin Grammar on Analytical Principles*, by E. Baines, M.A., is an attempt to popularize what is called the Crude-Form system,—a full exposition of which is given in Prof. Key's Latin Grammar, and the leading peculiarity of which consists in fixing the pupil's attention, not upon those forms of words which are usually given in dictionaries—such as the nominative case singular of nouns, and the indicative mood, present tense, first person singular of verbs—but upon that from which all are derived, and which the Germans call the stem or base. This Mr. Baines denotes by the expression *simple form*, in preference to *crude form*, as being less strange. Strong as is our conviction in favour of this philosophical method of teaching Latin, we are not sure that it is the best for young beginners; but we are quite sure it might have been exhibited in a clearer form than it here assumes.

Among those who persevere, amidst wars and rumours of wars, in advocating their special ideas, are our social sectaries, who believe in the virtues of a London Sunday and of Thames water. Mr. J. Livesey memorializes Mr. Wilson Patten about the proposed re-consideration of his Beer Bill, and

investigates the *Drinking System*, while he defends the *Maine Law*. With a similar object the United Kingdom Alliance have issued *An Address* dictated in an uncompromising style. *The Extent, Evils, and Needlessness of Sunday Trading in London* are treated of by a *Layman*, in a letter to the Bishop of London, and *The Sunday of the People of France* has a critic in the Abbé Mullois, as well as a commentator in Miss Selina Bunbury.—Mr. Hopley has circulated fragments from his *Lectures on the Physical, Intellectual, and Moral Elevation of Man*, with a view to promote medical and sanitary reforms; and, while the New Public Health Bill is attacked in a spirited protest, *The Privileges of Parliament Endangered and the Rights of the People Violated*—a movement is described in the *First Annual Report of the Directors of the Association for promoting Improvement in the Dwellings and Domestic Condition of Agricultural Labour in Scotland*. The plans of cottage architecture are highly interesting, as are Mr. W. Fowler's estimates and illustrations. Here is the story of a really philanthropic operation.

LIST OF NEW BOOKS.

MARINE METEOROLOGICAL OBSERVATIONS.

In June last, the Board of Trade addressed a letter to the Council of the Royal Society, requesting their opinion respecting the principal desiderata in meteorological science, and the forms best calculated to exhibit the great atmospheric laws which it is most desirable to develop. It was added, that, as it may happen that observations on land upon an extended scale may hereafter be made and discussed in the office of the Board of Trade in which the marine meteorological observations will be tabulated, it would be expedient that the reply of the Council should keep in view and provide for such a contingency.

Before making their reply, the Council deemed it advisable to obtain the opinion of those among their foreign members known as distinguished cultivators of meteorological science. Letters have been received from some of the most eminent meteorologists abroad, including Prof. Dove, of Berlin; and the Council of the Royal Society have recently transmitted a report to the Board of Trade, embodying various suggestions, bearing on the subject submitted for their consideration, which they have divided into different heads. We shall briefly notice the most important.

Under the head of Barometer, the Council observe that it is essential to obtain, by means of

barometric observations, strictly comparable with each other, and extending over all parts of the globe accessible by land or sea, tables showing the mean barometric pressure in the year, in each month of the year, and in the four meteorological seasons; on land, at all stations of observation; and at sea, at localities corresponding to the middle points of spaces, bounded by geographical latitudes and longitudes not far distant from each other.

In order that the observations may be worthy of credit, it is recommended that all barometers should be compared with standard instruments at the Kew Observatory before and after their employment at sea; and, as the barometers with which the Royal Navy and the mercantile marine are to be supplied are not very liable to derangement, it is expected that this comparison will be easily effected. The Council observe, "it is important, alike to navigation and to general science, to know the limits where the phenomena of the trade-winds give place to those of the monsoons, and whether any and what variations take place in those limits in different parts of the year. The barometric variations are intimately connected with the causes of these variations, and require to be known for their more perfect elucidation."

Under the heads of Dry Air and Aqueous Vapour, it is remarked, that many apparently anomalous variations exist in each of the two constituent pressures which conjointly constitute the barometric pressure. To investigate these phenomena, it will be necessary to have a separate knowledge of the two constituents, viz., the pressures of the dry air and of the aqueous vapour, which are generally measured together by the barometer, and to construct tables of the annual, monthly and season pressures at every land station, and over the ocean of the aqueous vapour and of the dry air. In order that all observations of the elasticity of the aqueous vapour may be strictly comparable, it is desirable that all shall be computed by the same tables, and those founded upon the experiments of MM. Regnault and Magnus are recommended.

The mean temperature of the air in the year at above 1,000 land stations on the globe, has been computed by Prof. Dove, who has published admirable tables of great importance in their bearing on climatology; but for the completion of this great work of physical geography, a similar investigation is required for the oceanic portion of the globe. For this purpose "the centres of geographical spaces, bounded by certain latitudes and longitudes, should form points of concentration for observations made within those spaces, not only by the same but also by different ships," care being taken that the instruments used shall have been examined and compared with standards.

Oceanic currents are treated of at considerable length, involving, as they do, the most important interests of navigation. Their direction, extent, velocity, and the temperature of the surface water relatively to the ordinary ocean temperature in the same latitude, are recommended to be carefully observed and tabulated. The proposition made to our Government on the part of the United States, for a joint survey of the Gulf Stream by vessels of the two countries, is recommended to be carried into effect, for until a systematic and complete survey of the stream be made, many interesting oceanic phenomena must remain unexplained. Under the head of 'Storms or Gales,' it is strongly advised that the captains of Her Majesty's ships and masters of merchant vessels should be correctly and thoroughly instructed in the methods of distinguishing in all cases between the rotatory storms or gales, which are properly called cyclones, and gales of a more ordinary character. Although the Variation of the Compass does not strictly belong to the domain of meteorology, it is considered that valuable service would be rendered to this very important branch of hydrography if, under the authority of the new Department of the Board of Trade, variation charts for the North and South Atlantic Oceans, for the North and South Pacific Oceans, the Indian Ocean, and for any other localities in which the requirements of navigation may call for them, were published at stated intervals, corrected

for the secular change that had taken place since the preceding publication.

Such are the principal recommendations submitted by the Council of the Royal Society to the Board of Trade,—which we believe will be carried into effect by the department specially established for the discussion of meteorological observations.

In looking forward to the results which are likely to be obtained by the contemplated marine observations, it is reasonable that those which bear practically on the interests of navigation should occupy the first place; but, on the other hand, it would not be easy to over-estimate the advantages to physical geography, which will arise from a general and systematic co-operation of observations made with approved instruments.

FOREIGN CORRESPONDENCE.

Naples, May 1.

At length Vesuvius is beginning to make active demonstrations. Vincenzo Cozzolino, the most intelligent of the Guides, reports that, on ascending the mountain this morning, the new crater was in a great state of eruption. On his arriving at the summit it opened as if with a discharge of a thousand pieces of artillery, and burning stones were thrown out. On account of the rain and the mist little, however, could be seen. This happened about half-past four o'clock this morning. The stream of lava is very large; but for reasons already assigned, a more accurate report cannot be sent.—So far I had written, when, on passing up St. Lucia, at mid-day, the whole of the mount appeared enveloped in smoke, which, as it rose, was swept away in mighty volumes in the direction of Capri. There was one spot, however, where, during the daylight even, it was easy to see a triangular sulphureous-coloured plane almost blending with the cloud, and yet evidently distinct from it, being the definite unchanging outline. About eight o'clock, it being a most gorgeous moonlight night, I determined to go down to the Mole and watch what progress the mountain was making. On turning round the corner of the Swiss Barracks, the whole heaven appeared to be in a blaze. Thousands of people on foot and in carriages were thronging down to see this wondrous sight; and hurrying on, I took up my station near the shipping. Through the tracery of the rigging of the gently heaving vessels I looked on one of the most splendid scenes I ever witnessed. The mountain was invisible; not a line was there to mark its form—all cloud and smoke, and smoke and cloud. Large round masses, black as Erebus, though tinged with white, formed the outline of the spectacle. The lower strata of cloud were all on fire, with the exception of a huge black syphon in the centre, which marked the shower of ashes, stones, and lava that was being thrown up. Lower down one could see by its brighter colour the stream of lava rolling down, and every now and then by its increased brilliancy telling of some fresh object yielding to its power. The base of the mountain was enveloped in dark clouds. Between the mountain and myself, lay the sea, so tranquil that but for the winking of its thousand eyes one might have imagined it dead; whilst the brilliant moon above us, which here appears to be suspended in the atmosphere, not stuck on a blue canvas, threw over the whole scene its softened light. The fire might have been seen to greater effect had there been no moon; but the other features of the wondrous scene would then have been lost: the ghosts of vessels sailing heavily along under the mountain—the volumes of cloud and smoke rolling away over the sea—the spectral cities which were dimly seen fringing the base of Vesuvius, and sleeping in fancied security, whilst ruin is impending above their heads. I am giving you my first impressions on my return from witnessing this scene. As the night was so clear, I took out my sketch-book and endeavoured to trace a faint outline, not of Vesuvius, for it is invisible, but of the mass of blackness and fire. I never saw any representation of it which gave a just idea of Vesuvius at such times. There is nothing there to remind one of earth; and so closely, to my imagination, does it resemble the picture of Sinai drawn in Holy

Writ, that I waited to hear almost the voice of the trumpet!—"The smoke thereof ascended as the smoke of a furnace, and the whole mount quaked greatly." The lava has descended very low, and is making rapidly for a small village; but I shall spend this night on the mountain, and will then send you fuller details.—The spectacle was rendered more imposing by an eclipse of the moon, which took place at two hours and a half after midnight.

H. W.

OUR WEEKLY GOSSIP.

Sir Roderick Murchison, we understand, was sent for by Prince Albert on Thursday to consult on the project of a general gathering of our Learned and Artistic Bodies under one roof at Burlington House. This project has, for the moment, taken precedence of the Gore House scheme. Some objections to the amalgamation, especially those of distance and inaccessibility from the north side of Hyde Park, are removed by this change of site. Next Friday a committee of the Royal Society will meet to receive and consider propositions. Somerset House had set itself against Gore House. Old rights of occupancy—comfortable quarters—love of independence and isolation—perhaps a desire to stand apart from other and younger associations—made it difficult to obtain a strong adhesion from the Royal Society in favour of the concentration of the Learned Bodies in one locality at Gore House. Lord Wrottesley, however, pronounced in favour of a union at the Academy dinner. "I trust," said the noble President of the Royal Society,—"I trust that the professors of Science and Art will, ere long, find a home in some convenient spot in this great metropolis, in some building worthy of the nation and age in which we live, and worthy of the services that both Science and Art have rendered to this country and to mankind in general."—We sincerely trust that these wise words imply the adhesion of the Royal Society to a scheme for concentration.

Sir Charles Eastlake tried to wring a promise from Lord Palmerston at the Academy dinner; but the Minister would not confess. Lord Palmerston admitted the inadequacy of the space at command—especially in the sculpture-room;—he remembered his old joint action with Sir Robert Peel in favour of enlarging this area; but then the dinner was such a capital dinner, the pictures exhibited were so beautiful, the manifestations of genius were so complete, the Government care of Art was so warm, and the Arts themselves were so useful, so productive, so ennobling,—that, in point of fact, he trusted—nay, he believed—that when scattered over the face of the land, these noble works of Art would serve to kindle the flame of genius in many a youthful mind! Not a word would the Minister say about the cramped statuary—the crowded pictures—the dark octagon room. These things are left, we infer, to other hands and other minds.

Sir R. I. Murchison has received the appointment of Director of the Geological Survey,—the post left vacant by the death of Sir Henry De la Beche,—and the salary of which is returned in the Estimates as 800*l*.

It will give pleasure to all persons interested in the advancement of knowledge, and especially in the branches of geology and geography, to learn that the late G. B. Greenough, Esq. has left his most valuable collections of books, maps, charts, sections, and engravings to the Geological and Royal Geographical Societies, to be apportioned by its executors in accordance with their relation to the pursuits of these Societies,—and he has left 500*l*., free of legacy duty, to each for the promotion of those objects which his whole life had been spent in advancing. With the same view, he had during the last few years of his life presented to the College at Cork his cabinet of rocks and simple minerals,—and to the Museum at University College his valuable collection of fossils, to be arranged there under the direction of Prof. Morris.

On Wednesday last the first general Exhibition of the Botanic Society was held in Regent's Park, when Majesty was present at the show, and the gardens were otherwise graced by a large and bril-

liant company.—The second meeting will be held on the 13th of June.

The name of Sir George Head, the less distinguished, perhaps, of the two brothers, whose contributions to literature and criticism make so lively and so peculiar a figure in our modern libraries, must be added to our black list for the year. Like Sir Francis, Sir George Head showed himself a man of heart and of humour; and an artist with pen and ink, in his power of making pictures out of materials no more promising than the heaps of broken iron in the yard of a railway station hospital,—or the pallid, ill-washed crowd of factory people that pours down the street of some north-country village at mid-day. His 'Tours through the Manufacturing Districts'—and the separate articles, which Sir George is understood to have contributed to the *Quarterly Review*, will be remembered and referred to—more, perhaps for their pictures than for their philosophies,—by historians to come, who may desire to show how Poor Law Commissioners intent on collecting statistical facts, or railway inspectors traversing a new line, seem to have been as unable to resist the modern appetite for picturesque writing, as our Wilsons who have rhapsodized concerning the poets, or our Macaulays when they have painted history.—Removed beyond the sphere of the British tongue and British sympathies, Sir George Head's liveliness of style and perspicacity of observation forsook him.—His 'Rome' a tour of many days—is tedious rather than interesting,—a book behind the time in which it was written. We do not pretend to give a complete list of Sir George Head's writings—or of the successive government situations held by him.—As a man—who may be referred to, as one of the old "Albemarle Street set"—he was sociable and cheerful, rather than brilliant.—The papers which announce his death state that he had passed the threescore years and ten allotted to Man.

The decease of the relict of Sir Humphry Davy, at an advanced age, which has happened within the last few days, might have been noticed in the briefest obituary fashion had not the late Lady Davy, especially since her widowhood, been a prominent figure in the circles of intellectual London,—one of those persons whose movements, whose sayings, and whose acquaintanceships are certain to figure in any literary "Lion's" diary of the last half-century. Lady Davy was a woman of fortune, of some accomplishments, of unwearied conversation, and of extraordinary physical activity. She had learnt everything. She had seen and spoken with everybody whom one had ever heard about. She had been everywhere. With Sir Humphry she was permitted by Napoleon to travel abroad during the years when the Continent was shut to the English; and the anecdotes and adventures which she had to tell of those journeys were countless and amusing. To a very late period, Lady Davy's ubiquitous habits, and her desire to partake of every pleasure, never failed. Whether the scene was at the corner of poor Chopin's pianoforte, or some "private view" at Christie's, or some buffet of exquisitely-wrought foreign wares, in the Hyde Park Crystal Palace, there was she:—buoyed up by that spirit which never allows its owner to discover that she is growing old. So often as that London world is talked of which included Mrs. Siddons and Lady Dacre, and the Misses Berry and Lady Cork, the name of Lady Davy will be recalled. It is already "cased in amber" for the inspection of future men of letters and women of society in Scott's Memoirs,—and also, if we mistake not, in the Diaries of Byron and Moore.

The appointments of Sir Charles Eastlake and Mr. Wornum are still, we assume, "under consideration"; though the salaries of these officers appear in the Miscellaneous Estimates. Our small picture-gallery costs us for the year no less than 17,696*l*. Of this sum, 1,000*l*. stands in the name of the Director; 800*l*. in that of the Secretary; 300*l*. in that of the Travelling Agent. By whom the last-named office is to be filled we have not heard. Beside this round figure, another item of no less than 1,155*l*. is set down for "travelling and incidental expenses." The money paid for the De

Bammeville pictures was 1,088*l*. 16*s*.; that for the Gherardine collection of models in wax and terracotta, 2,110*l*. The Trustees of the Gallery take a credit of 10,000*l*. for the purchase of pictures during the current year.

In the Miscellaneous Estimates for the current year—section of Education, Science and Art—we find 20,000*l*. set down as additional expenses for the building within the quadrangle of the British Museum. This makes 106,000*l*. spent on that account. 4,000*l*. are placed to the credit of the Museum for purchases at the Bernal sale; 12,000*l*. are placed for the same purpose to the credit of Marlborough House. These are vast sums of money; and unless it be allowed that the nation ought to give fancy prices for certain articles, merely because they come out of certain collections, we fear that in some cases the nation has made an indifferent bargain.

Herr Adolph Friedrich von Schack, the author of an excellent history of the Spanish drama, and besides well known by a masterly translation of the Persian poet Firdusi, has accepted a personal invitation of the King of Bavaria to join the poetical circle of Munich.

The new planet lately discovered at Düsseldorf has received the name of Leukothea. Its distinctive sign will be an ancient light-tower.

In the absence of Lord Braybrooke, Mr. Bruce presided at the Annual Meeting of the Camden Society, when the following officers were elected for the ensuing year:—*President*, The Right Hon. Lord Braybrooke; *Council*, Messrs. W. H. Blaauw, John Bruce, J. Payne Collier, W. D. Cooper, B. Corney, and J. Crosby, Sir Henry Ellis, the Rev. Lambert B. Larking, Messrs. P. Levesque, and F. Ouvry, the Right Hon. Lord Viscount Strangford, Messrs. W. J. Thoms, and Albert Way, Van de Weyer, and the Rev. John Webb. A suggestion, thrown out in the Report, in favour of devoting a sum of money to the preparation of a General Index to the Society's publications, was coldly received. With respect to works in preparation, the Council report that the first of these, on the 'Extent of the Estates of the Hospitalers in England'; taken under the direction of Prior Philip de Thame, A.D. 1338; from the original in the Public Library at Malta, edited by the Rev. Lambert B. Larking, may very shortly be expected, the last of the proof-sheets, sent to Malta for collation with the original MS., having just been returned. Transcripts of the 'Diplomatic Correspondence of M. d'Inteville, M. de Chatillon, and M. de Marillac, successively French Ambassadors in England during the Reign of Henry VIII.' are in the hands of M. Van de Weyer. The Council have added to the list of suggested publications:—'A Diary of Mr. Henry Townsend, of Elmley Court, Worcester, for the Years 1640—42, 1656—61,' from the original MS. in the possession of Sir T. Philipps, Bart., to be edited by Mrs. Mary Anne Everett Green; 'Diary of Mr. Rouse, from 1625 to 1643,' from a MS. in the possession of Dawson Turner, Esq., to be edited also by Mrs. Mary Anne Everett Green; and 'An English Chronicle of the Reigns of Richard II., Henry IV., Henry V., and Henry VI.,' to be edited by the Rev. J. Silvester Davies, M.A., from the original MS. in his own possession. Here is at least promise of the right kind. An addition of 32*l*. has been made to the capital invested, increasing the stock to 974*l*.

We learn from the Indian papers that the base line of verification for the grand trigonometrical survey of the Peninsula, commenced in September, 1852, has been completed. The survey was recommended by the Marquis of Wellesley and the Duke of Wellington. It began in 1800, under the auspices of Col. Lambton, who was spared to preside over it for above twenty years.

A Correspondent, noticing our remarks on the acquisition of Fénelon papers for the British Museum, writes to say that he has in his possession "the autograph of the first draft of Fénelon's reply to Bossuet's well-known 'Relation sur le Quietisme,' in the shape of minute and copious autograph notes of Fénelon on the margin of the work itself. Before the appearance of Bossuet's work," says our Correspondent, "the controversy

on the subject of Quietism had already been called to Rome; and Fénelon had despatched thither an agent, the Abbé Chanterac, to conduct his defence. In a letter addressed by him to Chanterac, June 27, 1698 (*Œuvres*, viii. 450), he says:—"Je vous envoie ma réponse à M. de Meaux, par des notes marginales." In a letter dated July 26 (*ibid.* 472), he alludes a second time to his having sent this reply; and Chanterac himself, on two occasions (pp. 467, 480), July 19 and August 2, acknowledges the receipt of the 'Relation sur le Quietisme,' with these marginal annotations. The book to which your Correspondent refers is the identical copy sent to the Abbé de Chanterac. The volume was the property of the late coadjutor, Archbishop of Cologne; and was sold by auction at Brussels some years since, when it came into the hands of its present possessor. The marginal annotations fully equal in extent the work of Bossuet, to which they are intended as a reply; amounting, in the fair copy which has been made of them, to above 130 pages. They are quite different, both in order and in substance, from the 'Réponse à Relation sur le Quietisme,' in the published works of Fénelon. This curious and interesting relic—interesting both as an autograph and as an historical monument—has not been noticed by any of the biographers or editors of Fénelon. Cardinal Bousset evidently was unaware of its existence, as was M. Gosselin, the late editor of Bousset's 'Vie de Fénelon'; nor do the latest editors of his *Œuvres Complètes* refer to it in connexion with the letters cited above."

Paris is to be the head-quarters of many interesting operations during the ensuing summer. Not the least interesting of its gatherings will be the International Statistical Congress. Ministers are preparing to receive the statisticians; and the Emperor has nominated a superior Commission, under the presidency of the Minister of Agriculture, Commerce, and Public Works, to consider a programme of questions. In the absence of the Minister, M. Charles Dupin, a member of the Commission, will occupy the chair.

Common Sense is at last beginning to stir itself in examination of some of our public educational foundations. Supine as the stir seems too often to be in its motions,—interrupted, hampered, thwarted by the very persons who ought to be most eager in promoting it,—when the stir has once begun, Common Sense is not apt to go to sleep again in England. Some impression that our Educational establishments, from the University down to the dame-school kept by the pensioned-off butler's widow, are not immaculate, has absolutely got into the very heart of London. Christ's Hospital is to be looked after:—for the good of its inmates, and the furtherance of the righteous purposes of those by whom it was established. The Report of the Select Committee, laid before the Governors, and which was to come under their serious consideration at the meeting held within the week, speaks emphatically to the necessity of remodelling the entire establishment, and points to the present moment as a fitting time for such a root-and-branch reform. The situation of the school, round which the metropolis has crowded itself since it was built, and which is close to a lazar-house, is felt to call for removal. A Christ's Hospital boy, to stretch his legs and to breathe wholesome air, must be got away from his college and its play (or plague) ground,—and hence has arisen the institution of the whole holiday every alternate Wednesday, which is denounced as "a fertile source of moral deterioration," and which, because of such bad result, has been of late reduced to one holiday in the month. The Report, pleading that "no prestige of antiquity attaches to the building of the Hospital," points out that a judicious change of site might be effected without heavy loss or cost, and suggests "the purchase of about 100 acres of land, in a bracing situation, for the erection of a new and complete hospital." The educational system, too, has undergone examination, and the Select Committee appear to have agreed that the aims of the foundation have been extended detrimentally; and that in order honestly and thoroughly to carry out the purposes of the college, the number of children admitted must be reduced by

about one-sixth,—such recommendation being accompanied by due details, calculations, and recommendations of the new arrangements proposed. A minor reform (still not without importance, because consonant with the spirit of the times,) is aimed against the *costume*,—it being proposed to substitute something "more modern for the breeches and yellow petticoat and stockings." What the shade of *Elia* might have to say against such a piece of Vandalism may be imagined. It would be, however, considerate and becoming to do away with the uncouth and unhealthy trappings of ancestral class-wisdom. Such are the matters which were to be brought before the special court convened for the 1st of May. Sooner or later they must be sifted thoroughly, and the recommendations considered, without undue leaning to prejudice, however picturesque it be, or to prerogative, however deeply be the root thereof in the wisdom of ages.

ROYAL ACADEMY OF ARTS, Trafalgar Square.—The EXHIBITION OF THE ROYAL ACADEMY IS NOW OPEN.—Admission (from Eight to Seven o'clock), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, R.A. Secretary.

SOCIETY OF PAINTERS IN WATER-COLOURS.—The FIFTY-FIRST ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East, close to Trafalgar Square.—Admission, 1s.; Catalogue, 6d.

JOSEPH J. JENKINS, Secretary.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.—The TWENTY-FIRST ANNUAL EXHIBITION of this Society IS NOW OPEN, at their Gallery, 63, Pall Mall, near St. James's Palace, daily, from 9 till dusk.—Admission, 1s.; Season Ticket, 5s.
JAMES FAHEY, Secretary.

GALLERY OF GERMAN ARTISTS.—The THIRD ANNUAL EXHIBITION OF THE WORKS OF MODERN GERMAN ARTISTS, in London, IS NOW OPEN daily, from 10 till 6.—Admission, 1s. Catalogues, 6d.—Gallery, 165, New Bond-street.

PATRIOTIC ART EXHIBITION, for the RELIEF of WIDOWS and ORPHANS of BRITISH OFFICERS engaged in the WAR with RUSSIA, BURLINGTON HOUSE, Piccadilly, by Special Permission of Her Majesty's Government, NOW OPEN.—Admission, 1s.—Communications and contributions to be addressed to the Committee, at Burlington House.

PHOTOGRAPHIC EXHIBITION.—An Exhibition of the finest English, French and Italian Photographs IS NOW OPEN at the PHOTOGRAPHIC INSTITUTION, 165, New Bond Street.—Open from 10 to 5.—Admission, with Catalogue, 1s.

ADAM AND EVE.—This great original Work, by JOSEPH VAN LERUUS, IS NOW ON VIEW at 57, Pall Mall, opposite Marlborough House, from 11 to 6 daily.—Admission, 1s.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—The Railway at Balaklava, Battle of Inkermann, Storm in the Black Sea, Battle of the Alma, Cavalry Charge at Balaklava, Pictorial Map of Sebastopol, &c., are now exhibited in the Diorama, illustrating "Events of the War." The Lecture by Mr. Stocqueler. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

TWO THOUSAND TWO HUNDRED AND THIRTY-FIRST representation of LOVE'S ENTERTAINMENTS in London, and ONE HUNDRED AND TWENTY-FIFTH consecutive night of the present selection of Pieces, on Monday, May 21, at the REGENT GALLERY, 63, Quadrant, Regent Street, where Mr. Love now appears every Evening at 8, except Saturday, Saturday, at 3.—Monday and Tuesday, Mr. LOVE, universally accepted as the first Dramatic Ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called "THE LONDON SEASON" and other Entertainments. On Wednesday, Thursday, and Friday, Mr. Love will present the Entertainment called LOVE IN ALL SHAPES, to be followed by a ZOOLOGICAL CONCERT, and LOVE'S LABOUR'S LOST. On Saturday, at 3, LOVE IN ALL SHAPES, with other entertainments.—Times at Mitchell's Royal Library, 33, Old Bond Street; and at the Rooms.

W. S. WOODIN'S OLIO OF ODDITIES.—The First Performance of the above entirely new COMIC ENTERTAINMENT, illustrated by 50 instantaneous Metamorphoses of Voice, Character, and Costume, and a Moving Panorama of the romantic Lake Region of England, will be given in the new and elegantly fitted-up Polygraphic Hall, King William Street, Charing Cross THIS EVENING, Saturday, May 12, by Mr. W. S. WOODIN, who has had the honour of giving 702 Representations of his former Entertainment, "The Carpet-bag and Sketch-book."—Private Boxes, 1s. 1s.; Dress Stalls, 3s.; Area Seats, 2s.; Amphitheatre, 1s.

ROYAL POLYTECHNIC INSTITUTION.—PATRON: H.R.H. PRINCE ALBERT.—THE LECTURES AND EXHIBITIONS, as delivered before HER MOST GRACIOUS MAJESTY and HIS ROYAL HIGHNESS PRINCE ALBERT, will be CONTINUED during the week, consisting of the TELEPHONIC CONCERT, DISSOLVING VIEWS OF SINCE THE SALON, DUNOSCO'S ILLUMINATED CASCADE, the DIORAMA illustrating the VOYAGE across the ATLANTIC, and the CITIES in the UNITED STATES; and, in addition, on Thursday Evening, the 17th, DRAMATIC READING, by Mrs. CHATTELEY, MUCH ADO ABOUT NOTHING.—LECTURES: SONGS and SONG WRITERS, by GEORGE BUCKLAND, Esq.—DISSOLVING VIEWS OF THE WAR, &c. &c.

SCIENTIFIC

SOCIETIES.

ROYAL.—May 3.—C. Wheatstone, Esq., V.P., in the chair.—The following papers were read:—"An Inquiry into the Nature of the Metamorphosis of Saccharine Matter as a Normal Process of the Animal Economy," by Dr. Pavy.—"Researches on the Partition of Numbers," by Mr. A. Cayley.

GEOLOGICAL.—May 2.—W. J. Hamilton, Esq., President, in the chair.—Messrs. W. White, C. S. Mann, L. Barrett, and J. D'Urban were elected Fellows.—"On the Anthracite Shells and Fucoidal Schists of the South of Scotland," by Prof. Harkness.—A Letter (communicated by the Foreign Office) from D. Sandison, Esq., Her Majesty's Consul at Brussa, noticing the existence of one or more Seams of Coal in Burzarkny, about 3 hours distant from Ghio, and 3 or 4 hours from Yalova, in the Gulf of Nicomedia.—"On the Physical Geography and the Drift Phenomena of the Cotteswold Hills," by E. Hull, Esq. After describing the physical features of the district, Mr. Hull proceeded to account for the formation of the valleys and the preservation of the headlands and outliers which are scattered at intervals over the Gloucester plain. The valleys were shown to be in the direction of slight anticlinal lines, and the headlands in the direction of synclinals, having a mean north and south strike. The preservation of Bredon Hill was shown to be due to a fault, which, traversing the southern side of the hill from east to west, had lowered by several hundred feet the area now forming the hill, and thus rendered the strata less exposed to the denuding action of the ancient sea. Bredon Hill had then acted as a breakwater to the district south of it, on which account the outliers of Oxenton, Stanley, Dumbleton, and Notting Hills had escaped destruction. From the magnitude and greater number of the tabulated platforms of marlstone, of the district which had a westerly direction, the inference was drawn that the prevailing winds during the period when the sea covered the plains were from the west, those from the north being next in force or prevalence. It was next shown that there were distinct pleistocene deposits to be found at intervals over the district. The most ancient was the Northern Drift, next the Estuarine, and latest the Warp Drift. No traces of the Northern Drift were to be found on the Cotteswold Hills, which were, in fact, above the sea at the period of its deposition; but the sands and gravels of which it is here composed, and which were derived principally from the waste of the New Red Sandstone and carboniferous rocks, were plentifully strewn over the vales of Gloucester and Moreton, and extended along a line drawn from Burford to Cirencester. Chalk flints being numerous in the Drift, it was supposed that an eastern current was confluent with the northern during the period in question; and the southern extension of icebergs was proved from the occurrence of boulders of Millstone Grit near the southern extremity of the Moreton Valley. The Estuarine Drift, which was composed of oolitic detritus and re-stratified northern drift, was found in the valleys of the Evenlode, Bourton, Cheltenham, and Stroud, and in it were found remains of mammalia now extinct.

SOCIETY OF ANTIQUARIES.—May 3.—Earl Stanhope, President, in the chair.—The President read the following memorandum:—"The numerous instances of the destruction of the character of ancient monuments which are taking place under the pretence of restoration, induce the Executive Committee, to which the Society of Antiquaries has entrusted the management of its 'Conservation Fund,' to call the special attention of the Society to the subject, in the hope that its influence may be exerted to stop, or at least moderate, the pernicious practice. The evil is an increasing one; and it is to be feared that, unless a strong and immediate protest be made against it, the monumental remains of England will, before long, cease to exist as truthful records of the past. Much as these monuments have necessarily suffered from time, and much as their decay is to be attributed to the neglect of their owners, the Members of the Committee have no hesitation in expressing their conviction that these two causes combined have inflicted less injury than the indiscreet zeal for restoration. Though time and neglect may impair, and eventually destroy, they do not add to a building; nor do they pervert the truthfulness of monuments. Restoration may possibly, indeed, produce a good imitation of an ancient work of Art; but the original is thus falsified, and in its renovated state it is no longer an example of the Art of the period

to which it belonged. Unfortunately, too, the more exact the imitation, the more it is adapted to mislead posterity; and even the best imitation must unavoidably impair the historical interest and artistic value of the prototype, so that, in truth, a monument restored is frequently a monument destroyed. The Committee strongly urge that, except where restoration is called for in churches by the requirements of divine service, or in other cases of manifest public utility, no restoration should ever be attempted, otherwise than as the word 'restoration' may be understood in the sense of preservation from further injuries by time or negligence:—they contend that anything beyond this is untrue in Art, unjustifiable in taste, destructive in practice, and wholly opposed to the judgment of the best archaeologists.—Dr. Emil Braun of Rome, and Dr. Shurtleff of Boston, U.S., were elected Honorary Fellows. Mr. Dillon Croker was elected a Fellow.—The President exhibited a set of bronze toilet implements, found on the estate of Sir Edward Kerrison, at Eye, Suffolk.—Mr. Cahmac exhibited a copy of the Russo-Greek Gospels picked up after the battle of Inkermann.—Mr. Fairholt contributed some remarks on girdle ornaments in the possession of Mr. R. Smith.—Mr. Morgan, M.P., exhibited a drawing of a Roman pavement, discovered at Caerwent.—Mr. Harrod, Local Secretary for Norfolk, exhibited some bronze horse trappings recently found in Suffolk.

ARCHÆOLOGICAL INSTITUTE.—*March 2.*—The Hon. R. C. Neville in the chair.—The Rev. Dr. Bruce made observations on a Roman Inscription at Bath.—The Chairman read a paper 'On the Deep Shafts (*javisse*) occurring at the Roman Station at Chesterford.'—Mr. Wynne gave an 'Account of some Remains found in a Circle of Stones at Cae Cledau, near Llanaber.'—A paper 'On Early Sculptural Crosses, especially those found during the repairs of Bakewell Church,' was read by Mr. Le Keux, who produced drawings of these ornaments, comprising some rich examples of early sculpture.—Mr. Octavius Morgan read a 'Notice of the Ancient German MS. Chronicle of Strasburg.'—Numerous antiquities lay on the table: including a bronze figure of a Centaur carrying Achilles, found on the beach near Sidmouth, a German work in bronze, several ornaments lately excavated by Mr. Neville at Chesterford, a chess piece of the twelfth century, formed of the tusk of a walrus, some impressions of signet rings, the property of Mr. Nichols, and two portable lanterns, made of earthenware, with a metallic lustre on the surface.

HORTICULTURAL.—*May 1.*—*Anniversary Meeting.*—R. Hutton, Esq., V.P., in the chair.—The following new Members of Council were elected, viz., the Duke of Northumberland, Sir S. M. Peto, Bart., and Sir Joseph Paxton, M.P.; *vice* General Fox, G. Rushout, Esq., M.P., and J. C. Whiteman, Esq., retired.—The Duke of Devonshire was elected *President*; Dr. Jackson, *Treasurer*; and Dr. Royle, *Secretary*; and as *Auditors*, Messrs. J. C. Stevens and H. G. Bohn. The Annual Report from the Council was read, and ordered to be circulated.

ZOOLOGICAL.—*May 8.*—G. R. Waterhouse, Esq., in the chair.—Mr. Gould exhibited a portion of a collection of birds, formed by Mr. Hauxwell in a district lying on the eastern side of the Peruvian Andes, in the neighbourhood of the river Ucayali, one of the tributaries of the Upper Amazon. Mr. Gould observed that the exploration of this district had been one of the earliest objects of his own ambition, but that until within the last few years no naturalist had visited it. The splendid collection sent by Mr. Hauxwell, of which the birds exhibited formed a part, fully bore out the anticipations entertained by Mr. Gould, that when explored it would prove one of the richest and most interesting ornithological districts with which we are acquainted. Among the birds exhibited were some Cotingas, differing from the ordinary species found in the lower countries of Brazil, and remarkable for the splendour of their colouring, together with species of Phœni-

cercus, Rhamphocelus, &c. of the most dazzling brilliancy. As a contrast to these, Mr. Gould exhibited a series of dull-coloured birds (Thamnopili), also contained in the collection, and remarked that this striking difference in the colouration of birds inhabiting the same locality was due entirely to their different degrees of exposure to the sun's rays; the brilliantly-coloured species being inhabitants of the edges of the forests, where they fly about amongst the highest branches of the trees, whilst the others form a group of short-winged insectivorous birds which inhabit the low scrub in the heart of the dense humid jungle, where the sun's rays can rarely, if ever, penetrate. Mr. Gould also remarked that the colours of the more brilliant species from the banks of the Ucayali,—a district situated towards the centre of the South American continent,—were far more splendid than those of the species which represented them in countries nearer to the sea; and from this circumstance he took occasion to observe that birds from the central parts of continents always possess more brilliant colours than those inhabiting insular or maritime situations. This rule applies even to birds of the same species,—the Tits of Central Europe being far brighter in colour than British specimens. Mr. Gould had observed a like difference between specimens of the same species inhabiting Van Diemen's Land and the continent of Australia. He attributed this principally to the greater density and cloudiness of the atmosphere in islands and maritime countries; and in further illustration of the influence of light upon colour, he remarked that the dyes of this country can never produce tints equal in brilliancy to those obtained by their continental rivals, and that in England they never attempt to dye scarlet in cloudy weather. Mr. Gould described a new species of Redstart from Erzeroum. For this species, which is nearly allied to the common Black Redstart of Europe, *Ruticilla Tithys*, Mr. Gould proposed the name of *Ruticilla erythrophrocta*, its most striking distinction from the European species being the red colour of the lower part of the abdomen.—A paper by Lieut. Burgess, 'On the Habits of the Birds of Western India,' was read. It contained many particulars, relating principally to the nests and eggs of the smaller Grallatorial birds (the Snipes and Plovers) inhabiting the Deccan, and forms the tenth of Lieut. Burgess's contributions to the ornithology of that district.—The Secretary informed the meeting that a female Giraffe had been born in the menagerie on the 7th inst. This is the eighth fawn which has been produced there.

INSTITUTION OF CIVIL ENGINEERS.—*May 1.*—J. Simpson, Esq., President, in the chair.—The discussion was renewed on Mr. Barton's paper 'On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams,' and was continued through the evening.—At the Monthly Ballot, the following Candidates were elected:—Messrs. J. G. Blackburne, as a Member; W. Adams, E. E. Allen, R. Carter, F. S. Homfray, W. Malins, J. Marmont, F. Morton, and M. Sharpe, as Associates.

ROYAL INSTITUTION.—*General Monthly Meeting.*—*May 7.*—The Duke of Northumberland, K.G., President, in the chair.—Messrs. G. Ade and W. Stuart were elected Members.—The following Professors were re-elected:—W. T. Brande, D.C.L. as Honorary Professor of Chemistry; J. Tyndall, Ph.D. as Professor of Natural Philosophy.

SOCIETY OF ARTS.—*May 9.*—J. Glynn, Esq., in the chair.—The paper read was 'On the Manufacture of Steel, as carried on in this and other Countries,' by Mr. C. Sanderson.

MEETINGS FOR THE ENSUING WEEK.

Mon. Geographical, 8.—'Notes on the Passage of Hannibal across the Alps, and the Valley of Beaufort in Upper Savoy,' by Prof. Chailu.—'The Amazon and the Atlantic Watercourses of South America,' by M. Lusini.—Copies of Letters from Drs. Barth and Vogel respecting the Progress of the Central African Mission.

Tues. Institution of Civil Engineers, 8.—'Description of the Landore Viaduct,' by Mr. Fletcher.—'On the Infiltration of Salt Water to the Springs of Wells under London and Liverpool,' by Mr. Brathwaite.

— Royal Institution, 3.—'On Voltaic Electricity,' by Dr. Tyndall.

Wed. Horticultural, 2.—Exhibition.

— Society of Arts, 8.—'The Capabilities for Mercantile Transport Service of Steam Ships,' by Mr. Atherton.

— Geological, 8.—'Geological Notes on the British Possessions in North America,' by Mr. Isabister.—'Notes on the Geology of Georgia, U.S.,' by Mr. Bray.—'On the Geology and Coal-bearing Rocks of the Middle Island, New Zealand,' by Mr. Forbes.

Thurs. Society of Antiquaries, 8.

— Royal Institution, 3.—'On Christian Art,' by Mr. Scharf Jun.

Fri. Royal Institution, 8.—'On Dante and the Divina Commedia,' by Mr. Lacaita.

Sat. Asiatic, 2.—Anniversary.

— Royal Institution, 3.—'On Electro-Physiology,' by Dr. Du Bois-Reymond.

FINE ARTS

ROYAL ACADEMY.

THE Exhibition seems to be nearly an average. The portraits are perhaps less brilliant than usual, and the landscapes scarcely so numerous,—yet Rome in all its glory could scarcely have produced more than thirteen hundred works of Art in a single year.

Mr. Maclise appears in full force, and Mr. Millais re-appears after some months' disappearance; Mr. Phillip returns to Scottish scenes, and Mr. Horsley takes the resigned seat in Spain; Mr. Roberts blazes out in an epic of panoramic landscape, and Mr. Stanfield rivals him in one of his grand historic combinations. We have also to hail a young competitor in the old arena, who though he may have a fall or two seems likely to grapple soon with the strongest. The young men stand well and show more care and finish; and with one exception we hear of no complaint of the hanging.

With all its faults, *Lear recovering his Reason at the Sight of Cordelia* (No. 149), by Mr. Herbert, is a picture full of the earnestness of this great painter's later style. We say faults, for the drawing is in parts faulty, and the face of Cordelia is not only weak but ugly. Lear's short legs can hardly be accounted for on any but telescopic principle, and the physician to the right does certainly not put the best (three-quarter) face upon things. The head of Lear is, however, a massive form of saintliness that atones for much, and the bit of sea seen through the tent opening with its moving cloud-shadows is calming and thoughtful. Most touching scene of all written tragedy, condensation of all conceivable heart-breaking, this scene would tax three Raphaels to paint it,—and it deserves to be to English painters what 'The Last Supper' was to the Church decorators of the Middle Ages. It should be painted in tears and in moments of deep convulsions of heart, after deaths of parents. We miss here that self-denying, humble love of the scorned Cinderella of Britain:—love more tried than Desdemona's—more deep than Rosalind's—less frantic than Juliet's—and only equalled by Imogen's, in whom we see the perfection of a wife's love, as in Cordelia's we see the perfection of a daughter's.

The Life and Death of Buckingham (349), by Mr. Egg, is a fine moral lesson, as the death of any debauchee might be; but Pope in this case was wrong in his facts. Buckingham was neither poor nor in disgrace, and his dying at an inn was a mere accident, for Calamy tells us, that being taken ill when pursuing his favourite diversion of fox-hunting on Kirby Moor in his Yorkshire domains, he was taken to a tenant's house, and there died. So far from unpopularity, Shaftesbury and his party were at the zenith of their almost imperial power;—as for poverty, he had paid off all his debts; and instead of dying a worn-out profligate, had for some time devoted himself to religious writing, and expired as sincere a penitent as his companion Rochester. Even his versatility rests more on Dryden's sketch of Zimri than on fact, for to the last the "World's Epitome" still studied chemistry. So much for historic *versus* poetic and pictorial truth. Nothing can be more vivid than the antithesis of the two scenes Mr. Egg has selected. In the one we see the Duke in "the bower of Cliefden and of love"; and in the other lying dead in the "worst inn's worst room." The contrast might have been heightened by making the gilded alcove of the poet a little more gilded and gay, and somewhat more brilliantly lit. In the first picture we see Buckingham a little flushed with wine; it has heightened his colour, lit his eye with a feverish brilliancy, and set his arch mouth quivering

with wickedness and wit. He is sitting as president of the evening; and a ringletted beauty, perhaps the siren Shrewsbury, holding a glass in one hand, is about to crown his periwig with a coronet, as if acknowledging him the lord of the night's misrule. On his other side leans the Merry Monarch, with his well-known black wig and deep-lined swarthy features. In the foreground, and at the opposite side of the table, are cavaliers and loose-bosomed beauties of the Nell Gwynn family and the Lely dress,—their eyes glittering with excitement, and all holding up their glasses, as if drinking the health of their host. On the right, a fellow of the Tom Brown or D'Urfev character turns up his glass to show the absence of heel-taps. Another gallant has leapt up on a red-cushioned chair, and seems, in a fit of bacchanalian frenzy, to be about to fling his empty glass at the moon, that shines in through an open window at the back of Buckingham with a calm and reproachful light. This picture is, however, not gay enough; and the effects of light and shade, such as Buckingham's flowing white satin dress, against the deep violet of the night sky and the bright red of the chairs, contrasting with their shadows below, are very wild and solemn. And then that terrible death scene, so real and ghastly in its Defoe-like touches! In a low, dreary room, shocking from its desolation, lies the dead fop, his blue ribbon still covering his black heart: the red velvet of his dress, and the unrolled garter that dangles from his knee, dreadful contrast to the sordid bed-clothes and the yellow valance that flaps from the ricketty framework of the dirty bed! His wig, its scented powder bedaubed with dust, lies on the uncarpetted floor beside a sponge and a basin, typical of disease. Beneath the foggy, yellow window-panes broken out at the top, as if in delirium, lies a crushed butterfly—an admirable touch of genius. How it oppresses the heart to look at that stiff limb, that thin arm that has clutched the quilt in the death agony, and that head with its vacant eye, sunken jaw, and waxen mask! May we dare to suggest that a glimpse, through a broken window, of the real scene, the dreary wind-swept grey moor, might have been well introduced? And perhaps more impressive than the shut door would have been, either a glimpse of drinking and rustic revel below, or mere bare stairs, with say a streak of watery sunlight touching a single landing. Mr. Egg's other picture of *Emmet in Prison* (136) is full of passion; and the squares of sunlight on the dull, dark wall give a strange reality to the desolation of the scene. We have seldom seen more absorption of grief than the artist has thrown into those staring eyes and that trembling mouth. The head of Emmet laid on his shoulder, tells of grief deeper than even that woman's, convulsing a stout heart, and filling the mind with a foretaste of death and of the grave.—His third work, *Through the green shade wandering* (127), though merely a sketch, is as complete a reproduction of an age as one of Scott's heroines would be were she to walk out of the Waverley Novels.

Mr. Maclise has a picture better than usual in colour, equally powerful, less mannered, and with not less vigour; yet displaying more breadth than his last year's work. It is dramatic, picturesque, imaginative, and full of detail; yet with no very great sentiment, and too masculine and sinewy to possess much subtlety of poetical feeling. The painter has selected the *Wrestling Scene from 'As You Like It'* (78), and brings before us the moment when the struggle commences. Rosalind and Celia—rather like the old Irish-maiden type of beauty that we all know by this time, and rather yellow and grey in colour, as usual, but still beautiful—are looking with sympathy on Orlando, who, under his brows, is gathering inspiration from their eyes; while on the side of one of those raging Herods of Dukes that Mr. Maclise delights to paint, is that brawny Hercules, Charles, looking with contempt at the stripling of a David who is to give him a fall. Touchstone, bright in red and yellow motley, squats on the ground at the feet of Orlando, and looks up archly at his lady mistress. A curious courtier and some make-weights—self-denyingly kept back—make up the scene. The background is an Elizabethan mansion, exceed-

ingly appropriate,—which is more than we can say of many of the details. In imaginative selection we see little possibility of selection between pure truth and pure fiction; but here we have an Elizabethan house with a Victoria conservatory,—a nondescript Duke with barbaric Saxon buskins and a Louis the Tenth hat,—a mediæval jester,—and passion-flowers, which were first brought from South America! What a patchwork is this! and what a want of that unity which Scott threw over his creations. In expression, the picture is not first-class,—though the Duke looks proud and cruel, the wrestler insolent and defying, and Orlando calm and confident. One of the best faces is the old courtier with the gold collar, who is anxious and diplomatic. The leaves in the foreground are much broader than usual, and breadth throughout is better maintained; while the flesh is warmer and healthier. The position of that bull-headed wrestler, with his folded arms and one hand feeling the muscles of his arms, is admirably contrived. His hair would have been better of the crisp, bull-hair type.

But the comet—the burning star—of the Exhibition is Mr. Millais's *Rescue* (282),—a picture that would be cheap for any public office wishing to save coals in hard winters. Not that, with some heretical exceptions, it is not a work of force and originality, full of purpose and sentiment, and daring endeavour to paint the poetry of English nineteenth-century life:—the life we, and not others live. It is, however, certainly more tricky, and less full of honest thought than the 'Order of Release.' The mechanical part is good; but there was little room for imitation. It represents a fireman rescuing three children, and descending the burning stairs with them on his back and in his arms. One of the children, frightened at the scene, struggles to his mother's arms; who kneels, as if thanking God for their delivery. We are sorry, however, to say, that the last-named lady seems to have already suffered much from the flames, having saved a voluminous night-gown, but lost the greater part of her body; which, with great magnanimity, she forgets in joy at the sight of the children. The children want numbering; for we find ourselves confusing No. 1's legs with No. 2's head; while No. 3's body is still a great desideratum. Composition, of course, is a mistake; otherwise the eldest boy might do his terror a little less awkwardly. We allow the mother looks ecstasically grateful (but joy is selfish, and the gratitude is premature); the fireman is manful and business-like; and the children turn anxiously towards the fire,—but yet expression does not seem the main point of the picture, which is the wonderful crimson glow that reddens the boy's night-gown and the fireman's helmet, contrasting with the quiet blue moonlight on the roof, seen through the hall window. A glimpse of a crowd might have been introduced to give a sensation of terror, by hinting at the confusion of the night, when, as Schiller says,—

Roth wie blut
Ist der Himmel,—

when the air is hot as a furnace, and one's home grows in an hour into a burning grave. However wonderful as a pictorial effect, we can hardly fully assent to the truth of the crimson glare which pervades this picture, and would render it a perfect blessing to the people of Nova Zembla. In the detail, the leather hose of the engine running over the bright Turkey carpet is happily chosen to convey a sense of the anomalies of such dreadful interruptions of domestic peace. The face of the fireman is very good: thoroughly English, cool, determined, and self-reliant, and, what is more, of that type of feature that any physiognomist would at once recognize as common among his profession. The mother is plain, but that might happen, and fantastically wild, which need not be.

Mr. Hart has two pictures more than usually successful. *The Captivity of Eccelino* (225), and *Othello and Iago* (327). The first is full of thought, the second is an admirably painted bit of costume, and little more. The first picture represents the end of that Eccelino, the despot of Padua, for whose special behoof Dante, in the white heat of his undying hatred, heated a special hell. After

many crimes, and having trampled God's and man's laws into a mire of blood beneath his mailed feet, he was at last driven to earth, at Soncino, where he refused to speak, tore off the bandages from his wounds, and died in fact as he had lived, a man worthy of the empire of evil. A complaint against Mr. Hart is, that instead of giving us a monster who dies blaspheming, he presents us with a saintly apostolic man who seems the incarnation of misunderstood benevolence. He is the sort of man to have "made a fine end," and to have gone away "an it had been any Christom child." The men in armour and the attendant priests are all excellent pieces of painting.

We cannot congratulate Mr. Leslie on his work of this year. After a hard and loving look at it, it really seems to us nothing but a *caput mortuum*. It is the old story of Sancho Panza and his forbidden dinner. In no face is there much expression but in that of the right-hand attendant, and that might as well be away. The detail is meagre, the colour poor, and the totality feeble—though an air of good humour pervades the whole.

Mr. Frith, exhausted by his masterpiece of last year, is playful, and no more. His best work is *Maria tricks Malvolio* (108),—a pretty sparkling bit of light and shadow, with a pretty sourette holding a sealed letter. Of the subject it has nothing; the dress is false, for the fardingale is no fardingale; she has no ruff or hood; and Elizabethan letters, let Mr. Frith remember, were tied with silk as well as sealed. But we look at the arch face and forget all imperfections. The moment chosen, we should mention, is that in which the "sweet nettle of India" throws down the letter that is to gull the sour-visaged steward. Mr. Frith is certainly the painter of the genteel, and beautiful, and his execution and colour are so smart and dainty that the very piquancy delights, whatever be the subject. Another clever sketch is *Lovers* (126), a charming bit of modern life, poetry, full of grace and tenderness; backed by a pleasant landscape. The modest pleasure of the lady and the insinuating fondness of the lover are admirably given, and with all the delicate force and vividness of the master. Equally brilliant, but with less subject, is *At the Opera* (305). This is merely an "angel" in white satin, leaning back in a sort of reverie at the Opera. The execution of this is marvellously light and elegant, and has a high-bred character very pleasant to the painter's eye. The face is beautiful, thoroughly English; and it is a pleasing characteristic of Mr. Frith's talent that his beauty is varied and never monotonous.

No picture in the Exhibition attracts more interest than the *Procession of Cimabue* (569), by Mr. F. Leighton, a young artist who, we believe, has studied in Italy. Amateurs who only admire admired pictures, and critics who are ill to please, disarmed by the Queen's purchase of the picture, stop and gaze and smile where they might, perhaps, have sneered or frowned. There can be no question that the picture is one of great power, although the composition is quaint even to sectarianism; and though the touch, in parts broad and masterly, is in the lesser parts of the roughest character. The scene represents one of those celebrated events of Italian Art-history preserved for us by that pictorial Boswell, Vasari. When Cimabue, one of the first Florentine painters who broke through the trammels of Byzantine Art, had completed his celebrated 'Madonna,' it was carried in procession to the church for which it was destined. In the groups that fill the street the artist has, with great propriety, introduced Giotto, Arnolfo di Lapo, Taddeo Gaddi, Andrea Tafi, Nicolo Pisano, Buffalmacco, Memmi, and Dante. The picture, which is a long horizontal one, is full of figures, and yet they neither crowd nor jostle. There is no impetuous rush of life, but all moves on as calmly, religiously, and silently, as if the whole were a dream where sounds are implied but never heard. Above the figures rises a high grey wall, which gives a grandeur and breadth to the whole, for it is only interrupted in three places,—once by a confused vine-trellis to the right; in the middle by the picture banner and the long green leafy chains that keep it steady; and to the

left by a group at a window. Stately before his work paces the acute-looking painter, holiday clad in white, crowned with laurel, and holding by the hand the boy Giotto, still wild from the sheep-cote, and staring with untamed eyes at the musician bending down and struggling to tune his theorbo,—the maiden beating the dulcimer,—the children scattering gilliflowers,—and the strange, black-eyed, swarthy troubadour. Behind them comes old Gaddi in a red gown, meditative, and his hands thrust behind his coat-tails with the air of a connoisseur,—and behind him are the Paul Veronese group, two mild men, and between them a black, bushy-bearded, red-capped “doer” of brawny mind. Leaning against a wall stands Dante, cold and soured, dreaming of Hell, and fancying he sees a procession in an avenue of Purgatory; and yet with all this the scene is a sheer abstraction, and there is no rabble and no sense of crowding life. With all our admiration at this display of painter-like ability, we are forced to observe upon the false treatment of the waxed flesh, the unmitigated colour of the drapery shadows, and amidst the want of a psychological unity the positive linear interruption of the fiddler who backs against the hero of the piece.

Mr. Poole cannot help being poetical; but his *Seventh Day of the Decameron* (457) is no particular advance upon the moonlight scene of last year, except that this picture has more of the yellow of lamplight, than the pale, mellow gold of a harvest moon. We are sorry to see here his same straggling sort of horizontal composition, of which the eye is unable at once to seize the salient points, and wanders about inquiringly in a baffled, confused manner. The figures by the lake, in the ladies' valley, are singularly beautiful in face and graceful in attitude; but it seems a conventional, insipid plan for a painter to make his actors all equally beautiful, and it certainly is a foolish self-denial to wilfully reject the fine antithesis of a wild or grotesque face, for Nature is never monotonous. We must, too, protest against the gross neglect of perspective in the two colossal figures seated under the distant tree. The great charm of the picture is not expression, but the delicious enchanted atmosphere in which every object seems to float.

We do not care very much for Mr. Cope's *Death of Elizabeth Stuart, at Carisbrooke Castle* (161). There is something almost ludicrous in the way in which the doll-like body is stretched in the window-sill, with its head on that immense book, and the alarmed man, with the helmet too large for him, who rushes in, is a strange dummy. To say that the painting is excellent would be an insult to so pleasing a painter. We think, in truth, he has thrown away a partizan subject, capable of having been treated with pathos, if—as is always the case with partizan painting—the Puritan cruelty was highly over-coloured. In this child we ourselves see no guillotine victim of mob ferocity, but, as it were, a flower that growing up some summer morning between the chink of a street pavement, is trod down by the first rush of life when the city awakes and begins to move and stir.

Mr. Brigstocke's *Prayer for the Victory* (540) is an immense mistake, and is one of the tamest religious pictures we have ever seen.

That sovereign of Spanish scenes, Mr. Phillip, appears this year in his old Scotch scenes, and although equally successful in composition and character, is hot and brown in colour. His picture is called *Collecting the Offering in a Scotch Kirk* (298), and is evidently painted by a somewhat sarcastic observer of what Charles the Second called “an ungentlemanlike religion.” The scene is a Presbyterian pew, with an elder, swathed in a brilliant green plaid, holding out the “brod.” At one end a prudent well-to-do man is fishing for a small coin in a profound pocket, while a mother is coaxing a shy child to put its “baabee” into the dish, aided by a red-haired brother who is sitting at the table; while in the distance a conceited precursor is giving out the hymn. There is much character in the shrewd well-to-do elder, whose clear cold eye takes in the whole scene at a glance. The texture of his plaid is as masterly as anything Mr. Phillip has ever done.

Mr. W. J. Grant's *Apothecary and Romeo* (506), though caricatured in the principal figure, is a meritorious picture, and the glimpse of masquerading seen through the door is well contrived to heighten the misery within.

Mr. Stanfield's great historical landscape, *St. Sebastian during the Siege* (545) represents the British troops taking possession of the heights and convent of St. Bartolomeo. The day is one of those lurid, cloud-laden days, when a strong sense of evil seems to press upon earth and sea. The waves are silent and level, only just creaming in lines of foam around the base of the rocks and the edge of the shore. In the foreground, dismal indications of the horrors of war, are the shattered walls of the convent, with the church bell lying amid burnt beams and rent stones. The ground is strewn with broken gun-carriages, shivered wheels and torn accoutrements,—while a wounded soldier, raised in the arms of a comrade, gives a touch of human emotion to the scene. To the right, some cottages are sending up volumes of spark-lit smoke, while the citadel looks calmly down on the marching troops, the musketeers, the gunners, and all the pomp and circumstance of war; while, on the other side, Wellington, with a sweep of his glass, already sees the place conquered and the English flag waving on its summit. Out at sea is a low, island rock, on which a few men have planted a flag and are making *reconnoissances*. The whole is painted with broad ease and power, and the figures are, as usual, effective and picturesque.

Mr. Roberts, in his *Rome* (594), has achieved a triumph in the epical landscape, worked out with a grand and poetical comprehensiveness in his sketchy yet firm manner. A red light fills the sky, tinges the pine trunks, gleams metallically on the roof-tops, and incarnadines the Tiber, as when the slaughters of Marius dyed its yellow flood or it rolled a bloody tribute to the sea from Nero to Neptune greeting. In the foreground are dancing peasants, in bright-coloured kerchiefs,—dancing, grape gathering, and laughing; while to the left a crowd prostrates itself before the upraised Host round the steps and entrance of a church of the Seven Hills,—emblems of pleasure and superstition, the idols of this graveyard city, whose glory refuses to die out and seems almost to have won the gift of immortality. Kingdom, republic, empire, papacy, surviving all,—bearing on through the days of the Etrurian Lares and of Mars, appeased by many victims,—fusing down even Christianity into a distorted resemblance to its old Paganism; and still the same hills, and the same river, and the same broad, desolate battle-field outside the walls, and the same horizon of hills, with Soracte and its snow-peak ruling all. Half the history of the world has taken place at Rome, now the city of Art and memory,—where dead Cæsar looks down on the Carnival, and Rienzi's ghost scowls at the Pope's guards. Can Baalbec, Nineveh, or any city or ruin but Jerusalem, dispute precedence with Rome?

FRENCH EXHIBITION.

THE great picture this year is M. Paul Delaroché's *Strafford going to Execution* (No. 42), lent by the Duke of Sutherland. It is almost too well known to require comment. Strafford is kneeling at the foot of a prison wall, below a grating, from which emerge Laud's hands, which are outstretched in benediction. On either side stand the halberdiers and pikemen; forming a powerful picture of deep feeling, bearing a strong historical impress, while a mournful and solemn atmosphere pervades the whole. The second work by this master is *Christ's Agony in the Garden* (41). This is an abstract, religious picture; our Saviour being represented kneeling and clasping a sacramental cup, while the halo from his brow glimmers in the darkness. The face, though not a triumph, is very sorrowful and holy, but the body seems scanty and meagre.

M. Ary Scheffer has nothing this year equal to his Dante scene. His *King of Thule* (176) seems to us merely a costume-study; the face has little expression, in spite of the oily tears that steal down the monarch's leathery features,—which are boldly and admirably painted. We miss this painter's pale holy faces, with their up-

turned glances of pure faith and love. This head does not tell the story. The King is alone, and not surrounded by the Court; and we have no indication given of his peculiar fondness for the treasured cup. The most singular thing about the picture is its proof of the artist's freedom of manner; his usual colour, style, and subject being here all changed.

That most versatile of men, M. Biard, appears in great force, in *genre*, caricature, love, and sentiment. His *European Travellers off Cape North, in a Lapland Fishing-Boat* (6) is a wild, characteristic scene; but telling no story. It is, however, in colour and force, perhaps, superior to a far better picture—*The Pirates* (5). The moment is dramatic. Part of the crew are attempting to decoy an approaching vessel; while the rest lie flat on the deck ready for boarding. The chief call-bird is a strapping Negro, dressed up in a bonnet, shawl, and parasol to represent a lady passeger, a sham officer having his arm thrown round his neck. Another bony sailor has a girl's straw hat on; while a white-whiskered captain, attired as a merchant, is beckoning the crew to lie still. One savage fellow in a straw hat, half naked, and with a knife between his teeth, is running up on deck. The leader of the gang seems a *Long-Tom-Coffin* of a man, who is running his eye along an immense musket-barrel, and motioning with his hand for caution. In another part of the vessel a barefooted sailor, standing tip-toe on a powder-barrel, is playing the fiddle; while a simple-looking carpenter is joining in the stratagem. *Henri IV. and Fleurette* (7) is a beautifully-painted landscape; but the figure of the recumbent girl in the wood is tainted by French voluptuousness,—so much so, that few English galleries would give it admittance. The face of the girl is of singular beauty, but that of the approaching lover is not much like the arch monarch, if any of Lavater's thirty portraits of him may be trusted. The incident of the goat nibbling at the rose of the maiden's garland is, of course, no accidental insertion. *Tycho Brahe's First Induction to Astronomy* (10) is a pleasing episode in the history of genius,—and the up-turned face of the boy is full of fervour and beauty, while the mechanical details are admirably touched. *The Poste Restante* (8) is an awkward composition of coarse humour coarsely painted; much more clever is *Newly Decorated* (9). It represents a newly-elected Chevalier of the Legion of Honour with his red ribbon flaunting at his button-hole rushing headlong under the showers from a mason's scaffolding which threaten him with dirt and mutilation.

That great female painter Mdlle. Rosa Bonheur contributes three works:—the *Charcoal Burners* (21), a *Team of Oxen* (22), and *Calves* (23). The first is the best, and is one of the leading pictures in the Exhibition, remarkable for its power, vigour, force, and the singular quality of its colour and chiar-oscuro. The subject is nothing but a piled charcoal waggon in a copse surrounded by smoke from some fire within the forest. The waggon with its black sacks is drawn by white buffalo-like oxen. They face the spectator, and literally protrude from the picture. The foreground is grey, pebbly heather. The colour is sombre and lurid, and the *impasto* massive.

M. Le Poittevin, always picturesque and vivid, has several small pictures:—*A Winter Scene in Holland* (130), *The Shrimper* (131), *The Message to the Admiral* (132), and *The Rising Tide* (133). The two last are the best. The second is a mere sketch, and represents the children of a fisherman on an isolated rock surprised by the tide, and clamouring for assistance;—the froth and fury of the yeasty waves are well conveyed and with little labour. ‘The Message to the Admiral’ is a spirited Van der Velde sort of scene, with soldiers in a rich barge, the trumpeter bending back to fling his whole breath into his instrument.

M. Horace Vernet's two pictures are not very interesting, at least, for him. His *Joseph sold by his Brethren* (200) has no Scriptural feeling, and is a mere cleverly-caught Asiatic group. There is much bad taste in the revolting prodigality of blood on the man's arms, on the knife, and streaming from the goat's throat. We need scarcely say, in other respects, the picture is a marvel of rapid

talent. The dead goat and the Ishmaelite's woollen dress are choice bits of painting. *Victoria, a Peasant Girl of Albano* (201), is a portrait of a young Italian woman.

M. Meissonnier's *Lansquenett Guard* (144) is a most dainty little bit of Flemish military life, finished like a miniature, and yet broad and effective.—Equally delicate, but softer and more effeminate, is M. Plassan in his *First Whisper of Love* (161).—*The Message* (162).—*The Concert* (163).—*The Mandoline* (164), &c. M. Plassan is a master of the Louis-Quinze dress, and all his figures are graceful and aristocratic; his faces beautiful, and free from subtleties of expression; his composition is pleasing, and his colour bright.

M. Schopin's *Judgment of Solomon* (177) is a successful rendering of an old subject, well drawn, and good in colour and composition. The face of the woman to the right is of rare beauty; and about the whole there is an impressive and statuesque sense of repose, which is impressive.

Almost the only good landscape is *Chamouni* (183), by M. Thuiller, and this is dry and gritty in colour, but still brighter and more airy, particularly in the distance, than any French *paysage* we have seen for many a day.

M. Dubufe is highly finished, and insipid as usual, for his heads are portraits, and little more. *The Family of the Absent Soldier at Morning Prayers* (48) might be any group praying, with the usual old father, young wife, old grandmother and young child.

FINE-ART GOSSIP.—A correspondent of the *Leeds Mercury*, after quoting the paragraph from our columns on the failure of a Yorkshire Exhibition of Fine Art, and the consequent breach of an understood contract with the artists who had generously contributed their works,—by which these latter were inconvenienced in many ways, adds:—

"This, as many of your readers will at once perceive, relates to the Leeds Academy of Arts: the facts are correctly stated, and the caution to artists deduced from this lamentable state of affairs is not only warranted, but is certain to have its effect so far as Leeds is concerned; and we may, therefore, resign any feeble hope we may have indulged of having a periodical Exhibition of pictures in Leeds. This department of Art must relapse into the sleep from which the abortive attempt of the Academy has failed to arouse it. It cannot be denied that this is a very sad and disgraceful affair."

After contending at some length that the public of Leeds must share the discredit of this transaction with the managers of the institution in question, the writer continues:—

"Now, should not an effort be made to wipe off the disgrace so far as possible? granting that the conduct of the Academy has not been characterized by absolute 'wisdom,' ought they to be left to bear among them the whole cost of the failure, which would at least have been less onerous if the public had in any degree responded as they ought to have done to the invitation to a really intellectual treat? I think not; and that for the credit of Leeds, some portion of the charges should be liquidated by a public subscription, and the threatened proceedings averted."

A proposal so obviously just, of course gains the support of the journal through which it is made. The Editors of the *Leeds Mercury* observe:—

"We concur in the opinion of our Correspondent, that it will be a discredit to the town if no effort should be made to raise the means of returning the pictures borrowed for the late unfortunate Exhibition to their owners. We think the Exhibition was opened far too early after that of the previous winter; and we do not say that the public ought to be answerable for errors of judgment in the managers: but still the friends of Art in Leeds would act well and generously, if they combined to prevent a public disgrace and severe individual injury from being entailed by that Exhibition. We shall gladly be among the contributors."

All this is very well, and conciliatory. Thus appealed to, we cannot doubt that a community so wealthy and so liberal—so conscious of its fair fame abroad, and so nobly jealous of its commercial honour—will satisfy all reasonable claims, and render to all the justice to which they have a right. A disposition, thus frankly expressed, to atone for a wrong committed, we must believe, rather by negligence than by deliberate intention, will go far to cancel all remembrance of the hurt.

Preparations are being made at the Rooms of the Society of Arts, in the Adelphi, for an Exhibition of the Pictures of the late John Chalon, R.A., and of his brother, Alfred Chalon, R.A. The Exhibition is expected to open, on the 6th

of June next, with a private view to the members and their friends: after which it will be open to the public, on payment of one shilling.

High fees have deprived Canterbury Cathedral of a new sculptural illustration.—"A memorial," says the *Shrewsbury Journal*, "to the late Gen. Cureton, executed by the sculptor Westmacott, is about to be placed in St. Mary's Church, Shrewsbury. The deceased officer, who fell in the Sikh War, was a native of this country, and the monument is the result of a subscription among his brother officers in India. After the memorial had been finished, it was found that the funds were not sufficient for the enormous fees required to erect it in Canterbury Cathedral; and, as the late General was a native of Shropshire, it was considered that this county was as fitting a place for it as any; and the Committee of Management determined to place it in St. Mary's Church, as the principal one in the town. The monument represents the recumbent full-length figure of a dead warrior, draped in a military cloak, the head supported on the breech of a cannon, and the hand, bearing a sword, resting on the chest."

The inner windows of the first gallery of the Scott monument at Edinburgh are to be filled with stained glass, painted with effigies of St. Giles and St. Andrew and armorial bearings. The cost will be about 300*l*.

The Dresden Gallery—it may be useful to some of our readers to learn—will be closed on the 15th of this month, for the purpose of moving the pictures to the new Museum,—an operation which, in so large a collection, will probably occupy several weeks.

The Berlin Museum has just received three sarcophagi, adorned with relics of early Christian Art, and discovered at Rome. One of these was found in 1616, in excavating the foundation of St. Peter's.

A valuable collection of engravings, the property of J. H. Roby, Esq., was sold last week by Messrs. Sotheby & Wilkinson. Some of the finest were contemporary portraits of Queen Elizabeth and Cromwell:—the former returning thanks at St. Paul's for the defeat of the Spanish fleet, in all the grandeur of ruff and jewelled fardingale;—the latter, in armour, between two pillars—emblems of stability and order. We had him again in caricature, dancing on the tight-rope, preaching at Worcester, on horseback, and, lastly, lying in state. Besides, there were some curious prints connected with the Gunpowder Plot, and some rare plans of London. Portraits of that exceeding double-chinned villain, Titus Oates, the image of sensuality and triumphant cunning, and portraits of the Pretenders (old and young) contributed to form a valuable collection.—Some articles of *virtù*, from the same house, are to be sold, next week, by Messrs. Christie & Manson. They consist of Palissy ware, Indian idols, canoes and Roman antiquities.

MUSIC AND THE DRAMA

SIGNOR and MADAME FERRARI beg to announce that their ANNUAL CONCERT will take place at the HANOVER SQUARE ROOMS, on WEDNESDAY EVENING, May 16, to commence at Eight o'clock. Vocalists: Miss Dolby, Madame Ferrari, Mr. Augustus Ibrahim, and Signor Ferrari; Misses Augusta Thomson, Banks, Hæck, and Favelli (Pupils of Signor and Madame Ferrari). Instrumentalists: Mr. W. Sterndale Bennett, Mr. Aguilar, Herr Jansa, Signor Piatti, and Signor Regondi. Accompanist: Signor Pinsuti.—Tickets, 7*s*, to be had at the principal Music-sellers; Reserved Seats, 5*s*, 6*d*, to be had only at Signor and Madame Ferrari's residence, 68, Upper Norton Street, Portland Place.

ST. MARTIN'S HALL.—Mozart's 'REQUIEM,' Beethoven's 'CHORAL FANTASIA,' and Mendelssohn's 'FIRST WALTZ' will be performed, under the direction of Mr. John Hulsh, on WEDNESDAY EVENING, May 16. To commence at Eight o'clock precisely. Principal Performers: Mrs. Endersohn, Miss Palmer, Mr. Herbert, Mr. Thomas; Pianist, M. Alexandre Bilet.—Tickets, 1*s*, and 2*s*. 6*d*; Stalls, 5*s*; may be had at St. Martin's Hall, and of the Principal Music-sellers. To commence at Eight o'clock.

MISS DOLBY and MR. LINDSAY SLOPER'S ANNUAL GRAND CONCERT will take place at ST. MARTIN'S HALL, on WEDNESDAY EVENING, to commence at Eight o'clock, June 13, when they will be assisted by Mdlle. Jenny Ney, Miss Amy Dolby, Mr. Sims Reeves, Signor Belletti, M. Sainton, and M. Benedict. The Orchestra will be conducted by Mr. Alfred Mellon.—Stalls, 1*s*, each, and Reserved Seats, Half-a-Guinea each, to be had only of Messrs. Cramer & Co., 201, Regent Street; at Ebers's Library, Old Bond Street; of Miss Dolby, 2, Hyde Street, Manchester Square; and of Mr. Lindsay Sloper, 7, Southwick Place, Hyde Park Square. Gallery Tickets, 5*s*, each, and Area Tickets, Half-a-Crown each, may be had at all the principal Music Ware-houses and Libraries.

MUSICAL UNION.—H.R.H. PRINCE ALBERT, Patron.—TUESDAY, May 15, half-past Three.—WILLIAMS' ROOMS.—Quintett in A, Mendelssohn; Trio, E minor, Piano-forte, &c., Spohr; Quartet, No. 2, in G, Beethoven; Solo, Contra-Basso; Solos, Piano-forte, Executants: Molique, Cooper, Hill, Goffrie, Piatti, Bottesini, and Halle.—Visitors Tickets to be had of Cramer & Co., Chappell & Oliver, Bond Street. Doors open at Three. Letters to be addressed to J. ELLA, Director.

ROYAL ITALIAN OPERA.—The first of the two novelties, promised by Mr. Gye for his present season, was produced on Thursday last.—For some sketch of the story of 'Il Trovatore' the reader of the *Athenæum* is referred to a Correspondent [No. 1356], who endeavoured to disentangle its mazes for our instruction. To ourselves, even with this light thrown on it, the fable is only partially intelligible;—a bad imitation of the most hackneyed French *drame*, combining certain violent situations, originally belonging to 'La Juive,' 'The Gipsy,' and half-a-dozen other operas, *ballets*, and *Porte St. Martin* pieces. By the choice of his subjects we sometimes can gauge a composer as well as by his melodies. Bellini may have known even less of the scientific processes of composition than Signor Verdi, (whom report declares to be a thoughtful, cultivated gentleman, as anxious, "according to his measure of light," for dramatic reality in opera as Herr Wagner himself), nevertheless, Bellini contrived to appropriate two of the best Italian opera-books ever written—those of 'Norma' and 'La Sonnambula,'—both full of interest,—both illustrating *character*, and thus less perishable than opera-books solely devoted to *situation*. Such selection is neither wholly a matter of chance nor of managerial caprice; but is, partly, referable to that feeling for the stage, tempered by an instinct for contrast, beauty, and simplicity, which establishes the existence and assures the fame of a composer for the theatre. No such merit of the kind exists in the *libretto* of 'Il Trovatore,'—a miscellany of forced, yet familiar, melo-dramatic combinations, owing such little individuality as it possesses to the gipsy troop, who pass through its labyrinths of crime, sorrow, and mystery. Among these—as was to be seen on Thursday—a great dramatic artist has managed to find materials for an effective personation.

It may be discerned in certain portions of the music—more strongly, perhaps, than in the best portions of 'Rigoletto,'—that Signor Verdi has remembered the promise announced by him of increasingly forsaking false stage-effect in favour of truth and nature. The gipsy chorus, which opens the second act, is good, till the stale Italian *cantilena*, which brings in the anvils,—(weak anvils in comparison with the utensils employed by Spon-tini in his 'Aldidor.) The 'Miserere' behind the scenes, with the heroine on the stage and the hero in the tower, is effective as a concerted piece,—being musical and melancholy. In the fourth *finale*, again, the *terzettino* 'Parlar non vuoi?' is a fair specimen of Signor Verdi's desire to produce effect by the combination of different emotions in regular musical form. But throughout 'Il Trovatore,' as throughout every opera by the master with which we are acquainted, these gleams of purpose and intelligence are relieved and contrasted against a general ground of commonplace,—than which little more monotonous in its mannerism can be conceived. The dash which may be found in the *cabaletta* 'Di tale amor,' with its *staccati*, and its sighs or sobbings, and its snatch at high notes by way of brilliancy, is as old as 'Ernani.' The *cantabile* for the tenor, in $\frac{3}{4}$ time, and with a plurality of flats for key, has been written for *tenore* and *baritone* one hundred times, if once, by Donizetti. The movement of the *stretto* to 'Cruda sorte,' in Signor Rossini's 'Ricciardo e Zoraida,' the employment of principal voices in unison,—whether it be placed or misplaced,—are anew resorted to here, with a coolness nothing short of curious, in one who believes that he has a mission, and professes himself to write on "a system."

We may return to speak of 'Il Trovatore,' with reference to a point or two overlooked in the above notice of the music. For the moment, however, we can merely say, that the opera entirely succeeded on Thursday. The singing of Mdlle. Ney as *Leonora*,—the singing and acting of Madame Viardot as *Azucena*,—and the beauti-

ful voice and suave *cantabile* of Signor Graziani,—are all such as to advance the respective artists in the good graces of the public.—The orchestral and choral execution was throughout excellent; and the opera is placed on the stage with due beauty of scenery and characteristic costumes.

HAYMARKET.—A version of 'Angelo, Tyrant de Padoue,' altered from the French of Victor Hugo, under the title of 'The Actress of Padua,' was produced on Friday, in order to give Miss Charlotte Cushman the opportunity of appearing in the character of *Tisbe*, the heroine. A more perilous selection of a new drama could scarcely have been made. It pleads for the rights of passion against the wrongs of matrimony,—the husband, as usual, being removed as an impediment to the happiness of a pair of guilty lovers. It is *Tisbe's* triumph that she has effected this purpose, and she dies exulting in the feat. The poverty of invention displayed in this hackneyed stage-arrangement deprives the *dénouement* of novelty, and certainly of merit. What Victor Hugo designed was to illustrate the war of class interests in a corrupt state of society, by upholding a theatrical wanton as better on the whole than a noble lady whose affections had wandered from a tyrant lord. *Tisbe* professes no pride in her art, represents none of its dignity, and displays none of its feelings; but merely obtrudes herself as a member of a despised caste, whose highest boast is that, after all, it is no worse than the more favoured orders,—if not somewhat better, because less hypocritical. An *artiste* without moral elevation one would have scarcely thought an eligible heroine for an ambitious drama. The other characters are, as we have said, more despicable still; and, from their misrelations, we have a series of accumulated horrors at once revolting and exciting. There is no attempt at veiling the vice; it stares the spectator out of countenance with its hideous effrontery, and revels in the display of its unabashed deformity. In its conduct the piece is a melo-drama,—the dagger, the bowl, and the crucifix, to say nothing of a jewelled key, being the material agents of effect. Miss Cushman acted the part with marvellous energy, determined on making a strong impression, and extorted continual plaudits.

ADELPHI.—On Monday, Mr. Wright returned to this theatre, and was received with a tumultuous welcome. His reputation is identified with the class of pieces produced on its boards, and the latter have scarcely seemed themselves since his departure. The announcement is confined to a temporary engagement, but in all probability the interests of all parties will induce a prolonged alliance. The play was 'Paul Pry,' and the hero was illustrated by the actor in his richest style. It was clear to the audience that Mr. Wright was 'i' the vein' for humour;—it was equally clear that they were willing to be amused:—the tide was at the full, and the laughter was immense. To this we have no objection;—but, according to the old saw, "we should be merry and wise," and liberty should not pass into licence. Mr. Wright wandered from the text, and in the height of his hilarity uttered impromptus which, however effective at the moment, will not bear after-reflection. Hamlet's instructions to the players forbid the practice, even to the clowns of the stage. Mr. Wright, we believe, claims to be considered an artist, and no abuse can be more mischievous to the interests of true Art than what is professionally called "gagging"; we trust, therefore, that he will no longer administer such a stimulant to the "barren spectators," whom Shakespeare rightly directs his actors to despise. The house was full.

SADLER'S WELLS.—This week has been devoted to Mrs. Keeley, who appeared on Monday as *Wild Meg*, in the drama of 'Sea and Land.' She was well received by a numerous audience, and acted with force and discrimination. The Adelphi experiments here continue to prosper.

SURREY.—Mr. Phelps's engagement at this theatre has led to the production of 'King John,' in which Mr. Creswick acted *Fairclough* with

much talent. The tragedy was well mounted, and respectably cast. That seldom-performed tragedy 'Venice Preserved' has also been reproduced.

MUSICAL AND DRAMATIC GOSSIP.—Concerning some of the music of the past week remark may take place of report. To begin with the Opera at Drury Lane. The directors are selecting their operas strangely. *Don Pasquale*, the part which even Signor Ronconi declined to touch after Signor Lablache, is not a character for Signor Susini to handle. The "serenade," after having belonged to Signor Mario for so many years, is above the reach of Signor Bettini. But those who manage Drury Lane may appeal for precedent to Mr. Lumley,—since he, too, ordered his proceedings by that "rule of thumb" which calculates that any four singers can sing and play what any four singers have sung and played before them, and that the public will detect small difference betwixt pure silver and *albatra* plate, so long as pen and ink declare *albatra* to be more precious than the old-fashioned metal. It is a pity, we repeat, that a clever pair of singers like M. and Madame Gassier should have placed themselves so disadvantageously. But enough concerning this Opera-fit:—"a fit," we imagine, which may presently pass, as the German Opera-fit passed a twelvemonth ago, with such discordant phenomena as crowded houses, rapturous plaudits, all but unanimous recommendation in the press, and for result, "leather and prunella."

The programme of the concert of the *Harmonic Union*, on Wednesday evening, offered, besides other pieces, Mr. W. S. Bennett's overture to 'The Naiades,' and Handel's 'Acis,' with Mozart's accompaniments,—the scored *Musette* which, in Mozart's edition, divides the two acts being omitted. We cannot like Madame Rudersdorff and Herr Reichardt so well as more than one English *Galatea* and *Acis* whom we could name. Both sing correctly, but neither with charm; and charm is eminently claimed for the "wretched lovers" who are to contrast with "the monster *Polypheme*" in Gay's *Serenata*.

In further illustration of the remarks offered last week, another vindication of English progress may be pointed to, in another of Mr. Mellon's *Orchestral Concerts*, given on Monday last, at which Mr. E. Bache, who is one of our most rising musicians, played a new composition: of which we hope to have some other opportunity of speaking. For the *Athenæum* anew to commend Mr. Mellon as a conductor is not needed; but a word on another matter must be added. Mr. Mellon's claims are too real, and his position is too good, for him to stand in any need of puffing. Why, then, with his Concert-tickets circulate a list of testimonials? why advertise his orchestra as including "fifty of the finest living instrumentalists"? Such "aids and helps" as these are more calculated to alienate than to invite a public capable of appreciating good music.

Among the minor concerts of the week may be mentioned chamber-music given by Mr. and Mrs. A. Gilbert and Miss Cole, and a *Soirée* held by Miss Emma Busby. At the latter Miss Milner was to sing, whom we name thus provisionally from having heard of her from the provinces, as a voice and a singer of promise.

Devonshire House was yesterday week thrown open for the introduction of Herr Goldbeck. The circumstance of a compliment never in our day accorded to a Liszt, a Thalberg, or a Chopin,—being granted to a new-comer, may be admitted as in some measure defining his position, and exempting us from the necessity of work-a-day criticism till we meet him under more work-a-day circumstances.

The fewest words will suffice to call attention to an advertisement which appears in another column of the *Athenæum*, announcing the postponement *sine die* of the Bishop Concert, on grounds in every respect satisfactory.

M. Hallé is about to give three *Matinées* devoted to solo music for the pianoforte.

The Choruses of Mendelssohn's 'Edipus' are about to be performed at Oxford, under the direction of Dr. Corfe.

We regret to hear that Signor Ronconi has joined the dishonourable company of engagement-breakers; and that having "signed for the season" with Mr. Gye, on the terms of former years, he has lately addressed a letter to his manager demanding an increase of salary, failing which he will not fulfil his contract.—We have heard that the management is desirous of engaging Signor Varese in Signor Ronconi's place.

MM. Scribe and Auber's opera, which is forthcoming at the *Opéra Comique*, and in which the principal parts will be sung by Mdles. Duprez and Boulart, MM. Couderc and Faure, is to be called 'Jenny Bell.' When is the run on *Molly*, or *Patty*, or *Betty*, or *Nanny*, to begin? "Jenny" has been of late years too universal and ubiquitous among favourite names.—M. Halévy's opera at the *Théâtre Lyrique* for Madame Cabel, will be performed almost immediately.

We are informed that, so far from the violin and violoncello, which were last week offered for sale by Messrs. Puttick & Simpson, having fetched high prices, the two instruments were bought in, as not realizing the value set upon them by their respective owners.

M. Bourges reports on the 'Te Deum' of M. Berlioz for the *Gazette Musicale*, in a spirit which (differences of country considered) is almost identical with that of our last week's paragraph. Let us see, however, what can be gathered from his report. As regards execution, the vast machine assembled seems to have moved experimentally, rather than with certitude and smoothness. Our countryman, Mr. H. Smart,—probably detained in England by the rehearsals of his coming opera,—did not, as had been announced, "take the organ." There was some thought, when we were in Paris, of establishing immediate sympathy betwixt the conductor in the choir and the organist, by an application of the principle of the electric telegraph,—an electric metronome, if we understood aright, having been used by M. Berlioz in the direction of the unseen chorus of his 'L'Enfance,' when that trilogy was the other day performed at Brussels;—but we are not aware if the same means were resorted to on the late performance. M. Bourges describes the 'Te Deum' as singular, containing certain transpositions and alterations of the text, and as military in character,—concluding with 'A March for the Presentation of the Banners.' It may be called, indeed, a scenic rather than a sacred 'Te Deum,'—since it was written many years ago, having been originally intended to form part of a vast composition, on the subject of Napoleon's return from the Italian campaign. Singularly enough (as M. Bourges observes), its performance, which had been commanded for the Opening of the *Exposition*, and was rendered unmeaning by the postponement of that ceremony, fitted in opportunely as a thanksgiving service, on the occasion of the Emperor's escape from assassination.

The dramatic ladies of France, whether authoresses or actresses, have "an ill time of it," if their husbands see fit to be disagreeable, and to lay an embargo on their desires for publicity. We recorded not long since, how M. Roger de Beauvoir endeavoured to prevent *Madame* (Mdle. Doze that was) from "turning a penny" by bringing out little plays; and among the law reports of the last week, figures the action brought by M. Crosnier, of the *Grand Opéra*, against Madame Laborde, because that lady had failed to fulfil an engagement entered into with the theatre. Madame Laborde's plea was, that she had been compelled to silence by a decision of the *Civil Tribunal*, obtained some months ago, at M. Laborde's instance, who did not choose that his wife should sing. On hearing M. Crosnier's advocate, the same *Tribunal* decided, according to *Galigani*, "that the husband of a public performer has not the right of preventing her from exercising her profession without sufficient reason; and that as no such reason had been shown in this case, the demand of the Director of the Opera for the 50,000f. must be admitted." It is to be hoped that since M. Laborde has been the hindrance which has brought down such a doom on the Lady, he can be brought in as banker too, on the occasion. This is not the

place for discussing the "Emancipation of Woman question,"—but we cannot pass the trial without urging the oppressions by which the professional female artist can be spoiled, as wrongs calling for redress and repeal. The story of the gains of the *prima donna*, how they have been wasted, or madly invested, or wrung from her to support indolence, is one which it would be sad to write and sad to read, but which, for the interest both of music and of manners, ought to be written and studied.

Mr. C. Kean announces that the revival of 'Henry the Eighth,' so long in preparation, will take place on Wednesday, when Mrs. Kean will re-appear in *Queen Katharine*.

We have the following self-correction from Herr Engel.—

"In my letter of last week I said, 'Not Mozart only, but Gluck himself has drawn from the ballet of 'Don Juan.' It should have been, 'Not Mozart, but Gluck himself,' &c. As the insertion of the word *only* conveys a meaning almost contrary to the original one, I hope you will have the kindness to notice the slip.—I am, &c. CARL ENGEL."

MISCELLANEA

Dry Collodion.—I subjoin a new process, which I have just completed, for using collodion dry. The subject may not be uninteresting to your scientific readers. The usual plain collodion is excited with

- (No. 1.) 3 grains iodide of cadmium
1 grain chloride of zinc
1 oz. collodion
½ oz. alcohol.

Dissolve the chemicals in the alcohol, and then mix with the collodion :

- or (No. 2.) 3 grains iodide of zinc
1 grain bromide of cadmium :
or (No. 3.) 2 grains iodide of cadmium
1 grain bromide of cadmium
½ grain bromide of iron
20 grain bromide of calcium.

In the last it will be necessary to dissolve 1 grain of bromide of iron in 1 drachm of alcohol, and use 1 fluid grain of the solution. Similarly 3 grains of bromide of calcium must be dissolved in 1 drachm of alcohol, and use 1 fluid grain. The excited collodion will require to stand a few days to completely settle. Decant into a dry bottle to avoid sediment. Spread as usual.

Bath of albuminate of silver.

- 16 ounces distilled water
1 ounce albumen
1½ ounce nitrate of silver (neutral)
1½ ounce glacial acetic acid
2 grains iodide of potassium.

The albumen and water must be well mixed first, then the glacial acetic acid added; shake up and stand three hours, then the nitrate of silver in crystals, shake and filter, stand twenty-four hours, then add the iodide of potassium, filter again ready for use. Coat the plate as usual with collodion, and use the albuminate of silver bath as an ordinary silver bath; wash in another bath of distilled water five minutes, then wash the back of the plate with common water, the front with distilled; set the plate aside to dry, vertical position, in a place free from dust. It will keep three weeks. Expose in the camera as usual, from two minutes to ten, according to the light, diaphragm, &c. Pass into the silvering bath again three minutes. Develop with

- 6 grains proto-sulphate of iron
1 ounce distilled water
1 drachm glacial acetic acid.
Wash, and fix with
1 cyanide of potassium
20 water.

It is about as quick as albumen in the camera. The albuminate of silver bath must on no account be exposed to daylight, nor the developing solution. Potassium and ammonium salts will do to excite the collodion; but it will not keep so long as with the metallic iodides.—Yours, &c. J. E. MAYALL.
224, Regent Street, May 7.

GUESSES at TRUTH. By TWO BROTHERS. Cheaper Edition. 2 vols. fcap. 8vo. 10s. cloth lettered.

"I here present you with a few suggestions, the fruits, alas! of much idleness. Such of them as are distinguished by some capital letter, I have borrowed from my acuter friends. My own are little more than chimerings, I had almost said dreams, of thought: not a word in them is to be taken on trust."

"If then I am addressing one of that numerous class, who read or be told what to think, let me advise you to meddle with the book no further. You wish to buy a house ready furnished: do not come to look for it in a stone-quarry. But if you are building up your opinions for yourself, and only want to be provided with materials, you may meet with many things in these pages to suit you. Do not despise them for want of name and show. Remember what the old author says, that 'even to such a one as I am, an idiot or common person, no great things, melancholizing in woods and quiet places by rivers, the Goddess herself Truth has oftentimes appeared.'"

"Reader, if you weigh me at all, weigh me patiently; judge me amply; and may you find half the satisfaction in examining my Guesses, that I have myself had in making them."

To the Reader.

THE ENGLISH LANGUAGE. By Dr. R. G. LATHAM, F.R.S. Fourth Edition, greatly enlarged. 2 vols. 8vo. [Next week.

A HANDBOOK of the ENGLISH LANGUAGE, for the Use of Students of the Universities and higher Classes of Schools. By Dr. R. G. LATHAM, F.R.S. Second Edition. 12mo. 7s. 6d. cloth.

The object of the 'Hand-book' is to present to students for examination, in a more condensed form, the chief facts and reasonings of 'The English Language.' Less elaborate than that work, it is as elementary as the 'English Grammar.' Like all the other works by the same author, it gives great prominence to the etymological relations of our tongue; and insists upon historical investigation, and the application of the general principles of comparative philology, as the true means of exhibiting its real growth and structure, in opposition to the more usual method of treating it as a mass of irregularities. It has the further object of supplying a knowledge of those laws of speech and principles of grammar which apply to language generally.

THE ESSENTIALS of MATERIA MEDICA, THERAPEUTICS, and the PHARMACOPEIAS. For the use of Students and Practitioners. By ALFRED BARING GARROD, M.D., Professor of Materia Medica and Therapeutics, in University College, London. Fcap. 8vo. [Next week.

PRINCIPLES of AGRICULTURAL CHEMISTRY;

with special Reference to the late Researches made in England. By JUSTUS VON LIEBIG. Small 8vo. 3s. 6d. cloth.

This work contains, in the shape of fifty propositions, a summary of the true relation between Chemistry and Agriculture. These propositions are true, so far as our present knowledge extends, and contain principles, facts, and applications, and application of which is of the last importance to all who wish to cultivate agriculture on true, that is, on scientific principles.

The work demonstrates that the author's so-called 'Mineral Theory' has been entirely misunderstood by Mr. Lawes, and that the experiments of the latter gentleman, in all points, really prove the truth of the 'Theory,' as it exists in the author's works.

THE ELECTRIC TELEGRAPH POPULARISED.

With One Hundred Illustrations. By DIONYSIUS LARDNER, D.C.L., formerly Professor of Natural Philosophy and Astronomy in University College, London. (From 'The Museum of Science and Art.') 12mo. 350 pages. 2s. cloth lettered.

"In the composition of this volume my purpose has been to render intelligible to all who can read, irrespective of any previous scientific acquirements, the various forms of telegraph in actual operation in different parts of the world, and the manner in which their marvellous effects are produced. Since the instrument in one form or another involves all the great laws governing electrical and magnetic phenomena, the discovery of which will render for ever memorable the researches of the eminent scientific men of the last half-century, it was necessary to include in the exposition of each piece of apparatus such an account of the physical principle upon which its use depends, as should render its application and effects understood. Descriptions of such apparatus, however briefly expressed, would have been obscure without graphic illustrations to correspond with them. These have accordingly been supplied, as will be seen, with no sparing hand."

"No two countries agree in adopting the same form of telegraphic instrument, and even in the same country different forms of telegraph are used by different companies and for different purposes. Since these various instruments are always different in the details of their construction, and often totally distinct in their principle and mode of operation, it was necessary to explain each in succession, and to do so correctly it was necessary to seek and obtain authentic documents, descriptions, and drawings from those who were placed in the direction and superintendence of the telegraphs in various parts of the continent of Europe and in the United States."

"The reader of this little volume will find in its pages abundant evidence, that no pains or cost have been spared in these researches."—*Preface.*

MR. NEWBY'S NEW PUBLICATIONS.

SECOND EDITION.

In 3 vols. 8vo. price 42s.

THE LITERARY LIFE AND CORRESPONDENCE OF

The COUNTESS of BLESSINGTON.

By R. MADDEN, Esq. M.R.I.A.

Author of 'Life of Savonarola,' 'Travels in the East,' &c.

* * * The publication of the *Second Edition* of this most popular work has been delayed in consequence of the numerous important letters and documents which the Editor has received, as well as to enable the Publisher to have engraved the celebrated Portrait of Lady Blessington by A. E. Chalon, Esq. R.A. It will be ready on the 30th inst.

2.

On the 15th, in 1 vol. 10s. 6d. with coloured Plates,

NINE YEARS' RESIDENCE IN RUSSIA,

ARISTOBULUS:

A TALE of JERUSALEM.

By M. KAVANAUGH.

MR. HEPWORTH DIXON'S HISTORICAL MEMOIRS.

I.

FIFTH EDITION.

JOHN HOWARD:

A CONTRIBUTION TO THE SOCIAL HISTORY OF ENGLAND IN THE EIGHTEENTH CENTURY.

"The adventures of Howard are recorded in a loving and energetic spirit. The reflections are just, often ingenious and eloquent, almost always striking. The book contains many satisfactory evidences of an independent and vigorous intellect."—*Examiner.*

II.

SECOND EDITION.

WILLIAM PENN:

AN HISTORICAL BIOGRAPHY.

Founded on Family and State Papers.

"Mr. Dixon's sketch of the Governor's life in his American dwelling is tempting and picturesque. His style is good and easy. There is life in his narrative and vigour in his descriptions."—*Edinburgh Review.*

III.

ROBERT BLAKE:

ADMIRAL AND GENERAL AT SEA.

Based on Family and State Papers.

"The subject is noble; and Mr. Dixon has treated it with rare vigour, spirit, and conscientiousness. The glorious victories won by Robert Blake are universally known; but to find out *how* they were won, and what sort of man achieved them, we must apply to the famous Republican Admiral's latest, best, and completest biographer. His narrative is not only historically valuable, but is terse, vivid, and dramatic in no ordinary degree. We especially like the manner in which the extraordinary events of Blake's period are interwoven with Blake's life; and the rigorous and masterly clearness of the descriptions of the sea-fights."—*Leader.*

IV.

THE LONDON PRISONS:

WITH SOME ACCOUNT OF THE MOST CELEBRATED PERSONS CONFINED IN THEM.

"'The London Prisons' is an enchanting volume. It is a book no less of great principles, which all statesmen and philanthropists would do well to ponder.'"—*Evangelical Magazine.*

V.

THE FRENCH IN ENGLAND;

BOTH SIDES OF THE QUESTION ON BOTH SIDES OF THE CHANNEL.

"The author wields a skilful pen, and tells his story with true historical fervour. The circumstances were worthy of his powers. The sketch of Bonaparte's measures for the concentration of his troops, and those for rendering Boulogne and the other harbours on that coast capable of containing his powerful armaments, and the description of the various kinds of troops and vessels, are admirable. The power and force of despotism stand before us in their grandest and most imposing characters. But far nobler and more inspiring is the account of what was meanwhile going on upon our own shores. The description of all this is brilliant."—*Gentleman's Magazine.*

CHAPMAN & HALL; and all Booksellers.

THE BANDMASTER'S ATLAS: Showing, at one view, the Scales, Compass, &c. of all the Instruments used in the Military and Band Bands; with explanation of each Instrument, &c. By RICHARD PORTER, Bandmaster to the Royal Military Asylum, Chelsea. 10s. 6d. This unique Work is invaluable to the Bandmaster, and all concerned in the scoring of Orchestral Music, &c.

Also, NIEMITZ'S METHOD for MUSICAL INSTRUMENTS used in a Brass Band, with complete Scales, translated from the German, by A. MERRICK. 21s. London: Robert Cocks & Co. New Burlington-street, Music-Publishers to their Majesties Queen Victoria, and the Emperor Napoleon III.

FRENCH IN ONE VOLUME.

Just published, a New and Improved Edition, price 6s.

THE COMPLETE FRENCH CLASS-BOOK; or, Grammatical and Idiomatic French Manual: with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and original plan. By ALFRED HAVET, French Master in the Glasgow Athenæum, &c.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.

"One delights to luxuriate among its ample pages, replete as they are with excellent and clearly-arranged matter, explanatory and illustrative of the French language."—*Scottish Educational Journal*.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French Manuals yet published in this country. The new features that it possesses are chiefly that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language."—*The Educational Examiner*.

London: Dulau & Co., W. Allan.

FRENCH LANGUAGE.

ROUILLON'S GRAMMATICAL INSTITUTES of the FRENCH LANGUAGE;

or, the Teacher's Assistant; containing a Series of Theoretical, Practical, and Progressive Lessons, in which every difficulty is explained, either in Notes at the end of each Exercise, or by References to preceding Rules. Tenth Edition. 12mo. half-bound, 5s.—Key to ditto, 3s.

ROUILLON'S EXERCISES on FRENCH CONVERSATION;

or, a Selection of English Sentences to be translated into French, in which the difference of the Idioms, Genius, and Phraseology of the French and English Languages may be readily distinguished. Seventh Edition. 18mo. 3s. 6d. half bound.—Key to ditto, 2s.

ROUILLON'S TOURIST'S FRENCH COMPANION;

or, Familiar Conversations on every subject which can be useful to the Continental Traveller or the French Student in general. Fifteenth Edition. 12mo. half bound, 4s. 6d. The sale of nearly 40,000 copies of this Work strongly attests its value. The sentences are expressed in elegant language, and, in order to facilitate the pronunciation, the silent letters are printed in italics.

London: Longman & Co.; Hamilton & Co.; Simpkin & Co.; Whittaker & Co.; and W. Allan. Norwich: C. Muskett. And all Booksellers.

London: James Blackwood, Paternoster-row.

On the 21st inst. Second Edition, 2 vols. post 8vo. cloth, price 12s.

THE MEMOIRS of JOSEPH JOHN GURNEY, 1y J. B. BRAITHWAITE.

In passing through the press a second edition of these volumes, various additions have been made, principally from letters and papers communicated to the editor since the first edition was published, which will, it is hoped, add to the usefulness of the work. With a view to prevent its bulk from being increased, some passages have been omitted, which, upon a careful review, appeared not materially to add to its general interest or value.

"We thank the biographer most sincerely for the rich repast he has furnished to enlightened and spiritual Christians of all denominations, and venture to hope that the Memoirs of Joseph John Gurney will become a Christian Classic."—*Evangelical Magazine*.

"Mr. Braithwaite's volumes are ably written, and they are a valuable addition to a branch of our literature, the biographies of the Friends, on which they who are best acquainted with the productions of the British press in the last two centuries set a high value."—*Eclectic Review*.

"Those who are best acquainted with the writings of J. J. Gurney will turn to these volumes with large expectations, and they will not be disappointed. They are rich in traces of the strong Christian wisdom which characterized the subject of them."—*British Critic*.

Norwich: Fletcher & Alexander. London: W. & F. G. Cash, 5, Bishopsgate Without. Dublin: J. M'Glashan. Edinburgh: John Menzies.

On June 1, No. 1, with 180 beautifully coloured figures, price 3s. 6d.

WOOD'S INDEX TESTACEOLOGICAL, an illustrated Catalogue of all known Shells, British and Foreign, with their Synonyms, Localities, &c. New edition, revised and enlarged by SYLVANUS HANLEY, Esq. Also, a large assortment of **ROSS'S** Portrait and Landscape **LENSES.**

PHOTOGRAPHY ON PAPER.

Every requisite for practising the Calotype process may also be seen in the Apparatus-room, including Buckle's Brushes, Shallow Glass Dishes for developing negatives, with case and covers, Deep Porcelain Dishes, for Washing the Iodized Paper, &c. &c. An excellent Negative Paper, well adapted for Iodizing, after the method followed and recommended by Mr. Sutton, price 4s. per quire, or 3d. 10s. per ream, 19 by 15.

N.B. The stock (50 reams) has now been kept two years. This paper may also be had ready iodized.

XYLO-IODIDE OF SILVER.

This important photographic preparation is exclusively used at all the Photographic Establishments. Its superiority is universally acknowledged. Testimonials from the best photographers and principal scientific men of the day warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action.

In all cases where a quantity is required, the two solutions may be had at wholesale price in separate bottles; in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each bottle is stamped with a red label, bearing my name and address.

RICHARD W. THOMAS, CHEMIST,

10, PALL MALL,

to counterfeit which is felony.

NITRATE of SILVER BATH for the above preparation may be always obtained of R. W. THOMAS, ready made, at a cost little more than the price of ingredients used.

CRYSTAL VARNISH.

PREPARED FROM THE FINEST AMBER.

This valuable Varnish, for protecting Negative Pictures, does not require the application of any heat to the plate. The coating will be found free from stickiness, hard, and transparent. It dries immediately.

HYPO-COLOURING BATH.

FOR RENDERING THE POSITIVES ON PAPER DARK AND RICH IN COLOUR.

CYANOGEN SOAP.

FOR REMOVING ALL KINDS OF PHOTOGRAPHIC STAINS.

The genuine is made only by the inventor, and is secured with a red label, bearing this signature and address,

RICHARD W. THOMAS, CHEMIST,

No. 10, PALL MALL,

Manufacturer of Pure Photographic Chemicals and Apparatus.

And may be procured of all respectable Chemists, in pots, at 1s. 2s., and 3s. 6d. each, through Messrs. EDWARDS, 67, St. Paul's Churchyard; and Messrs. BARCLAY & Co., 95, Farringdon-street, Wholesale Agents.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

PHOTOGRAPHY, WHOLESALE, RETAIL, AND FOR EXPORTATION.

OTTEWILL & CO. 24, CHARLOTTE-TERRACE, ISLINGTON.—OTTEWILL'S REGISTERED DOUBLE-BODY FOLDING CAMERA, with Rack-work Adjustment, is superior to every other form of Camera, and is adapted for Landscapes and Portraits.—May be had of A. Ross, Featherstone-buildings, Holborn; and at the Photographic Institution, Bond-st. * * * Catalogues may be had on application.

JUST OUT.—THE QUEEN, PRINCE, EMPEROR and EMPRESS in ONE GROUP in the STEREOSCOPE.—Stereoscope Company, two doors west of Hanover-square, in Oxford-street.—Photographic Views, 11s. per dozen. THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY.

Established at York, 1824, and Empowered by Act of Parliament. CAPITAL, 500,000l.

The attention of the Public is particularly called to the terms of this Company for

LIFE INSURANCES,

And to the distinction which is made between Male and Female Lives.

No Charge for Stamps on Life Policies.

FIRE INSURANCES

Are also effected by this Company on the most moderate terms.

LONDON AGENTS:

Mr. William Pitman, Solicitor, 34, Great James-street, Bedford-row.
William R. Turner, Solicitor, 1, Field-court, Gray's Inn.

Agencies are also established at the various Towns in the Country.

W. L. NEWMAN, Actuary and Secretary, York.

ANNUITIES GRANTED ON LIBERAL TERMS BY THE
FALCON LIFE ASSURANCE SOCIETY,
 dependent on the
AGE AND CONSTITUTION OF THE LIFE.
 Particulars sent free on application.
 41, Moorgate-street, London.
THOMAS WALKER, Actuary.

SUN LIFE ASSURANCE SOCIETY,
 LONDON.

SHARE OF PROFIT INCREASED FROM
ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in **FOUR-FIFTHS**, or 80 per cent. of the Net Profits of the Society, according to the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young lives are lower than in many other old-established offices, and Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the investments of Premiums.

Policy Stamps paid by the Office.
 Prospectuses may be obtained at the Office in Threadneedle-street, London, or of any of the Agents of the Society.
CHARLES HENRY LIDDERDALE, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY.

HENRY FREDERICK STEPHENSON, Esq. Chairman.
ROBERT BIDDULPH, Esq. Deputy-Chairman.

Advantages.

The **LOWEST** rates of Premium on the **MUTUAL SYSTEM.**
 The **WHOLE OF THE PROFITS** divided among the Assured every Fifth Year.

No charge for Policy Stamps, nor for Service in the Yeomanry or Militia Corps.

Policies in force upwards of 7,000.

The Assurance Fund exceeds 1,402,322l. Income upwards of 231,000l. per Annum.

The sum of 397,000l. was added to Policies at the last Division, which produced an average Bonus of 67 per Cent. on the Premiums paid.

For particulars apply to
ALEXANDER MACDONALD, Secretary.

Actuary and Secretary.
CHARLES JELICOE, Esq.

The business of the Company comprises Assurances on Lives and Survivorships, the Purchase of Life Interests, the sale and purchase of contingent and deferred Annuities, Loans of Money on Mortgage, &c.

This Company was established in 1807, is empowered by the Act of Parliament 33 Geo. III., and regulated by Deed enrolled in the High Court of Chancery.

The Company was originally a strictly Proprietary one. The Assured now participate quinquennially in four-fifths of the amount to be divided.

To the present time (1854) the Assured have received from the Company, in satisfaction of their claims, upwards of 1,480,000l. The amount at present assured is 3,000,000l. nearly, and the income of the Company is about 150,000l. per annum.

At the last Division of Surplus, about 120,000l. was added to the sums assured under Policies for the whole term of Life.

The lives assured are permitted, in time of peace, without extra charge, to reside in any country (Australia and California excepted) north of 33 degrees north latitude, or south of 33 degrees south latitude, or to pass by sea (not being seafaring persons by profession) between any places lying in the same hemisphere, and not within those limits.

Assurances effected by persons on their own lives are not rendered void in the event of death occurring by suicide, duelling, or the hands of justice, unless such death take place within one year from the date of the Policy.

All Policy Stamps and Medical Fees are now paid by the Company.

The Annual Reports of the Company's state and progress, Prospectuses and Forms, may be had, or will be sent, post free, on application at the Office, or to any of the Company's Agents.

ESTABLISHED 1803.

GLOBE INSURANCE,

 INCOME-TAX RETURNS.

GREAT WESTERN RAILWAY.—COALS.

—Orders for the best RUABON HOUSE COALS, equal to the finest Durhams, may be executed at 25s. per Ton (cash price), delivered within 4 miles of the Paddington Station.

These Coals are bright and durable in burning, and contain only one-half per cent. of dust.

They are now for the first time introduced into the London Market by the recent opening of the Great Western Railway into North Wales.

Address the Superintendent of the Company, Paddington Station.

F. DENT, 61, STRAND, and 34 and 35,

R. ROYAL EXCHANGE, Chronometer, Watch, and Clock Maker, by appointment, to the Queen and Prince Albert, sole Successor to the late E. J. Dent in all his patent rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical, turret, and other Clocks, Diplendoscopes, and Patent Ships' Compasses, on board the Royal Yacht, and the United States' Watches, 61, &c. Gentlemen's, 10 guineas. Strong Silver Lever Watches, 8l. 6s.

WATHERSTON & BROGDEN caution the

Public to have the carat gold stated on the invoice, and redress is obtainable in a County Court. Watherston & Brogden's Gold Chains are sold on this principle only, at manufacturer's prices.—Crystal Palace, Central Trausept Gallery, and Manufacturers, 16, Henrietta-street, Covent-garden. Assays made of chains and jewelry for 1s. each.

FINE-ART MANUFACTURE.—ELKINGTON

& Co. respectfully solicit the attention of the Nobility, Gentry, Amateurs, Artists, and others interested in the advancement of British Art-Manufacture, to their increasing collections of Statuettes, Vases, &c. published exclusively by them in Bronze, Silver, and Gold, from the Antique and select Works of Modern Artists.

Also to their Artistic and Decorative Plate, calculated for the Table, Sideboard, Library, Boudoir, &c.

These productions were honoured at the late Great Exhibition by an award of the 'Council Medal,' and may be obtained at either of the Establishments.

22, REGENT-STREET, } LONDON.
 22, MOORGATE-STREET, }
 NEWHALL-STREET, BIRMINGHAM.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in operation.

52, FLEET-STREET.—At home from Ten till Five.

CONSTANT EMPLOYMENT GUARAN-

TEED.—Ladies or Gentlemen are instructed in the New, Elegant, Ornamental ART of WHITE, GOLD, or PINK DECORATION, for articles of general use. "THE ARTS TAUGHT" for One Guinea each, and constant employment "GUARANTEED," by which from 2l. to 3l. may be realized weekly. Ladies wishing to increase their incomes cannot pursue a more elegant, artistic, or pleasurable occupation. Private Lessons given at Ladies' own residences. Mr. LAWRENCE, who is an Exhibitor at the Stationery Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites Ladies to see his unique specimens at the above public buildings, or at Mr. L.'s Show Rooms daily, from Ten till Five, 15, Percy-street, Bedford-square, near Rathbone-place. The Arts taught by correspondence.

RECONNOITERING TELESCOPES.—These

well-known Instruments to be had of the Maker, **JOHN DAVIS, OPTICIAN, DERRY.** The Telescope, when closed, measures 34 in., and shows Jupiter's moons. Price, sent through the post, 36s. The same Instrument fitted up with an additional Eye-piece and Stand, price 3l. 2s. Thus fitted, it will show Saturn's Ring.—Map Metres in case by post, 3s. 6d.

THE ROYAL EXHIBITION.—A valuable,

newly-invented very small powerful Waistcoat Pocket-glass, the size of a Walnut, to discern minute objects at a distance of from four to five miles, which is found to be invaluable for YACHTING and to SPORTSMEN, GENTLEMEN, and GAME-KEEPERS. Price 1l. 10s. sent free. **TELESCOPES.** A new and interesting NEW INVENTION IN TELESCOPES, capable of extraordinary powers, that some, 34 inches, with an extra eye-piece, will show distinctly Jupiter's Moons, Saturn's Ring, and the Double Stars. They supersede every other kind, and are of all sizes for the waistcoat-pocket, Shooting, Military purposes, &c. Opera and Race-course Glasses with wonderful powers; a minute object can be clearly seen from 10 to 12 miles distant.—Invaluable newly-invented preserving Spectacles. Invisible and all kinds of Acoustic Instruments for relief of extreme deafness.—Messrs. S. & B. SOLOMONS, Opticians and Aurists, 39, Albemarle-street, Piccadilly, opposite the York Hotel.

LOCKWOOD'S celebrated NUGGET PENS,

being electro-gilt, are not liable to rust or corrode; with Fine, Medium, or Broad Points, 1s. per box of one dozen. Wholesale and retail at LOCKWOOD'S Stationery and Dressing-Case Warehouse, 75, New Bond-street.

N.B. A box of one dozen post free for 13 stamps.

FLOWER-POTS and GARDEN SEATS.—

JOHN MORTLOCK, 250, Oxford-street, respectfully announces that he has a very large assortment of the above articles in various colours, and solicits an early inspection. Every description of CHINA, GLASS, and EARTHENWARE, at the lowest possible price, for Cash.—250, Oxford-street, near Hyde Park.

GARDEN VASES, FOUNTAINS, &c.—

THOMAS SOMERVILLE, Landscape Gardener, Nurseryman, Seedsman, and Florist, Garden-road, St. John's Wood, London, begs to inform the Nobility, Gentry, and his Patrons generally, that he has entered into arrangements with an eminent Company in Scotland for the sole disposal in London of their highly ornamental and very durable VASES, Fountains, &c., samples of which may be seen at his Grounds, in the Garden-road, as above. T. S. has much pleasure in being the first to introduce to the notice of the public a highly ornamental Vase, capable of resisting the most severe weather, and at little more than half the cost of any other possessing the same qualities, and he has no hesitation in stating that a more suitable Vase for the growth of plants cannot be manufactured.

STAINED GLASS WORKS,

32, ALLSOP-TERACE, NEW ROAD,
 Near Baker-street, St. Mary-le-Bone,
 LONDON.

Messrs. GIBBS beg to announce to the Nobility, Clergy, and Laity, that they have REMOVED their Old Established Stained Glass Works from No. 2, Harmond-place, Camden Town, to the above Address, where business will be continued the same as usual.

April 28, 1855.
 N.B. Stained Glass Designs and Estimates given for Ecclesiastical and Domestic purposes.

OSLERS' TABLE GLASS, CHANDELIERS,

LUSTRES, &c., 44, Oxford-street, London, conducted in connection with their Manufactory. Broad-street, Birmingham. Established 1807. Richly cut and engraved Decanters in great variety. Wine Glasses, Water Jugs, Goblets, and all kinds of Table Glass at exceedingly moderate prices. Crystal glass Chandeliers, of new and elegant designs, for Gas or Candles. A large stock of Foreign Ornamental Glass always on view. Furnishing orders executed with despatch.

IMPROVEMENTS; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete Lists of Sizes and Prices may be had on application.

CHUBB & SONS, 25, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley Field, Wolverhampton.

DO YOU BRUISE YOUR OATS YET?—

One bushel of oats crushed will nearly make two. Immense saving and important improvement of the animal.—OAT-BRUSERS, Chaff-cutters, Ploughs, Threshing Machines, Domestic Flour Mills, Light Carts, Mining Tools, Brick and Tile Dito, Corn-dressing Dito, Horse and Steam Machinery put up, &c. Repairs done.—**M. WEDLAKE & CO.** 118, Fenchurch-street.—Pamphlet on Feeding, 1s. List with 140 illustrations, 1s.; per post, 1s. 4d. each.

CARRIAGES of the lightest Construction, best

build and finish, at reduced prices.—For SALE, or to be let on Job, a large assortment of New and Second-hand CARRIAGES, comprising single and double seated Broughams, Clarendons, Steppes, Broughams, Phaetons, &c.—**PEAKE'S** old-established Carriage Factory, 5, Lisie, or 11, Princes-street, Leicester square.

DR. ARNOTT'S SMOKE - CONSUMING

FIRE-GRATE is manufactured by F. EDWARDS, SON & Co., 42, Poland-street, Oxford-street; where one may be seen in being perfectly consumed, no chimney sweeping is being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

AT Mr. MECH'S ESTABLISHMENTS,

112, REGENT-STREET, and 4, LEADENHALL-STREET, London, are exhibited the finest specimens of British Manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and other articles of utility or luxury. A separate department for Papier Maché Manufactures and Bagatelle Tables. Table Cutlery, Razors, Scissors, Penknives, Straps, Paste, &c. Ship's Orders executed. Superior Hair and other Toilet Brushes.

LOOKING-GLASSES, Console Tables, Window

Cornices, Girandoles, and Gilt Decorations of every description.—**C. NOSOTTI, Manufacturer** (established 1820, 384 and 389, Oxford-street) has the most extensive assortment of Looking-glasses in every variety of style. The taste and superiority of workmanship, combined with the pure colour of the glass, must insure patronage. C. Nosotti being the largest consumer of Plate Glass, has made arrangements with the principal British and Foreign Glass Cutters, from 7s. to 12s. per foot, to enable him to offer advantages in prices as cannot, by excellence by any other house. Books of Designs free on receipt of six stamps for postage.

FENDERS, STOVES, and FIRE IRONS.—

Buymen of the above are requested before finally deciding, to visit **WILLIAM S. BURTON'S SHOW-ROOMS**, 39, Oxford-street (corner of Newman-street), Nos. 1, 2, and 3, Newman-street, and 4 and 5, Perry's-place. They are the largest in the world, and contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exactness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 10s. to 5l. 10s.; ditto with ornate ornaments and two sets of bars, 3l. 10s. to 12l. 10s.; Bronzed Fenders with ornate stands, from 7s. to 12s.; Stoves and Ranges, from 2l. 10s. to 6l.; ditto, with rich ornate ornaments, from 2l. 10s. to 7l. 7s.; Fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other Patent Stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Secondly—from those purchases being made exclusively for cash,

BATHS & TOILETTE WARE.—WILLIAM

S. BURTON has ONE LARGE SHOW-ROOM devoted exclusively to the DISPLAY of BATHS and TOILETTE WARE. The stock of each is at once the largest, newest, and most varied ever submitted to the public, and marked at prices proportionate with those that have tended to make his Establishment the most distinguished in this country. Portable Showers, 7s. 6d.; Pillar Showers, 8l. to 5l.; Nursery, 15s. to 32s.; Sponging, 15s. to 32s.; Hip, 14s. to 31s. 6d. A large assortment of Gas, Furnace, Hot and Cold Plunge, Vapour, and Camp Shower Baths.—Toilette Ware in great variety, from 15s. 6d. to 45s. the Set of Three.

THE BEST SHOW OF IRON BEDSTEADS

IN THE KINGDOM IS **WILLIAM S. BURTON'S**. He has TWO VERY LARGE ROOMS, which are devoted to the EXHIBITION of IRON and BRASS BEDSTEADS and CHILDREN'S COTS, with appropriate Bedding and Mattresses. GREAT SAVING OF COST, and embrace the HOME quality at
SHIPPING PRICES.

RUPTURES.—BY ROYAL LETTERS PATENT.
WHITE'S MOC-MAIN LEVER TRUSS is
allowed by upwards of 200 Medical Gentlemen to be the most
effective invention in the curative treatment of HERNIA. The use
of a steel spring, so often hurtful in its effects, is here avoided; a soft
bandage being worn round the body, while the requisite resisting
power is supplied by the MOC-MAIN PAD and PATENT LEVER
trussing with so much ease and closeness that it cannot be detected,
and may be worn during sleep. A descriptive circular may be had,
and the Truss (which cannot fail to fit) forwarded by post, on the
circumference of the body, two inches below the hips, being sent to
the Manufacturer, Mr. WHITE, 238, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE CAPS, &c.
For VARICOSE VEINS, and all cases of WEAKNESS
and SWELLING of the LEGS, SPRAINS, &c. They are porous,
light in texture, and inexpensive, and are drawn on like an
ordinary stocking. Price, from 7s. 6d. to 16s. each; postage 6d.
MANUFACTORY, 238, PICCADILLY, LONDON.

GREENWICH WHITEBAIT DINNERS.—
THOMAS QUARTERMAINE respectfully informs the
Nobility and Public that he has opened his New Tavern, the
"SHIP," which he intends to conduct on the same principle as
the old one, the "CROWN AND SCEPTRE," and solicits their
patronage to both houses.—Orders can be given at the York Hotel,
New Bridge-street, Blackfriars.
May 12, 1855.

IMPORTANT TO INVALIDS.—The delicious
GERMAN MILK LOAVES, manufactured by P. McLachlan,
144, Holborn-bars, stands unrivalled as an article of diet for the
sick. They are highly nutritious, and at the same time re-
markably easy of digestion. Only to be had genuine at 144,
Holborn-bars, and 6, Birch-lane, Cornhill.

BERMUDA ARROWROOT, unremoved from
the tin cases in which it is shipped, weight, case exclusive,
262 lb., price 50s. Small quantities can be had at 2s. 6d. per lb.
JAMES EPPS, Homoeopathic Chemist,
Egyptian Hall, Piccadilly;
112, Great Russell-street, Bloomsbury; and
82, Old Broad-street, City.

**SCHWEPPE'S SODA, POTASS, and
MAGNESIA WATERS,** and Aerated Lemonade, continue to
be manufactured upon the largest scale at their several estab-
lishments in London, Liverpool, Bristol, and Derby. The cele-
brated, well-known waters, and the preference they univer-
sally command, are evidence of their original superior
quality over all others is well sustained. Every bottle is pro-
tected by a label, with the name of their firm, without which
none is genuine, and it may be had of nearly all respectable
Chemists throughout the Kingdom. Importers of the German
Seltzer Waters, direct from the springs, as for the last thirty
years.—51, Berners-street, London.

**YOURSELF! WHAT YOU ARE! AND
WHAT FIT FOR!**
ALICE MELVILLE continues, with immense success, to de-
lineate the characters of individuals from a graphological exami-
nation of their handwriting. All persons wishing to "know
themselves" or their friends, by means of this extraordinary
and interesting science, must send a specimen of their writing,
stating sex and age, or supposed age of the writer, to Miss Mel-
ville, Argyle-square, London (inclosing fourteen penny post-
age stamps), and they will receive a written description of their
mental and moral qualities, virtues and failings, &c., and many
things hitherto unsuspected, calculated to guide them through
life.

**TRELOAR'S COCOA-NUT FIBRE MANU-
FACTURES** consist of Matting, Door Mats, Mattresses, Har-
socks, Brushes, &c., and are distinguished by superiority and
excellence of workmanship, combined with moderate charges.
Catalogues, containing prices and every particular, free by post.—
TRELOAR, Cocoa-Nut Fibre Manufacturer, 43, Ludgate-hill,
London.

BRIGHTON.
**SAKE DEEN MAHOMED'S CELEBRATED
INDIAN MEDICATED VAPOUR AND SHAM-
POOING BATHS.**
Introduced into this Country and Established by him in 1784,
and who received the Appointment of Shampooing Surgeon to
their late Majesties George and William the Fourth, and the Royal
Family.

MR. ARTHUR MAHOMED
(Son and Successor of the late Sake Deen Mahomed)
continues to administer this highly-appreciated and valuable de-
scription of Bath, which has, during the period of near Seventy
years, obtained a high reputation amongst the Nobility, Gentry,
and Medical Profession, in the Cure of the following Diseases:—
Gout, Rheumatism, Lumbago, Sciatica, The Doloureux, and the
various forms of Neuralgia, Chronic Inflammations, Sprains, Con-
tractions, Paralytic Affections, Asthma, Scrofula, and diseases
produced by improper or long-continued use of Mercury, Severe
Colds, Defective Secretions, Torpor of the System, Indigestion,
Hypochondriasis, Hysteria, Nervousness, and all Morbid Suppres-
sions.

MR. ARTHUR MAHOMED'S
Establishment is conducted by his own personal attendance, and
his long experience in the above practice enables him, with plea-
sure and confidence, to state with continued successful results, of
which numerous testimonials may be seen by reference to his book
of Cases.

The Ladies' Department is under the Superintendence of
Mrs. MAHOMED
Proprietress of Terms, &c., forwarded by Post (as customary),
on application, or to be had at the Establishment,
64, WEST-STREET, opposite St. Paul's Church, BRIGHTON.

DINNEFORD'S FAMILY MEDICINE
DIRECTORY, containing a variety of Practical Informa-
tion especially adapted for the Clergy, Ladies, Schools, and Heads
of Families, in the absence of Professional Assistance. New Edi-
tion, price 2s. 6d., by post 3s.

MEDICINE CHESTS in great variety; a large Assortment of
Patterns, at prices from 10s. to 100.
172, New Bond-street, London.

DINNEFORD'S PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent
of the Medical Profession as an excellent remedy for Acidities,
Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient
it is admirably adapted for delicate Females, particularly during
Pregnancy; and it prevents the Food of Infants from turning sour
during digestion. Combined with the ACIDULATED LEMON
SYRUP, it forms an Effervescent Aperient Draught, which is
highly agreeable and efficacious.—Prepared by DINNEFORD &
Co., Dispensing Chemists, (and General Agents for the improved
Horse Hair Gloves and Belts), 172, New Bond-street, London; and
sold by all respectable Chemists throughout the Empire.

MISS KIRBY, 23, Mortimer-street, Caven-
dish-square, having received numerous orders for her
EMOLIENT POMADE for RESTORING the HAIR, has
appointed the following Agents:—Forster, 52, and Barton, 77,
King's-road, Brighton; Savory & Moore, High-street, Chelten-
ham; Wells, Sparre-street, Dover; Chater, Chemist, Walford;
Morris, 29, High-street, Kensington; Davies, Chemist, Bridge-
street, Rye; Chester, Hallows, 2, High-street, Islington; M'Doug-
all, 174, Regent-street; Adolphus, 198, Oxford-street; and Barclay,
Farringdon-street.

H. BREIDENBACH, Distiller of Flowers
and Eau de Cologne to the Queen, has now in great per-
fection several EXTRACTS of that favourite flower the WOOD
VIOLET. It has a lasting odour, and will not stain the hand-
kerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet
Powder, and several toilet preparations of the same flower equally
fragrant.
157 n, New Bond-street, facing Redmayne's.

THE TOILET OF BEAUTY furnishes innu-
merable proofs of the high estimation in which GOWLAND'S
LOTION is held by the most distinguished possessors of brilliant
complexions. This elegant preparation comprehends the preser-
vation of the complexion, the removal of the effects of cutaneous
malady and the operation of variable temperature, by refreshing
its delicacy and preserving the brightest tints with which beauty
is adorned. "Robert Shaw, London," is in white letters on the
government stamp, without which none are genuine.—Prices 2s. 9d.
and 5s. 6d.; quarts, 8s. 6d. Sold by Perfumers and Chemists.

A CLEAR COMPLEXION.—GODFREY'S
EXTRACT OF ELDER FLOWERS is strongly recom-
mended for softening, beautifying and preserving the skin and
giving it a blooming and charming appearance, being at once a
fragrant perfume and delightful cosmetic. It completely removes
tan, sun-burn, redness, &c., and by its balsamic and healing
qualities renders the skin soft and free from dryness, scurf, &c.,
clears it from every humour, pimple or eruption; and, by con-
tinuing its use only a short time, the skin will become and continue
soft and smooth, and the complexion clear and beautiful. In the
process of shaving it is invaluable, as it annihilates every pimple
and all roughness, and affords great comfort if applied to the face
during the cure of a skin disease.—Sold in Bottles, price 2s. 9d., with
directions for using it, by all Medicine Venders and Perfumers.

LADIES' BONNETS—OLDRIDGE'S BALM
OF COLUMBIA FOR THE HAIR.—Ladies' Bonnets are
not soiled by the use of Oldridge's Balm of Columbia. In bottles,
with full Instructions for Use, 3s. 6d., 6s., and 11s.
13, Wellington-street North, Strand; and all respectable Chem-
ists and Perfumers.

METCALFE & CO'S NEW PATTERN
TOOTH BRUSH & PENETRATING HAIR BRUSHES.
—The Tooth Brush has the important advantage of searching
thoroughly into the divisions of the Teeth, and is famous for the
hairs not coming loose, &c. An improved Clothes Brush, incapable
of injuring the finest nap. Penetrating Hair Brushes, with the
durable unbleached Russian bristles. Flesh Brushes of improved
graduated and powerful form. Hair Frizzlet Brushes, which act in
the most successful manner. Smyrna Sponges.—By means of
direct importations, Metcalfe & Co. are enabled to secure to their
customers the luxury of a Genuine Smyrna Sponge. Only a
METCALFE, BINGLEY & CO'S Sole Establishment, 1309,
Oxford-street, one door from Holles-street.
Caution.—Beware of the words "From Metcalfe's," adopted by
some houses.
METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

ROWLANDS' MACASSAR OIL, for the
GROWTH, RESTORATION, and for IMPROVING and
BEAUTIFYING the HUMAN HAIR. It prevents Hair from
falling off or turning grey, strengthens weak Hair, cleanses
it from Scurf and Dandruff, and makes it BEAUTIFULLY
SOFT, CHELID, and GLOSSY. In the Growth of the BEARD,
SOFT, CHELID, and GLOSSY. It is equally useful in the treatment
of WHISKERS, and MUSTACHIONS, it is especially recommended as
forming the basis of A BEAUTIFUL HEAD OF HAIR.

Price 3s. 6d.; 7s.; Family Bottles, equal to four small, 10s. 6d.;
and double that size, 2s. 6d.
CAUTION.—On the Wrapper of each Bottle are the words,
ROWLANDS' MACASSAR OIL, in two lines.
Sold by A. ROWLAND & SONS, 20, Hatton-garden, London;
and by Chemists and Perfumers.

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.?—No other compound for the Hair has
maintained such an enduring celebrity as EMILY DEAN'S
CRINIDENE. It is guaranteed to produce Whiskers, Mous-
tachions, Eyebrows, &c. in a few weeks, and restore the Hair in
baldness, from whatever cause, strengthen it when weak, prevent
its falling off, and effectually check greyness in all its stages. Price
3s. per Package (cleverly perfumed); sent post free on receipt of
3 penny-postage stamps, by MISS DEAN, 37A, Manchester-street,
Gray's Inn-road, London. Sold by every Chemist in the world.—
"In one fortnight it produced a beautiful set of moustaches," H.
Adams.—"It has prevented my hair falling off," J. Hickson.—"It
has quite checked the greyness that was coming on," Mrs. Elder.
Beware of imitations under closely similar names.

Just published, the 32nd edition, price 1d.
GRIMSTONE'S HISTORY OF AN EGYPTIAN
PEA, discovered amongst others by the Committee of the
British Association, in a Vase, presented to them by Sir Gardner
Wilkinson, the Egyptian Traveller. Three were presented to Mr.
W. Grimstone by Mr. T. I. Pettigrew, who assisted in opening this
relic of the time of the Pharaohs, being 2,844 years old. The
growth of this pea is different to those of this country; the taste
is unequalled, they boil much greener than ours, and so prolific,
being planted thus, eight inches apart, the 2s. 6d. bag will
produce enough for a small family, they require no sticks, and the
bloom hangs in clusters. Remember the only genuine is sold in
bags, 2s. 6d.; three times the quantity, 5s.; seven times the quan-
tity, 10s. Each bag is signed and sealed by William Grimstone,
Great Marlborough-street, Dept. 52, High-street, Bloomsbury, London,
Eye Snuff and Herb Tobacco Warehouse, 3d. per ounce.

DR. DE JONGH'S
LIGHT BROWN COD LIVER OIL.
THIS OIL, long known, extensively prescribed, and highly ap-
preciated on the Continent, has now, in consequence of its proved
superior power and efficacy, acquired the general and entire con-
fidence of the medical profession in this country. It is of the purest
of the finest quality, free from adrears and adulterations, and is
usually repulsive and nauseous flavour, or sickly after-taste of the
pale Oil, or of the coarse brown Oil commonly sold, though totally
unfit for medicinal use. It is as low in price per ounce as any
other genuine Cod Liver Oil, whilst its regular and speedy effects
render it incalculably cheaper. Medical and scientific testimonials
of the highest character delivered or forwarded gratis on applica-
tion.—Sold in bottles, capsuled and labelled, with Dr. de Jongh's
Stamp and Signature, WITHOUT WHICH NONE ARE GENUINE, by
ANSAR, HARFORD & Co., 77, STRAND, LONDON. Dr. de Jongh's
sole accredited Agents; and by respectable Chemists in
Town and Country. Half-ounce, 10s. 6d.; 2s. 6d.; Fints (20 oz.) 4s. 9d.;
Quarts (40 oz.) 9s. IMPERIAL MEASURE.

RUPTURES EFFECTUALLY CURED
WITHOUT A TRUSS!—All sufferers from this alarming
complaint are earnestly invited to consult or write to Dr. LESLIE,
as he guarantees them relief in every case. His remedy has been
successful in curing thousands of persons during the last twelve
years, and is applicable to every kind of single and double Rupture,
however old or long-standing, in male or female of any age,
causing no confinement or inconvenience in its use whatever. Sent
post free to any part of the world, with full instructions for use,
on receipt of 7s. 6d. in postage stamps, or post-office order, pay-
able at the General Post-office, to Dr. Herbert Leslie, 37A, Man-
chester-street, Gray's Inn-road, London.—At home daily (except
Sundays) from 11 till 4 o'clock. A Pamphlet of Testimonials, cases, &c.,
sent post free on receipt of one postage stamp.

SPRING MEDICINE OF GREAT EFFICACY.
—KAYE'S WORSDELL'S PILLS thoroughly purify the
blood, and promote the healthy action of the liver, stomach, and
bowels.—Sold Every where, 1s. 1d., 2s. 9d., and 4s. 6d. Wholesale
Depot, 22, Broad-street, London.

STUDENTS, TEACHERS, CLERGYMEN,
and others, whose care and most anxious thought is constantly
being called forth, can hope for but little pleasure in their
high and important undertakings, unless secured by a proper
buoyancy of spirit and vigour of mind. To secure this, then, be-
lieve me, the consideration of every male or female of any age,
and the fine balsamic preparation, PARR'S LIFE PILLS, of all medicines
is without dispute the best calculated to produce a fine flow of
animal spirits, a clear head, and a ready perception.
Sold by E. Edwards, 67, St. Paul's Churchyard; Barclay & Sons,
Farringdon-street; Sutton & Co. Bow Churchyard; Hannay &
Co. 63, and Sangar, 150, Oxford-street, London; and by all respect-
able Chemists and Medicine Venders in Town and Country. In
Boxes, price 1s. 1d., 2s. 9d., and in Family Packets, 11s. each.
* * * Ask for PARR'S LIFE PILLS.

IMPORTANT TO ALL WHO SING.
—From S. Pearsall, Esq., Vicar Choral of Lichfield Cathed-
ral.—A lady of distinction having pointed out to me the qual-
ities of
Dr. LOCOCK'S PULMONIC WAFERS,
I was induced to make trial of a box, and from this trial I am
happy to give my testimonial in their favour. I find, by allowing
a few of the wafers—taken in the course of the day—to gradually
dissolve in the mouth, my voice becomes bright and clear, and the
tone full and distinct. They are decidedly the most efficacious of
any I have ever used.
Dr. LOCOCK'S WAFERS give instant relief and a rapid cure
of asthma, coughs, and all disorders of the breath and lungs.
Sold by all Druggists. Price 1s. 1d., 2s. 9d., and 11s. per box.

HOLLOWAY'S PILLS, an excellent Remedy
FOR THE CURE OF BILE and SICK HEADACHE.—The
extraordinary cures effected by these Pills are truly astonishing,
and which have been the means of bringing them into the highest
repute among all classes of society in every part of the civil-
ized world. They may be taken at all times, with perfect safety, per-
sons suffering from bile, indigestion, deranged stomach, disordered
liver, or any other internal complaint. The properties they pos-
sess strengthen the system, renovate the debilitated, and add
vigour to the constitution. As a family medicine they are
unparalleled.—Sold by all Venders of Medicines, and by Messrs. Proffers
Holloway's Establishments, 244, Strand, London, and 60, Maiden-
lane, New York.

13, GREAT MARLBOROUGH-STREET.

MESSRS. HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED THE FOLLOWING NEW WORKS:—

Volumes III. and IV. of

THE DUKE OF BUCKINGHAM'S MEMOIRS OF THE COURT AND CABINETS OF GEORGE III.

FROM ORIGINAL FAMILY DOCUMENTS. COMPLETING THE WORK. In 8vo. with PORTRAITS.

Among the principal important and interesting subjects of these volumes (comprising the period from 1800 to 1810) are:—The Union of Great Britain and Ireland—The Catholic Question—The Retirement from Office of Mr. Pitt and Lord Grenville—The Addington Administration—The Peace of Amiens—The Connexion of the Prince of Wales with the Opposition—The Coalition of Pitt, Fox, and Grenville—The Downfall of the Addington Ministry—The Conduct of the Princess of Wales—Nelson in the Baltic and at Trafalgar—The Administration of Lord Grenville and Mr. Fox—The Abolition of the Slave Trade—The Walcheren Expedition—The Inquiry into the Conduct of the Duke of York—The Convention of Cintra—The Expeditions to Portugal and Spain—The Quarrel of Lord Castlereagh and Mr. Canning—The Malady of George III.—Proceedings for the Establishment of the Regency, &c. The volumes also comprise the Private Correspondence of Lord Grenville, when Secretary of State and First Lord of the Treasury—of the Right Hon. Thomas Grenville, when President of the Board of Control and First Lord of the Admiralty—of the Duke of Wellington, during his early Campaigns in the Peninsula, &c.

In the List of Distinguished Persons who figure in the Concluding Volumes of this Work will be found the following:—

EMPERORS.—Napoleon, Paul, Alexander, Francis.

KINGS.—George III., Frederick William, Louis XVIII., Joseph and Louis Bonaparte.

The PRINCE OF WALES, the Dukes of York, Cumberland, Gloucester, Clarence, Kent, and other Members of the Royal Family.

DUKES.—Beaufort, Bedford, Bridgewater, Devonshire, Hamilton, Montrose, Newcastle, Portland, Queensbury, Richmond, Somerset, Sutherland, Wellington.

MARQUESSSES.—Abercorn, Blandford, Buckingham, Cornwallis, Downshire, Drogheda, Ely, Headfort, Hertford, Lansdowne, Londonderry, Waterford, Wellesley.

EARLS, VISCOUNTS, and BARONS.—Auckland, Bathurst, Beattie, Belgrave, Bexley, Bridport, Buckinghamshire, Bulkeley, Carrington, Carysfort, Cathcart,

Camden, Camelford, Carlisle, Carnarvon, Castlereagh, Chatham, Charlemont, Chesterfield, Colchester, Cowper, Collingwood, Cochrane, Dartmouth, Derby, Ebrington, Egremont, Eldon, Elgin, Ellenborough, Erskine, Exmouth, Falmouth, Fitzgibbon, Fitzwilliam, Folkestone, Fortescue, Glastonbury, Leveson Gower, Grenville, Grey, Grosvenor, Hardwicke, Harrington, Harrowby, Hobart, Holland, Hood, Howe, Howick, Hutchinson, Keith, Kenyon, Lake, Lauderdale, Liverpool, Macartney, Mansfield, Melville, Milton, Minton, Malmesbury, Moira, Morpeth, Mulgrave, Nelson, Nugent, Paget, Palmerston, Percy, Pembroke, Plunkett, Powis, Portarlington, Proby, Radnor, Rendlesham, Romney, Sandwich, St. Helen's, Sidmouth, St. John, St. Vincent, Sydney, Spencer, Temple, Teignmouth, Townshend, Westmeath, Westmoreland, Yarmouth.

BISHOPS.—London, Oxford, Limerick, St. Asaph.

SIRS.—Ralph Abercrombie, David Baird, Francis Burdett, Henry Burrard, John Craddock, Hew Dalrymple, Philip Francis, Francis Freeling, William Fremantle, Charles Grey, Henry Halford, Everard Home, Samuel Hood, John Moore, Evan Nepean, George Nugent, John Parnell, James Pulteney, Home Popham, Samuel Romilly, Sydney Smith, Charles Yorke, William Young.

ADMIRALS.—Berkeley, Campbell, Cotton, Duckworth, Gambier, Louis, Murray, Markham, Nelson, Patten, Parker, Saumarez, Stopford, Strachan, Trowbridge, Warren.

GENERALS.—Fitzpatrick, Hay, St. Leger, Smith, Simcoe, Spencer, Stuart, Whitelock.

MESSRS.—Addington, Brougham, Beresford, Canning, Croker, Cobbett, Dundas, Frere, Fox, Grenville, Huskisson, Horner, Spencer, Perceval, Horne Tooke, Tierney, Wyndham, Wilberforce, &c.

From the Athenæum.—"The present volumes exhibit the same features as the former portion of the series. The general reader is entertained, and the reader for historical purposes is enlightened. Of their value and importance there cannot be two opinions. There are abundant revelations of interest to arrest attention in many of these papers. On the characters of George the Fourth and the Duke of Wellington there are some very valuable letters. In Court scandals, the affairs of the Duke of York and Mrs. Clarke are brought under notice; and in what we may designate as public scandals, the 'horrors of routine' receive abundant illustration in the letters about the Walcheren Expedition and on the Peninsular War. Our extracts sufficiently show the high interest belonging to these volumes."

THE MONARCHS of the MAIN; or, Adventures of the BUCCANEERS. By GEORGE W. THORNBURY, Esq. 3 vols.

TURKEY; its HISTORY and PROGRESS: from the JOURNALS of SIR JAMES PORTER, Fifteen Years Ambassador at Constantinople; continued to the Present Time, by his Grandson, SIR GEORGE LARPENT, Bart., &c. 2 vols. 8vo. with Illustrations.

MEMOIRS and CORRESPONDENCE of GENERAL SIR W. NOTT, G.C.B., Commander of the Army of Candahar. 2 vols. with Portrait.

PAINTING and CELEBRATED PAINTERS, ANCIENT and MODERN; including Historical and Critical Notices of the Schools of Italy, Spain, France, Germany, and the Netherlands. Edited by LADY JERVIS. 2 vols.

SAM SLICK'S NEW WORK, 'NATURE and HUMAN NATURE.' 2 vols.

"These volumes are full of fun and fancy."—*Athenæum*.

THE LIFE of MARGUERITE D'ANGOULEME, QUEEN of NAVARRE, Sister of Francis I. By MISS FREER. 2 vols. with fine Portraits, 21s.

A NEW WORK by LEIGH HUNT. (Just ready.)

MEMOIRS of LIEUT. BELLOT; with his Journal of a VOYAGE in the POLAR SEAS in SEARCH of SIR JOHN FRANKLIN. 2 vols. with Portrait. (In the press.)

NEW AND POPULAR NOVELS.

The HEIRESS of HAUGHTON. By the Author of 'EMILIA WYNDHAM,' &c.

EUSTACE CONYERS. By JAMES HANNAY, Esq. Author of 'Singleton Fontenoy,' &c.

THE SECRET MARRIAGE; or, Contrasts in Life. By Miss FANNY WILLIAMS.

"The Secret Marriage' is one of the best novels of the season."—*Lit. Gaz.*

CONSTANCE HERBERT. By Miss JEWsbury.

"Constance Herbert' is deeply interesting—full of power and earnestness."—*Examiner*.

THE WIFE'S TRIALS.

"The Wife's Trials' deserves to be a successful novel, for it is one of the most spirited and amusing we have read for a long time. The interest is sustained without flagging to the very last page."—*Athenæum*.

MAMMON. By Mrs. GORE.

"There is much vivacity and liveliness and a good deal of shrewd observation in these volumes."—*Blackwood*.

THE NEXT-DOOR NEIGHBOURS. By the AUTHOR of 'TEMPTATION,' &c. (In the press.)

Also, just published, in 2 vols., a SECOND SERIES of

The ROMANCE of the FORUM; or, Narratives, Scenes, and Anecdotes from Courts of Justice. By PETER BURKE, Esq.

THE ATHENÆUM

THE FINE ARTS PRIZE ASSOCIATION in Connection with the EXHIBITIONS OF THE BIRMINGHAM SOCIETY OF ARTISTS.

GENERAL PRIZE. The BIRMINGHAM FINE ARTS PRIZE ASSOCIATION offers a PRIZE OF SIXTY GUINEAS to the Artist of the BEST PAINTING IN OIL, contributed to the Exhibition of the Birmingham Society of Artists of the present year. All Pictures sent to the Exhibition by Artists are eligible for the Prize, but in preference will be given to such Pictures as have been painted within the last two years. The Association reserves to itself the power of withholding the Prize in the event of no Picture of sufficient merit being contributed.

LOCAL PRIZE. A PRIZE OF FIFTY POUNDS will be awarded for the BEST PAINTING contributed to the Exhibition of the Birmingham Society of Artists this year, by a Local Artist.—All Artists who are natives of Birmingham and have practised there, and Artists at present resident and practising their profession in Birmingham or within ten miles thereof, will be entitled to compete for the Local Prize.

By order of the Committee. JOHN JAFFRAY, Hon. Secretary. Birmingham, May 3, 1855.

BIRMINGHAM MUSICAL FESTIVAL, in AID OF THE FUNDS OF THE GENERAL HOSPITAL, On the 28th, 29th, 30th, and 31st days of AUGUST next. Under the especial Patronage of HER MOST GRACIOUS MAJESTY THE QUEEN. HIS ROYAL HIGHNESS THE PRINCE ALBERT. HER ROYAL HIGHNESS THE DUCHESS OF KENT. President. The Right Hon. LORD WILLOUGHBY DE BROKE. Vice-Presidents. The Nobility and Gentry of the Midland Counties. J. F. LEDSAM, Esq. Chairman of the Committee.

OPERATIVE SURGERY.—THEATRE OF ANATOMY AND MEDICINE, 1, Grosvenor-place.—DR. DEVILLE, M.R.C.S. of England, and late Demonstrator in the Anatomical Theatre of Paris, is now giving a Course of Demonstrations in OPERATIVE SURGERY, at 11 A.M. daily. A fresh Course of Demonstrations and Lectures will commence on THURSDAY, May 31st, at 9 A.M. Each Pupil performs all the operations in Surgery under the direction of Dr. Deville. Private Classes for Gentlemen immediately entering the active service of the Army and Navy. R. W. BURFORD, Secretary. Further particulars to be had at the School, 1, Grosvenor-place; or of Dr. Lankester, 8, Savill-row.

MONTHS LECTURES ON ANCIENT AND MODERN SCULPTURE.—These Lectures will be delivered on SIX consecutive WEDNESDAYS, at his Studio in Marlborough-street, at 8 o'clock, P.M. precisely: the first on May the 23rd.—Subscription tickets to be had at Messrs. P. & D. COLNAGHI'S, Pall Mall East.

THE LABORATORY OF THE ROYAL POLYTECHNIC INSTITUTION is always OPEN for the reception of Pupils under J. H. PEPPER, Esq., and J. SPILLER, Esq. Careful Analyses and Assays of Soils, Minerals, Waters, Mercantile or Agricultural Products, are performed with despatch, accuracy, and economy.

LESSONS IN COMPOSITION.—Pupils out of town taught by correspondence. Manuscripts prepared for the Press.—Address to A. B. 31, Newman-street.

DR. ALTSCHUL'S LECTURES AND READINGS.—To Literary Institutions, Schools, and Families.—LECTURES (in English), combined with Dramatic and Literary Readings are delivered by DR. ALTSCHUL, M. Ph. Soc., Examiner Royal Coll. Preceptors, Professor of the German, Italian, and French Languages and Literature.—Clandon-st. Cavendish-square.

GERMAN LANGUAGE AND LITERATURE.—Dr. BUCHHEIM, Graduate of the University of Vienna, Editor of the *German Athenæum*, GIVES LESSONS in the GERMAN LANGUAGE AND LITERATURE, through the medium of the English, French, or Italian.—Address to 2, Burton-crescent.

THE GOVERNESSES' INSTITUTION, 34, Soho-square.—Mrs. WAUGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools to her Register of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

EDUCATION.—A Gentlewoman, who can offer eminent Educational advantages, and constant attention to the health and happiness of those committed to her care, with separate Beds, Hot and Cold Baths, and very high References, receives SIX YOUNG LADIES into her Family, and has now TWO VACANCIES.—A. B., Mr. Rossiter's, Chemist, Lonsdale-place, Notting-hill.

EDUCATION.—A LADY residing in a healthy locality, near London, RECEIVES a select and limited number of YOUNG LADIES, she has had many years' experience, and can offer the advantages of a superior education, combined with the comforts of home. Professors of reputed talent attend.—Address H.Y., at Roland's Library, 20, Berners-street.

EDUCATION.—40s. PER ANNUM.—A Professor at a First-Class Establishment at St. John's Wood, has the privilege (in return for his services) of introducing a YOUNG LADY, who will receive the same advantages as the other Pupils, and be instructed by the Masters at the above (which are little more than half the usual terms).—Address, immediately, L. T. Post-office, 15, Charing-cross.

ST. JOHN'S-WOOD PROPRIETARY COLLEGIATE SCHOOL, 25, St. John's-Wood Park.

Head Master.—The Rev. THOMAS MARKBY, M.A., late Scholar of Trinity College, Cambridge, and Classical Master in King's College School.

Second Master.—H. DEIGHTON, Esq. B.A., late Scholar of Queen's College, Cambridge.

An Exhibition of 30s. open to Students intended for the Universities, or for the Legal and Medical Professions, and tenable for three years, will be annually adjudged. Students entering before Christmas next will be admissible to contend.

Each Proprietor has the right of nominating one Pupil at a time to the School at reduced fees. R. HODSON, Hon. Sec.

* * * The Second Master RECEIVES BOARDERS at 24, Boundary-road.

EDUCATION.—The Parents of several Young Ladies educated in an Establishment in the vicinity of London, are so deeply impressed with the value of the system therein pursued, that they are desirous of making it more generally known.

It is conducted by a German Protestant Lady, admirably qualified for the work she has undertaken, in which she is assisted by English and Foreign Governesses, as well as by the daily attendance of many eminent Professors.

Great advantages are presented for moral cultivation, the easy acquisition of Modern Languages, together with the usual accomplishments.

The number of Young Ladies, from thirteen years of age and upwards, is limited to Twenty, and the Terms, which are 110 Guineas per annum, include Residence and every branch of Tuition, except Music.

Letters addressed to G. T., at Messrs. Waterlow & Son, Parliament-street, London, will be replied to by some of the Parents, with whom this notice originates.

ENGLISH AND FRENCH EDUCATION in PARIS.—LOUIS DIREY, M.A. of the University of France, and ALGERNON FOGGO, B.A. of Christ's College, Cambridge, undertake personally the ENTIRE CHARGE of a small number of Pupils.—Letters to be addressed to Messrs. DIREY & FOGGO, to the care of Messrs. John W. Parker & Son, Publishers, West Strand, London.

MORNING or DAILY GOVERNESS.—A Lady, a member of the Church of England, desires a RE-ENGAGEMENT. She is capable of instructing her Pupils in all the requisites of a sound English Education, together with French, Music, Singing, Drawing, and the Rudiments of German. She can give excellent references. Address E. C. F., Mr. Leslie, 55, Great Queen-street, Lincoln's Inn.

PRIVATE GERMAN CLASSES, to consist of no more than Six Members each.—WILHELM KLAUER-KLATOWSKI, of Schwerin, in Mecklenburg, Author of the German Manual for the Young, &c., proposes to resume his German Classes. Terms for a Course of Twenty-six consecutive Lessons, twice a week, 2s. 10s.—Professor Kluener continues to give Private Instruction in Families.—20, South Molton-street.

GERMAN.—Professor WILHELM KLAUER-KLATOWSKI OFFERS his ASSISTANCE to STUDENTS of GERMAN, by means of correspondence and correction of their Translations and Compositions.—Terms, 1s. 1s. for one month, or 2s. 10s. for three months, payable in advance.—Further information will be given upon application, by letter, to the Professor, No. 20, South Molton-street, London.

TEDESCO.—Signor GUGLIELMO KLAUER-KLATOWSKI, via Professore in Lingua Tedesca nell' Accademia Pontificia de Nobili Ecclesiastici in Roma, comincerà quanto prima un CORSO DI LINGUA e di LETTERATURA TEDESCA mediante la lingua Italiana. Questo corso, da servir di pratica in ambedue le lingue, si farà due volte la settimana, ed ogni lezione sarà d' un' ora e mezzo, la mattina per le signore, e la sera per signori. Le ore saranno regolate conforme al desiderio della pluralità degli allievi. Si daranno i rischiaramenti necessari dal Professore, No. 20, South Molton-street, Londra.

GOVERNESS.—WANTED, in a Private Family, or a Respectable School, a SITUATION as GOVERNESS, by a Young Lady, a native of Edinburgh, who has had to acquire experience in teaching, having been nearly three years Pupil-teacher in a respectable Scholastic Establishment. In addition to the usual Branches of an English Education, the Young Lady is competent to teach Music theoretically and practically, French, and the Rudiments of Drawing. Satisfactory references given.—Apply, address R. R., Mr. Bogue, Publisher, 55, Fleet-street.

RESIDENT GOVERNESS.—A LADY, of considerable experience, who has long resided in Paris, wishes for a RE-ENGAGEMENT in June. Her qualifications, besides French, which she speaks fluently, are Italian, the rudiments of Latin and German, Music, Oil Painting, Drawing (in the French style), and Pastel. She is also thoroughly qualified to impart a sound and highly-finished English Education. Age 27. Unexceptionable references will be given.—Address to A. B., Mr. Hart's, Bookseller, Saffron Walden, Essex.

TO PARENTS and GUARDIANS.—Two Ladies, intending shortly to leave for the Continent, and spend a year in Paris or its immediate vicinity, would take under their charge TWO or THREE YOUNG LADIES as PUPILS, to receive instruction from the best masters in any studies or accomplishments desired, under superintendence of and with occasional lessons from the two Ladies—the elder a proficient in the German Language and English Literature, the younger (long resident from childhood, in France and Italy) a proficient in Singing and the Piano-forte, and the French and Italian Languages. To promote French conversation in the family circle, a French Protestant young lady will be secured as a pupil, and the comforts of an English home, with every attention to religious instruction, will be insured. Unexceptionable references will be given and required. Terms, 100s. per annum for each pupil, for Board and Instruction alone.—Letters to be addressed to G. Y. K., under cover to Rev. W. Magee, Bath, Somersetshire; or Mrs. Bernard, Dr. Bernard's, M.D., York-crescent, Clifton.

MRS. EDWARD GRAHAM begs respectfully to inform her Friends and the Public, that having RESUMED her LESSONS ON THE HARP and GUITAR, with SINGING, that communications may be addressed to her at Hookham's, New Bond-street.

MISS POLE, having made arrangements for the reception of EIGHT YOUNG LADIES as RESIDENT PUPILS, in addition to her Morning Pupils, has the honour of announcing that the Studies commenced April 4th, at her residence, 23, Circus, Bath, where the Plan of Study and Prospectus may be obtained.

A well-educated GENTLEMAN, conversant with the topics of the day, wishes to CONTRIBUTE a WEEKLY ARTICLE, either Political or Literary, to some respectable Journal circulating in the country.—Address A. Z., Post-office, High-street, Camden-town.

AS PRIVATE SECRETARY and LIBRARIAN.—A Gentleman is desirous of meeting with an EN-GAGEMENT in the above capacity, where active energetic habits and a general acquaintance with English and Foreign Literature might render his services valuable. The Advertiser is a good Accountant, can converse and correspond in French and German, and read Italian fluently. As he has received a Classical education, and has had some experience in tuition, he will be glad, if required, to discharge, in addition to the duties of a Secretary, those of a Private Tutor, where the pupils are tolerably advanced. The highest references will be given both as to character and acquirements.—Address Mr. BURTON, Lentrant House, Inverness.

REBUILDING of the WHITTINGTON CLUB.—A PUBLIC MEETING will be held at the Freemasons' Hall, Great Queen-street, on MONDAY, the 21st instant, for the purpose of adopting the necessary measures to secure the continuance of a Club for the Middle Classes. J. J. MECHI, Esq., will take the Chair at Eight o'clock.

WHITTINGTON CLUB BUILDING FUND.—For the purpose of completing the Rebuilding of the Club Premises in Arundel-street, Strand, recently destroyed by fire.

J. J. MECHI, Esq. (President of the Club), Treasurer.

In 3,000 Shares of 1s. each. Instalments at the rate of 2s. per share, per month.

The first instalment to be paid on or before the 1st of June, 1855. Interest at 5 per cent. per annum. One share in the addition to the payment of 1s. will entitle subscribers to an annual Membership.

A subscriber of twenty-five shares will be entitled to an Honorary Membership.

Subscribers of five shares will be exempt from the payment of an entrance-fee.

Further information and prospectuses may be obtained at the temporary offices of the Club, 210, Strand.

HENRY Y. BRACE, Secretary.

TO BOOKSELLERS and STATIONERS.—A YOUNG MAN, engaged for several years in the largest Wholesale and Retail House in Town and Country, is now open for an ENGAGEMENT. Is capable to undertake the management of a business, or no objection to travel.—Address, pre-paid, A. B. C., care of Tallant & Allen, 21, Paternoster-row, London.

TO NEWSPAPER PROPRIETORS, EDITORS, &c.

A WRITER of great experience in Newspapers and in various departments of Literature, is open to an ENGAGEMENT in Town or Country, permanent, temporary, or occasional. He would contribute Political articles, Sketches or Reviews. Specimens will be submitted, with proofs that as an original author he has not been thought worthy by the ablest critics. Address G. H. care of Mr. Fikin, Dentist, Fleet-street.

PRACTICAL INFORMATION WANTED

upon the latest plans of proceeding in
The Bleaching of Palm Oil;
The Formation of Palm Kina;
The Pressing of Palm, Cocoa Nut Oil and Tallow.
Remuneration, &c. to be applied for by letter, addressed L. poste restante, Lubbock.

CHEMISTRY.—Mr. MEDLOCK, F.C.S., formerly Chief Assistant in the Royal College of Chemistry, continues to give PRIVATE INSTRUCTION to Gentlemen in all Branches of CHEMICAL SCIENCE. Particulars may be had at the Laboratory 20, Great Marlborough-street, London.

CAIRO, JERUSALEM, ATHENS.—A Physician, of great experience and reputation as an Author, wishes to ACCOMPANY a NOBLEMAN or GENTLEMAN'S FAMILY to visit these places in the Winter of 1855-1856. Address the Rev. W. Adams, Rector of Throcking, Buntingford, Herts.

HYDROPATHY.—MOOR PARK MEDICAL and HYDROPATHIC ESTABLISHMENT, near Farnham, Surrey, within three miles of the Camp at Aldershot. This Institution is now open for the reception of Patients under the Superintendence of Dr. EDWARD W. LANE, A.M., M.D., Edin.—Dr. Lane may be consulted in London, every Tuesday between half-past 2 and 4 at 41, Conduit-street, Regent-street.

TO PARENTS AND GUARDIANS.—PUPIL

WANTED.—An ENGINEER of great experience, about proceeding abroad for the purpose of erecting and carrying on extensive Gas Works, has a Vacancy for a Gentlemanly Youth, with a taste for Engineering, as an APPRENTICE. The pupil occupied will be about three years, and he will have during that period every opportunity of studying the practical part of his profession in every branch.—Address immediately to A. J. Z., at Mr. Lowe's Stationer, 51, Church-lane, City.

TO SECRETARIES AND LIBRARIANS.—

WANTED by a Young Man, accustomed to the charge of a Library, a situation as UNDER-LIBRARIAN, or in a similar capacity. Satisfactory references, &c.—Direct A. B. Mr. Cook, 54, Mount-street, Grosvenor-square.

TO ENGLISH AND FOREIGN BOOK-SELLERS, &c.

WANTED, to take the general MANAGEMENT of a BOOKSELLING ESTABLISHMENT. Person conversant with the English and Foreign Book Trade, and who has a general acquaintance with Book-keeping. A knowledge of first-class Binding may be a further recommendation.—Apply to Mr. THOMAS HODGSON, Aldine-chambers, 13, Paternoster-row.

IMPORTANT SALE OF COINS AND MEDALS.

One of the MOST CELEBRATED COLLECTIONS of COINS and MEDALS in the United States, and which is particularly rich in choice Gold and Silver of the American and Roman Series, will be SOLD without reserve at PUBLIC SALE on TUESDAY and WEDNESDAY, JUNE 12 and 13 next, by Messrs. THOMAS & SONS, PHILADELPHIA.—Catalogues may be had on application to C. J. SKERT, Bookseller, 10, King William-street, Charing Cross, London.

TO BE DISPOSED OF, one of ERARD'S

choicest and best HARPS, nearly new, Stand, String-box, &c. complete, cost 150 guineas, will be parted with cheap.—Address S. P. E., care of Mr. B. Wheeler, News-agent, Manchester.

A FINE LESLIE'S AIR-PUMP FOR SALE,

with Brass Cylinder and Fittings, three thirteen-inch Plates, receiver and valves, on mahogany stand, by those eminent makers, HARRIS & Co., Holborn, and equal to new. Price only Eighteen Guineas; original cost 60.—Apply or address L. P. 13, Catherine-street, Strand, London.

NEW MICROSCOPES for SALE, with Mechanical stage, fine adjustment, double mirror, 2 eye-pieces, 2 French powers, 1 inch and 1 1/2 inch, and 1 1/4 inch, &c. Complete in Cabinet, or the cheaper ditto if required. At W. BILES, 52, Red Lion-street, Clerkenwell.

MICROSCOPE for SALE.—To be SOLD, a

magnificent ACHROMATIC MICROSCOPE, the workmanship of the celebrated Optician, ABRAHAM, of Liverpool, and exhibited by him as a specimen of his skill at the Crystal Palace in 1851. It has an admirable stage, with vertical and horizontal rack-work, and sliding and rotating object-plate, slow and fine motion, three eye-pieces, and polarizing prisms, double mirror, and an achromatic lenticular prism, which answers the purpose of either mirror, condenser, or Wenham's paraboloid. It possesses, in addition, an admirable cage, compound microscope, Lieberkühn, and forceps, with the following object-glasses: 2-inch, 1-inch, 1/2-inch, 1/4-inch, and 1/8-inch. The entire apparatus is packed in a handsome Spanish mahogany case. This splendid Instrument will be sold a bargain, as its owner, possessing another Microscope, has no further use for it. To be seen at Messrs. SMITH & BECK'S, 6, Coleman-street, London.

TO AUTHORS.

ROBERT HARDWICKE, Printer and Publisher, 26, Duke-street, Piccadilly, begs to inform Authors and Possessors of MSS. desirous of publishing Works on any topic requiring extensive and immediate publicity, that he has at his command ample funds of Type and Machinery expressly adapted for printing Books, Pamphlets, Essays, Poems, &c., with the utmost Despatch and Economy. Instructions to Authors, with Specimens of Type and Sizes of Pages, post free on receipt of six stamps.

TO PUBLIC MUSEUMS AND SCIENTIFIC

INSTITUTES.—BRITISH SHELLS.—R. TO NATURALISTS.—COLLECTIONS of

HAMPSHIRE TERTIARY FOSSILS, mounted in "Box-cells," may now be seen at 30, Tavistock-street, and choice examples of any of the following Species figured in Mr. Sowerby's "Mineral Conchology," will be sent free by post, in box-cells, upon the receipt of 10s. 6d. per box for each Species:—

Acteon elongatus,	Nucula nitida,
Solutum caviculatum,	Nucula detrita,
Str. rubus Bartonensis,	Melania fasciata,
Signatus cancellatus,	Mitra parva.

And in recent British Shells:—

Truncatella Montagu,	Bulla obtusa.
----------------------	---------------

Postage Boxes, 2s. per dozen, fitted with cork for insects; or with lint for bees, &c. 1s. per dozen.

Marine Dredges, 25s. each.

Insects, in box-cells, Geological Hammer, &c. &c.

Collections of Grasses, Ferns, Lichens, in preparation.

30, Tavistock-street, Covent-garden.

MARINE DREDGING.—Mr. JAMES COOK,

of Long Westgate, Scarborough, begs to inform Naturalists who may visit the above attractive watering place, that he is fitting up an small Trawl, with very complete Dredging Apparatus, the use of which may be had after the 7th of June upon very reasonable terms. Reference in London may be made to Mr. BURCH, 30, Tavistock-street, Covent-garden.

ENGRAVINGS BROUGHT WITHIN THE

REACH OF ALL.—Immense quantities of first-class Subjects (chiefly from Sales), at unheard-of prices. One instance:—"Morning" and "Evening" (pub. at 21s.), 6s. 6d. per pair. Such an instance has never before occurred in the sale of the most renowned buildings and places in Rome and its vicinity, are of large size, and are all picked impressions.—Photographic Institution, 168, New Bond-street.

PHOTOGRAPHIC INSTITUTION.

PHOTOGRAPHS FROM ROME.—A COLLECTION of upwards of ONE HUNDRED SLENDID SPECIMENS of PHOTOGRAPHY, by Anderson, Macpherson, Deziob and Lussier, HAVE JUST BEEN RECEIVED from Italy, by the Secretary of the Institution, the most renowned buildings and places in Rome and its vicinity, are of large size, and are all picked impressions.—Photographic Institution, 168, New Bond-street.

MR. LAROCHE begs to inform his Patrons

and the Public in general, that having succeeded in the late important action of Talbot v. Larocche, in establishing that the Photographic process as practised by him is different from, and very superior to, the Talbotype, he continues to take these much-admired PORTRAITS, by his instantaneous method, at his Rooms, 65, Oxford-street, two doors from Wells-street, where an inspection of the life-size and other Portraits is respectfully solicited.

MAYALL'S PORTRAIT GALLERIES, 224,

REGENT-STREET, Corner of Argyl-place.

DAQUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life * * * without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected."—*Athenum*, July 22, 1854.

"Mr. Mayall's portraits represent the high art of the daguerreotype; they are as superior to the generality of such pictures as a daguerreotype is to a coarse woodcut."—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

TO PUBLISHERS.—Under the head of "OUR

LIBRARY TABLE," a considerable space is devoted weekly to the literature of the day, in the MANCHESTER WEEKLY ADVERTISER, which has a selected circulation (according to the Government Stamp Returns for 1854) of 7,625 copies of each impression, and is distributed to the smallest shop in Manchester and the surrounding district. Advertisements and Books for Review can be sent to the Proprietors, GALT, GENT & Co. 55, Market-street, Manchester.

MUDIE'S SELECT LIBRARY.—All the

best New Works may be had in succession from this extensive Library by every subscriber of One Guinea per Annum. The reference is to the Works of History, Biography, Religion, Philosophy, and Travel. The best Works of Fiction are also freely added.

Prospectuses may be obtained on application.

Royal 4to. price 21s.

THE POETICAL WORKS of the LATE CATHERINE GRACE GODWIN.

Edited, with a Memoir, by A. C. WIGAN.

With Forty Illustrations by BRIDGET FOSTER, JOHN GILBERT, &c. "There are many striking and pleasing pieces in Mrs. Godwin's collection of Poetry, and we think that Mr. Wigan has expressed a fair and candid opinion of the writer's general merit when he said 'I have read your volume ('The Wanderer's Legacy,' &c.) through with much pleasure. Whenever it is read, such poetry cannot but do you honour. It is neither wanting in feeling, nor in that much rarer gift which is the soul of poetry—imagination. There is great command of language and fine versification."—*Literary Gazette*.

London: Chapman & Hall, 193, Piccadilly.

Just published, price 4d.; per post, 6d.

New Work Edited by Dr. Lindley.

On June 1st will be published, PART III., price 6s., in handsome folio,

THE FERNS OF GREAT BRITAIN NATURE-PRINTED (Life Size).

With Descriptions of the Indigenous Species and Varieties by THOMAS MOORE, F.L.S.

EXTRACTS FROM THE PRESS.

Daily News.—Nature-Printing excels all that can possibly be achieved by manual care and dexterity in the art of delineation, since in these leafy examples we find revealed minute and important features in the construction of the vegetable kingdom which elude the grasp even of photography.

Illustrated London News.—This work is important, not only for the scientific research displayed by the author in an extremely interesting branch of Natural History, but as the first instance of the application of a new and valuable process of imitation and reproduction, called "Nature-Printing." The plants being represented in relief, as if painted upon paper, and all the parts in their several appropriate colours, the result is a complete substitute for the original specimen. To the botanical student such a means of study must be invaluable.

Globe.—Such is the beauty and perfection of this mode of representation, that the very plants themselves seem adhering to the paper.

Leader.—A most remarkable series of botanical illustrations.

Examiner.—The plates at first sight look more like perfect and unfaded specimens from a good *Hortus Siccus*. They are beautiful and curious.

Press.—We can testify to the extreme delicacy and exactitude with which the forms of the various species of ferns are represented, so as, in fact, to convey the impression that the plants themselves have been transferred to paper.

Morning Advertiser.—By this process a vast improvement has been effected upon any of the methods previously in existence, inasmuch as it displays, with absolute accuracy, the minutiae of superficial structure.

Observer.—Every ramification of the most minute vessels of the plant is given in these admirable prints, with an accuracy only attainable by the nature-process; and all its peculiar features, picturesque as well as botanical, are shown in the most perfect manner.

Sunday Times.—The ostensible purpose of the work—is to furnish a complete history and classification of the British Ferns.

* * * The Work is being issued Monthly, and will be completed in about 16 Parts. Parts I. and II. are already published, price 6s. each, and containing Three Nature-Printed Plates.

BRADBURY & EVANS, 11, BOUVERIE STREET.

In a few days will be published, price 4s. 6d.

STORIES FROM A SCREEN.

By DUDLEY COSTELLO.

"Look here upon this picture—and on this!"—HAMLET.

BENTLEY'S MONTHLY VOLUMES.
JESSE'S MEMOIRS of the COURT of
ENGLAND under the STUARTS. 3 vols. crown 8vo. with
Illustrations, 18s.
"Without it no library can be called complete."
Times.—"Under the appellation of *Bentley's Monthly*
Volumes, this enterprising publisher has commenced the issue in
a cheap form of a collection of standard works. The undertaking
is inaugurated by that clever piece of anecdotal history, 'Mr.
Jesse's Court of England under the Stuarts.' Mr. Jesse has
adopted a style in which French writers are adepts, and has suc-
ceeded most admirably. The biographies meander through a
garden of anecdote most delightfully arranged. Mr. Bentley could
not have commenced his series more happily than with a work
which is so rich in material not accessible to the ordinary
student."

IV.
ASPEN COURT, and WHO LOST
and WHO WON IT. By SHIRLEY BROOKS, Author of
'Miss Violet and her Offers.' 3 vols. [Just ready.]

V.
Miss CRAWFORD'S FRENCH COOK-
ERY and CONFECTIONERY, adapted for English Families.

REVIEWS

Poems.—[*Poesie, Edite e Inedite*]. By Giuseppina Turrissi Colonna. Palermo.

THE Sicilian press, weighed down by a paralyzing censorship, and fettered by almost prohibitory restrictions, would seem to hold out small promise of any contribution worth acceptance to the current literature of Europe; yet this little volume of *Poems*, which has just reached its second edition at Palermo, for more than one reason deserves a word of notice in a wider circle than that in which it has hitherto appeared:—first, on account of the real grace and beauty of some of its contents; secondly, from the interesting career and untimely death of the authoress; and thirdly, as a sign and a pledge that the light of female education is forcing its way,—slowly as yet, and only through chinks and crevices,—into the darkened chambers of Southern life.

A beautiful Sicilian girl, akin to the best blood of the island, triply hedged in by hoary prejudices, and educated under the eye of a fond and proud but Sicilian-nurtured mother, falls almost surely into the class of minds from which no intellectual effort can reasonably be expected. It is worth while to glance for a moment at the every-day conditions of such an existence. We shall be the better able to comprehend what miraculous proportions a trifling degree of mental culture is apt to assume in such a phase of society, and how differently we must estimate this little book from a work of the same calibre if met with among ourselves.

What is the intellectual training which a Sicilian woman, however gifted, receives? While the rest of the world is awake and stirring, the sleepy calm of ignorance hangs around her home circle. Towards her parents she learns betimes to show the exaggerated submission of passive reverence. A few near relatives, seen only at stated seasons, are, in her eyes, only paler copies of those austere dignitaries of the family group. The kindly nuns of the convent where she receives such drowsy teaching as is thought befitting her sex and rank, become dear to her in proportion as they are more lavish of sweetmeats and *Agnus Dei*, and less rigid in the infliction of *aves* and hours of meditation. When she returns to her family, the Spiritual Director becomes a mighty personage on the scene of her uneventful youth. For him there are no family secrets, no subjects unapproachable, no motives unexplained. He must sanction all changes, and preside over all resolves, from the learning of a song to the choosing of a bridegroom. He is the *Deus ex machina* in all knotty points of family discussion, and the shadow of his influence seems to lengthen and deepen over her parents' life the nearer it approaches to a close.

Beyond these, the noble Sicilian girl sees in most cases no interpreter of the—to her unknown—tongue of the living world. The characters of her life-drama stand so closely around her, as even to leave her no horizon full of clouds and mystery, in which a girlish imagination may lose itself at will. Very often, as in the case of La Turrissi herself, even the word *Patria* is hardly to be uttered in her hearing, as suggestive of notions too perilous and flights of exaggerated feeling.

Her life is made up on a pattern. So was that of the Costanzas and Rosalias who preceded her in the family line. Yet she is neither querulous nor discontented, for "what the heart knows not, the eye seeks not." If she issue from her convent school to find her wedding presents bought, and her wedding

guests invited, she feels only gratitude for being so promptly guarded from the opprobrium which in all Southern countries attaches itself to lingering spinsterhood. Gladly and cheerfully she goes to her husband's home, to become the centre of another such circle as that she has left.

Sometimes, indeed, the circumstances of married life create new combinations out of the monotonous elements of a Sicilian woman's nurture. In marriage lies her one chance of moral emancipation. She may fall, almost by a miracle, among a class of larger minds, and so learn to measure her intellectual stature against theirs. Or she may travel, and breathe in time, without shuddering, the bracing wind of strong tramontane thought. Perhaps, and this was the rare case of La Turrissi's mother, domestic feuds and sufferings compel her to concentrate all her energies of thought and action on the education of her children. The strong mother's instinct seems to have taught her in this almost unique case to loosen in some degree the swaddling bands of habit, and to let her tender seedlings struggle upwards to the little light there was, however clouded and confined that light might be.

Thus only under circumstances of exceptional liberty was the young Giuseppina exempted from the insipid routine of convent discipline, and early allowed to study the Greek and Latin classics under the teaching of one Giuseppe Borghi, a Tuscan of some note for erudition. The preceptor's influence, however, augured ill for the growth of original genius. His young pupil, scarcely ten years old, had, when he came to her, already found employment for a lively utterance of strong dramatic perceptions, in working up the few simple incidents of her home life, with no little skill, into childish dramas, in which brothers, sisters, friends, and servants, nay, doubtless, the awful Soul-Director himself, had a part to sustain. Under the teaching of the learned Tuscan these artless "household words" very soon dwindled into silence, and were replaced by smooth and sapless verses full of classical allusion and stilted metaphor, in which the gods and muses of ancient Greece began to jostle each other in a manner which seemed prophetic of future fame to the family conceptions of poetic greatness.

At the same time, graver and more edifying themes were by no means excluded; for when Borghi quitted his pupil at the age of fourteen, she had already produced under his auspices and express encouragement several hymns in honour of favourite saints. That in praise of St. Michael the Archangel, written at that early age, appears in the present collection of poems, where St. Peter and St. Benedict have also their full share of stereotyped glorification. Giuseppina was left then, at fourteen, almost to the direction of her own studies, and plunged eagerly into the poetical literature of her own island.

Sicily is never weary of remembering that she was the birthplace of Italian poetry. Nearly a century before the star of Dante rose, the Court of Frederic the Second had been literally the cradle of the *dolce favella*; and the mawkish conceits of the *giullari* or *jongleurs* were first banished thence by the Imperial poet to make way for more polished productions in an idiom in which, as Dante tells us in his 'Vita Nuova,' poets first wrote "for the sake of making their verses intelligible to Ladies who could ill understand their Latin poetry." There Ciullo d'Alcamo wrote the first ballad,—there Piero delle Vigne rhymed the first sonnet. There the intellectual

cultivation which has now come to be regarded as somewhat of a dangerous mental deformity—a sort of moral *jettatura*—was for a long period considered as the fitting and necessary crown of noble birth.

The feverish turmoil of our nineteenth century has overstepped, and well nigh forgotten the very names of Vittoria Colonna, Tullia d'Arragona, the poetess and philosopher, Gaspara Stampa, and other noble ladies, who as late as 1650 achieved for themselves a world-wide reputation. But with the busy nineteenth century poor modern Sicily has very little to do; and she is more likely to forget the political convulsions of yesterday than the far-away glories of these daughters of her love.

No doubt their sweet singing served young Giuseppina in better stead than Maestro Borghi's heroes and goddesses. Her style became polished and elegant; and we have the assurance of one of Italy's most eminent literary men, Paolo Emiliani Giudici (author of the 'Storia delle Belle Lettere d'Italia,' and the 'Storia Politica dei Municipi Italiani,' and translator of Mr. Macaulay's 'History of England'), that in grace and artistic finish of composition no living poet of her country has surpassed her. With early womanhood came also the rare advantage of the society of cultivated foreigners, and the consequent study of modern languages, especially English, of which she soon acquired a very extensive knowledge. In the progress which she made in our literature, the poetry and character of Byron seem to have attracted her, almost to the exclusion of other poets. His name soon became to her the watchword of all that was high, noble, and patriotic. Accordingly, we find in this volume translations from his lyrics, and several original poems headed 'Lord Byron at Ravenna,' 'Lord Byron at Missolonghi,' 'Teresa and Lord Byron,' 'Lord Byron's Adieu to Italy,' &c. &c. The English poet's name, however, seems to have been inauspicious to his worshipper on the shores of the Conca d'Oro (as the Palermitan loves to call his beautiful Gulf), even more than it was wont to prove to his devoted imitators on our side of the Channel. The weakest verses in the book, by far, are those consecrated to her Byron-worship, and her happier efforts are drawn in most cases from sources of native inspiration. The following lines, 'Alla Patria,' for instance, show by their passionate energy that she had by this time thoroughly learnt the spell that lies in that forbidden name.—

Love wakened Sappho's lyre;
Our sweetest Bards have ever sung of Love;
And when my fancies rove
Thro' sad sweet dreamland, I, too, breathe his name.
But nought can wing with him,
The Poet's verse, my country! I like thy fame.
No more the playthings of a witless game,
But mighty as God's voice, mine accents move
Abroad among the nations, passion fraught,
Envoys of godlike thought!
Oh I would lead you with unquenched desire,
Sicilian hearts! to glory, as the maid
Of France to conquest erst her country's heroes led.

La Turrissi goes on to reproach her countrymen for their slothful silence in the cause of freedom. She holds up before them the example of the rest of Italy, yet ringing with the voices of Monti, Leopardi, and Ugo Foscolo; and the Anacreontic and pastoral poetry of Giovanni Meli, who about the same time wrote in the Sicilian dialect, and may be called the Burns of Sicily, serves as her text for the spirited close of the poem.—

Europe was all a-flame
With ruin, blood, and shame
When the mild greybeard raised his eyes to heaven,
Singing of calm delights and shepherd love,
And round men's hearts his fatal sweetness wove.

Be his to court repose!
I would arouse the living and the dead,
And consecrate instead

To that high task, my thoughts, my youth, my song.

Shame to the man who shows
Unblushing cheeks, while menacing and strong
The awful prophet voice which brands the wrong
Kings through his soul! Deign not the sun to shed
One ray upon his head!
No child's caress be left to soothe his close,
Nor wife's nor friend's true voice; but, righteous doom,
Scare his remorseful sleep, and hunt him to the tomb!

Another poem of considerable merit, to which translation can do little justice, on account of some untranslatable peculiarities of metre and phrase, is the 'Inno al Tasso,'—in which the usual bitter lament is made over the wayward poet's hard fate, and his royal Ladye's vacillating coldness of purpose. We select for translation a few stanzas, in which La Turrissi, after inveighing against the merciless critics of the living Torquato, thus apostrophizes the dead Princess Leonora.—

Thou that 'neath thy regal marbles
Sleep'st unmarked by mortal worth,
At the voice of my reproving
From thy confined sleep come forth!
What but love should burst in twain
At a touch, the Poet's chain?
Up from thy cold bed of earth!

Hie thee to yon ghastly dungeon,
Trembling in the twilight grey;
Lady, seek and save thy lover
From its dreary gloom, and say,
"Haste thou hence, the world can give thee
Homes less ready to deceive thee,
Far from courts and kings away!"

"Fly! for lays of brighter wonder
Keep thy daring genius strong.
I will wrestle here unwearied,
Traitor hearts and hands among.
Never yielding, never shrinking,
I will kiss the rack while thinking
That I but endure thy wrong!"

The few remaining years of the young poetess were spent in acquiring new languages, in assimilating new ideas, and steadily pursuing a course of self-instruction, which exposed her in her family life to an almost incredible amount of obstacle and petty annoyance. In 1846, after the death of her father, she accomplished her long-cherished wish of a journey to Florence, where, for several months, her dignified beauty and simple sweetness of manner drew around her a little court of men of taste and learning. On her return to Sicily, she enjoyed the rare privilege, it is said, of choosing her own husband,—probably in much the same way as a child may be said to choose a card from the pack in the conjuror's hand. However that may be, she married without reluctance, for there existed many points of sympathy between her and her betrothed husband, the Prince di Galati, who had given proofs of considerable literary merit in several creditable translations from the Greek. As she herself said just before her marriage: "He, at least, will not be likely to oppose my inclination to study." Nor was she mistaken. The few months of her wedded life were far happier than the outset might have seemed to promise. But, in 1848, the hopes and terrors of the Sicilian Revolution came at an evil moment to agitate her ardent and impressionable mind, just when her bodily condition required most calm and repose.

She entered into all the chances of the brave and unequal struggle with heart and soul, and paid for her generous sympathy with her own life and that of the infant whose birth she had looked forward to with yearning delight. She died, after only ten months of marriage, at the age of twenty-five; and those youthful poems which she had fondly imagined would be to her future fame what the 'Hours of Idleness' were to that of the Author of 'Childe Harold' are now the only signs of what she might have become had time and opportunity befriended her.

We must find room before concluding this notice for the little poem headed 'Al mio Angiolo,' both as a good specimen of her femi-

nine tenderness of thought, and because it has a certain plaintive tone of resignation, which seems like the shadow of coming fate darkening the writer's mind at a time when her worldly hopes looked fairest.—

Al mio Angiolo.

Oh, naught is sweet like thee! Oh, naught on earth
With smiles of joy like thine my soul can fill!
Thou, in the rosy cradle of my birth,
Didst kiss me; and in death thou'lt kiss me still.
Thou breathest thro' my girlish heart at will
Delicious strains,—thoughts of divinest worth,—
Thou'rt ever with me; but my heart doth own
Thy hidden presence most when most alone.

I may not see thee here: such deathless things
Are gazed on but in heaven, they are so fair;
Yet the soft flutter of thy voiceless wings,
Even while I speak, stirs thro' my veil and hair.
And canst thou love a child of earth, and care
To guard me with fraternal comfortings,
O mine own faithful angel! O my best,
My truest comforter in strife and rest?

When mournful thought grows deepest, oft I hear
Low sounds of weeping to my tears reply.
A soft hand smooths my cheek; and in mine ear
A gentle voice invites to melody.
It is thy hand,—thy voice which murmurs nigh;
Thou answerest to the mourner with a tear,
And dost prefer our converse and our love,
Bright youth! to all the starchy dance above.
And thou wilt follow me by ways unseen,
Mysterious friend! through all this vale of woe.
Oh, strive to lend my life a lovelier mien,—
The life this maiden bosom dreads to know.
At least, sweet roses on my grave bestow,
And leave not one harsh thought where I have been.
Give me the kiss of death. This brow of pain
I'll hide upon thy breast, and wake in heaven again.

We may add, that Signor Giudici is collecting materials for a future biography of his gifted countrywoman.

A Vacation Tour in the United States and Canada. By C. R. Weld. Longman & Co.

THE author of Weld's 'Travels in America,' who visited General Washington, and published a book fifty-five years ago, is still alive, and may now compare his reminiscences with the impressions of his relative, Mr. C. R. Weld, whose Vacation Tour was ended last October. This parallel of two social eras, separated by half-a-century, though remarkable, is familiar; but it is not often that a writer sees his views contrasted by one of his own name, after such a lapse of time as that between the birth of the Great Western Republic and the rise of the Know-Nothing party. Such a circumstance of itself recommends to general notice Mr. Weld's pleasant and instructive volume.

Mr. Weld lived in the singular hotel circles of the United States, entered into the varieties of social intercourse,—took notes of the industrial, commercial and political aspects of the Union,—wandered through the great mazes of lake and forest in the Canadian interior,—went up the mountains and along the plains,—and saw as much, during his rapid tour, as some travellers see in the course of many revolving seasons. His narrative is equally free from pretence and levity. It is a carefully-coloured picture of men and movements, enlivened by anecdotes, and giving evidence of candid and impartial inquiry. There is no unnecessary flattery of the American people, and no bigotted detraction. With sentiments that occasionally surprise us, and opinions unsupported by evidence, we nevertheless accept Mr. Weld's report on the social characteristics of North America and of the Canadian cities as a clear and liberal survey, taken from an elevated point of view, and rendered agreeable by its variations of style, which range from pure gossip to abstract though steady reflection.

At Nahant Mr. Weld saw a number of American ladies bathing, in brilliant attire, somewhat Eastern in its details, and he expatiates on the elegance of the scene when they emerged, with "countless pairs of little white feet, twinkling on the sand." An American, however,

surpassed him in enthusiasm about these damsels, who, he said, "come down to breakfast after their bath, freshened up, looking as sweet and dewy as an *avalanche of roses*." But these minor graces of the land were forgotten as soon as the tourist passed from hotel interiors into the more permanent circles of life, which were agitated by politics and serious social discussions. The "Know-Nothings" were at the head of all other parties, at least in the interest they excited.—

"The party have three newspaper organs. The principal one is called 'The Know-nothing and American Crusader,' and has for its motto 'God and our country!—Deeds, not words!' surmounted by a youth, extending his right hand to a star, and trampling the Papal tiara under foot. The second is styled 'The Mystery,' published nowhere, sold everywhere, edited by Nobody and Know-nothing.' Underneath are a large eye, a nose, and the cipher 0. The third is entitled 'The Wide-awake and the Spirit of Washington,' with the motto 'God forbid, that we, their posterity, should be recreant to their trust.' These publications are full of coarse and low invectives against Roman Catholics, who are denounced as enemies to the country of their adoption. Notice of all elections is given, with directions who should be supported. The movement is not confined to the lower orders. A Boston gentleman told me that, having expressed opinions supposed to be in favour of 'Know-nothingism,' he was drawn aside by an acquaintance, and informed if he desired to join the party he might do so by going to a house which he described on a certain night; but he must bear in mind that the oaths enjoining secrecy would have to be taken."

It should be mentioned that Mr. Weld has had his fears aroused by this movement,—which he dreads as a public Frankenstein, of sinister import to the people of America. Among other considerations, he objects to the multiplication of sects, already constituting a "piebald polity."

"The number of political associations in America is as extraordinary as the strange names which they bear. Here are a few of them:—Wild Cats, Woolly Heads, Hunkers, Straight-out Whigs, Morrill Whigs, Fusion Whigs, Anti-Fusion Whigs, Fusion Democrats, Anti-Morrill Temperance Democrats, Nebraska Wild-cat Democrats, Anti-Nebraska Old-line Democrats, Free-Soilers, Hook and Ladder Democrats, Dumb Democrats, &c. &c."

The Americans are extravagant, however, after an original fashion. They have invented their own forms of hyperbole. This peculiarity distinguishes their exaggerations from those of England, Ireland, or Germany,—and belongs to acts as well as to expressions, to sentiments as well as to ideas. What but its intense extravagance constitutes the humour of the following mock advertisement?—

"For Sale. A good husband, warranted sound and kind in any kind of harness, especially the matrimonial. He is of handsome figure and action, stands to the cradle without tying, and can trot his babies an hour easily. He is also a smart traveller, and in every respect a good family beast."

The same principle—Irish recklessness exaggerated—is illustrated in Mr. Weld's story of a "miraculous escape." He was in a light vehicle, driven by a youth of Ohio, and was carried at a furious pace over ruts and stones.—

"But when, on turning a corner, we came suddenly in sight of a board with the well-known notice, 'Look out for the locomotive when the bell rings,' which was made more impressive by hearing the signal, and seeing the line of steam announcing the proximity of a train, I was somewhat anxious, as my driver did not manifest the slightest disposition to stop. As usual, the road and the railway crossed on the same level, which did not lessen my anxiety. 'Hold hard! stop, stop!' I cried; and as these words received no attention, I rose from my seat and grasped the driver's arm, for the purpose of arresting our progress; but in vain. Lashing the horse with redoubled energy, he replied to my entreaties to

stop, by the assurance he would go a-head of the *en-gine*; and to my horror, on we went, buggy and train approximating rapidly at right angles; the locomotive's bell meanwhile ringing furiously what seemed to be my death-knell. Finding all my efforts to avert an anticipated collision were futile, I resumed my seat, and resigned myself to my fate. What I did or said during the next few moments I know not; but I remember a feeling of sickness came over me as we dashed across the line, and I beheld the iron horse rushing onwards, and almost felt the hot blast of its steam-jets. 'There, I told you I'd clear the darn'd thing,' said my driver, chuckling over the achievement."

Nothing more stolid was ever witnessed than the ingenious indifference of the Niagara artist, whose "modern instance" is annexed.—

"I was shown the scene of the last catastrophe, just above the American fall. It is a small rocky islet to which an unfortunate man clung with terrible tenacity for three days. He had been drawn into the rapids, and was on the point of being swept over the falls, when his course was arrested by the little island. Far better would it have been for him had he not met with this obstruction; for his agony during those three long days and nights was fearful. All attempts to save him were abortive; and at the close of the third day, being unable to cling longer to the rocks, he was carried over the cataract. An American daguerreotypist reaped a rich harvest by taking impressions of the poor fellow during his agony."

This daguerreotypist might have been a development of the Kentucky boy described by Mr. Weld. He was told that his father had been drowned. "Has he?" he exclaimed; "why, he's got my knife in his pocket!"

We hope, however, that Mr. Weld does not seriously mean to quote such stories as illustrations of the "extraordinary disregard for life in America":—otherwise, there is no nation which may not be convicted of a diabolical deficiency in human principles and natural affections. The boy who would regret his father's death simply for the loss of his knife, would be a paricide in other circumstances; but we suspect that the anecdote invites to no philosophical contemplation; it is a grotesque invention, with a nice dash of Yankee humour.

As a specimen of Mr. Weld's best manner, we will extract some passages from his account of a hunting trip in Canada—a day on Clear Lake,—which shows that the romance of life has not retired before colonial civilization. After a journey through pathless forests, he and his companions took to canoes, and having fished awhile, reached one of the last homes of Indian life,—a spot and a group as picturesque as the scenes which our minds associate with the early borderers, with those rude heralds of Art and civil culture who first broke on the pastoral peace or the barbarous glory of the red man's hunting grounds.—

"At the head of Clear Lake, a reach, not unlike that separating the upper and middle Killarney lakes, occurs, studded by wooded islands. On one of these the Indians were camped; but there was no sign of life, nor could we detect amidst the dense foliage a landing-place. A wild whoop from my companion was answered by an Indian, who burst through the bush and motioned us to a little creek, where we disembarked. Following our swarthy guide, we came suddenly on a small clearing, in the centre of which was the lodge. A more picturesque spot could not well be conceived. The ground, mantled by a variety of wild flowers, sloped gently towards the Lake. Lofty trees shut out the oppressive sun, and a tiny brook gurgled sweetly as it leaped into daylight from the gloom of the forest. The lodge was constructed of birch-bark, open at the top for the egress of smoke. Around were various hunting and fishing implements. Portly fish, with strips of bear-flesh and venison hanging on poles in process of curing, attested how efficiently these had been used. Pushing aside the buffalo-skin serving as a

door, we entered the lodge, from which, however, I was nearly driven by the dense and acrid smoke. The family consisted of the Indian's wife, mother-in-law, and two girls, who were squatted round the fire superintending a savoury mess of boiled ducks, fish, and squirrels. The women and girls could not speak a word of English. The excessive natural simplicity of the girls and the freedom of their limbs were remarkable. With their naked feet, which were beautifully formed, they seized fragments of wood and cast them on the fire with the same ease as we should perform the operation with our hands."

The reader who is interested in American and Canadian progress will thank us for commending Mr. Weld's very useful work to his attention.

The Life, Times, and Contemporaries of Lord Cloncurry. By William John Fitzpatrick. Dublin, Duffy.

By writing his own memoirs, and publishing them before his decease, the late Lord Cloncurry seemed to have been desirous of avoiding the perils of an indiscreet biographer. If such were his wishes, they have been completely frustrated by the author of the strange volume before us, which contains matter the appearance of which in print Lord Cloncurry and his immediate friends would not have sanctioned. We surmise that the appearance of this work will increase the dislike of Irish aristocratic families to being brought under critical examination.

On perusing its first sentence, we thought that we had before us one of those Irish biographers who make it a point to give magnificent pedigrees to their heroes. The volume commences:—"In the twelfth century, when Dermot Mac Murrough, King of Leinster, triumphantly carried off the beautiful Dearbh-forguill, wife of O'Rourke, Prince of Brefni, and thereby incurred the indignation of that potentate." We at once recollected the (professed) biographers of Edmund Burke (the son of a Dublin attorney), and their grand flourishes about "De Burgh" and the "great House of Clanrickard," and "illustrious forefathers," &c.,—but a few pages soon showed that Mr. Fitzpatrick does not belong to the professional manufacturers of rose-coloured genealogies. He devotes several pages to the history of the widespread race of Lawless; and he then applies himself to a minute particularization of the low level to which the Cloncurry family fell, and from which it afterwards arose. Few aristocratic families would like to have their exact ancestral pretensions set forth with the merciless detail shown by Mr. Fitzpatrick. In doing so, the author beyond question gives us a curious insight into the manner in which patricians were manufactured in the days of the Irish Parliament. He tells us, also, a romantic story (wonderful, if true) about how Robin Lawless came down from the Dublin mountains, and became a shop-boy at a woollendrapery in Dublin; and how he afterwards married the widow of his employer, and was the father of the first Lord Cloncurry; who, it appears, also kept a shop famous for its blankets. The latter circumstance is preserved in the following anecdote.—

"Soon after the elevation of Sir Nicholas Lawless to the peerage, he paid a visit to the Theatre Royal, Crow Street, dressed in the pink of the then fashion, and decorated with a star indicative of his rank. The piece was a pantomime, and the subject, Don Quixote. At the very ludicrous scene where Sancho is tossed by the village clowns in a blanket, Lord Cloncurry was observed to laugh so heartily as to be well nigh in danger of tumbling off his seat—rather a ludicrous proceeding, it must be confessed, when the buckram-like dignity of his Lordship's movements is taken into account. The idea was indeed truly laughable, and in the prolific mind of the notorious Lady Cahir (who happened to be in an adjoining

stall), it speedily took root, and threw out blossoms of characteristic wit. Beckoning his Lordship into her box (at least, so the story has it), she exclaimed:—

Cloncurry, Cloncurry,
Come here in a hurry—
And tell why you laugh at the squire?
Now altho' he's tossed high,
I defy you deny
That blankets have tossed yourself higher."

We have heard a different version of this anecdote; and we know that the verses have been attributed to the pen of the eminent song writer, "pleasant Ned Lysaght," author of 'The Sprig of Shillelagh,' 'Rakes of Mallow,' &c. We believe their proper form ran thus:—

Cloncurry, Cloncurry,
Come, come, in a hurry,
And see how they toss the poor squire;
But between you and I,
Toss him ever so high,
Your blankets have toss'd you much higher.

The author, whose newspaper research is considerable, cites a variety of evidence to show what sort of character was the first peer of the ennobled family of Cloncurry. He assails his personal reputation with a mass of defamatory charges, and describes him as a mere adventurer, who for lucre and title changed his religion and politics. We shall not copy these personal insinuations; but it is certainly curious to compare them with the florid pictures of the same person given by the son in his autobiography.

Turning to the hero of the volume, we must say that never was a public character subjected to such unnecessary illustration. "If," writes Prof. De Morgan, of London, "you wish to be as minute as Boswell,"—and the learned Professor's conjecture is verified. Our readers will be amused at the following *minutiae*, printed in the biography of a provincial politician.—

"28th April, 1853.

"Dear Mr. Hogan,—Here I am, tired and sorry. I hope to see you soon. Will you dine with me on Sunday? Any news about the Exhibition?"

And again.—

"Lord Cloncurry to W. J. O'Neil Daunt, Esq., M.P.

"My dear sir,—Will you give me the favour of your company to dinner on Thursday next, if not otherwise engaged, and talk over the past affairs of Ireland? Dear sir, yours truly, CLONCURRY."

"Lord Cloncurry to John Gray, Esq., M.D.

"Dear Dr. Gray,—Cecil is at Glandore, not very well. I expect him about Christmas, if better.

"Faithfully yours, CLONCURRY."

Some of our readers may ask "Who was Lord Cloncurry?"—and we need only tell them that he was an Irish peer of excellent intentions, limited abilities, and no lasting success in public life. He was for many years a Dublin social celebrity, who kept a good table and aimed at popular applause. He has been called "a Brummagem Charlemont," and, allowing for its satirical distortion, there is some truth in that description of his character. He did not deserve a Boswell, for his talk was neither brilliant nor profound; but in any case he did not merit such a caricature of Boswell as Mr. Fitzpatrick has shown himself.

Thus we regret being compelled to specify the grievous fault of parading in print domestic scandals connected with some of Lord Cloncurry's family. The Peer's first marriage was dissolved by Act of Parliament; and all the wretched particulars of the transaction, with extracts from the evidence at the trial, occupy the entire of the twelfth chapter of this volume. The fact of the daughter of the first Lady Cloncurry following the maternal example is also duly chronicled:—nor is that enough!—in order to show that he can be "as minute as Boswell," the author narrates how Lady Cloncurry went to England, assumed her maiden name, married

an English clergyman, whom he indicates; and he then chronicles the marriage of their daughter (by this second union) with an English Peer,—giving dates and particulars so as to identify all the *dramatis personæ*. Against such flagrant impropriety we must emphatically protest. Family scandals had little to do with the personal career of Lord Cloncurry, and many of the parties concerned will be extremely offended with the freedom of this author's pen.

The style in which this strange volume is penned often reminds us of the outbursts from Mr. Carleton's inimitable Irish schoolmasters. Thus Mr. Fitzpatrick commences his second chapter in the following way:—

"The year 1773, remarkable for having given birth to Francis Jeffrey, Louis Philippe, Simonde de Sismondi, and Madame de Cottin, also introduced to the light of day Valentine Browne Lawless, the subject of this memoir."

—which recalls the comic song about

Leslie Foster
And the Duke of Gloucester,

with other sounding names. So, also, when introducing the narrative of Robin Lawless, the author kindly shows us the extent of his reading in English poetry.—

"To modify the words of Beattie, it both
Points a moral and adorns our tale."

In many other instances, also, he shows us that he has no apprehension of disturbing the rest of Dr. Johnson. It would be too tedious to cite them, for every page of his work proves his inexperience. We might have expected more discretion and reticence from a "Member of the Royal Dublin Society," although aged twenty-five years, as we are informed by himself.

In spite of most serious faults, this volume contributes some materials for the history of Ireland during the age of agitation. A variety of matter illustrative of "the times and cotemporaries" of Lord Cloncurry is brought under notice. Facts, incidents, and anecdotes, showing the rapid vicissitudes of Irish popular opinion, are collected by the author. Light is thrown on the character of the Repeal agitation, and on many other movements. Upon these polemical questions we cannot, of course, pronounce any opinion; but we may show the character of the political revelations in these pages by a few citations.

Thus the following letter from Lord Cloncurry is remarkable when we recollect how zealous he was in his support of "Repeal" and "Catholic Emancipation." It is written on the ejection of the son of Grattan from Meath, and the substitution of Mr. Lucas. After alluding to "the cause of Ireland," the letter continues:—

"Her ever persecuted people, who, under the guidance of, I must say, either mad or wicked advisers, have forgotten all the best interests of Ireland, of their families, and of themselves, in favour of ignorant or of hostile strangers. All the good we ever had in Ireland, we owed to Grattan. All the good we struggled to recover, was pointed out by O'Connell. The son of Grattan has been spit upon, reviled, and rejected in Meath, in favour of a stranger. Repeal, the only remedy for our evils, pointed out by Grattan and by O'Connell, has been forgotten. The noble and most independent son of Grattan, who, even if he had not such a father, was deserving of all our love and all our confidence—whom we should have loved for his father's sake, if not for his own—at the very moment that he and his most amiable and talented wife mourned the loss of their only son, he has been insulted, and O'Connell has been forgotten. What reward can patriotism expect amongst the abject, place-hunting, flattering, degraded population?"

In early life Lord Cloncurry was imprisoned in the Tower on suspicion of high treason, and he was a great enthusiast to the last about Irish "Nationality." Yet Mr. Fitzpatrick tells us that in 1852 Lord Cloncurry thus expressed himself:—

"Of the good and happiness of this wretched country I have less hope than I ever had before; and if I did not love it in dotage, I should seek another home."

There is much more confession to the same effect. The whole work is crammed with matter enough to make out a case for or against the modern Irish agitators, according to the prejudices of those who read. Whether Lord Cloncurry was competent to cure the evils around him seems to have been more than doubtful. He had no powers of public effect. He liked to go to popular meetings, make a declamatory speech, and allude to his "dear friend Lord Edward Fitzgerald," which always brought down great applause, renewed when a princely subscription was handed in after the harangue. His Lordship appeared to have had several of the points of a patrician fond of the platform. He seemed to collapse without the stimulus of "loud cheers." Thus, when O'Connell made him unpopular, Mr. Fitzpatrick writes:—

"Cloncurry felt his own popularity on the ebb. The reflection galled him acutely. It smarted him in the marrow of his bones. He was extremely unhappy. Since his imprisonment in the Tower, as he acknowledged years after, he had never felt more so. To attempt to convince O'Connell, or the mass of people whom he wielded, of Lord Anglesey's good intentions was hopeless."

Pym and Hampdens and Sydneys would not "smart to the marrow of their bones" because vilified by an eloquent tribune. "Ambition should be made of sterner stuff." The author shows us, also, that some others in Ireland do not share in his Boswellian admiration for Lord Cloncurry. Thus, he says:—

"A letter dated September 16, 1854, and written by an Irish privy councillor, for many years identified with the national movements of his country, lies before us as we write. 'I am not an ardent admirer of Lord Cloncurry,' observes Mr. O—. 'He advocated the Repeal humbug for years, but remained silent from the day Lord Anglesey got him made an English peer.' This belief, as well as that he *craved* the elective peerage, is unfortunately general."

The mysterious way in which the author quotes "Mr. O—" is characteristic of this queer book. "Dodd" can at once inform the least initiated that the "Right Honourable More O'Ferrall" is the "Privy Councillor" quoted. The author then cites a letter on the point from the Duke of Leinster.—

"The author wrote to his Grace for a confirmation of this report, and was much gratified to receive the following assurance:—'I can have no hesitation in saying,' wrote the Duke on September 27th, 1854, 'that the English peerage was conferred on Lord Cloncurry unlooked for and unexpected by him.'"

But on this promotion in the Peerage we are made to think of the first Lord Cloncurry, concerning whom there is a statement in the early part of the work.—

"Some of the papers of the late Lord Fitzwilliam have found their way into the possession of a distinguished member of the Royal Irish Academy, well known and respected for the important services conferred by him on the literature of his country. Amongst them is the 'Precis Book' of the Earl of Fitzwilliam. To this we have been given access, and under date the 8th January, 1795, we find the following entry in the Viceroy's handwriting:—'Lord Cloncurry desires a promotion in the Peerage. Begs to know if recommended by Lord W.' Westmoreland is the party referred to."

Either those papers must be private or public. In either case, it seems strange that they should have "found their way" out of "The Castle," or out of the custody of the Fitzwilliam family.

It is not often that so much curious matter is presented to us so crudely as in this volume, dedicated by "his Grace's own permission" to the Duke of Leinster. The *imprimatur* of the chief of the Geraldines may not be without its value in Ireland. But even the language of the

Dedication truly exemplifies the style of the performance.—

"The following pages are, with his Grace's own permission, and in the hope that they may not altogether disappoint the respect entertained by him for the memory of his deceased friend, respectfully inscribed."

His pages will, we fear, "disappoint the respect" felt for the name of Cloncurry in some quarters. Children should not be allowed to play with edged tools, and an indiscreet biographer's pen can be a most dangerous weapon. It ought to be enough for any Irish Lord to "have his life attempted" once. With Mr. Fitzpatrick's double-barrelled discharges at the first and second Lords Cloncurry, their descendants may now dare the worst, and quote Lord Byron—

After being fired at once or twice,
The ear becomes more Irish, and less nice.

The Exodus Papyri. By the Rev. D. I. Heath, M.A. With a Historical and Chronological Introduction by Miss F. Corboux. Parker & Son.

EVERY single ray of light, however feeble, which may help us to penetrate the thick darkness brooding over the history and chronology of ancient Egypt, is worthy to be prized. Viewed under this aspect, the publication before us cannot but be welcome to the archaeologist. Our readers may remember that eleven years ago fac-similes of the Hieratic Papyri in the British Museum were published by the authorities of that establishment. Mr. Heath has since, through the medium of our pages, given some account of these ancient records. They are thirteen in number, and bear the names of the persons by whom they were collected, or from whom they were purchased by the Museum. Mr. Heath here confines his attention to five, which he considers have some bearing upon the Exodus, and which he therefore denominates "The Exodus Papyri." Commencing with the study of the Coptic language, he entered upon the task of translating these papyri, determined, as he tells us, "to doubt the pronunciation of every alleged Egyptian letter and the meaning of every alleged word." The result is, that he has satisfied himself of the existence of allusions to names and circumstances, which prove the papyri to be contemporaneous with the age of the Exodus, and he rejoices in a rhapsody of exultation at the good fortune of the present generation in having access to "Egyptian newspapers," of that distant period. "We have found favour," he says, "with the Cherubim that guard the paradise of knowledge." His translations, intermingled with comments of rather a discursive character, make up the greater part of the present volume. With great candour he confesses their necessary uncertainty, arising from the serious deficiencies yet remaining in our knowledge of the ancient Egyptian language, and regards them "merely as approximations which somebody must make as a first step to afford printed matter for discussion, reference, and amendment." As a remarkable illustration of the doubt attaching to all such attempted interpretations, we may mention, that what Mr. Heath last year translated as the *Royal Land*, he now explains to mean the *North-eastern country*, while M. de Rougé, whom he quotes as the highest authority, reads it the *land of the south*. The fact is, with such a paucity of data there is necessarily too much room for conjecture to admit of any well-founded and indisputable conclusion; and one cannot read this volume without feeling that it is in a great measure mere guess-work.

Nor is the want of knowledge the only evil

with which we have to contend in reference to this subject. Unfortunately few, if any, can approach it with unbiassed minds. Nearly all have some conclusion which they wish to establish or refute by their investigations. Mr. Heath even goes so far as to put forth his professional character as a plea for his belief in the contemporaneity of these papyri with the Exodus. Whether this is the most effectual way of inspiring the reader with the same confidence as he himself feels in his translations, we leave others to determine. He is not unconscious of his liability to be influenced by his prepossessions, as is evident from this remark.—

"But it is so easy to suppress and twist evidence, so hard to see what really constitutes evidence, the desire to find what we wish to find disturbs the mind so deceitfully and subtly; and, alas! the worship of supposed good, the fear of anticipated bad consequences, so often supplants that reverence for Truth and Fact which alone fits a man for communion with his Maker, that we ought rather to scan suspiciously what evidence I have brought, than at once to rush into a blind, and perhaps partizan, acceptance of it; and though I have a considerable confidence that my translations will be found substantially correct, and thus that the Exodus of the Jews is probably specifically here described, yet the natural emotion of the most experienced in these matters, when they first hear of such a declaration, will, I am quite aware, be one of incredulity."

That the caution here given is not superfluous, appears pretty plainly from the way in which Mr. Heath doctors up a passage which he takes to be an account of the destruction of Pharaoh and his host at the Red Sea. His first translation is, according to his own admission, so indefinite that, if it stood alone, he "would not hint that it might possibly allude to the passage of the Red Sea." But after he has paraphrased it in the style of a modern leading article, it becomes unmistakable in its reference to that event. It is evident from what follows, that the scrupulous scepticism with which he commenced his study of the ancient Egyptian language was laid aside before the conclusion of his task.—

"The reader must form his own conclusions as to the extraordinary and increasing probability that after three thousand years we have fallen upon an Egyptian song, alluding concisely but accurately to the slavery, rebellion, and Exodus of the Jews, and to the ascent of Mount Sinai by Moses. He will probably, however, think that I have cooked the account so as to make it look more like the events in question than it does in the original. I am not conscious of having done so. Take the word hyssop for instance. I never met with it elsewhere, but it has the sign of a plant after it, and a mark which I imagine to be a symbol of a religious utility. It is spelt as b. The light reader will remember the famous orthographical enquiry of the British Quarter-Master. If A s h a, said he, doesn't spell Asia, what on earth does it spell? So if A s b, with the sign of a plant, is not the Hebrew Azab or Hyssop, it has at least the peculiarity of being very like it."

Mr. Heath finds certain paragraphs in one papyrus repeated in others. These, he says, invariably partake of the nature of common-places, or general sentiments suitable to many occasions. They are in the form of extracts from letters, and he thinks they were selected and strung together to suit the particular purpose of the writer, whether to chant the praises of the dead, celebrate a victory, or narrate any other great event. In several instances there appears to be a break in the middle of a sentence, which Mr. Heath accounts for by supposing that the writer copied as much of the common stock of remarks as comported with his object, but omitted names and other specific circumstances which would have been unsuitable.

Miss Corboux's Introduction is an amplification and extension of what has already appeared

from her pen in the *Athenæum* and elsewhere. It contains her chronology of the Eighteenth and Nineteenth Dynasties, with a full discussion of the period and circumstances of the Exodus. We are happy to find she contemplates a more complete exposition of her views in another form. Her profound acquaintance with the subject and her ingenuity of combination lead us to hope much from her labours in this thorny field.

THE WAR.

IN style eccentric, in spirit retributive, in plan confused, the volume of *Pictures from the Battle-Fields*, by "The Roving Englishman," (Routledge & Co.) nevertheless deserves to be popular. The pictures are, indeed, as much scenes of peace as of war; they are alternately discursive, sketchy and rhetorical; they sometimes descend to burlesque;—but every line bears on an interest of the day; all the jokes are at the expense of self-satisfied stupidity or dull routine, and the Rover never approaches a solemn topic without subduing his levity, and writing of serious things in serious words.

The title, perhaps, ought to be reckoned among misnomers. 'Pictures from the Battle-Fields' contain very little about the fields of battle. We have a glance at Balaklava, a bright glimpse of Sebastopol, some outlines of camp life and scenes, by the way, through the eclipsed and deserted theatre of Turkish constancy on the Danube. We are not altogether disappointed, however, that "The Roving Englishman" is disinclined to emulate "our own Correspondent's" daguerreotypes of trenches, batteries, sorties in the dark, and general actions in the light of the sun. He deals well with the personal points of the war story, with the lords of Misrule, and with diplomatists whose "hesitation, admirably slow," suggests some rough and not very scrupulous satire. In contrast with these, there are "pictures" of the Bashibazouk, of the Zouave, of the Russian officer, the Ottoman, and the Greek, all light and spirited, and set in a frame, partly of narrative, partly of irony. An irreverent reformer, checked by a lord-loving editor, and aided by a mock critic, is supposed to indite the book. Thus, "the argument" of the Preface is in this fashion.—

"The author explains the plan of the present work of fiction. He commences with a general apology. He abases himself, and eats dirt after a national custom of the Britons. He discreetly declares his belief in family governments, and expresses much affectionate and proper feeling for the noble families of Grey and Elliot. The author judiciously calls attention to his prudent veneration for hereditary legislation, and some other equally admirable institutions of this great and enlightened country. With wise obtrusiveness he continues to evince his highly connected admiration for modern Bedfords and Lauderdale. He contemptuously refers to the late Mr. E. Burke. The author ingenuously asks pardon for any reprehensible and vulgar matter which may have unavoidably crept into these reverential pages, and after the most approved fashion of the Crimean witnesses, indignantly casts all blame upon some person or persons unknown. The author expresses the most highly connected and handsome regret for having spoken the truth even as a Shadow. He acknowledges this glaring impropriety with contrition and trouble of mind. He speculates for a moment on the fearful chance which the most cautious writer must always run of incurring the vengeance of 'the family,' but finally hopes to take refuge in the utter nothingness of book writers, and to vanish in the eternal outer darkness of literary men. The author cursorily mentions Mr. Smith, also Pythagoras, but politely and very properly concludes with enthusiastic praise of the aristocracy, and the hereditary wisdom of the British nation."

A positive attack on hereditary legislation is succeeded by dissolving views of the East and

West. We select an uninspiring military scene in the Crimea.—

"Wide, wide away rides a general officer and his staff. I do not know why I smile as my eye rests upon them; but perhaps it is, that the general officer is a very feeble and elderly general officer, who appears to be rather shaky, so to speak. His poor elderly head is stretched forward and bent down, as if some other part of his person was suffering from acute pain. He carries his legs stiffly, and he appears to totter on his horse, though he has got a well-bitted pacer, and a clever easy goer. Then there appears to me an odd sort of importance in the group, as if they were riding nowhere particularly, but wished to do it handsomely, and in such wise as to create a sensation. Some tired soldiers, lying on their elbows on the ground, watch the elderly general officer with vacant looks, as if they had a dim idea that there was something not quite right in soldiering affairs—a muddle, indeed, but further knew nothing."

The rude romance of war is suggested by an account of the enterprising generals of "the King of Candy's" army,—for most of the chapters are masques, and hide their heroes under affected names.—

"It is one of the few pleasant features of the war, that it has used up a great number of these worthies, and given them some chance of doing reputably in life; a chance which otherwise, and in our unsatisfactory state of society, they could hardly have had. * * It was refreshing to see many a rollicking Irishman, or canny lad from beyond the Tweed, who had probably obtained an introduction into public life by means of the cutty stool, and who had long been the reproach and scandal of his elders. It was refreshing, I say, to see them shining away here as pashas, and knights, and generals. They were quite in their element. They could do the bullying—which, I am afraid, is necessary in Turkey—quite naturally; and their very faults (mostly allied with kindness of heart and natures really genial, and gentle as those of children), looked like positive virtues, when contrasted with the black, unredeemed corruption around them. There they were—eating and carousing together, like gipsies or moss troopers; drinking brandy-and-water to keep off cholera, out of their embroidered caps, and cutting up tough fowls with their doughty swords. There they were—lending money to each other, out of purses slender enough probably, squabbling with consuls about unpaid tailors' bills for the wonderful uniforms; laughing together, quarrelling together, making it up with tears and ejaculations, that 'Jack was the best fellow who ever put on a boot, but, hang him, he is always coming the general over one so!' There they were—believing in each other, and believing in themselves; talking about their uncles or cousins, who lived in parks, which were always the finest in that part of the United Kingdom in which they were situated—those 'doosid' highly-connected fellows."

We are afraid of identifying the various gentlemen who figure in "the Roving Englishman's" portfolio. Official education, in general, supplies a less offending extract.—

It is unnecessary to do more than remind every noble family official that it may be laid down as an absolute rule, that he will be required to possess due cunning in the difficult craft of folding neatly, and docketing despatches in a straight line. The words of the docket will be found in the first lines of the despatch. He should also know how to open a despatch, and put it together again with its enclosures. He should give long and careful study to the art of making an ordinary and a *flying* seal a beautiful and sublime official mystery. Signing appointments, unbonneting to deputations, eating dinners, and drinking healths, with the proper mode of holding the knife, fork, and glass, in order to make a fitting impression on the common and popular. Sketching caricatures, and twiddling the thumbs with proper indifference at a cabinet council. Taking a cigar gracefully out of the mouth, to reply with necessary gravity to any absurd special person asking for employment. The buttoning of official uniforms according to the last tailoring regulation. Acquiring the true art of raising the fore-finger of the right hand to menace a feeble minister in a manner duly imposing, and to learn the real fiddlededee spreading out of the

palms to express becoming awe and reverence of a strong one."

In all respects the delineations of the book are clever though exaggerated, and entertaining though monotonous. But ordinary readers, we suspect, would have been satisfied to find more real pictures from the battle-fields, and fewer personal and party satires. The analysis of Foreign Office arts, however, leads to an explanation on this point.—

"The intelligent reader must not suppose that I have been wandering away from the battle-fields, while calling upon him to contemplate the purity and beauty of those drawing-room darlings and despots of the Travellers' Club who condescend to follow Fortune at the Foreign Office. Many of the most tremendous of our warlike thunderbolts have been forged in this sacred edifice, and exact copies taken of them by the jewelled fingers of our fashionable friends during their blithe intervals of leisure which have not been occupied in pantomimes; while what Briton will not proudly own that the fiercest of our battles have been fought on foolscap paper, very hotpressed indeed!"

Such is the object, such the manner of "the Roving Englishman." We now hand him over to his readers.

There is more formality, more routine, in Mr. Robert Harrison's *Notes of a Nine Years' Residence in Russia, from 1844 to 1853* (Newby). The writer seems to have lived under public protection, and to have enjoyed opportunities for social study. His 'Notes' agree in purport with those of 'The Englishwoman in Russia,' though they are not so simply written or so varied. Mr. Harrison had thirst for anecdotes, and took them from all quarters. His assortment, therefore, is a mixture of pleasantness and common-place. The most reliable and interesting portions of the volume refer to incidents and impressions of travel, especially among the woods and villages. Anecdotes, notwithstanding, are sure of readers, and any mad trick or captious *mot* of the Czar with the mild eyes may be repeated, even to those who are less bewitched by his huge boots and pompous stature than naval juniors have been.

We will glean from Mr. Harrison's 'Notes' some passages descriptive of society in Russia, and especially of the group in purple. On the St. Petersburg promenade—

"the celebrities of Russian literature likewise walk abroad their little hour. The stout hard-faced man, carrying a thick, knotty cudgel, is the editor of the *Northern Bee*; he is caricatured in statuette under the form of a bear. That smart, military-looking man, wearing a moustache, is the editor of the *Contemporary*, a bulky monthly. Another editor is that mild, gentlemanly-looking man, with his head thrown back, and face looking upward, and who keeps his hands always behind him. Yonder, the tall, overgrown Count, in loose hanging garments, is the lively author of the 'Tarantass.'"

A tint is added to the panorama of Russian social varieties by the scattered Finns of the wilder race, who are caught while young and placed in rural "establishments."—

"The children were neatly dressed in coarse linen frocks, embroidered on the breast, back, and shoulders with a pattern that strongly reminded me of the New Zealander's tatoo. These devices are Runic in character, and the symbolical meaning of some of them is still understood by the people. Beads and shells of different colours formed their necklaces, and fringed their gaudy sashes. Though they had been three years under tuition, the wild scared look of their restless eyes bespoke minds in a still savage state."

The late Czar was known to be jealous of his patriarchs when they wielded any intellectual power.—

"A new governor of the town was so deeply struck with the reverend personage's high qualities, that in writing to head-quarters his account of men and things, he said: 'Here is a vicar whose monastic con-

dition one must regret, for he has talents that fit him to be a minister of state.' This unlucky recommendation was productive of an order, which arrived with the speed of unpleasant news, for the removal of the unconscious ecclesiastic to Viatka, a fortress on the confines of Siberia, where he remained in exile for two or three years."

He preferred the debasement of corruption, and even fostered it.—

"A story in point is told of a police major in St. Petersburg, who dashing along the Nevsky in a handsome droschky and pair, was met by the Emperor Nicholas. His Majesty, being in a lighter mood than was usual with him when in public, stopped the officer and inquired what salary he received from the crown. On being informed that it was 2,000 roubles banco, the Tzar desired to know how he contrived to keep so smart an equipage and such good horses.—'By presents, your Imperial Majesty, that I receive from the kind people in my district,' was the candid answer.—The Emperor laughed at his straightforward frankness, and giving him some money, replied, 'I believe I live in your quarter, and have neglected sending you my present.'"

His army, for the most part, understood his character. At a review of the "Sappers and Miners" he became lively, and called each officer by name.—

"Among the subalterns present was a Lieutenant, Romanoff, whom Nicholas jocosely asked, if he were 'a relation of his.'—'No, your Imperial Majesty,' was his simple answer, for which his comrades jeered him not a little, as letting slip an opportunity of promotion, which a witty reply might have procured him."

No man could display more indecent insolence than the Emperor Nicholas.—

"An instance of the disagreeable things which he could say and do, was exhibited at a visit which he condescended to pay to one of his wealthiest subjects, allied by marriage to a reigning house in Europe. The gentleman, who in some manner had displeased the Tzar, received his Imperial guest at the door, with a taper in each hand, and walked backwards all the way until he had ushered him into the saloon where the company were assembled, without once receiving a word or a glance of recognition. 'Does he think,' said Nicholas to one of his officers, 'that I am come to see him? I came to see my cousin, the princess;' and he made his way, without further notice, to the place where his host's wife sat receiving her visitors."

Mr. Harrison tells us that the Czar once entered an omnibus, whereupon the passengers, honoured as they were, escaped from the vehicle as quickly as possible. They knew that a frolic with Nicholas was hardly less dangerous than playing with a live shell.—

"During an interview which Martineff, the comedian and mimic, had succeeded in obtaining with the Prince [Volkhonsky, High Steward], the Emperor walked into the room unexpectedly, yet with a design, as was soon made evident. Telling the actor that he had heard of his talents, and should like to see a specimen of them, he bade him mimic the old minister. This feat was performed with so much gusto that the Emperor laughed immoderately; and then, to the great horror of the poor actor, desired to have himself 'taken off.'—'Tis physically impossible,' pleaded Martineff.—'Nonsense,' said Nicholas, 'I insist on its being done.' Finding himself on the horns of a dilemma, the mimic took heart of grace, and, with a promptitude and presence of mind that probably saved him, buttoned his coat over his breast, expanded his chest, threw up his head, and, assuming the Imperial port to the best of his power, strode across the room and back, then, stopping opposite the Minister, he cried, in the exact tone and manner of the Tzar, 'Volkhonsky! pay M. Martineff 1,000 silver roubles.' The Emperor, for a moment, was disconcerted; but, recovering himself with a faint smile, he ordered the money to be paid."

Of the new Emperor, Mr. Harrison says little that is important, and relates few anecdotes that are reliable. Alexander the Second

is represented as an abstemious liver, eager for popularity, but unaffected and amiable in his private relations.—

"In person, the present Emperor looks more of a Russian than the late Tzar, whose fair complexion and fine physiognomy bore distinct traces of his German descent. He is very tall and robust, of a dark complexion, with full round eyes, which, though occasionally lighted up by the spirit of merriment, habitually wear an expression of melancholy."

Mr. Harrison was surprised by the warlike spirit of the successor of Nicholas, who had been reputed in Russia to aim at re-establishing peace. In Russia, however, absolutism is only absolute while it leads the nobles and the nation. It can crush any individual;—it cannot resist the mass.

Mr. Harrison's volume is an acceptable contribution to our knowledge of Russia. Without being elaborate or profound, it appears trustworthy, and is full of information. To 'The Englishwoman in Russia' it is a companion as well as a commentary; but we except from our reliance a good deal that the author repeats on hearsay.

An addition to the literature of the Eastern campaign has been made by "An Amateur," who records the incidents of *A Trip to the Trenches in February and March, 1855* (Saunders & Otley).—There were quiet times in the camps while he stayed in them,—that is to say, rifle fights and bayonet struggles happened—like the earthquakes noticed by Lady Sale—"as usual"; but the main batteries did not roar on the hills, or the belligerent legions meet in full force between their lines and fortifications. Consequently, a tourist who came to study human nature in its martial attitude was so far disappointed, as his readers will probably be, to find a thin volume eked out with irrelevancies on Stamboul, on Islamism, on Edinburgh, and on the historical policy of Russia.

Two months in the actual presence of war, with the armies of four nations face to face, and incidents fit for Tasso to sing occurring every day, might supply materials for a narrative of wondrous richness and variety. As it is, "An Amateur" repeats the burden of many a newspaper essay; though he has some touches to contribute to the scenic story of the conflict before Sebastopol. One of his earliest glimpses of the camp is picturesquely suggested.—

"After tramping about in the mud, asking every one in vain for information as to the quarters of the — Division, we came upon a Zouave picket, composed of several hundred men, halted in a slight hollow. As we approached, we heard a kind of hum, and supposed, of course, that, *à more majorem*, according to the custom of their nation, they were all chattering; but as we drew nearer we found that, instead of all talking, they were all coughing. This universal bronchitis had a most curious effect, sounding much like the coughing of a flock of sleep in winter."

A sergeant who conducted him through the trenches remarked, that the men had been so sickened by their toils that death was welcome, or at least indifferent to them. "An Amateur" ascribes to this cause the waste of life among soldiers who exposed themselves recklessly to the enemy's fire. He is probably wrong. Such weariness does not make untiring and willing heroes,—and of such are the besiegers of Sebastopol. Habit and personal immunity, in all likelihood, inured the men to the perils that surrounded them. They exhibited, in every situation, a certain coolness and apathy, illustrated by nothing so much as by their sportive method of slaughter.—

"One day I was in the advanced trench, a party of our men seemed very anxious to pink a party of three Russians, who were partly exposed, at work. They had fired several shots without effect; and although startled, I could not help smiling at the

coolness with which they were discussing the shots:—"Give him a little more elevation, Bill"; or, "Wait till he lifts his head up"; whilst another, more humane, was urging them to desist with, "Let the poor beggar be; how would you like to be shot at when you was obliged to work?" Seeing that I seemed interested, one of the men offered me his rifle to take a shot, but I declined, having no right whatever to slay a Russian, and it being also against the regulations."

The writer's imagination seems to have been kindled as he walked over ground "where shot and shell, dead and alive, are lying in millions." The accidents from these missiles were rare in comparison with the escapes.—

"An officer told me that, walking through the trenches, to keep the men awake, he found two fast asleep, close together, with a live shell between them; there was just room for the shell to roll between them, and there the fusee had burned out! During the severe nights, the officers used to heat round shot in the picket fires, to keep their feet warm. On one occasion, an officer's servant had put a shot to warm, when his master coming up, saw, to his horror, that it was a live shell with the fusee in, instead of a solid shot. He immediately kicked it out, and thus providentially escaped a death that would have been inevitable had it escaped his notice."

The English once fired fourteen thousand balls in the dark, says "An Amateur," and admitted that they had only killed one Russian. At Inkermann, it was calculated that sixty-nine out of seventy shots fell to the ground harmless. Such arithmetic, at best, is doubtful. The 'Trip to the Trenches,' with much trivial matter, contains its proportion of sketch and story, interesting to amateurs at a distance whose trips do not extend so far.

Sketches of Lancashire Life and Localities. By Edwin Waugh. Whittaker & Co.

HERE is a new volume by way of addition to our library of provincial literature. Artless and incomplete as this is,—chargeable with false sentiment and imitative poetry, the mistaken taste, in short, which belongs to partial cultivation,—there is, nevertheless, so much truth, life, reminiscence and information to be found in it, that there are few of its component books which are unreadable, fewer still which do not offer some contribution to the student of manners and to the historian of civilization. Mr. Waugh's volume belongs to the better division of the library, not merely in right of the variety and entertainment belonging to its contents, but also because of the style in which he has written. Those who may care to speculate on the difference betwixt "North and South" will find food for comparison in these chapters. Let us instance particularly that devoted to 'The Town of Heywood and its Neighbourhood' as pleasantly conveying information—not without fancy, not without humour. We will prove the existence of the latter by transferring sketches of two originals to our columns.—

"In an old fold near Heywood, there lived a man a few years since, who was well known and feared thereabouts as a fighter. The lads of his hamlet were proud of him, as a local champion. Sometimes, he used to call at a neighbouring ale-house, to get a gill, and have a 'bout' with anybody so inclined and worth the trouble, for our hero had a sort of chivalric dislike to spending his time on 'wastrils' unworthy of his prowess. When he chanced to be seen advancing from the distance, the folk in the house used to say, 'Hello! so and so's coming; teen th' dur!' whereupon the landlord would reply, 'Naw, naw; lhyev it oppen, or else he'll pounce it in! But, yo'n no 'casion to be fyerd; for he's as harmless as a chylt to aught at's wayker nor his sel!' He is said to have been a man of few words, except when roused to anger, when he uttered terrible oaths with great vehemence. The people of his neighbourhood say that he once swore so heavily when in a passion, that a plane-tree growing at the front of his cottage

withered away from that hour. Most Lancashire villages contain men of this stamp—men of rude, strong frame and temper, whose habits, manners, and even language, smack a little of the days of Robin Hood. Yet it is not uncommon to find them students of botany and music, and fond of little children.—Jane Clough, a curious local character, died at a great age, near Heywood, about a year and a half ago. Jane was a notable country botanist, and she had many other characteristics about her, which made her remarkable. She was born, and lived till her death upon Bagslate Heath, a moorland tract, up in the hills, to the north-east of Heywood. I well remember that primitive country amazon, who, when I was a lad, was such an old-world figure upon the streets of Rochdale and Heywood. Everybody there knew old Jane Clough. She was very tall, and of most masculine face and build of body; very strong-boned and robust; with a clear and healthy complexion. She was mostly drest in a strong, old-fashioned blue woollen bed-gown, and thick petticoats of the same stuff. She wore a plain but very clean linen cap upon her head loosely covered with a silk kerchief; and her foot-gear consisted of heavy clouted shoon, or wooden clogs, suitable to her rough country walks, her great strength, and masculine habits. Botany was always a ruling passion with rough old moorland Jane. She was the queen of all flower-growers in humble life upon her native clod; especially in the cultivation of the polyanthus, auricula, tulip, and 'ley' or carnation. Jane was well known at all the flower-shows of the neighbourhood, where she was often a successful exhibitor; and, though she was known as a woman of somewhat scrupulous moral character—and there are many anecdotes of her illustrative of this—yet, she was almost equally well known at foot-races and dog-battles, or any other kind of battles; for which, she not unfrequently held the stakes."

It was among such wild, primitive and original persons as these that the Brontë sisters found characters for their painfully vigorous north-country novels. Their dialect, retailed by the Author of 'Mary Barton,' rivals (as we recently had occasion to mark) the Border speech of *Dandie Dinmont* and the unctuous brogue of Miss Edgeworth's *Lanty*.—We might have loitered longer among Mr. Waugh's collections had not a part of them been already published. The portions concerning Tim Bobbin and the village of Milnrow have appeared elsewhere, and were noticed in the *Athenæum* at the time of their appearance.

MINOR MINSTRELS.

The World and its Beautiful Lights and Sympathies. By James Waymouth. (J. Blackwood.)—Such a title to a book as this excites as much prejudice in most readers against a volume of poetry as 'Crumbs of Comfort for the Chickens of the Covenant,' or such name upon a folio, would have excited in Sedley or Rochester. It argues a want of practicality and a want of knowledge of the tastes of those for whom the writer works, as well as an insipid diffuseness, an omen too fatally verified by the first few pages. The religious public is, perhaps, the least critical, and the most easily pleased, of any portion of the reading world. Poetry cannot be treated as a matter of mere feeling; and if the head is not called in to arbitrate, the decisions of the heart alone are worth little. If we believe the reviews appended to this volume as a sort of testimonial, our author is philosophical, reflective, and, as one enthusiastic friend asserts, assured of immortality: one poem is a masterpiece, and another a sweet lyric,—which, as an admirer observes, contains the interweavings of the "cypress twigs of sorrow and sympathy with a few rose-buds of love and gladness." Our author, for we are sorry to differ from these eulogizers, seems to us to have a poetical perception by no means of the clearest, aided by a judgment not the most transparent. Like all religious poets,

he thinks nothing of making archangels his commonest *dramatis personæ*, who blend rather strangely with Sylvia, whom we see sitting on a music-stool, and a pair of lack-a-daisical lovers, who seem to possess no property of love but that deprivation of reason that usually attends it. Let us take, for instance, page 197, in the "Revelations of the Worlds": where certain seraphs float over the earth which they benevolently sprinkle with drops of fire, and then "strike up" a song "intelligible to angels alone." We all remember Lord Castlereagh's "giving the Hydra head of faction a rap on the knuckles." Mr. Waymouth is peculiarly rich in these blunders of the fancy. We have a warrior dipped in blood, "riding on a throne of bones,"—"ambition boiling in the veins," "yet clinging to life";—ties of life are "woven with golden chains." Our author's prose is as logical as his poetry, and his observations on Chaos and the future prospects of the world, if obscure, are at least original. He informs us, with much depth of geological research, that this earth sprang from the ashes of former used-up worlds, and that electricity will be the means of its future destruction. He believes Turkey will become tolerant,—Palestine be given to the Jews,—Russia be annihilated,—Popery be humbled,—and a new era of peace and civilization, reformation, and civil and religious liberty dawn upon the world. He discusses the Manning murder and the present condition of photography.

Travels in Æther; or, Scenes of Life in other Worlds. By H. L. Watts. (Cook.)—For most puny poets it is quite time to versify the other world when they have done with this. If poetry were the true vehicle for theoretical geology, this would be a fine poem, saving the metre, which is of the comic-song kind, and the sense, which is but "so so." Mr. Watts meets Science, who talks of Jove and Æther: and their discourse may, we think, be judged of by the following 'lines, which embrace the whole system of Newton's philosophy.—

Its rotary motion diurnal proceedeth
From that which it makes in its journey through space,
A fluid elastic, which thereby divided,
Returns with like force to recover its place;
This, therefore, re-acting on each planet's surface,
Becomes of its rotary motion the cause,
While all other motions to these are subjected,
And like these, explained by mechanical laws.

Byron; Salathiel, or the Martyrs; and other Poems. By Æmilia Julia. (Routledge & Co.)—There are certain diseases which have been fashionable at various epochs, and a melancholy proof it is of the theoretical character of our medical knowledge. In Fielding's time ladies drank Hungary water—something very like juniper water—for the vapours, a disease which every lady of quality was expected to have. Before that there was the falling sickness. Abernethy brought the stomach into notice; before then no man knew he had one. Next we had the spine, and lastly came nervous diseases. So it is with the mind. In Shakspeare's time, even if not in love or in debt, or with heart or liver affected, it was fashionable to affect melancholy. Byron introduced turn-down collars and broken hearts. Now we have intellects distracted by the planets, and metaphysical poets. Old fishermen shall tell you that long after the herring shoals have come in follow some thin fish, not worth much in any market, which they call "after-swimmers":—these are benighted herrings who have not acted up to their instincts, have mistaken the time of leaving town, and are altogether unfashionable and unseasonable. We do not mean to imply that Æmilia Julia is a herring, or as thin as one—that be far from us; but merely that she is an "after-swimmer." The Byron race has passed, and other epidemics have seized the poetical mind. Looking back

to him, we see one sad mourner with the vulture Care preying at his heart and a swarm of admirers, all with the same sort of shirt-collars, allowing the flocks of sparrows, which are daily annoyances, to peck at them, and thinking themselves all heart-wounded like him. Emilia Julia says she has been called the child of Byron—has suffered like him, although still young—longed for a bright home—been stung to madness by feelings—and so on, according to the orthodox heterodoxy of the Byron formula. The enthusiast describes the infancy of Byron.—

For man is born to suffer and to die,—
And thy first days were strife and bitterness!
A mother, watching o'er thy infancy,
Would clasp thee fondly in her dear caress,
Then spurn thee from her for thy waywardness,
Till thou couldst meet her love with cold disdain;
And those paternal lips, which once could bless,
To win thee back might supplicate in vain;
And thou, her joy and pride, wert turn'd to be her pain!
Then came suspicion and ingratitude,
And all thy after-woes were thrown on her.
When child and mother fall to impious feud
That guilt of every curse is harbingers.
Thou borest from thy birth a fatal spur
Which urged thee onward, but with grief, to fame!
And thou couldst say—for prone is youth to err—
"If I am mark'd by heaven's anger, lame,—
A prey to scoffers—thine, my mother, is the blame."

A Century of Verses in Memory of the Reverend the President of Magdalen College. By the Rev. John W. Burgon, M.A. (J. H. Parker).—A beautiful little poem, full of kindness, and only too short. All who knew the old sage of Magdalen will remember his—"But I tire you, Sir,—I fear I tire you, Sir?—An old man, Sir!"—

He sleeps before the altar, where the shade
He loved will guard his slumbers night and day;
And tuncful voices o'er him, like a dirge,
Will float for everlastingly. Pitting close
For such a life! His twelve long sunny hours
Bright to the edge of darkness; then, the calm
Repose of twilight, and a crown of stars.

Joseph Hume: a Memorial. By J. B. Hume. (Parker & Son).—This verse is not much better than—perhaps not so good as—prose; yet is it an offering of affection, full of judicious, unstrained praise. The following is a just tribute to one of the honestest of men:—

A more unselfish course than his did seldom Heaven inspire;
And in that course he persevered with courage naught could tire.

No labour seemed to weary him; no conflict to appal;
Unquailing, aye e'en sanguine, 'mid the worst that could befall;

And evermore unruddied: strife embittered not his mind;
Defeat and scorn could never leave one rankling pang behind.

Full often, ere the echo of the jeer had ceased to creep
About St. Stephen's, unto him 'twas naught—he was asleep!
And often, ere the hour, that marred some grand aim,
Passed away,
You might have seen him on his knees, among his babes, at play!

Peace: a Poem. Dedicated to Lord Palmerston, by J. H. Stirling, Barrister-at-Law. (Hall & Co.).—We can only say that if Mr. Stirling would leave us alone and at peace, we would take good care to let his 'Peace' alone. The poem is a dull sermon on the Russian war.

Travels and Adventures in the Province of Assam, during a Residence of Fourteen Years. By Major John Butler, 55th Regt. Bengal Native Infantry. Smith, Elder & Co.

To the north-east of the district of Sylhet, in the Bengal Presidency, is a wild and thinly inhabited region, comprising the Nowgong Zillah of Lower Assam, the district known as Tuleeram Sunaputtee's country, and other tracts in which the savage tribes of the Angahmee Nagahs are located. The character of the country may be described as that of a vast plain, with occasional ranges of low hills, very much intersected with rivers and streams. It is bounded on the south by the mountains of Cachar and Munnepoor, and on

the north by the vast Burrumpooter river. This territory had never been so much as entered by Europeans till the expedition of Capt. Jenkins in 1832; and in spite of the occasional movement of armed detachments through it since then, it still remains for the most part unexplored and unknown. In the sketch before us Major Butler contributes some interesting information. Appointed Assistant to the Governor-General's Agent on the North-eastern Frontier in 1841, he had to locate himself and his family in this "wilderness grotesque and wild," and from time to time force his weary way through it on military or exploring expeditions. In some places the jungle is so dense that a mile an hour is considered very rapid marching; in others, a still slower passage can be effected only with the aid of hatchet and axe. The ascent "over precipices 2,000 feet high by a path 18 inches wide," is agreeably varied by a descent into valleys of almost impervious jungle, where the view is limited to a foot or two on either side, and where so thick a canopy of foliage shuts out the blazing Indian sun that it is dark at noon. Occasionally, indeed, a more open road is formed in the shape of the bed of a river, on which, however, the traveller has scant reason to congratulate himself,—as witness the following description:—

"Setting out from our encampment at eight A.M., we wended our way along the eastern bank of the Deeboo river, over some high precipices and many steep acclivities, for two miles; but at last there was no possibility of climbing over the perpendicular ledges of rock in our front; we were obliged, therefore, to take to the river, and a ludicrous scene occurred. It was a bitterly cold day, and a slight drizzling rain was falling; to add to our discomfort, the water was two or three feet deep, extremely cold, and running with extreme rapidity over a stony bed. The Sipahs, and all of us indeed, immediately relieved ourselves of our trowsers, which each threw over his shoulders, one leg dangling on each side as far as the breast, and with short cotton drawers and naked feet we all cheerfully entered the water, and crawled along slowly for a mile and a half. On each side the banks were very precipitous, and many bluff high projections were surmounted with the utmost difficulty. The rolling stones in the bed of the river were as slippery as glass, and some of the boulders were particularly sharp, cutting our feet like a knife. Scarcely one of us got along without an unhappy fall; but no matter who fell, whether officers, Sipahs, or Coolies, hearty shouts and laughter repeatedly proclaimed that another luckless wight had fallen, and had been saved the trouble of a bath. No one heeded the sufferings that we were obliged to endure, for all were anxious to quit the bed of the river as quickly as possible. We had now been a long time in the water, and our progress seemed exceedingly slow, and we were becoming excessively cold, and shook to such a degree that we could hardly stand; but we persevered, and at last quitted the river, put on our clothes hastily, and trudged over a succession of low hills for three miles and five furlongs, which brought us to our encampment on the west bank of the Deeboo river, near Rojapo-mah. Our feet were terribly lacerated and bruised by walking barefooted over the rolling stones; and few of us, in a long life probably, will easily forget the pain and suffering of this day's march."

If such are the marches, the halting-places (to call them resting-places would be mere sarcasm) are proportionally bad. A grass wigwam in a thick bamboo jungle under soaking rain is spoken of as rather a snug place, to obtain which is regarded as a piece of unusual felicity. Even in the more civilized parts, where such phenomena as villages and market-places are found to exist, the luckless wanderer cannot escape disasters of which we subjoin a specimen:—

"I had made myself comfortable for the night in a snug little travelling tent by about ten P.M. A violent storm, attended with heavy rain, hail,

lightning, and thunder, came on. It was a dismally cold and wet night, and I was congratulating myself on my good fortune in having brought a capital tent, when, suddenly, a shrill shriek from the riding and baggage elephants made me aware that they had become alarmed, and had fled to the jungle. The roar of the elements, however, was so great that no orders could be given for their capture; for every servant had taken refuge from the storm in the huts in the market or village. At this moment a sudden gust of wind blew down my tent upon my bed; I was compelled to crawl out and make the best of my way, through torrents of rain, to the Police outpost or Thannah, which was close by. On entering the building I was astonished to see the whole establishment of Ticklahs, or Policemen, unconcernedly sitting round a log wood fire on the ground. I had scarcely joined this snug party, and exchanged my wet clothes for a dry sheet to wrap round me, when the building was, by a sudden gust of wind, blown to the ground, and we all escaped uninjured under the platform or changs erected round the room as seats. Luckily the roof did not fall flat, or we should have been crushed to death. Our peril, however, was very great; we could not extricate ourselves, and there was every prospect of the roof catching fire, and of our being burnt to death. We succeeded in partly smothering the flames by scraping up the earth floor with our hands, and throwing it on the fire; still the horror of our position was dreadful; every flash of lightning showed us too vividly the danger we were in, and the darkness succeeding the lightning rendered all efforts to escape unavailing. In this interval of despair we at last discovered a small hole in the roof, by which we all effected our escape, deeply grateful for miraculous preservation in not being crushed by the falling building, or reduced to cinders by a roaring log wood fire. The next morning the elephants were found and captured on the other side of the Boree Dulung river, having fled in the hailstorm and swum across the river, though their legs were bound with heavy chains."

The inhabitants of this dolorous region are wild beasts and men as savage. Elephants are very numerous, and tigers, leopards, rhinoceroses, and buffaloes abound. Major Butler speaks of a friend who bagged a couple of rhinoceroses at a single shot, and describes it as not uncommon for two or three sportsmen in one day to shoot thirty buffaloes, twenty deer, and a dozen hogs, besides one or two tigers. Until ten expeditions of our troops against the stockaded villages, there was as much danger from them as from the beasts of the forest. Like the Dyaks of Borneo they have a mania for heads, and until a man has appropriated some of these ghastly trophies, he is hardly regarded as a member of the community. The warrior's principal ornament is a collar reaching to the waist made of goat's hair, dyed red, intermixed with long flowing locks of hair of the persons he has killed. The people of a village are continually occupied in plotting or executing forays against their neighbours.—

"They lie in ambush during the night till the break of day, when they rush in upon it with a great noise, and spear the first they meet with, and afterwards cut off the head, hands, and feet of their enemies, roll them up in a cloth, and return home. They then take the skulls to each house in the village and throw rice and spirits over them, and tell the skulls to call their relatives. The man who has cut off the head keeps it under his bedstead five days: during that time the warriors eat no food prepared by women, and do no cooking in their accustomed cooking pot. After the fifth day, however, the heads or skulls are buried, and a great feast is given of pigs and cows, after which they bathe and return to their avocations."

Such is the people and such the country into which, at some expense of blood and treasure, we have pushed forward the outposts of the Bengal army. It might be supposed that it would have been better policy to preserve this land of impenetrable jungle and savage men

and precipitous crags and forests pregnant with malaria, as a barrier against the Burmese and other more distant and more barbarous tribes. The scanty revenue which the Indian Government extorts from the inhabitants, which presses heavily on them, but is the merest item in the schedule of our revenue, pays but a fraction of the expenses of our political establishment; yet such are the exigencies of our position, that we are led against our will into these wildernesses, where we shall by degrees, at vast expense to ourselves, civilize the inhabitants and change the forest into cultivated fields.

A Complete Guide to the English Lakes. By Harriet Martineau. Windermere, Garnett; London, Whittaker & Co.

THE English Lakes enjoy more than the usual luck of "water privilege." After Wordsworth devoted to them one of the most delightful prose poems in the English language, it was hardly to be looked for that they should be made the subject of a second Guide-book, so agreeably executed and so copious in the information ministered, as Miss Martineau's. This contains capital written pictures of scenery,—as the following passage from a mountain ascent will prove.—

"Ascending from these shades through a more straggling woodland, the stranger arrives at a clump on the ridge,—the last clump, and thenceforth feels himself wholly free. His foot is on the springy mountain moss; and many a cushion of heather tempts him to sit down and look abroad. There may still be a frightened cow or two, wheeling away, with tail aloft, as he comes onwards; and a few sheep are still crouching in the shadows of the rocks, or staring at him from the knolls. * * Still further on, when the sheep are all left behind, he may see a hawk perched upon a great boulder. He will see it take flight when he comes near, and cleave the air below him, and hang above the woods,—to the infinite terror, as he knows, of many a small creature there, and then whirl away to some distant part of the park. Perhaps a heavy buzzard may rise, flapping, from its nest on the moor, or pounce from a crag in the direction of any water-birds that may be about the springs and pools in the hills. There is no other sound, unless it be the hum of the gnats in the hot sunshine. There is an aged man in the district, however, who hears more than this, and sees more than people below would, perhaps, imagine. An old shepherd has the charge of four rain-gauges which are set up on four ridges,—desolate, misty spots, sometimes below and often above the clouds. He visits each once a month, and notes down what these gauges record; and when the tall old man, with his staff, passes out of sight into the cloud, or among the cresting rocks, it is a striking thought that science has set up a tabernacle in these wildernesses, and found a priest among the shepherds. That old man has seen and heard wonderful things:—has trod upon rainbows, and been waited upon by a dim retinue of spectral mists. He has seen the hail and the lightnings go forth as from under his hand, and has stood in the sunshine, listening to the thunder growling, and the tempest bursting beneath his feet. He well knows the silence of the hills, and all the solemn ways in which that silence is broken. The stranger, however, coming hither on a calm summer day may well fancy that a silence like this can never be broken. Looking abroad, what does he see? The first impression probably is of the billowy character of the mountain groups around and below him. This is perhaps the most striking feature of such a scene to a novice; and the next is the flitting character of the mists. One ghostly peak after another seems to rise out of its shroud; and then the shroud winds itself round another. Here the mist floats over a valley; there it reeks out of a chasm: here it rests upon a green slope; there it curls up a black precipice. The sunny vales below look like a paradise, with their bright meadows and waters and shadowy woods, and little knots of villages. To the south there is the glittering sea; and the estuaries of the Leven and Duddon, with their stretches of yellow sands. To

the east there is a sea of hill tops. On the north, Ullswater appears, grey and calm at the foot of black precipices; and nearer may be traced the whole pass from Patterdale, where Brothers' Water lies invisible from hence. The finest point of the whole excursion is about the middle of the *cul-de-sac*, where, on the northern sides, there are tremendous precipices, overlooking Deepdale, and other sweet recesses far below. Here, within hearing of the torrents which tumble from those precipices, the rover should rest."

Miss Martineau, too, shows herself a diligent gatherer of those humours and customs which mark the primitive folk who live in secluded corners of the Lake district. She takes up their superstitions, also, in a mood which may seem merely dramatic to those who conceive superstitions as so many sportings of the imagination,—but which will be found significant by all who share her recorded opinions about prevision, *clairvoyance*, spectral apparitions, and the like. Further, she beguiles the reader's way by more than one tale and picture of the poets who have hallowed the Lakes by their presence and sojourn. The following anecdote contains two characters "in little."

"The road from Ambleside to Keswick has already fallen under our observation as far as Grasmere, and its conspicuous white inn, the Swan. That inn had the honour of providing Scott with a daily draught of something good, when he was, in his early days, the guest of Wordsworth and his sister at Grasmere,—their board being conscientiously humble, as they used to tell, to a degree which did not suit the taste of their guest. By some device or another, Scott managed to pay a daily visit to the Swan without his friends being aware of it. But, when he, Wordsworth, and Southey were to ascend Helvellyn, mounting their ponies at the Swan, the host saw their approach, and cried out to Scott, 'Eh, sir! you've come early for your drink to-day.' It was a complete escape of the cat from the bag; but Wordsworth was not one to be troubled by such a discovery. No doubt he took the unlucky speech more serenely than his guest."

Thus much in recommendation of the lively merits of this Guide-book. It is further made attractive by copious illustrations,—useful, by a map geologically coloured,—by "an account of the flowering plants, ferns, and mosses of the district, and a complete Directory." Should Winter get out "of the lap of May,"—and summer burst forth (for spring it is lost labour to pray) this year,—this Red-Book of Cumberland and Westmoreland scenery will be found in many hands, and may settle the undecided plans of many a tourist, anxious for a few days of fresh air and quiet, but uncertain which way he shall wend.

OUR LIBRARY TABLE.

Our Indian Army: a Military History of the British Empire in the East. By Capt. Rafter. (Bryce.)—Readers who desire for the sake of variety to study the course of well-planned military enterprises, campaigns unobstructed by timidity, victories unobscured by disaster, and wars not neutralized by futile diplomacy, may consult Capt. Rafter's history. It is a dashing and picturesque outline—checked by references to the best authorities—of our martial successes on the continent of India. The narrative is sufficiently ample to include all necessary details, and sufficiently rapid to be popular. Capt. Rafter, in common with most soldiers, writes dogmatically, and flings into limbo all opinions inconsonant with his own. Thus, Lord Gough's Punjab strategy has been questioned from more than one point of view; but his eulogist disposes of the matter by ridiculing every dissident as a "pseudo-critic," and abusing him as a "contemptible caviller." There is more of *Bombastes Furioso* than of the historian in such passages; but we would not undervalue so excellent a book as this, even from a more angry and provoking pen than that of Capt. Rafter. Nothing could be better timed

than his account of the Indian army and its officers,—composed at present of more than 280,000 men of all arms, besides 30 Queen's regiments. Nearly 5,000 of the officers are English, of whom at least 700 are generally absent on furlough; while numbers are employed on the staff, in local charges, or otherwise away from their regiments. The splendid style in which this force has been moved from point to point of a vast territory, is somewhat encouraging, now, when "unavoidable delays," imperfect preparation, and transport difficulties have added to the darkness of war. The great Mahratta campaign, when four armies simultaneously marched along four diverging routes, and operated at once over an immense country, is deserving of repeated examination. The Indian sieges, also, though totally in contrast, in their necessities and accidents, with any that are likely to take place in the Russian war, supply interesting studies.

The Galleries of France—Paris: Guide and Memento for the Artist and the Traveller, &c.—[Les Musées, &c.]. By Louis Viardot. (Paris, Maison.)—This makes a pleasant and instructive fifth volume, in continuation of the four, devoted to the other picture galleries of Europe, which were noticed by us two years ago [*Athen.* No. 1329]. The dryness which inevitably belongs to a catalogue is relieved, without frivolity and without flippancy, by touches of anecdote and traces of research. M. Viardot's style is easy, and his humour seems to us very much the humour which all gallery haunTERS should take with them by way of *vade-mecum*—candid recognition of truth, beauty and skill, wherever it exists, without coldness. A German Art-critic might, it is true, break a lance with him on some of his *dicta*; but a writer without nationality is a writer without vitality,—and we know of little French criticism based on so solid a stratum of fact and experience as M. Viardot's. Omissions can be marked (as, indeed, was said in reference to his former volumes), but not misstatements. Then, he has treated that marvel of Paris, and that reproach to London, the collections of the Louvre, in a fashion which may be all the more useful in proportion as it is neither vaunting nor vainglorious. Passing through that magnificent collection of pictures, M. Viardot points out the blanks as well as the prizes,—indicating names, masters and specimens, which are essential to its completeness,—asking, among other questions, how it is that the English school of painting is as entirely without representation there, as if Hogarth, Sir Joshua Reynolds, Wilson, Gainsborough (not to speak of modern men), had no existence? In the "Louvre" this volume will be valuable as a guide and companion; out of it, it may be still read as another volume of the modern French library of books about painters and painting, to which MM. C. Blanc, and Delécluze, and Feuillet de Conches have made such agreeable contributions.

The Mormon's Own Book; or, Mormonism tried by its own Standards, Reason and Scripture. By T. W. P. Taylder. (Partridge, Oakey & Co.)—Whatever sect or form of theology has attracted numerous and enthusiastic disciples must have appealed to some deep and noble instinct. The instinct of religion is the deepest and strongest of all human feelings; the one that is most enduring and blends most readily with all possible circumstances, emotions and conditions. It may be rendered the instrument for degrading men to the most abject depths of superstition and fetish worship, and may be used as an instrument to raise them so high that the poetical exultation of the King of Israel,—"*I have said, Ye are gods; and all of you are children of the Most High,*"—becomes almost the expression of a literal truth. All sects, all forms of theology, appeal to this instinct; and if there be anything sacred in this world, it is this indomitable instinct of religion in the hearts of men;—therefore, to write or speak of any form of religious belief otherwise than with a certain reverence and respect, as distinguished from scornfulness and levity, is a sin against charity, a mistake as well as an offence against taste. The book before us, which sets itself forth as a champion of Christianity, fails in this fundamental virtue. The

arguments set forth are of the most vulgar and disingenuous kind. The objections raised appear to apply quite as strongly to the system which the author upholds as they do to the system which he denounces. Arguments which infidels have applied against the Christian religion, and which have been long since exploded as captious, futile and irrelevant, are to be here found in full array; but made to serve a new purpose. The army has faced about; and the guns, which once bore on Christianity, now fly very harmlessly over the bastions of Mormonism.

The Butterflies of Great Britain. By J. O. Westwood. (Orr & Co.)—A book on butterflies by Mr. Westwood cannot fail to be an acceptable work for the entomologist. None of the insect tribes are more popular, beautiful or worthy of study than the diurnal Lepidoptera, and certainly we know of no introduction to the study of the British species that can rival this new work by Mr. Westwood. Here the accomplished collector of insects will find much new matter worthy his study, whilst those who are looking forward to a little recreation in the country during the ensuing summer, will find it a means of turning their favourite pursuit in childhood to account. The work is illustrated with beautiful coloured engravings of all the species, so that those who are not disposed to study the anatomy of insects may yet be able to identify their specimens or name their collections. In addition to the descriptions of the species, which are very complete and minute, the work contains an account of the transformations of the Lepidoptera, with the modes of collecting caterpillars and butterflies, and other details useful to the beginner in the science of Entomology.

The Entomologist's Annual for 1855. Edited by J. H. Stainton. (Van Voorst.)—To those who are studying Entomology this will be found a most useful manual. It contains notices and descriptions of new British insects discovered during the past year, instructions for collecting, preserving and arranging insects, and an address to young entomologists. A coloured plate of several of the newly-discovered insects accompanies the volume.

A History of the British Marine Testaceous Mollusca. By William Clark. (Van Voorst.)—This work is the result of a life spent in the study of the Mollusca. The author's papers on this division of the Animal Kingdom are well known to naturalists, and those who are investigating these animals will be glad to possess Mr. Clark's observations in a single volume. The work, as its name implies, is devoted to the British Testaceous Mollusca, which are arranged according to a natural order, based on the organization of the animals. The author dwells more particularly on the structure and habits of the Mollusca which he has personally investigated, but notices every British species. The work will, therefore, serve as a manual of the British forms of Testaceous Mollusca; but its merit consists in the minute anatomical observations made by the author on a very large number of species, and in his descriptions of their habits. The work is not, however, adapted for the tyro; but the advanced student in the science of Malacology will find in this volume a mine of valuable original observations.

First Steps in Economic Botany. By T. C. Archer. (Reeve.)—This is an abstract of Mr. Archer's larger work on Popular Economic Botany adapted for the use of young persons and schools. It contains an account of the foreign plants which yield the materials of our manufactures, supply our table with luxuries, or are consumed as articles of food. Such a work cannot fail to be of service in stimulating inquiry with regard to the natural productions which are of service to man, and will be found a good preparation for more exact and elaborate accounts of those substances, on whose properties the wealth and industry of the world at the present day so much depends. We are glad to know that Mr. Archer is engaged in teaching the science of Botany in connexion with its practical applications to the Arts and Manufactures in one of the large educational establishments of Liverpool, and we hope such teaching may become more general in our schools.

Koran of Love—[Koran der Liebe]. By Leopold Schefer.—*Hafiz in Hellas—[Hafiz in Hellas].* By a Hadschi. (Hamburg, Hoffmann & Campe; London, Trübner & Co.)—There are such things as ponderous levities in literature; and among them may be reckoned the contents of the 'Koran of Love' and the warblings of the travelled Hafiz. We had expected better things of the veteran Leopold Schefer than such a mass of dull rhapsodies about beauty, love and joy, in which we are so constantly exhorted to be happy that we long for a little sorrow by way of relief. All varieties of metre are introduced,—written by the hand of a practised master of verse,—yet the most wearisome monotony is the result; and even if the reader, having laid down the 'Koran,' took up the 'Hafiz' by mistake, there would be little to prevent him from toiling on his way, through the infinite series of hot-house exotics, without discovering that he had strayed from Schefer, so called, to Schefer with his Persian pseudonym. To a certain party of German thinkers, who find the height of wisdom and happiness in a perpetual preaching of epicurism, this renewed attempt to combine the reflective licentiousness of the Western world with a tone of Oriental luxury may possibly be regarded with high veneration; but the venerators will either be very young men, or—what is more probable—elderly gentlemen who affect very young feelings. Those who have profited by experience will have become too deeply impressed with the transient nature of sensual delights to be knocked out of their conviction by any metrical battery. Some of our readers may, perhaps, imagine that we are abnormally contracting our brow at what is, after all, a little harmless sport; and that the same mood might repel Horace's graceful pleasantries,—the charming Greek puerilities which, when the world was less critical, were ascribed to Anacreon,—or the compatible utterances in Goethe's 'Westöstlicher Divan.' Alas! there is no sport in Leopold Schefer's thick little 'Koran' or thinner (but still stout) little 'Hafiz,'—or, if there be, the sport is confined to the writer.

Chili—[Le Chili considéré sous le Rapport de son Agriculture]. By B. Vicuña Mackenna. (Paris, Huzard.)—There is a movement in progress in France to promote emigration to South America, and especially to Chili. M. Vicuña Mackenna is its advocate. He thinks the Northern States already too full, unless the new comer, traversing a wide region, chooses to push into the Far West, which necessitates a life too wild and too comfortable for those who have aged parents or infant children in their society. But there is in the South, he says, another territory, also the America of Columbus, with a prolific, virgin soil, and a climate favourable to the desires and frailties of man. There, the exile may find himself a home on cool plateaux clothed with grain, or in rich tropical vales, or in thronged and busy towns. The inhabitants possess many natural virtues, and are little addicted to that thirst for gold by which other nations have been consumed. No monuments of ancient civilization, no arts, no history, exist there, it is true; but Nature is displayed on her noblest scale to animate the feelings and please the sight. All this pleasant promise is contained more particularly in Chili; which M. Vicuña Mackenna depicts and eulogizes in a strain of exuberant fancy. His language excels that of Ulloa, and he finds cause for congratulation even in the geographical circumstances which isolate his favourite country. The Chilean, indeed, is shut within a narrow tract between the Andes and the ocean. But what of that? It will prevent him losing himself in forests "measureless by man"; so that a home-sick emigrant, dreaming of France, has only to mount any contiguous hill to look on the waves that roll in uninterrupted expanses into the seas about his native coasts. And then M. Vicuña Mackenna expatiates, like Columbus at Salamanca, or the merchants before King Emmanuel, on the soil, the grain, the fruits, the flowers of Chili. Chili, he tells us, has been sung by poets as Paradise recovered; and of late years a benignant industry has blessed it as with the influences of a second nature. Thirty years ago

the capital lay in the centre of an arid plain; but a canal was opened; sluices were cut; and now the plain laughs with fertility, like the borders of the Nile. The writer has a florid style, and often poetizes instead of describing; but his pamphlet suggests a just idea of the wealth that lies neglected in that beautiful region, and contains a mass of useful information, compressed into little space.

Mr. Robert Owen continues to multiply his tracts on *The Future Existence of Man on Earth* and on *The Coming Millennium*. He is not one of those who disbelieve in a day because it never arrives. It should approach, however, according to the Author of *The Grand Secret*; or, *Knowledge Purified from Doubt and Error*. But, unfortunately, this latter writer has nothing to offer in proof of his positions save the worst of dogmatism, insolently expressed, and associated with disgusting forms of speech. Such effusions, which treat of learning, are only useful as "frightful examples" of ignorance.—On education, in a more strict sense, we have the Duke of Argyll's *Inaugural Address* as Lord Rector of Glasgow University,—an address, by J. P. Norris, on *The Teacher's Difficulties*,—another, by H. W. Bellairs, on *The Teacher's Mission*,—and a Report of the *Annual Exhibition of the Sir Jamssetjee Jejeebhoy's Parsee Benevolent Institution*, at Bombay,—a light thrown across the intellectual obscurity of India.—Particular theories are advocated in Mr. H. Kingscote's *Reply to Mr. Colquhoun's Remarks on Sir John Pakington's Plan*,—in *How the Poor may be Taught without Compromise of Principles or Opinions*, which is amiable and vague,—and in *Reformatory Schools*, a letter to Mr. Adderley, by Mr. Sydney Turner.—Isaac Reggio's *Guide for the Religious Instruction of Jewish Youth* has been translated from the Italian, by M. H. Picciotto, for the advantage of a separate community. Addressed to students in general, we find the Rev. W. Lee's flat and easy *Lecture on Books in relation to Mental and Moral Culture*,—and Mr. C. Nicholson's graceful essay on the *Mental and Moral Progress of the Present Century*.—William Hay's educational labours have been commemorated in a brief anonymous memoir,—and all the labours of all ages are recounted in *Chronology in Verse, without Numbers*,—a book of rhyming memoranda, arranged in asthmatic couplets, as follows:—

Printing is fixed in stereotyping art;
Perfect resemblance lithographs impart.
Fulton repeats again attempts with steam,
And railway engines gain a bright esteem.

If such the master, what would be the pupil? The "bright esteem" of these tinkling *Pasti* finds a practical contrast in *A Word to my Wife*, suggesting a miserable picture of a married man interfering with frying-pans, pickle-jars, and the disposal of "leavings."—*Notes on Nurses* suggest the establishment of a hospital by Protestant Sisters of Charity.—Relating to ward and watch of another kind, "an Indian Officer" advocates a thorough reformation of *Police and Policemen of India*. His trenchant criticism degenerates into declamation from the paucity of his facts and authorities.—On other social matters, we have Mr. R. D. Grainger's Address, delivered at Birmingham, on *The Public Health*,—and *A Word on the Coal Trade*, which quotes Scripture in behalf of an unborn joint-stock scheme. The Author threatens to be more fierce than the mightiest men of Judah, and, thereupon, recommends all good citizens to subscribe for shares.—In *The Australian Colonies; where they are, and how to get to them*, Mr. H. Capper condenses much useful information,—and in *The Year-Book of the Nations for 1855*, Mr. Elihu Burritt brings Europe and America into a statistical bird's-eye view.—The discussion on decimal coinage is carried on, by Mr. J. H. Turner, in *The Penny considered as the Foundation of a Decimal Currency*,—that on *The Deviation of the Compass in Iron Ships* by Mr. P. Cameron,—and that on the National Debt, in its relation to the funds, the markets, trade and population, in *A Sheet Diagram*, compiled by Mr. N. Burnett. This money-map is ingenious and convenient for reference.—Messrs. Low have issued their annual

Catalogue of Books published in the United Kingdom, with improvements on their former plan.

LIST OF NEW BOOKS.

Barnum's Life, author's edit. 8vo. 1s. 6d. cl. swd.
 Braybrooke's (Lieut. W. L.) Diary, 8vo. 2s. 6d. cl.
 Bushby's (H. J.) Widow-Burning, post 8vo. 3s. 6d. cl.
 Calvin's (Letters), Vol. 1, edited by Dr. Bonnet, royal 8vo. 10s. 6d.
 Capper's (Samuel) Memoir, 8vo. 3s. 6d. cl.
 Carpenter's Principles of Human Physiology, 5th edit. 8vo. 26s. cl.
 Chalmers's Select Works, edited by Dr. Hanna, Vol. 4, cr. 8vo. 6s.
 Cleve Hall, by the Author of 'Amy Herbert,' 2 vols. 8vo. 12s. cl.
 Curling On Diseases of the Rectum, 2nd edit. 8vo. 6s. cl.
 De Porques's Le Petit Secretaire, 3s. 6d.; Nouvelles Conversations
 Parisiennes, 3s. 6d.; Key to Sequel to 'Le Trésor,' 3s. 6d.; First
 Italian Reading Book, 3s. 6d.; Key to Italian Trésor, 4s. 6d.
 12mo. new editions.
 De Valency's (M. B.) L'Entente Cordiale, 8vo. 3s. 6d. cl.
 Dove on the Cross, 5th edit. 8vo. 2s. 6d. cl.
 Egan's (Edw.) Adia Register, 2s. 6d.; 2nd edit. 12mo. 10s. swd.
 Engineer and Machinist's Drawing-Book, illust. 40s. half-mor.
 Eustace Conyers, a Novel, by Hannay, 3 vols. cr. 8vo. 31s. 6d. cl.

 Waring's Hymns and Meditations, new edit. 18mo. 2s. cl.
 Wesley's Novels, Vol. 1, cheap edit. 'Old Mortality,' 8vo. 1s. 6d.
 Weiss's (T. H.) Grammar of the German Language, cr. 8vo. 3s. cl.

[ADVERTISEMENT.]

KENT MUTUAL LIFE ASSURANCE SOCIETY,
QUEEN-STREET-PLACE, NEW CANNON-STREET.

The Fifth Annual General Meeting of the Kent Mutual Life Assurance Society was held on the 8th inst. at the London Tavern, and was attended by a great number of its most influential members.

The chair was taken by Mr. J. T. King, the Chairman of the Board; and among the members present were C. B. Mander, Esq., of Wolverhampton; R. H. Haywood, Esq., and F. Bishop, Esq., of Hanley; Dr. Goddard, of London; the Rev. A. P. Hughes, of Gornal; R. Davison, Esq.; R. W. Cooke, Esq.; F. Dollman, Esq.; W. J. Carne, Esq.; P. Karlsake, Esq.; T. Wilson, Esq.; J. C. Burnett, Esq.; N. Crouch, Esq.; T. W. Pike, Esq.; R. Crossley, Esq.; W. Brownfield, Esq.; C. B. Kelham, Esq.; H. Bessemer, Esq.; R. Longson, Esq.; J. L. Evans, Esq.; T. Minshall, Esq.; W. Holdich, Esq.; J. C. Hailes, Esq.; B. L. Thompson, Esq.; J. M. Mullen, Esq.; J. Young, Esq.; S. Rickan, Esq.; W. Anderton, Esq.; G. Fagg, Esq.; J. Burton, Esq.; J. Gould, jun. Esq.; and W. Baker, Esq.

Mr. GEORGE CUMMING, the Manager, read the Directors' Report. It stated, that since the last Annual Meeting 509 New Policies had been issued, upon which 6,195, 19s. 5d. had been received in premiums. The ASSETS of the Society at present amounted to 31,398, 8s. 1d.; and, under the division of profits, realized on the 24th of March, 1854, a cash bonus of one-fifth of the premiums paid was declared upon all policies on which two or more annual premiums had been paid. It further stated, that the Society's ANNUAL REVENUE now amounted to 14,130, 10s. 1d.

The CHAIRMAN, in moving the adoption of the Report—the reading of which elicited the entire approbation of the Meeting—congratulated it upon its eminently practical character, as regarded the large amount of success which it had been the good fortune of the Directors to attain during the past year. It would be unnecessary for him to allude to the circumstances of active competition which now existed among the representatives of the several Companies; and, having regard to that, he was sure it would be most gratifying to them to find that the assertion made in casual conversation by various Managers and Secretaries, that the wonderful amount of business transacted by the Kent Mutual Society in its past years was the result of gigantic efforts on the part of the Board, and would not be continued in ensuing years, had been disproved. It was most true, that great efforts had been made; but the Board never overlooked the importance of getting active and influential agents throughout the country; and the result of the judicious measures which they had taken in that view was seen in the highly satisfactory Report now before them. (Hear, hear.) He was sure that it was only necessary that the principles of the Office should be known, and its advantages fairly laid before the public, to command perfect success; and he begged to move that the Report be now approved and adopted.

The motion having been seconded by Mr. WILSON, of Newport, Monmouthshire, was put and agreed to unanimously.

The Directors and Auditors retiring by rotation having been re-elected,

The CHAIRMAN then proposed that the thanks of the Meeting be voted to the Local Boards of North and South Staffordshire, including in the resolution the names of Mr. Mander, of Wolverhampton, and Dr. Goddard, of the North Staffordshire Board.

The motion was cordially agreed to, and both gentlemen severally returned thanks, declaring their confidence in the soundness of the principles upon which the Society was founded, and that, with the active exertions which they would not fail to make, it would be sure to make still greater progress in the country.

Mr. BISHOP, as connected with the North Staffordshire Board, moved a resolution expressive of their entire confidence in the management, and their satisfaction at the prosperity which had hitherto attended their operations, and added, that he thought their Local Society would soon be in a position to double its transactions with them. (Hear, hear.)

Mr. MANDER moved a vote of thanks to the supporters and Agents, which was agreed to.—Mr. WILSON, Mr. PIKE, and Mr. GOSBELL returning thanks.

Votes of thanks were then passed to the Medical Referees, the Actuaries, and the Manager.

Mr. HILMAN, the Actuary, in returning thanks, said that he should have been justified in estimating their business at a much higher rate of interest than 3 per cent., but he preferred being moderate, and could assure the Meeting that the Balance-Sheet was a true statement of their affairs.

Mr. CUMMING also returned thanks, and, in doing so, went into a few figures, exhibiting a highly satisfactory state of the affairs of the Society as compared with some of the oldest offices in their earlier years.

A vote of thanks having been unanimously passed to the Chairman for his able and courteous conduct in the chair, the Meeting terminated.

The Anniversary Festival was celebrated in the evening by a splendid dinner at the London Tavern, at which Mr. King again presided, supported by a large number of the Directors, members, and supporters of the Society, among whom we noticed Sir James Duke, Bart. M.P.; Mr. Lee, M.P.; Sir H. Muggidge, Sheriff; Mr. Alderman Kennedy; Mr. Deputy Dakin; Sir C. P. Roney; Rev. H. Mackenzie, M.A.; Rev. Mr. Cattley; C. B. Mander, Esq.; James Grant, Esq.; Dr. Goddard; F. Stanier, Esq.; A. Palk, Esq., &c.

The usual loyal toasts having been duly responded to,

The CHAIRMAN gave "The House of Commons." Sir JAMES DUKE, M.P., returned thanks, observing, that he had not undertaken the responsibility of Trustee of the Kent Mutual Assurance Society without first ascertaining that he would be justified in so doing, and that he felt the highest confidence in the management.

Mr. Lee, M.P., also returned thanks, and referred in high terms to the distinguished position which the Kent Mutual Assurance Society had obtained for itself among the Assurance Societies of the metropolis.

The CHAIRMAN gave "The Lord Mayor and Corporation of London," associating with it the names of Sheriff Sir H. Muggidge and Mr. Alderman Kennedy.

The CHAIRMAN then gave the toast of the evening, "Prosperity to the Kent Mutual Assurance Society." He was satisfied that there was no occasion for his saying anything to enlist the sympathy of the company on behalf of the interests of the Society which they had met to promote. (Hear, hear.) The question had been frequently put,—

"How was it that the Kent Mutual Assurance Society had outstripped many other Societies of older date?" The answer was to be found in those principles of universal mutuality which appealed at once to the intelligence of our countrymen and their desire to have a voice in the direction of their own affairs. (Hear, hear.) He felt quite sure that the great things they had already accomplished would be still far exceeded by a continued application of the same principles, and doubted not that the 20,000,000 per annum of income, which they had realized in five years, might soon be immensely augmented. (Cheers.)

Mr. ALDERMAN KENNEDY proposed the health of the Chairman, which was warmly responded to by the company.

The healths of the Trustees, Local Boards, and Manager having been afterwards drunk and responded to, the party separated, after passing an evening most unanimously in the promotion of the interests of the Society.

THE UNIVERSAL EXPOSITION.

ON Tuesday morning the new Palaces of Industry on the Seine were opened with Imperial splendour. A people, whose universal gift is an eye for effect, had lavished on the preparations in the wealth of spectacle. The ceremonial, as a show, even under a cloudy sky, which broke only for a moment as the curtain went down, was an assured success. Of moral meaning there was little—of poetical illusion there was none. The display was hard, brilliant, and material: the music, even the applause, seemed part of a state pageant, rather than the spontaneous expression, the joyous overflow, of happy hearts. Apart, however, from high poetry and mystic graces the gathering of pictorial elements was striking and original. Multitudinous banners and escutcheons, and ample areas of gold and crimson velvet, broke the cold monotony of the edifice. Theatrical forms looked down on the ceremony, and theatrical arts were exhausted in its conception. A colossal figure of the Goddess Plenty, which adorns the western nave and pours from its cornu-

copa, not a stream of fruits and flowers, as in the pleasant legend of the poets, but a heap of bonbons, toys, gimcracks, finery and Paris-ware, appeared to be the presiding and expressive Genius of the scene. The grandeur was altogether French grandeur, and the brilliancy that of the Palais Royal, seen under myriad jets of gas. Napoleon played the leading part; and, by an odd arrangement of the scene, suggested to spectators a train of thought assuredly not proposed by the programme. Behind and beside the temporary throne is the space allotted in the show to America—a space not very full of objects yet, but already alive with banners and inscriptions. As the Emperor sat on his throne, he seemed half encircled by the Stars and Stripes; and the Republican pendant hung above his head—like a menace or a sarcasm. The Empress, as the heroine of the play, formed a gracious and attractive object for admiring eyes. Guns were fired outside the Palace,—martial strains arose within,—bright colours charmed the sight,—delicious odours filled the air,—far off the plash of fountains reached the ear. Yet, even when the triumph was at its highest, the scene was not more gay in aspect than it was sorrowful in suggestion.

As the eye of the spectator wandered down the living lines, from throne to gallery, from nave to roof, above the glittering uniforms of the Imperial Household, along the rows of brightly-attired ladies,—a fringe of light and varied colour, made more sparkling by the sombre dresses of their male companions,—or sought repose among the flowers and fountains, the statues and painted glass, the waving banners and proud devices of the several countries represented in this second gathering of mankind under a common roof for a pacific and industrial purpose,—Memory would go back in search of contrasts and comparisons to that First of May—so lately here, and now so distanced by events it almost seems to the imagination as far off as the era of the Cæsars—when all the world had gathered in Hyde Park to celebrate the Jubilee of Peace,—when Republicans from Paris crossed hands with Cossacks from the Ukraine,—when the multitudinous eagles flashing in newest gilt from every corner of the newest edifice in France were in the shell, and Muscovy, instead of armed legions, was sending forth its mineral treasures to amaze the West with beauty,—in every pause of this new solemnity, so like and so unlike the past, Memory would revert to that pacific and serene inauguration which becomes more precious to the heart as one by one the fond illusions, the poetic hopes, which gathered round it, like a cloud of angels, and wrote upon its perishable front of glass that divine legend, for which the world appears to be still unworthy:—"Peace on Earth and Good Will to all Men." The comparison was saddening.

The World was then at Peace. Much that was visionary mingled in the dreams of men in 1851, no doubt; but the illusion was of generous parentage, and while it lasted made mankind less wretched. A palace of glass—a new edifice, in a new material, for a new purpose—naturally stirred up new emotions. Fancy found a virgin soil in the Crystal Palace, and covered it with a too poetic harvest. The world is now in arms. Among the thousands gathered in the Paris building there were few, we fancy, whose hearts were not elsewhere. All thoughts were occupied with the Crimea. While waiting for the Imperial party—in the pauses of the music—after the rush of the departing visitors, the words that rose most readily to the lip, as friend met friend, and guest saluted guest, were not always words of congratulation on the sparkling show, of gentle construction and loving hopes, of happy auguries as to beneficial intercourse hereafter between the nations; but words of eager passion, of which the scene was far away and the action more dramatic and deplorable. The talk was of the last despatch, of the sortie and the repulse, of the mine and countermine, of the sailing of the fleet, the bombardment of cities, the waste of life. Yet even in the visible results, which could not check or turn aside even for a gala day, the fierce sympathy displayed—so nobly, necessarily displayed—by the countrymen of those who are fighting for France,

Italy, and England at the furthest extremities of Europe—in a sea unknown to our Blakes and Nelsons, on a shore unreached by our Eugènes and Napoleons—there was a certain consolation. Nothing so grandly proves the force of Civilization as compared with Barbarism—the strength of the Allies and the weakness of their enemy—as the fact, that in the midst of a contest which has sealed up his dominion, lopped it off from the enterprises of the world, we can build crystal palaces, fill them with the produce of nature and genius, and confidently invite the nations to our festival of Industry.

The building in Hyde Park was the People's Palace. The buildings in the Champs Élysées are Imperial works. All England contributed its portion towards the house of glass: the Government of France furnished the plans and guaranteed the edifice of stone. From the First of May the million took possession of its own property in Hyde Park, and to the last hour of its existence, hung about it with the love felt for a pet estate. In Paris there is no sense of common ownership, or the respect that springs from ownership, among the multitude. The edifice does not even belong to the Exposition. When the riches it contains are scattered to the four winds, its massive walls will still remain, to be used for—no one knows what purpose. It has a life, therefore, apart from the industrial gathering; and hence the people occupy it temporarily, as they would occupy the Tuileries on the morrow of a revolution, and move about it as they would move through palaces and gardens for a day, on sufferance of the higher powers. In Hyde Park every Englishman felt at home; and his Crystal Palace had the unity, as well as the variety, of an epic.

The Palaces of Industry in Paris, now opened to the world, are three in number—the Central Palace, the Palace of the Fine Arts, and the Palace of Machinery. These are separate buildings, and have various forms. The central building is a parallelogram, with a triple roof of glass, barrel-shape, like the transept of our Crystal Palace:—the middle arch having a wider base, but a less elevation than ours. In this building the ceremonial took place. A long gallery, very narrow for the length, of the shape of a railway tunnel, but well lighted from a partial glass roof, is the Machinery Palace. It runs along the bank of the Seine for three-quarters of a mile, and is particularly ugly when viewed from the steps of the Chamber of Deputies, or the esplanade of the river. But within, it is perhaps the most effective of the three. The Central Palace, nearly square in shape, has no vistas. From any point of the galleries, even from the naves, the eye dominates all the scene. Unlike the shifting outlines, vanishing lights, and crystalline forms of the Hyde Park building, every view in the Paris Palace is the same view. There are no unexpected openings—no magical changes—no deep and bright recesses. What there is of splendour breaks upon the sense at once. Hyde Park had the romantic varieties of a vast forest: light and shade, avenues of pillars, intercepted views—all beckoned the spectator on, with something of the witchery of nature, towards fresh openings and fairer pictures: a sky of glass so broad that sun and shadow travelled visibly along its surface, while clouds rested on it, and threw the radiance from their silver wings on tree and statue, kindling them with transitory beauty like a smile. Something of this last effect is seen in the long gallery on the Seine, as the clouds float over the slip of sky. But the Central Palace is free from all illusion. About it nothing is poetical, nothing indefinite, nothing suggestive. What it is, it seems. Fancy is uneasy in such an interior—so orderly, so exact, and so mechanical. If the eye finds something to admire and to remember in a scene so gorgeous, the soul feels scarcely any stirring of its more deep emotions; and those precious memories which cling about Hyde Park, and grow more warm and tender as the years roll on and throw it further backward into time, making it part and portion of the joys and sorrows of so many hearts, will scarcely, we suspect, gather around the more substantial and prosaic building near the Seine.

The Palace of the Fine Arts, a showy building of wood and plaster, stands a short distance from Mabile. Outside it is effective, and the interior is well lighted. Beyond this little was required. A series of rooms and galleries are apportioned to the various schools; each nation having its own space, in most cases a separate gallery. France, of course, takes the lion's share of the available wall; not perhaps from any intentional unfairness, so much perhaps as from a conscientious belief that the paintings of the French schools of the present day are beyond compare the worthiest works of human genius. Assuredly they are the most ambitious. Painted on a colossal scale, for the decoration of miles of gallery at Versailles and the ample roofs of Paris churches, they stand out among the largest historical compositions of our own Wards, Friths, and Maclises, like the colossal pictures of Broddingnag among the miniatures of Lilliput. We shall have more to say hereafter on the contrasts and comparisons provoked by the juxtaposition of the several schools. At present we need only say that England is fairly—not strongly—represented at this gathering of contemporary Art. Mr. Ward's two grand pictures, 'Argyll Asleep' and the 'Execution of Montrose,'—taken from the corridor of the New Palace—will show our neighbours the style of Art with which we are decorating our greatest public building; Mr. Creswick's landscapes, in a style beyond the imagination of a Frenchman to conceive, will bring home to many eyes in France the green glories of our forest glades. Mr. Mulready's works, nine in number, will show our neighbours that while the English school shirks no comparison with the minute accuracy of the Flemish painters, its humourists excel in grace of form and depth of feeling. Sir Edwin Landseer's specimens—though not his best—will give them an idea of our great animal-painter's mode of handling Highland scenery. Mr. Danby's 'Evening Gun,' in a style of excellence more cultivated in France than elsewhere, will prove how little we need fear competition on our rival's ground; and Mr. Stanfield's paintings how absolutely we remain masters, in Art as in other ways, of our own watery element. Then, again, to come to our new generation, Mr. Millais' 'Release'—which the French are amused to find in a glass case—will show them, in its breadth of style and solidity of execution, the best fruits of that heresy of Pre-Raphaelitism which appears to them so preposterous a mystery of the English school. While rejoicing over the works which are present to testify of our doings, and to justify our place in the high fields of Art, we cannot but mourn over the remarkable works of our time which are absent. We deeply regret the rule which excluded the works of two such illustrations of our contemporary Art as Etty and Turner from the Exhibition; at the same time we may also record our regret at that spirit of reserve which, in the exercise of an unquestionable private right, has inflicted on us the risk of a certain amount of public discredit by withholding from some of our best artists the means of showing their full strength. Sir Edwin Landseer, for himself, contributes nothing to the show:—it is by inferior works, taken up by accident, without the painter's choice, that one of the most characteristic of our masters is misrepresented to the European student of schools and styles. Mr. Baily's 'Eve' is there; but where are 'The Graces,' 'The Morning Star,' the 'Nymph,' of our most poetical sculptor? Mr. Gibson is represented by a single figure. In France, church, palace, gallery has each given up its best to the occasion. Versailles rejoices for a time in bare apartments; the Louvre has surrendered its ceilings, the Luxembourg its walls. Few churches in Paris have escaped the conscription. With equal zeal private collections have been placed at the service of the several artists. Hence a vast illustration of the living faculty of France in regard to Art,—the productiveness of which appears astounding.

The contents of the Central Palace are chiefly Industrial. Science and Art, so far as these are instrumental as productive agents or manufacturing means, are included; but the prevailing character

of the collection is that of Utility rather than that of Beauty. Conspicuous among the objects at the English end—and most mysterious to the worthy citizens of Paris—is our Astronomer Royal's instruments from the Greenwich Observatory. Light-houses of various construction occupy very prominent places on the ground-floor. Our Indian collection, placed in the right hand gallery, in the corner nearest to the Tuileries, makes a most brilliant and attractive show. Few of the sections, however, are yet ready for inspection; and the opening ceremonial lost no little of its charm through the imperfection of the preliminary work.

Among the objects of interest in foreign departments is a collection made by a countryman of our own, Mr. J. J. Forrester, illustrative of the natural wealth and productive forces of Portugal. Our readers know Mr. Forrester as an able writer and most zealous agitator on that beautiful and fertile country. In the Paris Exposition he has gathered together a variety of material tests of that long and promising argument which he has maintained before Parliamentary Committees, in the Transactions of the Royal Society, and in numerous publications. We look at all these things with interest, from the grain of the earth to the jars of wine, from the photograph of the river bed to the costumes of the people. Mr. Forrester is chiefly concerned with the wine country,—a picturesque and primitive district, which is naturally dear to an Englishman's heart,—but his illustrations show the character of the country generally, and throw an original light on its great natural resources.

FOREIGN CORRESPONDENCE.

Eruption of Vesuvius.

Naples, May 8.

Do the wells dry up—is a city swallowed up—is there an earthquake or the shock of one down in Calabria, or are credulous foreigners shaken in their beds at Nice,—the finger of the public is sure to be pointed at Vesuvius, as much as to say, "That's the villain who occasions all this fear and trembling." Truth to say, too, that as far as regards Naples, the fears of the inhabitants are more justifiable, for the lower part of the city is completely hollow beneath, and it would not require a great effort to lift up the thin crust on which dwell so many thousands of noisy, busy souls. Since the last eruption, we have experienced many shocks of earthquake in Magna Græcia: Melfi has been destroyed; at the beginning of this year a portion of the crater fell in; smoke in greater quantities than usual has at times been vomited forth; still, so late as ten days since, the guides prophesied that an eruption would not take place till October. It is singular that these catastrophes have taken place, I will not say generally, for I have not sufficient data to go upon, but frequently about the time of the full moon. On this occasion she was eclipsed, adding vastly to the mysterious grandeur of the spectacle, and awakening in the minds of the vulgar a species of pious awe. One of the lights of heaven was going out, whilst a subterranean fire was bursting forth, scorching and destroying everything within its reach. All the public places have therefore been crowded nightly with curious or anxious gazers,—and a stranger entering the city might have readily imagined that a series of demonstrations was being made in different parts.

I think the finest view was to be obtained near the Church of the Carnival,—for the fire does not flow down so much in front as on the side or the back. Standing, then, near the church,—sacred, by the by, to the memory of Masaniello,—a broad path of light lies across the sea to Resina. Over this the imagination runs, and advancing up the mountain sees a river of fire descending like the coils of a serpent from the recently opened mouths. On the very top, the huge crater is comparatively quiet and inactive; one might fancy that the portion which fell in earlier in the year had gorged it, and that like a huge boa it was now lying insensible in all the agonies of indigestion. But an examination on the spot is worth a hundred distant, imaginary views, so on the second

night I started for Resina. On the outskirts of Naples, in the centre of a bridge, is a large statue of St. Januarius, with an inscription beneath, recording his miraculous interposition to stay the destruction of a former eruption. The saint was holding out his right hand, as though he was saying "Thus far and no farther," whilst his face gleamed with the recent fires. Still nearer Resina a long inscription calls on posterity to be vigilant, and describes the impetuosity, the suddenness, the overwhelming destruction of an eruption,—and now again the boiling lava was flowing down the sides of the mountain, and people were driving and hurrying along the road by thousands, as if to throw themselves into the flames they were warned to avoid. Resina is passed, and we are going up the mountain on foot,—for the best of all reasons, our horses will not pull us. Nor were we alone in our disaster; many were the carriages stuck deep in the fine dust which had been thrown out during former eruptions. The neighbourhood of the Hermitage was like a horse-fair, and a motley group indeed the human or Neapolitan species presented in its many varieties. Without guides, for we had nothing more to do than join the stream of living creatures, that was flowing all in one direction, we pushed on to the grand point of attraction, and, deviating a little from the road, we crossed the lava of yesterday's deposit. It was an immense black bed of coke, to all appearances;—here and there the occasional elevations looked like waves which had been arrested in their course. The heat which ascended was sometimes intolerable; it burned our shoes. We were walking over the blackened crust which lightly lay on the surface of a river of fire. We took up loose pieces of the coke, and the glowing lava appeared, at which we lighted our cigars, and on which, throwing paper and other inflammable materials, flames sprang up. This vast bed, which is now again in motion, was then stationary, yet divided only by an imaginary line from the most remarkable spectacle I ever witnessed,—a long fiery extended plain moving on slowly and irresistibly, as if the Power which set it in motion required not to make itself known by any sudden or violent jerks. There were a majesty and a continuity in its progress which made an impression upon me that I can never forget. Although it was nearly a level, yet unceasingly it moved on like an Alpine glacier, carrying everything with it. The noise, too, which marked its course reminded me at times of the murmuring, rattling kind of noise which an Alpine stream makes as it rolls or rattles over its shingle bed. The masses of coke ground lightly one against the other, and it seemed to one as if a thousand voices were uttering hiss—sh—sh.

There was a point at which this scene, grand as it was, became yet grander. Half way between the Hermitage and the foot of the cone is a vast ravine, which separates Vesuvius and Somma. A different wind might have brought the lava more to the north and west down upon Ercolano; as it was, it took the direction of this ravine, which descends more than a thousand feet below, into the villages of Massa di Somma, San Sebastiano, Madonna del Arco, and others. The first descent into this ravine is precipitous, and over it rolled this stream of fire, in width about 200 feet, forming a cascade of liquid flame. Even in its fall, too, I imagined that it was not forgetful of its dignity:—there was no impetuosity in its movements; it rather moved than dashed over, and then kept on its course through the plantations of poplars and chestnuts with which the sides of the ravines were planted. They are now, of course, utterly destroyed. A sudden flame, and a shriek, and a waving to and fro, and tree after tree succumbed to the power of the fire. I never saw movements nor heard sounds more expressive of suffering; I could not disembarass myself of the impression that they were human, and as they writhed and toppled over found myself exclaiming to some Italian friends "*Poverini!*" The abyss into which the lava rolled might have been unfathomable, for no eye could pierce it, and the huge masses of red smoke which heavily rose from below threw an indescribable air of mystery over the whole, except when a sudden puff of wind

clearing the opposite side showed us the burning trees.

There was yet another point to be attained, without doing which I could not content myself: so, like the traveller who has come upon some unknown river in a strange land, I determined to trace back the fiery stream to its very source. Taking for our guide a man who was selling coins, which he had imbedded in burning lava, and without any other light than that which proceeded from the mountain, we tumbled along over our rugged path of coke, listening as we walked to the history of the various strata against which we were knocking our shins. As we rose higher and higher we obtained a further view of that marvellous river on our left, which here appeared to be divided into two branches, and a short distance further brought us to the foot of the cone. There were then seven mouths open on this side, vomiting flame, and smoke, and lava, and two of them were throwing up stones, though not large. "We must see them," said I; "nay, we must stand by them." It was one of those situations when a man does not reason, but when he is drawn irresistibly along by that wonderful fascination which draws the bird to the serpent. So up through the heavy dust we toiled, over our ankles at every step, puffing, panting, and perspiring, until we reached the goal to which our wishes tended. The noise, though not so loud as I have heard it, was like that of a distant, continual cannonade; and at every shot up came fire and stones, or out gurgled lava. The latter flowed down before us in gentle and regular undulations, the former fell in all directions and some amongst us, but being small we had more fear of that dense mass of red lurid clouds which were piled up in the background ready to do battle. Had the wind changed, we should have fallen as lifeless as the soldiers of Sennacherib; and it was a fitful night. Parties had more than once returned in consequence of the clouds sweeping down in their direction; and the "*avanti!*" "*avanti!*" of the guide, and a deep gull of sulphur, warned us too that it might be as well to go down. "Not however till we have got some lava with our own hands, and put some money in it." There, now we are ready. It is only to repeat oneself to use the terms "wonderful," "magnificent," "miraculous,"—and yet little else could I utter that evening. Returning, we found ourselves half surrounded by a semicircle of fire; it accompanied us to the edge of the cascade: and once more we placed ourselves there again. Sometimes large masses broke away out of the stream, as it rolled down, and falling down precipitously, tumbled over and over. The glare and the heat, which at such times were thrown out, blasted and scorched us: we were obliged to lift up our hands, and fly for it.

Since that evening many changes have taken place. Several of the new *bocche* have united; another has burst out, and under the following alarming circumstances. A Spanish family were standing on the cone, and nearly on the same site as ourselves, when they fancied they both felt and heard the ground cracking beneath them. It was a run for their lives,—when up shot a stream of stones and lava, and a new crater was formed. The old crater too, at the summit, is beginning to rouse itself from its lethargy, and is now adding to the destruction which is pouring down upon the devoted country beneath. Another change has taken place in the bed which I first described as that from which I looked down on the fiery cascade. It is also in motion; and to give you any idea of it, I must beg you to imagine Oxford Street or the Strand taking it into its head to go into the country,—not in detached parts, but in one solid, continuous whole. On moves this fiery serpent, now upwards of four miles in length, its jaws devouring plantations and vineyards, whilst its huge body is emerging, coil after coil, from the "shattered side" of Vesuvius. God preserve the poor people below! I went round the mountain last night to the villages of Massa di Somma and Sebastiano, and met the river in its course. I was there till two o'clock in the morning;—but must reserve my description of what I then witnessed till another occasion. I am stu-

pified by it: all that I had hitherto seen faded before it. Not all the various, picturesque, and, under ordinary circumstances, amusing incidents, which one met with, could relieve the one absorbing feeling of awe which took possession of me. Suffice it, for the present, that I looked on a cascade of glowing lava without exaggeration one thousand feet in height. It was Niagara on fire; and now it is in the very streets of a village. The excitement in the capital and throughout the neighbourhood is intense: the whole population swarms out to the great scene of interest. On the first night on which I went up the mountain I met the King, the Queen, and all the royal family after midnight. Many remained the whole night, for it was just one of those scenes that it was impossible to gaze upon sufficiently. What a contrast did the view present as we returned! As we left the fires more and more behind, the moon resumed her influence, and shed her softened, silvery light on the placid Bay and the spectral outline of the lovely coast. Capri was distinctly looming up in the distance; and circling round to Naples, and Procida, and Ischia, the eye marked the many points rich with poetic and historic interest.

The mountain increases in activity, and a portion of Massa di Somma has been destroyed. The poor inhabitants are flying in all directions with furniture, with the timber they have cut down,—with whatever, in short, they can save from the general ruin.

H. W.

OUR WEEKLY GOSSIP.

It is said—and, we believe, is correctly said—by well-informed persons, that the scientific Commission appointed to consider the feasibility of Lord Dundonald's plan for destroying the arsenals and fortresses of the Russians, have reported in favour of the project, subject to certain conditions, which will have to be decided by military engineers.

A season of doubt and inactivity in the book trade seems to be drawing to a close. Things look brighter, confidence is returning, despite the failure of negotiations at Vienna, and publishers are putting forth their enterprises. Lady Holland's 'Memoirs of Sydney Smith'—a book which has been in private hands some time—is about to appear in public. Mr. Macaulay, we believe, has at length prepared two volumes of his 'History' for the press. Mr. Washington Irving has finished the first part of his long-contemplated 'Life of Washington,' and the first volume will appear in a few days from Albemarle Street. An excellent subject, 'Lives of the Queens of England of the House of Hanover,' is in the hands of Dr. Doran. A work on Australia, 'Land, Labour, and Gold; or, two Years in Victoria,' is announced by Mr. William Howitt. Mr. St. John, we hear, has a work in the press, entitled 'The Ring and the Veil.' 'Eustace Conyers,' by Mr. Hannay, is announced to appear immediately. Mr. Murray is preparing a popular reprint of all Mr. Hallam's 'Historical Works'—to be printed in ten monthly volumes. The first volume will appear in June. Mr. J. W. Parker has in hand, Lord De Ros's 'Journal of a Tour in the Principalities, Crimea, and Countries adjacent to the Black Sea, in the Years 1835-6,'—Capt. Murray's 'Lands of the Slave and the Free; or, Travels in Cuba, the United States, and Canada,'—and an annotated edition of 'Shakspeare's Poems.' Mr. Newby announces a new edition, with fresh letters, of 'The Literary Life and Correspondence of the Countess of Blessington.'

It is stated in Paris that Prince Charles Bonaparte has been appointed Director of the Museum of Natural History, and that he purposes reorganizing that fine establishment, which of late years has not used to the full its high scientific capabilities.

Gore House was opened to the lovers and cultivators of flowers on Wednesday. Cold winds and a threatening sky kept many visitors away, no doubt; but the gathering was still large and brilliant. Much had been done by orders of the Royal Commissioners—in whom the property is vested—to prepare the grounds: walls had been levelled, unsightly objects removed, and the gardens of Gore House and Grove House thrown together

into an ample lawn, intercepted and beautified by noble trees. Her Majesty inspected the flowers early in the day; and, in spite of a cold spring, the show was fine.

The hospitalities of Bridgewater House were offered on Wednesday last to a distinguished circle of men of letters and science, invited to meet the Fellows of the Royal Geographical Society, of which the Earl of Ellesmere is President. Besides the splendid attractions of the picture gallery, the rooms were made more interesting to the geographers by the fine and rare examples of foreign maps which lay on the several tables. Altogether this was a very pleasant *réunion*. Lord Ellesmere's second reception takes place on Wednesday next.

Next week, as some of our London readers may like to be reminded, the joint meeting of the Architectural and Archæological Societies of the Archdeaconry of Northampton, the Diocese of Lincoln, the County of Leicester, and of the University of Cambridge, will be held at Peterborough, —when various papers will be read, excursions made, and dinners eaten.

"Very large sums of money," says a Correspondent, whose indignation we share, "have been expended lately in restoring to the *encinte* of our old Tower of London somewhat of the aspect it must have borne in the days when those strange and stirring scenes were enacted which have made the memory of the place immortal. Just, however, as the public had begun to dream of seeing the completion of this laudable design, the officials of the Ordnance Office have seized upon a vacant piece of ground, which had been cleared evidently with the view of developing a most interesting portion of the old structure (a tower in the south-eastern angle of the inner defences, containing a very fine window,) and are now about to erect upon it a vile brick edifice, which will entirely mar the whole design, and carry us back again to that dismal reign of architecture which flourished under the reign of the Churchwardens and Overseers of the Georgian era. Is it too late to see to this? Can Prince Albert do nothing for us at Court? or Lord Stanhope, President of the Society of Antiquaries, in the Lords? or Sir W. Molesworth, of the Board of Works, in the Commons? Can you and the *Times* do nothing through the Press? Were it only a temporary building, just run up to answer the exigencies of the Ordnance Store-keeping Department for a while, it would not matter; but a most substantial edifice is evidently contemplated, and indeed commenced; and unless a strong hand comes to the rescue, and that speedily, the public will have to deplore the perpetration of a tasteless and barbarous outrage upon one of the most interesting structures in England, and a shameless waste of the money which has been so freely expended during the last three or four years, for the express purpose of doing what some of our thoughtless men in office are now seeking and labouring to undo.—I am, Sir, H. L."

The Chair of *Materia Medica* in the University of Glasgow is left vacant by the death of Dr. Couper, who had occupied it for upwards of twenty years.

The Trade Museum, which has been forming for some months past under the joint sanction of the Society of Arts and Her Majesty's Commissioners for the Great Exhibition of 1851, is to be opened in the Adelphi, on Wednesday next, the 23rd inst. The collection comprises illustrations of animal produce and manufactures alone, and is designed to illustrate the various uses to which animal substances are put. The present Exhibition can only be regarded as a temporary and experimental one, and will necessarily be very far from complete. It is a matter of regret that so valuable and useful a collection should be cramped and curtailed to fit into the dark and inconvenient model-room of the Society of Arts; and it is much to be hoped that the museum will shortly be transferred to more spacious and suitable premises, in which it may be properly arranged and rendered more complete.

A week or two since [*ante*, p. 457] we were amusing ourselves with a few examples and illustrations of the literature of self-praise, culled from "the booksellers' column" in the days when the

advertising *mania* of fashionable novels "ran high." A few months ago we dealt with a humourist who played with conceits, under pretext of pertinent letterings for books. The following, which is odd enough to be included in either collection of *facetie*, is an extract *verbatim* from a West-end tradesman's circular. The advertiser begins by a lecture on the value of a book: this the reader may dispense with; but he will be glad to see what can be said concerning a book in its calf clothing:—

"Great, however, as is the influence of this humanizing agent, it has to struggle strongly with destroying Time, needs much support, and may be greatly strengthened in its most earnest efforts. For how often gems of thought inspired, or rich results of many an anxious hour, are doomed to pass into oblivion—to ignite, perhaps, the morning fire, or wrap the candles which may serve to usher in some new-born thought, thus, dying in the cause of light; or, like a phoenix from its ruins rising with greater glory in its form renewed. Reader! have you no valued books you gladly would preserve—no warm memento of a distant friend—no last prized relic of a parent dead—to pieces falling? Go then to a binder! his humble press is the earnest friend and firm support of its enlightening namesake, and will save your unbound treasures, collect your scattered leaves, make new your well-thumbed books, and thus preserve them, like well-set jewels, to you and yours for years."

Following the above ode,—a composition of which neither Mr. Warren of the famous "Jet," nor the Mr. Warren of 'Now and Then,' need be ashamed, so mellifluous are its strophes,—a list of prices has a low and prosaic look, it will be owned.

On Saturday, Mr. W. S. Woodin re-appeared in London with a new dramatic entertainment, entitled 'The Olio of Oddities,' written by Mr. E. L. Blanchard, and delivered in King William Street, Charing Cross. The hall, denominated "the Polygraphic," has been handsomely fitted up for the occasion. The lecture differs from other public exhibitions of the kind on the score of its literary merit. Mr. Blanchard has pursued the "suggestive" method of Art, and thus produced a gallery of characters, each of which is fully enough presented without being exhausted; the imagination of the auditor being left to supply what is omitted. The result is, that the entire series sparkles with point, and the greatest variety obtainable within the given limits is secured. A solid background is provided for the delineations, in the fact of a Tour to the Lakes, a picturesque panorama of which is presented, and the eccentricities brought forward are supposed to be persons met with during the journey.

"Amongst public works in southern Italy," says a Correspondent, "is perhaps worthy of mention the construction, or rather re-construction, of an iron bridge over the River Calore, near Solopaca. As the river crosses the great Samnitic road, which connects the Gulf of Gaeta with the Adriatic, this bridge re-animates the commerce of the whole country, and the erection of it was made the occasion of great public rejoicing. Whilst speaking of lines and means of communication, I may allude to a cheap and agreeable mode of getting from Rome to Naples, though I am uncertain whether I have mentioned it before or not. An English Company books the traveller from Rome to Naples, by way of Porto d'Anzo, defraying every expense, save that of meals. The economy of time, expense, and annoyance is great, and every (green) traveller (especially) will find this a most delightful way of visiting Naples. We have had some very cold nights with sharp frosts, by which the orange-trees on the coast have suffered much. Indeed, it is said that for three years the hopes of the growers are destroyed, so much have the trees suffered."

The Riccardiana Library, at Turin, says the *Athenæum Français*, has recently obtained more than a hundred autograph letters of the Italian historian Muratori. Autographs of this writer are not scarce; and his letters are found in many of the public libraries of Paris,—for instance, in the Imperial, in the Carpentras, and others.

A monograph by M. Delécluze in the *Journal des Débats*, on the miniature painter Isabey, is too suggestive in the facts there grouped together which marked the artist's long career to be passed over. Mr. Browning's *Oyniben* in 'The Soul's Tragedy' did not witness more revolutions than this old man,—Talleyrand himself kissed hands to hardly a greater variety of "powers that be." The list of some of Isabey's subjects which M. Delécluze

gives amounts to a *tragi-comedy*. Among these were Barrère, Saint-Just, Carrier, Collot d'Herbois, Couthon, Mirabeau (who condescended to give the painter good advice),—next, after a chasm of some years, during which Isabey had a notion of embracing mezzotint engraving as his profession, come Madame de Beauharnais and her fair daughter Hortense, and other of the ladies connected with or interested in Madame Campan's seminary, or who gathered round the gracious mistress of Malmaison,—then, the First Consul, the Emperor, Pope Pius, the Empress Josephine, —afterwards, a batch of miniatures, forming part of the compliments in the *corbeille de mariage* sent to Marie Louise at Vienna,—subsequently, the Bourbons of 1815 and the personages of the Congress—the later Bourbon family, including Charles the Tenth and (doubtless) the mercurial Duchesse de Berri,—winding up with the celebrities of the reign of *Le Roi Citoyen*, from 1830 downwards; and finally wound up by Isabey's receiving a commandership of the Legion of Honour from the present Emperor Napoleon the Third. Did ever artist or man of science at any former period of society take such intimate part in so many different worlds as the old Frenchmen, the Isabeyes and the Portals—the last of whom are now dying off?

Freedom of the Press, as understood in the "Land of Liberty," is an odd provision of the law, very oddly interpreted by the general public—if we may take as an illustration facts supplied by the last arrival of American newspapers. A Free-soil journal, published at Parkville, in Missouri, and entitled the *Industrial Luminary*, appears to have been shedding its unwelcome light on the Slavery Question. Missouri, as our readers know, rejoices as a member of the Union in the dogmas of Equality and Liberty, and as an individual State in the fact of a considerable property in human flesh. Therefore, Messrs. Park & Patterson, owners and writers of the aforesaid *Luminary*, being Free-soilers, were at odds with their neighbours. But as "thought is free" in America, these sovereign citizens continued their labours, and from time to time expressed their theoretical views on the peculiar institution. The slave interests became alarmed. Two hundred persons,—somewhat brusquely interpreting the divine dogma of free thought,—broke into the office, seized the presses and the luckless Patterson (Park having left the town), and proceeded to the market-place with their captives, to try them by a public meeting. The crowd was called to order, and Patterson was brought forth to receive his sentence. One speaker stated that the worthy democrats there assembled had come together with the determination to black, tar and feather, and ride on a rail, G. S. Park and W. J. Patterson; but seeing that Park had escaped, and left his scape-goat to suffer for both, he wished the meeting to decide what should now be done with Patterson. Another speaker declared for mercy; not that he had any excuse to offer for Patterson, but "because his wife throughout the morning had hung to him like a leech; that she now held on to him, and that they could not inflict the punishment without gross violence to her feelings, and perhaps rudeness to her person." In this worthy's opinion justice might be sacrificed on the altar of chivalry. He, therefore, for the sake of the wife, moved to remit the tar and feathers. The worthy citizens consoled themselves—for this show of mercy—by passing unanimously the following resolutions:—

"Resolved,—1. That the *Parkville Industrial Luminary* is a nuisance which has been endured too long, and should now be abated.—2. That the editors—to wit, G. S. Park and W. J. Patterson—are traitors to the state and county in which they live, and should be dealt with as such.—3. That we meet here again on this day three weeks, and if we find G. S. Park or W. J. Patterson in this town then, or at any subsequent time, we will throw them into the Missouri river; and if they go to Kansas to reside, we pledge our honour as men to follow and hang them wherever we can take them.—4. That, at the suggestion of our Parkville friends, we will attend to some other free-soilers not far off.—5. That we will suffer no person belonging to the Northern Methodist Church to preach in Platte county after this date, under penalty of tar and feathers for the first offence, and a hemp rope for the second.—6. That we earnestly call on our sister counties throughout the state to rise in their might and clean themselves of free-soilism.—7. That our peace, our property, and our safety require us at this time to do our duty.—8. That we request every pro-

slavery paper in Missouri and Kansas to publish the above resolutions."

—After the public of Parkville had relieved their sense of duty by passing these resolutions, regulating the freedom of the press for the future and warning all luminaries how far they may shine on the faces of free citizens, the press was shouldered, with a white cap drawn over its head, labelled "Boston Aid," and marched away, the crowd following in regular order. It was deliberately and in cold blood taken through the town nearly to the upper landing, and there, with three hearty cheers, was deposited in the Missouri river, with which its luckless owner had been merely threatened. Such is the liberty of the press—such is the freedom of thought—such is the inviolability of the person—under the benignant radiance of the Stars and Stripes!

ROYAL ACADEMY OF ARTS, Trafalgar Square.—The EXHIBITION of the ROYAL ACADEMY IS NOW OPEN.—Admission (from Eight to Seven o'clock), 1s.; Catalogue, 1s.
JOHN PRESCOTT KNIGHT, R.A. Secretary.

SOCIETY OF PAINTERS IN WATER-COLOURS.—The FIFTY-FIRST ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East, close to Trafalgar Square.—Admission, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

THE SECOND ANNUAL EXHIBITION of the FRENCH SCHOOL of FINE ARTS IS NOW OPEN daily, from 10 to 6 o'clock, at the Gallery, 121, Pall Mall, opposite the Opera Colonnade.—Admission, 1s.; Catalogue, 6d.

PATRIOTIC ART-EXHIBITION, for the RELIEF of WIDOWS and ORPHANS of BRITISH OFFICERS engaged in the WAR with RUSSIA, BURLINGTON HOUSE, Piccadilly, by Special Permission of Her Majesty's Government, NOW OPEN.—Admission, 1s.—Communications and contributions to be addressed to the Committee, at Burlington House.

PHOTOGRAPHIC EXHIBITION.—An Exhibition of the finest English, French and Italian Photographs IS NOW OPEN at the PHOTOGRAPHIC INSTITUTION, 165, New Bond Street.—Open from 10 to 5.—Admission, with Catalogue, 1s.

THE CHALON EXHIBITION, SOCIETY OF ARTS.—This Collection of the Paintings, Drawings, and Sketches of the late JOHN CHALON Esq., R.A., with a selection from the Works of ALFRED E. CHALON, Esq., R.A., WILL BE OPENED, at the Society's House, Adelphi, on THURSDAY, June 7.—Admission, 1s.

ADAM AND EVE.—This great original work by JOSEPH VAN LERUUS, IS NOW ON VIEW at 57, Pall Mall, opposite Marlborough House, from 11 to 6 daily.—Admission, 1s.

SIEGE of SEVASTOPOL.—GREAT GLOBE.—All the New Approaches and Siege Works are placed on the MODEL of SEVASTOPOL, including Inkermann, Balaklava, and the Tchernaya, at the GREAT GLOBE, Leicester Square. Open from 10 a.m. to 10 p.m. Admission to the whole building, 1s. Children and Schools, Half-price. A Collection of Trophies taken from the Russians.

TWO THOUSAND TWO HUNDRED AND THIRTY-FIRST representation of LOVE'S ENTERTAINMENTS in London, and ONE HUNDRED AND TWENTY-FIFTH consecutive night of the present selection of Pieces, on Monday, May 21, at the REGENT GALLERY, 69, Quadrant, Regent Street, where Mr. Love now appears every Evening at 8, except Saturday; Saturday, at 3.—Monday and Tuesday, Mr. LOVE, universally accepted as the first Dramatic Ventriquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called THE LONDON SEASON, and other Entertainments. On Wednesday, Thursday, and Friday, Mr. Love will present the Entertainment called LOVE IN ALL SHAPES, followed by a ZOOLOGICAL CONCERT, and LOVE'S LABOUR'S LOST, on Saturday, at 3. LOVE IN ALL SHAPES, with other entertainments.—Tickets at Mitchell's Royal Library, 33, Old Bond Street; and at the Rooms.

Mr. W. S. WOODIN'S OLIO of ODDITIES.—The above entirely NEW COMIC ENTERTAINMENT, illustrated by fifty instantaneous Metamorphoses of Voice, Character, and Costume, and a Moving Panorama of the romantic Lake Region of England, will be given in the new and elegantly fitted-up Polygraphic Hall, King William Street, Charing Cross, EVERY EVENING, by Mr. W. S. WOODIN, who had the honour of giving 722 Representations of his former Entertainment, "The Carpet-bag and Sketch-book." Doors open at half-past 7, commence at 8.—Private Boxes, 12s.; Dress Stalls, 3s.; Area Seats, 2s.; Amphitheatre, 1s. Box-office open daily from 11 to 5.—N.B. It is respectfully intimated that bonnets cannot be admitted in the Dress Stalls.

ROYAL POLYTECHNIC INSTITUTION.—The LECTURES and EXHIBITIONS, as delivered before HER MOST GRACIOUS MAJESTY and HIS ROYAL HIGHNESS PRINCE ALBERT, the PATRON of the INSTITUTION, will be CONTINUED, consisting of the TELEPHONIC CONCERT, DISSOLVING VIEWS of SINDBAD the SAILOR, DUCOSCI's ILLUMINATED CASCADE, the DIORAMA illustrating the VOYAGE across the ATLANTIC, and the CITIES in the UNITED STATES.—LECTURES on SONGS and SONG WRITERS, by GEORGE BUCKLAND, Esq.—DISSOLVING VIEWS of the W.T.G. &c.—Monday Evening, the 21st, LECTURE to the INDUSTRIAL CLASSES: HISTORY of a CORAL ISLAND, by TREVELLIER SPICER, LL.D.

SCIENTIFIC

SOCIETIES.

ROYAL.—May 10.—Lord Wrottesley, President, in the chair.—The following papers were read:—"Experimental Inquiry on the Nature of the Force evolved during Muscular Contraction," by Mr. H. Baxter.—"On a Simple Geometrical Construction giving an approximate Quadrature of the Circle," by Mr. C. Willich.

GEOGRAPHICAL.—May 14.—Sir R. I. Murchison, V.P., in the chair.—Prof. H. W. Acland, Capt. J. Wood, R.N., Messrs. Thomas Sopwith and W. H. G. Kingston, were elected Fellows.—The Chairman announced that the Geographical Society of Paris had transmitted to the Council three medals for presentation to three Fellows of this Society, to whom they had been awarded by the French geographers. To Capt. McClure, R.N., the Gold Medal had been awarded for his discovery of the North-West Passage; to Capt. Inglefield, R.N., a Silver Medal has been awarded, for his discoveries in the Arctic Regions; and to Mr. Francis Galton, a Silver Medal has also been awarded, for his explorations in the Namaqua, Damara, and Ovampo countries, northward of the Orange River, in South-Western Africa.—"Notes on the Passage of Hannibal across the Alps; and on the Valley of Beaufort, in Upper Savoy," by Prof. Paul Chaix.—"On the Frontier Tribes of the Punjab, west of the Indus, with a Sketch Map," by Lieut. J. Sykes.—Copies of Letters from Drs. Barth and Vogel respecting the progress of the Central African mission, communicated by the Earl of Clarendon.—Attention was directed to the 24th volume of the Journal which is now published; and in adjourning the meeting to the 28th inst., the Chairman remarked that the Anniversary of the Society would on that day be held, when the President would deliver his address, on the "Progress of Geographical Discovery" during the past year; and in the evening the usual Anniversary Dinner would take place at the Thatched House Tavern.

ASTRONOMICAL.—April 13.—M. J. Johnson, Esq., President, in the chair.—Rev. W. Selwyn and W. R. Vines, Esq. were elected Fellows.—The discovery of a new planet was announced in a letter from M. Chacornac, the discoverer.—The discovery of a new planet, by M. Luther, was also made known.—"On the Method of Observing the Positions of Spots on the Sun, and of Deducing their Heliographical Longitude and Latitude, adopted at Redhill Observatory," by Mr. R. C. Carrington.—"Remarks on the Orbits of a Centauri and σ Coronæ Borealis," by Capt. W. S. Jacob.—"Description of an Observatory erected at Grant-ham," by Mr. J. W. Jeans.—"On the Theory of M. Foucault's Gyroscope Experiments," by the Rev. Baden Powell.—"Report of the Director of the Imperial Observatory of Paris on a Plan for improving the Organization of that Establishment."

ASIATIC.—May 5.—Lord Ashburton, President, in the chair.—Mr. E. C. G. Murray was elected a non-resident member.—Prof. Wilson read a continuation of his papers on the Festivals of the Hindús, giving an account of the *Charak*, or Swing Festival, the extraordinary character of which has made it better known in Europe than almost any other of the Hindú festivals. The object of this Festival is the propitiation of the God Siva, and it is celebrated in the month of April, upon the sun entering the sign Taurus. Though it is especially conspicuous in Bengal, it is well known in the Peninsula, and appears to have originated as a mere exhibition of endurance and dexterity in the performance of gymnastic feats. At the present time it is celebrated by individuals of the lower classes, and is scarcely of a religious character. The full series of ceremonies connected with this festival occupy several days, and consist of a variety of feats, in which the physical powers of endurance of the performers are severely tested. The chief exhibition, however, is that of the swing. A cross-beam is made to traverse upon a moving pivot, on an upright post; and to one end of the beam the swinger is suspended by ends, fastened to two hooks, which are passed through the integuments on each side of the back-bone, above the loins. These hooks are sometimes secured from tearing through the skin by a broad bandage round the body, but this precaution is not always observed. One of the most remarkable circumstances connected with this voluntary act of self-torture is the ease with which the wounds are healed. The dressing applied is of the most simple kind, but inflammation very rarely occurs, and scarcely one case in fifty is attended with any troublesome con-

sequences. This festival is often attended with violations of public decorum of a very gross character.—In a discussion which followed the reading of the paper, General Bagnold stated that he had seen the ceremony performed with some variation at Berhampore, in Candeish. Twelve cords were attached to the hooks passed through the back of the performer, and to these were fastened twelve common country carts, all loaded with people. A short distance in advance of the performer was the idol at whose feet he was to fall; to arrive there, it was necessary to drag forward the whole of the carts,—and this he actually appeared to accomplish. Neither the gallant General, nor any one of the twelve Mohammedan sepoys whom he had taken with him, were able to discover any trick or means, beyond that of actual force and weight of muscle, by which it was effected.

SOCIETY OF ANTIQUARIES.—May 10.—J. P. Collier, Esq., V.P., in the chair.—Mr. Thomas Close, of Nottingham, was elected a Fellow.—Mr. Lemon announced the donation of two Proclamations of the Protector Cromwell, from Mr. Salt.—Mr. J. G. Nichols presented some curious broadsides of the last century.—Mr. Scharf exhibited a drawing which he had made of the ornament of a prow, found near Actium, in the possession of Sir Howard Douglas.—Mr. O. Morgan exhibited three curious lanterns from his collection.—Mr. Blaauw communicated an account of some Roman pavement found at Foxfield.—Mr. Tymms exhibited several curious mediæval tokens in lead, found at Bury St. Edmunds.—Mr. Brent, jun. exhibited a small figure of Latona, found with Roman urns, at St. Dunstan's, Canterbury.—The Treasurer, Mr. Ouvry, read an account of the Church of Wing, in Buckinghamshire, with extracts from the Churchwardens' books.

ROYAL SOCIETY OF LITERATURE.—May 9.—S. Birch, Esq., in the chair.—Mr. Vaux read a paper, by C. T. Newton, Esq., H.M. Vice-Consul at Mytilene, 'On the Inscriptions lately found at Mavrodhilissi.'

BRITISH ARCHEOLOGICAL ASSOCIATION.—May 10.—S. R. Solly, Esq., V.P., in the chair.—Three Associates were elected, and several presents laid upon the table.—Mr. Crofton exhibited four specimens of Roman As from his collection.—Mr. Cuming exhibited another specimen, from the same atelier, of a Dupondius:—*Obv.*, Bust of Pallas; *Rev.*, a Wheel.—Mr. Pettigrew exhibited four specimens of As from Mrs. White's cabinet, one of which gave a Bifrons of Pompey, with MGN on the obverse; and the Rostrum Navis, with PIVS above and IMP. below, on the reverse. Another was a Sesterius of Augustus, with busts of Julius Caesar and Augustus looking in opposite directions, IMP. DIVI. F.; on the reverse the ship's prow. This coin is of Vienna (Vienne) in Gaul, and resembles one figured in Mr. Akerman's 'Ancient Coins of Cities and Princes' (Pl. xviii. fig. 1).—Mr. W. Meyrick called the attention of the meeting to a beautifully-carved steel pommel of a sword of the early part of Elizabeth's reign. It is nearly globular, and wrought in open chain-work of large square links richly engraved. It was discovered at Waltham Abbey, Essex.—Mr. G. Wright exhibited a lock belonging to Mr. Whelan, found at the Battle-field of Worcester. It offered an example of the lock of a Tricker firelock of the close of the reign of Charles the First. The side-plate was stamped with a crown and shield, containing the letters DAM-GAR-3-A.—Mr. Crofton exhibited a Flemish tobacco-box of the time of William the Third. It had engraved on the top and bottom representations of the visitation of the Angel Gabriel to Mary, and the Salutation of Elizabeth by the Virgin.—A paper 'On the Chronicle of Tysilio and the Territories of Vortigern,' by Mr. Wakeman, in reply to the Rev. Berle Poste, was read and ordered to be printed,—also, a paper 'On Watches, Watch-papers, and Watch-stands,' by Mr. H. Syer Cuming.

HORTICULTURAL.—May 8.—The season for Chinese azaleas having arrived, the tables were as if on fire with vivid masses of scarlet and crimson,

and deep rose tints. Three large piles of their blossoms from Mr. A. Palmer especially commanded admiration. To these succeeded, but at a distance, banks of pelargoniums, cinerarias, and pansies, with their yellow and purple and variegated heads. Rhododendrons, too, gave variety to the tables; there were great crimson heads from the open air in Kent, which this cruel spring had not succeeded in harming; a crimson gem, half rhododendron, half azalea, called *Azalea amena*, from the Bagshot nursery; and many of the rare Sikkim species, among which *R. Dalhousieanum* and *Edgeworthi* were most admired. Mrs. Lawrence contributed fine greenhouse plants and orchids. Grapes were presented in abundance. The most remarkable part of this portion of the exhibition, however, was two dishes of pears, in the most perfect state, from the Duke of Rutland and the Speaker,—the sort was the *Beurré rance*, and on this occasion the right hon. gentleman was distanced by the noble Duke. Of vegetables, supplies came from the Dukes of Norfolk and Rutland, the last nobleman contributing prodigious mushroom.

INSTITUTION OF CIVIL ENGINEERS.—May 8.—J. Simpson, Esq., President, in the chair.—The discussion was renewed on Mr. Barton's paper, 'On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought Iron Beams.'

May 15.—J. Simpson, Esq., President, in the chair.—'Description of the Landore Viaduct, on the Line of the South Wales Railway,' by Mr. L. E. Fletcher.—'On the Infiltration of Salt Water to the Springs of Wells under London and Liverpool,' by Mr. F. Braithwaite.

SOCIETY OF ARTS.—May 16.—The Right Hon. the Earl of Hardwicke in the chair.—On the walls were suspended a series of twenty photographic views of the building in which the Industrial Exhibition was held at Munich last year, presented to the Society by direction of the Earl of Clarendon; and on the table was exhibited, by Messrs. Appleton, a new bed or mattress for the use of the army and navy, as well as for emigrants and travellers. It weighs only 4½ lb., and when folded up, is 2 feet long, and about 7 inches diameter; when spread open, it is 6 feet long, and 2 feet broad. It consists of an outer or lower covering of waterproof material and an inner lining, non-waterproof. Between the two there are corrugations, 1½ inch broad, filled with ground or pulverized cork, which does not "mat" or "felt," preserves the body from damp, retains the heat, has sanitary and purifying qualities, and no insect can live therein. The mattress might be used under some circumstances for pontoons or floats, and a single one has sufficient buoyancy to support the heaviest man.—The paper read was, 'On the Capability for Mercantile Transport Service of Steam Ships,' by Mr. Charles Atherton, Chief Engineer of Woolwich Dockyard. The object of this paper was to suggest and exemplify some definite process of investigation and arithmetical deduction whereby the capabilities for sea transport service of steam-ships might be as correctly estimated as was the capability for land transport service of the railway locomotive engine.

SYRO-EGYPTIAN.—May 8.—Dr. W. Camps in the chair.—Mr. Sharpe read a paper, 'On the Early History of Syria, formed by the Help of the Slight Notices of that Country which are found in the Old Testament.'—Mr. Harle read a paper, 'On the Idol Nergal, made and probably worshipped by the Men of Cuth, mentioned in 2 Kings xvii. 30.'—Dr. Jolowicz read some Notes on the philological and archaeological bearing of the question. In the philological part, he agreed that the word Nergal signified a cock,—an opinion which, he said, received additional confirmation from the circumstance that the god worshipped by the Izedis in the present day is represented by a cock on a candlestick. The Doctor believed the word not to be Syriac, but Hebrew, a compound of two words, signifying the rise of morn, because the cock heralds the dawn.

MEETINGS FOR THE ENSUING WEEK.

- Mon.** Statistical, 8.—'On the Mining Resources of France,' by Mr. Laack.—'On the Distribution of the Emigrants from Europe over the Surface of the United States,' by the Rev. R. Everest.
- Tues.** Institution of Civil Engineers, 8.—'On Stationary Floating Bodies,' by Mr. Herbert.—'On Volute Springs for the Safety Valves of Locomotive Boilers,' by Mr. Bailie.
- British Meteorological, 7.—General and Council.
- Zoological, 9.—Scientific.
- Royal Institution, 3.—'On Voltaic Electricity,' by Dr. Tyndall.
- Wed.** Society of Arts, 8.—'On the Mutual Relations of Trade and Manufactures,' by Prof. Solly.
- Royal Society of Literature, 8½.
- British Archaeological, 8½.
- Thurs.** Society of Antiquaries, 8.
- Numismatic, 7.
- Royal, 8½.
- Royal Institution, 3.—'On Christian Art,' by Mr. Scharf, jun.
- Fri.** Royal Institution, 8½.—'On Ammonia,' by Dr. Hofmann.
- Ethnological, 3.—Anniversary.
- Philological, 8.—Anniversary.
- Sat.** Royal Institution, 3.—'On Electro-Physiology,' by Dr. Du Bois-Reymond.

FINE ARTS

ROYAL ACADEMY.

WE resume our notice by returning to the *genre* pictures, which we left unfinished, concluding with a few remarks on the portraits.

Mr. Horsley, whose works are always full of a graceful and refined poetry, is as good as usual in his *Scene from Don Quixote* (No. 476). The moment he has chosen is that in which the Curate is condemning the romances of that knight, who, a century earlier, would have swept the Moors from Andalusia, but is now a mere laughing-stock. He is seated with his back to a balconied window, and is, with much gravity and self-importance, passing judgment on several foolish folios, which the pretty niece is handing for his fiat. The barber (an excellent piece of character), with head turned aside, and half smothered with dust, is beating two pamphlets together, while the housekeeper is hurling the condemned volumes into the yard below. A Murillo-like boy is bringing in some refreshment; and, through the open door, the unconscious knight is seen in bed, dreaming of Amadis de Gaul and Palmerin of England. The Curate's face is the redeeming point of the picture. The barber is stiff and studied, and the niece ill drawn and heavy. The peasant boy is a mere copy, and the sleeping Don almost an abortion. With all this, the picture pleases by its lucid painting and thoughtful details. How well that half-emptied flask of *vin du pays* must wash the dust out of the throat, and how cleverly the grape-stalk is thrown at the portly ecclesiastic's feet!

A very delightful little painting is Mr. F. Goodall's *Arrest of a Peasant Royalist—Brittany, 1793*, (402), though, perhaps, more full of artistic delicacies than of either passion or feeling. Two soldiers have just seized the young peasant, who wears the full Flemish breeches and heavy sabots of his class. His wife flies towards him, and his father, torpid with despair, is sitting on a chest watching the scene. The cottage seems barred up, and a sword or scythe-blade hangs against the wall. The red-tasselled cap of the peasant volunteer lies on the ground. The colour is sombre, yet well suited to the scene, and the whole has a French character, which is a pleasing novelty in our Exhibitions. Mr. Goodall has turned the scene with great taste and talent into a mere artistic effect. We hope that in a few years he will learn to see that one glimpse of the passionate tenderness of wife or father would have far transcended all that red, yellow and green can accomplish in their kaleidoscope changes.

Mr. Webster has two pictures; the *Race* (182), and *Spring—the first of a series of the Seasons* (103). The "Race" is one of the best of his smaller pictures, being full of humour and character,—well drawn and well painted. The scene is a cricket meadow; and the two rival champions are racing with children on their backs. One has almost thrown his rider; and with upraised head is half laughing, half screaming, for the urchin is clinging to his hair. The other rider, quite indifferent to his companion's fate, and fully convinced of the superiority and fidelity of his own steed and the excellence of his own seat, is wholly intent on an alarming dog that is barking at the fun. We do not know which is best,—the open mouth, laugh-

ing eyes, broad forehead and frank face of the one boy, or the sly, quizzing look of his companion, who seems about to imitate his example; such rides being insipid, and void of all proper excitement if the rider is not thrown:—a rule contrary to the precept of that pleasant mode of breaking your neck without your knowing it—fox-hunting. We think Mr. Webster in this picture has hit the happy medium of idealizing every-day subjects; throwing over them an unobtrusive poetry, without robbing them of one particle of truth. These boys are pattern boys, and yet natural,—their clothes are of harmonious colours, yet not theatrical,—they are brimming with mirth, yet not vulgar,—beautiful in face, yet not sentimental. The whole is honest, bold and English, without being affected, flimsy, pretty or rough. The Dutch painters had no children to paint from:—and the gold and silver of Ostade and Teniers are only substitutes for the lilies and roses which they sought for in vain.

Mr. Solomon's *Contrast* (355),—not very well hung,—is a good picture; with much thought in it, and displays a great deal of effective labour and pleasing colour. The scene is the Boulogne sands, where a pretty English lady in a wheel-chair is being waited on with much affectionate solicitude by a handsome young officer-like husband; while two young French fisherwomen, of buxom but graceful figures, and arch, wondering faces, are standing with their nets and poles, partly in curiosity, partly in pity. At their feet is a red-capped boy, quite absorbed in small piscatory enterprises of his own, his sympathy neither with his sisters nor the *belle étrangère*; while on the opposite side, a young English lady, in the usual straw hat and buff-coloured dress, is sitting on a rock, buried in a novel,—no doubt, as the author's own advertisements say, of "absorbing interest." The sympathy and indifference are well contrasted,—both in the fair and brunette complexions,—the fashionable dress and the bare legs,—the boy and the girl,—the young, sad wife, and the brave, sturdy husband. The merit of the picture, in spite of the touches of sentiment, is, perhaps, after all, more in the mechanism than the thought.

Mr. Glass is less mannered than usual in his *Evening on the Prairie* (364); but his figures are less meaning; and the merit of the picture seems to lie in the light and shade, the red shirt, and the strength of the peculiar effects,—which, however, we suppose, are not from Nature, and do not remind us of Bonneville or Astoria.

Mr. Dobson's good works promise to be as numerous as those of Dorcas. He has this year another *Acts-deeds of Dorcas* (379), full of careful and admirable painting. Dorcas, orange-scarfed, stands in the centre of the picture, surrounded by Sisters of Mercy, the sick, the dying, the starving, and the fatherless. A Negro with a brown back, (well painted), and a fuzzy head, is trying on some things,—some tender-aged children are eying each other with innocent surprise, as they did last year,—and in the right-hand corner a handmaid of the widow is putting a cup to the lips of a sinking old man. The whole forms a beautiful allegorical picture, equal in power and finish, and pleasing throughout, with no daubed corners or slurred careless figures.

Mr. Frost's *Bacchante and Young Faun Dancing* (396) is gracefully drawn, and refined and poetical in expression;—Bacchantes not being generally supposed, like the bear of Tony Lumpkin's friend, to dance to "the genteeldest of tunes." The only thing we do not much like are those shuffly stockings, which would suit the performers of an Irish hornpipe on a cottage-floor. They may give abandonment, but that is conveyed with much purity of feeling in the face and in the curve of the body. There is such fine taste in the whole scene, that even if the nymph were not flushed and Cytherean, or the faun Puck-like and wanton, it would delight. How nicely the soft brown (the colour of a young filbert leaf) of the faun's skin enhances the melting bloom of the carnations in the nymph. Of course, when we think of Rubens's horse-play, with his mountains of rosy flesh, such playful, lady-like mirth as this is the statuesque of drawing-room *poscs plastiques*; but for-

getting that great roar of voices through the woods, where the brooks run red with the trampled vintage, with all the stamping of feet and clashing of cymbals, we are pleased here with a single flute note or so and a silvery chime, heard as through caves, in a spectral and dreamy remembrance of mythology, robbed of the fierce abandonment and wild allurements of vice, and grown into a mere well-drawn, delicately-coloured abstraction,—half a life-study and half a vision.—No living painter can surpass Mr. Frost in such little gems as *Wood Nymphs* (170): not that they are nymphs, but mere little pieces of tinted flesh, worth their weight in gold pieces,—finished like a miniature, but with no pedantry of the brush, no conceited ostentation of dull chuckling labour,—still less any of that impudent, contemptuous *bravura*—that bad money which talent passes off for current coin.

Mr. F. R. Pickersgill is a disappointing painter. He reminds us of the Coptic magician's servant, who, in his master's absence, got access to all his spells but one, and that one was the one that gave them full life. So his skeleton moved its bony jaws, and the brazen head rolled its eyes: but the one could not speak, and the other could not walk; so he learned no secret. So is it with Mr. Pickersgill: he uses colours with great witchery; his pencil with great taste; his figures with great skill: but there is an end. His personages want life-blood, and the one touch more that makes the whole world kin. They are costume figures—drapery holders—poetical vacuities; and one has no firm belief in their vitality or *bonâ fide* existence. They simper gracefully; they trip about with dimpled rosy backs, and quatern loaves and pint bottles of sherry, and are called Faith, Hope and Charity, or Mercy and Love, or Venetian ladies, or any pretty Southern name, effeminate, Italian, and soft-sounding. But yet they do not live in the imagination, and seem drawing-room ephemerides, destined for genteel people. Furniture smooth as French polish, clean, trim, and ornate.—*Britomart Unarming* (16) has nothing of Spenser's creation. Britomart is a pretty English girl, and has nothing of the stern, armed chastity, cold and saintlike as Diana.—*Christian conducted by Charity, Prudence, Piety, and Discretion into the Valley of Humiliation* (324) is exactly of the same class of thought, and would do for Spenser, if a quotation were attached to it. The Virtues pirouette and waltz round Christian, who bears it with becoming patience. In the former picture cherubs or cupids, not at all buoyant but rather heavy, are disarming Britomart.

Mr. A. Johnston gives us an empty picture, and pleases to call it *The Abdication of Mary Queen of Scots* (361). Mary is sitting at a table, with a very scolding face, listening to the stern bidding of the ferocious Lord Lindsey, the old noble that Scott describes so well in the same scene as Lochinvar. He is here made a brutal grey-browed moss-trooper, and not the bigotted old noble. With much firm painting, there is altogether a want of essential thought in the painting, which is but a bald sermon on the word "abdication."

Mr. G. Landseer's *Una* (499) is poetical, though cold and monotonous in colour; and the picture seems but another variation of 'The White Doe' of last year. Una has perhaps too much the character of a lady coming home from the Opera benighted in Regent's Park, with a pacific lion escaped from the Zoological Gardens asleep by her side, dreaming blandly about Buffon and Cuvier. We expect much from Mr. Landseer—and we hope he will consider it a compliment that we exact more in the way of study from him than we should seek in one less poetical and less promising.

Mr. W. H. Knight has seldom painted a better picture than *The Broken Window* (239). It is really very full of character, and requires some time to find out the whole story. The indignant, moralizing cobbler has just seized the real culprit, who is pointed out by an informer, indignant at the arrest of an innocent friend. The culprit, while loudly protesting his innocence, as all boys in plush travelling caps do, is dropping behind him the identical sling with which he wrought the evil.

In the corner skulks an accomplice, and a big cowardly companion, who is much distressed in mind by the harassing attacks of a rough terrier, which seems an ally of the cobbler. In the distance, by the broken window, which forms the front lattice of a picturesque gable-ended village street, stand a group of indignant gossips. A sympathizing girl and one or two neutral boys make an interesting picture, which tells its story well.

Mr. G. B. O'Neill, who painted last year the clever picture of 'The Obdurate Jurymen,' has this year an equally good picture, but a less characteristic subject. He calls it *A Hearty Welcome* (309). It is, in fact, merely the advent of a Weller-like country uncle. He is a jolly red-cheeked traveller, clad in a ponderous box-coat, and loaded with bundles, which kind friends are about to relieve him of. There is some humour in the complete complacency with which he persists in scraping his shoes before greeting any one, as a sort of religious ceremony and conclusion of his labours.

With evident talent, Mr. Herbert's (Jun.) *Don Quixote's first Impulse to lead the Life of a Knight-errant* (64) is a caricature. The face of the Don has no gentleness, no ideal of honour in it, no dream power, no immateriality. This is an epileptic man, half-crazed and much in debt, terribly ennuied, and decidedly bilious. It is not Spanish, nor does it smack of the seventeenth century.

Mrs. Ward's *Morning Lesson* (348), though not perhaps equal to her picture of last year in power, is superior to it—and to all her former works—in the delicacy of its sentiment. It represents a mother and child in an old-fashioned room, the details of which are effectively given.

Mr. H. O'Neill has thrown much pathos into his *Return of the Wanderer* (393). It represents a penitent who has found her way back to her native village, and is kneeling at her broken-hearted father's tomb. Mr. O'Neill leaves little to the imagination, and brings everything palpably and sharply to the surface; but he has invested his story with a deep interest, because the grief he depicts seems so hopeless, and the wound one that no balsam may soothe, no sympathy alleviate. The details are highly finished. The grass and flowers are careful, without being painful or photographic; and the colours, though rather hard, pleasing and well adjusted. The subject is worthy of Crabbe, and touches the heart that shudders to see penitence so unavailing and destiny so irreversible. Tears may wash out those letters on the tomb sooner than the winter's rains; but though they may water the flowers that spring from a father's heart, and distil through the ground till they reach even that withered body, they have no spell to bid the dead awake; and only death may now be the alleviation. The thought has great poetry, and is worthy of the highest painting.

A Vessel under conduct of an Angel, coming over the Waves with Spirits to Purgatory (682), is a dreamy picture by Mr. Woodington, full of white light and antique gymnastic figures. There is a poetical amenity about it all, and as it is not natural, may be supernatural. There is no strong purpose in the picture, and the figures seem all in a sort of galvanic play.

Summer Hill—Time of Charles II. (685), by Mr. Wingfield, is a rather coarse and hard imitation of Mr. Goodall, with little meaning or spirit, and yet is an improvement on the artist's former pictures. There is much want of taste in the picture, and the costume is used in an inexperienced and crude way. The sack which is introduced was rather an exception than a rule till at least 1680, and the Lely or Kneller dress had surely been more graceful and picturesque. Of the wigs, lace cravats, and embroidered coats too little is made, and the detail is slurred or forgotten. Where are elaborate ruffles at the wrist, or the ladies' hoods and commodes? Charles the Second's Court had at least a voluptuous elegance, but this scene might be a tawdry ally of Cremorne Gardens on the evening of a masquerade. With care and labour Mr. Wingfield would, however, we are sure, rank high in the ornamental school of painting.

Mr. F. S. Cary has a poor subject in *John Evelyn's First Meeting with Grinling Gibbons* (666),

yet he has treated it with some originality, but with extreme abandonment of brush. Gibbons is sitting carving at a crucifix in a sort of cool garden-house, surrounded by jars and shavings, and before a blocked-up window, festooned with cobwebs. Evelyn is entering at the door. The dress of Evelyn is a complete mistake, for he was a gentleman of family and education, and would never array himself like a Dutch peasant. Gibbons wears a beard, though beards were abandoned at the Restoration, and carves a crucifix, although the No Popery Riots were at their height at this period. With extreme carelessness, the picture is clever, and has several touches of nature. The jars of flowers by the side of the carver remind us pleasantly of the waving blossoms that hang in garlands at Chatsworth. A dead woodcock, his favourite triumph, should not have been omitted. The demand for crucifixes in England from 1660 to 1683 must have been rather too small to have given Gibbons much employment. He was found by Evelyn, if we remember rightly, in a room in the Belle Sauvage Yard, having put some carved wooden flowers in his window which shook as the coaches passed beneath.

Mr. Stirling has joined Mr. Phillip this year in aiming a blow at Presbyterianism. His *Congregation during Sermon-Time* (357) does not agree with Christopher North's description of the controversial and critical eagerness with which the old Calvinists listen to hard-headed arguments on the doctrine of election. The faces are many of them good, shrewd, and full of character,—but there is hardly any attempt at composition in the group, and the figures ramble over the picture.

Mr. Patten's *Venus and Cupid* (45) is a large piece of nudity, very like simple, undefied English nature, except in colour. Mr. Patten seems to be the last cultivator of this class of Art left to us in England,—a class which the conventions of the day are content to leave in the background.

Mr. Collinson's *Writing Lesson* (321) is too serious in expression for a subject so trifling. The face of the child, who is teaching the labourer in the green fustian jacket and highlows to write, is pleasing, and not devoid of expression.—Better still is Mr. Hardy's *Whiff after Dinner* (346), though the scene consists merely of an old man smoking.

Mr. Wyburd, though doing penance in the octagon dungeon, is more ambitious than usual in his *Lalla Rookh* (1401). It would not be easy to surpass the delicate beauty of his face or the polished finish of his gold kincobs and woven carpets. It is a pity he rests satisfied with such results as these mere inane faces, and does not try his excellent and skilful manipulation on loftier subjects. As the old adage goes, he can but make "a shaft or a bolt" of it. Ambitious failure would be better than such success as this.

In the same condemned cell is a picture of extreme Dutch delicacy of finish—the *Return of Olivia* (1385). Mr. Rossiter has, however, chosen rather too homely faces for the daughters; and their different characters are little marked either in dress or bearing.—A *Scene from Kenilworth* (689), by Mr. T. Morton, as far as subject goes, was not worth painting. Imagine a person selecting as an illustration of Shakspeare's *Tempest*, the first appearance of the boatswain, when he bids the sailors be yare. It is, however, full of clever painting.—Mr. Marks pursues his Shakspearian vein of humour in his *Slender's Courtship* (511), and has thrown an air of doting patronage into Shallow and of awkward amorosness into Slender, who seems intent on buttoning his glove, and is wonderfully gay in a puffy doublet of crimson satin. The Anne Page is scarcely smart or arch enough.—Mr. Russell's *Consolation* (234) contains an original thought. The scene is the courtyard of a prison; and a thin, pale hand is emerging from a grating to receive a flower that the gaoler's daughter is standing on tip-toe to place within its reach.

Among the young rivals of Mr. Webster, Mr. Emmerson stands high. His *Odd or Even* (639) is fresh and natural; the boy bending down, with his hand on his knee, is simple and unaffected, and the cottage scene is evidently from nature. There is

much promise in this picture, and we shall be surprised if Mr. Emerson, in a few years, does not stand high as a painter of domestic subjects and cottage interiors.

Mr. C. Rolt seems steadily advancing. His scene *From the Book of Job* (223),—hung out of sight,—is full of unobtrusive religious feeling and firm painting.

The President has another of his serene female heads, with Titianesque curtains, *Beatrice* (20), but these dove-like women are insipid, and would be dreadful in the live state at an evening party. We hope he will not allow his brush to content itself with such studies, but return to its calm, scriptural scenes, with their love, reliance, and repose.

The portraits are more numerous than ever, yet not more interesting:—sad monuments, for the most part, of mechanical taste, and the vanity and affectation of titles and riches. Mr. Ward this year condescends to portraiture. Mr. Boxall sweeps in his heads with his usual deep, glowing colour and juicy glistening brush, and still leaves the lower parts of his pictures unfinished, as if he had more sitters than he knew what to do with. Mr. Pickersgill is as thin and tinted as ever,—Mr. Grant as broad and free. Mr. Buckner brings his children,—Sir Watson Gordon his corporation dignitaries,—and Mr. Knight his clever friendly studies.

General Hearsey (137), the dashing Indian horseman, has given Mr. Ward a subject so pictorial as to have drawn his pencil for a time from sterner and grander work. The costume of the cavalry chief is remarkably brilliant, and the expression of the head is that of a man who is something beyond a mere partisan soldier. Mr. Boxall's *Hon. Georgina Copley* (26) is a beautiful face, frank and clear-eyed; with a certain nameless air of command and aristocratic birth. The tone is deep, and the colour rather rich than bright. There is no attempt to display touch or detail, but there is a masterly feeling of ease and power in the whole; while the modelling is bolder than in most of the lighter-coloured portraits. His other portraits are *Mrs. Coleridge* (76),—*A Portrait* (89),—*J. M. Rendel, Esq., F.R.S.* (342),—*The Lord Bishop of Mauritius* (362),—*Joseph Maberly, Esq.* (541),—and *The Hon. Charles Lyttelton* (662).—Mr. Rendel's head is vigorous, but seems a little askew and unusually large. In spite of its mannerism, there is a strong charm in the old-master effect of this deep glutinous colour, oily and viscid.

Mr. Sant, always the emperor of children, has this year three pictures, *The Churchill Family* (*Infant Children of the Duchess of Marlborough*), (119),—*The Fortune Teller* (378),—and *Eda* (638).—The second picture is an ambitious attempt to tell a new story on the old Reynolds theme; but it will not look like anything but two portraits and a makeweight. It is a singular thing, that in painting on a large scale the whole charm of Mr. Sant's colour—or the greater part of it, at least—seems to vanish. Not that the profile face of the girl, whose hand the crone is holding, is not beautiful; still less the merry blonde behind, who is full of coquettish wonder and delight, and listens with playful wit trembling in her eyes. 'Eda' is, however, the flower of the three; and is as pretty a little poem on childhood as we have seen since the 'Infant Samuel.' The innocence is not mere abstract innocence, but drawing-room innocence; and this cherub wears lace, and is not destined to float, a mere head and wings, in the cold air. The colour is mannered, but refined; and a peculiar taste is visible in every touch.

Mr. Grant is not in strength this year. His most interesting picture is *Sir Edwin Landseer, R.A.* (387),—his most awful, with its wall of canvas, *Capt. Emmet, Adjutant of the Worcestershire Yeomanry* (179). The "noble quadruped" is so tame that it reminds us of the carefully-worded advertisements to be seen any day in the *Times*,—"Wanted, a quiet horse, by an elderly Gentleman—with a silver tail." The gallant Captain's head is weak,—we mean in painting. Mr. Grant's other portraits are *Lady Geary* (155),—*John G. Lockhart, Esq.* (171),—*Sir Samuel Martin, Baron of the Exchequer* (180),—*The Lady*

Manners (220),—*Sir Peter Laurie* (328),—*The Rev. D. Hawkins, Provost of Oriel College, Oxford* (363).

Sir John Watson Gordon is as vigorous and effective as usual, and stands forward as the painter of the middle and commercial class, of shrewd business men and gnarled humorous provosts and aldermen. He paints simply in a clever matter-of-fact way, just the honest unelevated transcript of every-day people. His aldermen look aldermen, not Junius Brutuses, and his mayors are palpable mayors, without a tinge of the "unnamed demigod." His portraits this year are the *Right Hon. Lord Dunfermline* (74), *Joseph Robinson Pease, Esq., of Hessewood, East Yorkshire*, a capital honest likeness (148), *Col. Haldyard* (224), *The Right Hon. Sir W. Molesworth, Bart., M.P.* (281), *C. A. Frewen, Esq., M.P.* (380), *Colin Campbell, Esq., of Colgram* (414).

Mr. Pickersgill is, as usual, timid and tinted, and rather feeble than vigorous. His portraits are, however, numerous, and indicate an unfading popularity, being careful quiet likenesses, with features at least secured. His works this year are, *Sir James Emerson Tennent* (86), *Mrs. H. Coryndon Luxmore* (160), (very indifferent), *The Very Rev. Llewelyn Lewellin, Dean of St. David's and Principal of St. David's College, Lampeter* (214), (one of his best), *Sir Charles Young, Garter King of Arms* (325), *J. G. Teed, Esq. Q.C.* (369), *The late G. L. Roupell, M.D., Physician to St. Bartholomew's Hospital* (549), and more vigorous than the rest, *Dr. Cyrellin* (625).

Mr. Knight has no head quite so good as those speaking ones of last year, but his portraits are less flushed, and modelled with wonderful artistic feeling and ease. *The Rev. Thomas Carter, M.A., Fellow of Eton College* (215), seems dwelt upon with friendly care, and bears no trace of manufacturing rapidity; *Charles Hammersley, Esq.* (237) is equally good.

Mr. Desanges is not so poetical as usual this year, and his portraits are merely graceful portraits, without moonlight or any planetary phenomena. *His Mrs. Palk* (241), though the face is set, is pleasing, and the lace, a study for more hasty men. *Miss Thorold* (213) is equally successful.

Col. Sabine (455), by Mr. Pearce, is a very quiet, effective portrait, pleasing in colour, with its brown and blue, and fresh flesh colour. There is a quiet gentlemanly repose over the whole which is prepossessing; neither its finish nor its want of finish strikes the eye, and there is a unity in the effect.

Mr. Buckner has one clever portrait, *Mrs. Lionel Ames* (312), with an unmeaning conventional background of faded stage scenery.

In the crowd of great canvasses, we observe a promising portrait of *The Rev. John Clay, of Preston* (392), by Mr. Clay. The subject was a good one, and the artist has dealt with it lovingly. *A Portrait of a Lady* (73), from the same easel, is good in pose, and is exceedingly graceful.—A clever portrait of a boy, *Master F. L. Salisbury* (646), is by Mr. D. G. Blakiston.—*John Pile, Esq.* (483), by Mr. Andrews, has considerable strength.

Mr. Herbert's portrait of *Horace Vernet* (433) is a flat and eccentric production.—Mr. Richmond's *Sir H. Inglis* (159) is peculiarly interesting at this period, so soon after his lamented death.

FINE-ART GOSSIP.—Marlborough House and the Manchester School of Art appear to be on somewhat indifferent terms. At a late meeting in Manchester we are sorry to find some strong terms applied to the London institution; but so far as we can see the quarrel seems to be rather as to methods than principles; and we sincerely trust that those who are concerned will come to a friendly understanding. The school at Belfast has been closed with a remonstrance. Against these evidences of difficulty and danger to Art-education, we have to announce that a Government School of Art has been established at Southampton. Its establishment was originated and chiefly supported by a lady of the neighbourhood. Many of the pupils are Sappers

and Miners belonging to the Ordnance Survey Department in the above-mentioned town.

"There is a grievance," writes a Correspondent, "we poor artists are subject to that, I think, might be noticed by a line in your account of the Academy Exhibition. You are aware that it is usual if a painter thinks his picture requires explanation, or that the mind of the spectator should be put a little in tune with his work, that an effort to secure this be made through the medium of the Catalogue. I sent with my picture a quotation of four lines from a beautiful poem,—which I read, indeed, in the *Athenæum*. They were quite to the point; and the action, or rather the sentiment of the action, of the single figure of which my picture consists is not intelligible without them. I received just now a Catalogue of the Exhibition, and have the pleasure to find my picture is hung in a room that nobody goes into; but that in the Catalogue—which everybody sees—my quotation is reduced to two lines,—that, by this alteration, it ceases to be in the slightest degree explanatory or suggestive,—that it becomes, on the contrary, a pert and nonsensical question, which I am made to appear stupid enough to ask twice over. That the Academy should reject, or hang where they please, my pictures, is, of course, their right. I have never grumbled on that subject:—it has always appeared to me ridiculous to do so. But I do think they have no right to make it seem to a man's acquaintances that he has neither taste nor sense,—have no more right to alter—I will not say spoil—the description of his picture than they have to alter the picture itself. One feels also the injustice the more when, in glancing over the Catalogue, one sees so many descriptions, long, foolish, hackneyed and vulgar. R. M."

"May 15."

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—On FRIDAY NEXT, May 25, will be repeated Haydn's 'CREATION.' Vocalists: Madame Clara Novello, Mr. Sims Reeves, and Herr Formes. The Orchestra, the most extensive available in Exeter Hall, will consist of nearly 700 Performers.—Seats, 5s. and 10s. 6d. each, may be secured by immediate application at the Society's sole Office, 6 Room, within Exeter Hall.

MISS DOLBY and MR. LINDSAY SLOPER'S ANNUAL GRAND CONCERT will take place at ST. MARTIN'S HALL, on WEDNESDAY EVENING, to commence at Eight o'clock, June 13, when they will be assisted by Mdlle. Jenny Ney, Madame Rudersdorff, Miss Amy Dolby, Mr. Sims Reeves, Signor Belletti, M. Sainon, and M. Benedict. The Orchestra will be conducted by Mr. Alfred Mellon.—Stalls, 15s. each, and Reserved Seats, Half-a-Guinea each, to be had only of Messrs. Cramer & Co., 201, Regent Street; at Ebers's Library, Old Bond Street; of Miss Dolby, 2, Linde Street, Manchester Square; and of Mr. Lindsay Sloper, 7, Southwick Place, Hyde Park Square. Gallery Tickets, 5s. each, and Area Tickets, Half-a-Crown each, may be had at all the principal Music Warehouses and Libraries.

PHILHARMONIC SOCIETY.—The first act of the *Fifth Concert* was composed as follows:—

"Sinfonia in E flat, Mozart. Aria, 'Agitato,' Signor Belletti (1 Fuoruscito), Paer. Concerto in E minor, Piano-forte, Mr. C. Halle, Chopin. Aria, 'Marten aller arten,' Mdlle. Jenny Ney (Die Entführung aus dem Serail), Mozart. Overture, 'Tannhauser,' Wagner.

Herr Wagner makes no way with his public as a conductor. The *Sinfonia* of Mozart went worse than we ever heard it go. The violins were rarely together; the wind instruments were hardly able to hold out in the middle movement, with such caricatured slowness was that *andante con moto* taken,—and the *finale* was degraded into a confused romp, by a speed as excessive. That Chopin's *Concerto*, a work which is as delicate as it is difficult, pleased as it did, was owing to the exquisite playing of M. Halle, who carried it through;—supporting, not receiving support from, the orchestra. A finer display of execution and taste has rarely been heard. Neither did Herr Wagner condescend to assist Mdlle. Ney in her *bravura*; which, if well accompanied, might have produced a great effect, in spite of its *rococo* forms, thanks to her lovely voice and brilliant execution. It is fair to give currency to the plea which, we are told, is put forth,—to the import that Herr Wagner protested, when making his engagements, against taking charge of the vocal and of *solo* music, on the score of admitted incapacity. But how ill does such want of power assort with the consummate musical knowledge assumed by the pretension of conducting certain favourite works by heart! There can be nothing in either *concerto* or *bravura*

to tax the quickness or resource of a conductor in comparison with the difficulties, violence and incoherences of "the music of the future." Due pains had been bestowed by Herr Wagner on his own overture,—but the pains had been bestowed in vain, for never did new work making such a noise, and concerning which so much noise has been made, fall more dead on the ears of a callous and contemptuous public.

Though we have already spoken of this long-winded prelude in general terms, we must be permitted a few more minute remarks on a composition for which such high honours have been claimed. Our impression is, that the overture to 'Tannhauser' is one of the most curious pieces of patchwork ever passed off by self-delusion for a complete and significant creation. The first sixteen bars of the *andante maestoso* announce the solitary strain of real melody existing in the whole opera. This is the Pilgrim's chant, and is the half of a good tune in *triple tempo*,—which, however, seems to us no more ecclesiastic in style than the *notturno* in Mendelssohn's 'Midsummer Night's Dream.' The second part of the air is made up of those yawning chromatic progressions which seem Herr Wagner's only bridge from point to point. After it has been given once, comes the whole over again simply repeated with embroideries. In the *allegro* a rude imitation of Mendelssohn's fairy music may be detected, both at the opening of the movement and in the phrases from bars 8 to 12. To these succeeds a scramble, not leading into, so much as broken off by, the second subject. This is a hackneyed eight-bar phrase, the commonplace of which is not disguised by an accidental sharp and the omission of an interval. As the *allegro* proceeds, one or other of the above "notions" is repeated with small attempt at working out:—and the ear is thoroughly weary ere the point is reached where a busy figure for the violins, identical with one used in Cherubini's overture to 'Lodoiska,' dresses up the theme of the Pilgrim *andante*, which for the third time is presented in its integrity, with slight modifications of rhythm, none of harmony, and no *coda* by way of final climax or close. When it is stripped and sifted, Herr Wagner's creation may be likened, not to any real figure with its bone and muscle, but to a compound of one shapely feature with several tasteless fragments, smeared over with cement, but so flimsily that the paucity of good material is proved by the most superficial examination. Of Herr Wagner's instrumentation as ill balanced, ineffective, thin, and noisy, we have elsewhere recorded our judgment. Yet, this overture is almost the sole coherent instrumental work from his hand which he could produce in substantiation of his claim to be considered the composer of the future. In London, we repeat, he fails to make any converts; either as a conductor or composer.

Ere we take leave of the subject, we should state that the loss to the Philharmonic treasury this season is, already, understood to be very heavy. Some argument of the kind was imperatively required. There must be a root-and-branch reform of the whole Society, with its laws and its institutes. It will not do to have Directors who, because they are Directors, engage themselves as players in their own orchestra. The evasions and indirect influences—the right of incompetence to shuffle away obvious responsibilities, or to assume despotic power when some measure of folly or injustice is to be carried—the wholesale favouritism and wholesale antipathies with which the proceedings of the Directors are chargeable,—must come to an end, and speedily:—or the Philharmonic Society will cease to exist.

CONCERTS OF THE WEEK.—The attention claimed by our *Philharmonic Concerts*, in the present critical condition of the Society, which is gasping (as it were) betwixt life and death—and the space which must be apportioned to the new opera—render compression in other musical reports indispensable: compression implying no disrespect. We have thus merely a few lines at the service of the third meeting of the *Musical Union*,—at which Signor Bottesini re-appeared, and M. Halle took the pianoforte part in Dr. Spohr's *Trio*

in E minor. Three hearings of this composition prove entirely sufficient; though it may be presented at intervals to new audiences. Better performed it could not have been. Herr Molique played very finely.—Mozart's 'Requiem,' Beethoven's *Choral Fantasia* (with M. Billet as pianist), and the 'First Walpurgis Night,' made up the programme of Wednesday evening's concert at *St. Martin's Hall*. Our contemporaries state that the music went very well, that the last movement of the *Choral Fantasia* was *encored*, and that the Hall was crowded.—Besides the above, Mr. Cooper was to give a Quartett meeting,—and Signor and Madame Ferrari were to hold their concert on Wednesday evening.

ROYAL ITALIAN OPERA.—Increased acquaintance with 'Il Trovatore' brings out the good and bad points of Signor Verdi's music. The beginning of the second act, the concerted piece at its close, and the entire fourth act, are his best operatic music,—while the mannerism of his phrases, and the meagreness and brevity of his melodic inspirations, become more present to us as settled facts. There is perhaps greater care—certainly greater delicacy—in the orchestral portions of 'Il Trovatore' than in some of Signor Verdi's former works. The whole opera may be heard from time to time without repugnance, and the fourth act with pleasure—when it is given so well as at Covent Garden. Mdle. Ney proves equal to the music of the heroine's part. Her voice is displayed to far greater advantage in 'Il Trovatore' than it was in 'Fidelio.' A sweeter and more powerful *soprano* we have not often heard,—from D flat above the line to the D two octaves beneath, the tones are good and agreeable, and rarely marred by that hooting delivery which the German songstress generally is apt to mistake for the emphasis of passion. Mdle. Ney's execution, too, is voluble and neat, her shake is even; she is, perhaps, hardly definite enough in accent for modern Italian music; but allowance must be made, on the score of strangeness of the language: when, as in the case before us, nightly improvement is evident. As an actress, Mdle. Ney is careful—according to the good habit of German stage actors,—but nothing more.—Madame Viardot's *Azucena* is one of the most remarkable performances of its time. The savage, credulous, restless Spanish gipsy, strong in her instincts, but whose reason amounts to little beyond a few broken ideas of revenge, is in every word, look, and gesture. Nor has Covent Garden ever heard such singing as hers in this music. It lies thoroughly within the compass of her voice:—the middle portion of which has gained body and sweetness. Since Madame Pasta and Rubini left the stage, we have had nothing of higher vocal finish—nothing in dramatic utterance more true and beautiful than her delivery of the *andantino*, 'Si la stanchezza.' Signor Graziani, who is *Il Conte*,—and whose air, 'Il balen del suo sorriso,' is the favourite song in the opera,—ought to ripen into a great vocalist. Though he has no bad habits, he has many good ones to learn. Signor Tamberlik, who was hardly "up to the mark" on the first night of 'Il Trovatore,' was steadier, stronger, and more satisfactory this day week and on Tuesday, and gained ground with his audience as the opera proceeded. But his voice gives unwelcome evidence of wear and tear in its diminished resonance when he desires to use it *piano*. His passion for "bringing the house down" by his chest c is, we fear, beginning to tell its tale. Signor Tamberlik has time, however, and material enough to charm his public for many a day, if he will take warning ere it is too late; and this without any sacrifice of manly energy or alteration of his music.

It must suffice us simply to record the re-appearance of Signor Lablache in 'L'Elisir,' and of Signor Mario in 'I Puritani,' as having taken place.—Madame Grisi has, unwisely, we think, reconsidered her determination; and will appear for a few more "farewell" nights.

PRINCESS'S.—By the more recent commentators, 'Henry the Eighth' is regarded as one of the latest,

if not the last, of Shakspeare's plays;—by some the authorship is disputed, and certain passages only are admitted to show marks of the great poet's hand. All agree that it was intended for a court historical pageant rather than a dramatic work: an opinion which the want of unity and the serial variety of its scenes tend to confirm. It may be questioned, however, if such pageant would have been pursued, even in the days of Masques and Moralities, to the extent of making the poem it accompanied a secondary consideration. We can hardly conceive that the latter would have been "digested in its scenes" with such manifest care, merely to suffer comparative neglect in its performance. No such marvellous display as Mr. C. Kean has realized in his revival could have been originally purposed. Nothing can exceed the elaboration which this gentleman has bestowed on its accessories and illustrations. The sorrows of Queen Katharine in her retirement, in the palace of Bridewell, where she was visited by Wolsey and Campeius, as related by Cavendish—a scene, however, usually omitted in performance—is made the opportunity for exhibiting a curious design by Holbein for a chimney-piece;—the execution of Buckingham supplies occasion for Wynyrede's picture of King's Stairs, Westminster;—and the opening scene places before us the Old Palace Yard as painted by the same artist. Wherever, too, there is opportunity for a procession it is introduced. The gorgeous pageantries in Wolsey's Palace of York, masque, dance and music—the vision of angels visibly descending in the track of a sunbeam on the dying couch of poor Queen Katharine—the Coronation of Anne Boleyn—the panorama of views from London to Greenwich, copied from Wynyrede, on occasion of the baptism of the Princess Elizabeth—all consumed wide intervals of time, and separated, we think, all too much, the dramatic situations. Of one the omission altogether was compelled—the famous trial of Cranmer, and the interference of the king in his behalf;—for which, indeed, an Apology, not unneeded, was inserted in the play-bill. Its "addition would extend the representation beyond reasonable limits"; an indisputable statement, seeing that such representation lasted as it was until half-past twelve o'clock. In one respect these various spectacles harmonized, however, with the spirit of the action, which is all made up of the pomp and pride of circumstance. Its agents, too, are victims of the same "unspiritual god." There is a destiny at once controlling monarch and people, perplexing all moral relations, insulting all religious feelings; making a chaos, in fact, in order to the creation of a new cycle, and thus tumultuously introducing the great period of the Reformation. Wrong is done, but the sufferers complain not of the wrong-doers, each recognizing, as it were, the inevitable necessity. The principle of impending change overrides all. It is a season of revolution, and fortune rules in all spiritual places. In the midst of the sufferings, the faultless Katharine, both in her elevation and decline, is the type of greatness—true and just in her power, resigned, religious and forgiving in her fall. All the elements of a perfect majesty are in her combined, and she presents to the mind the very model of womanhood in her highest gifts and graces. Mrs. Kean, whose re-appearance on the stage must be welcome to every lover of the drama, exerted herself to the utmost to realize the portrait, and she presented it with much force, fervour and beauty. Through all the disadvantages of an inadequate *physique*, the purpose was apparent, the sublime ideal suggested. We have never seen Mr. Kean to more advantage than in *Wolsey*; it was a solemn and impressive image of heroic ambition. Mr. Walter Lacy as *Henry the Eighth* looked the character excellently. There was no exaggeration in his delineation of the bluff Harry, and yet a complete abandonment of manner. He had, too, the appearance of acting on conviction, and thinking he was right in his conduct, whatever the abuse of absolute power that it implied. Mr. Ryder, too, in the unfortunate *Buckingham* was grand and imposing. His first scene was marked with laudable care; and his final address to the spectators of his execution was a fine example of oratorical speak-

ing, and might be consulted as a lesson by those to whom eloquence is a mission. Miss Heath and Mrs. Winstanley were also meritorious as *Anne Boleyn* and the talkative old lady, her injudicious friend.

OLYMPIC.—A comic drama of more than ordinary merit was produced on Monday, entitled 'Still Waters run Deep,' written by Mr. Tom Taylor. It is one of those pieces so rarely met with, in which the structure is so well adapted to the subject; and the general tone of the dialogue is so ably sustained, that complete success is never for a moment doubtful. Moreover, it is thoroughly English in sentiments and manners, and most unexceptionable in its morality. A Lancashire man is the hero (Mr. Wigan)—a remarkably quiet, unostentatious person, newly married, and living with his father-in-law and wife's sister, *Mrs. Hector Sternhold* (Mrs. Melfort)—the latter a strong-minded woman, who rules the household. Under her influence, the husband's authority becomes gradually despised; and, at the opening of the play, the first anniversary of the wedding, his authority is evidently at zero. One *Capt. Hawksley* (Mr. G. Vining) has also established himself as a constant guest, who, we soon learn, is a speculator in shares, and has made some way in the wife's affections, by his dashing manners and romantic discourse, so much in contrast with those of plain *John Mildmay*—the husband. Meanwhile, he has paid his addresses to Mrs. Sternhold, who has induced her father, *Mr. Potter* (Mr. Emery), to traffic in some Galvanic company's shares, and otherwise imperilled her reputation by a correspondence with the Captain. Mildmay, by a little simple plain dealing, proves more than a match for these embarrassing complexities. He knows Hawksley to have been the forger of two bills, and is only waiting his time to complete the proofs of the fact. Armed at length with the latter, he confronts the adventurer in his office, charges him with the forgery of one of the bills, and extorts from him the price at par of the shares sold to Potter, and also the fatal letters written by the aunt,—in return for which the forged bill is committed to the flames. But the situation is not yet ended. Hawksley, once safe, as he considers, grows insolent, and demands a duel, or threatens a horse-whipping. Having been invited to the anniversary dinner, he resolves on being present, notwithstanding what has happened, and inflicting the meditated insult. Mildmay is prepared, and accepts the challenge on condition of the terms being equalized between skill and no skill, by the well-known expedient of selecting one of two pistols—one only being charged—from under the table-cloth. Hawksley declines the ordeal. Mildmay then declares him a felon, and an officer steps forward and arrests him for the second bill. It is needless to add, that after this exhibition of practical ability, Mildmay is treated with proper respect by the whole of his household.—The drama is in three acts. The situations to the end of the second act are most exciting; but from that point the dénouement was transparent. It was inevitably foreseen that it must turn upon the second forgery, which required, but did not secure, a second surprise. We have frequently said, that expectation is the preferable law for the legitimate drama; but the law must be consistently enforced. Up to the end of his second act, Mr. Taylor, by the most skilful reticence, had laid the grounds for a very telling surprise; and then, by adopting the less startling condition for his final scene, produced an anti-climax in the catastrophes somewhat injurious in its effect. Three characters in this drama were well played—Mr. Potter, a "pottering old gentleman," by Mr. Emery; Hawksley, by Mr. G. Vining; and Mildmay, by the manager himself. But the female parts were inefficiently filled. Mrs. Melfort supported that of the self-willed aunt with difficulty; and Miss Maskell, as the erring wife, was altogether wanting. The audience, however, appeared to be satisfied.

MUSICAL AND DRAMATIC GOSSIP.—Another odd advertisement has been put forth by Mr. Smith, of Drury Lane; from which, so far as we can under-

stand it, we gather that he has transferred the management of "the Royal Opera" from the hands of its late Directors into his own,—while announcing the continuance of M. and Madame Gassier's performances,—the engagement of Madame Arga and Signor Armandi,—a reduced scale of prices of admission,—and adding, that "in consequence of the great losses accruing from 'Free Admissions,' Mr. Smith is determined to discontinue the practice, and rely solely on the support of the public."

The Rev. Sir F. B. Ouseley has been appointed to the Professorship of Music at Oxford, vacated by the death of Sir H. R. Bishop. We have hitherto known this gentleman as an accomplished amateur; who the other day only took his degree in that very college, where he is now titular head of a branch of Art,—we say "titular," because it is perfectly true that such appointments have hitherto been mainly honorary. It is no less true, however, that the taste for music is increasing; and that the taste for honorary appointments is falling into discredit. Hence, without implying the most remote criticism on Sir F. Ouseley's attainments, the question naturally arises, how far the new Professor may be permitted by his clerical position,—how far he can be enabled by his present experience actively to sustain the duties of a Professorship,—supposing increased activity called for? Such a question is further suggested by our recollecting the new Oxford Professor as one of the three who recommended the Sydenham Palace Company to invest something like half-a-hundred thousand pounds in the monster organ, a recommendation luckily neglected. It may be hoped, that the memorial referred to is not a type of the new Professor's caution and wisdom in counsel; and that less ambitious and more practical efforts may mark his career. Meanwhile, it will be among the curious consequences of the ninety-one "Tracts for the Times" should a race of reverend artists and titled teachers arise in the English Church analogous to those Italian *abates* who taught counterpoint to composers theatrical and ecclesiastical,—who trained opera-singers and built organs,—and who, in fact, were so many working music-masters wearing cowl and cassock.

Among other musical arrivals for the season, are those of Madame Bockholtz-Falconi, and of *Mlle. Emilie Krall*, a songstress from Vienna.

The Town Council of Liverpool is wisely making a good place for a town-player, who is to be attached to the giant organ in St. George's Hall, and to exhibit the instrument at stated times for a liberal salary. This is as it should be; provided that a judicious selection is made of the best organist, wherever he can be found, without reference to church or chapel, connexion or coterie, the influence of any given builder, or of any other leading family. Such an appointment, if rightly carried out by the establishment of a truly great player in Liverpool, might render that town a school for organists,—and, besides affording educational facilities to many who are tempted by tradition to lose time, and to learn bad taste, by wandering away into Germany under the idea of studying there. Besides offering a point of attraction to strangers,—it might extend the general musical taste and quicken the sympathy of the amateurs, in the midst of whom the organ is built. We are informed that the instrument is, at last, all but completed; and wait with some curiosity to ascertain what its powers and capabilities prove to be. In too many of our large modern English organs, the result seems to have been decided by haphazard rather than by scientific experience.

The curiosities of Law as applied to Drama are "legion" in number—anything, however (if such playing with words may pass), rather than a "legion of honour." We observe that MM. Lévy, the theatrical publishers of Paris, have been endeavouring to persuade the *Civil Tribunal* of Paris to pronounce a judgment in favour of M. Lockroy, the dramatic author, as collaborator, and therefore part proprietor, of the new play '*La Conscience*,' which recently obtained great success at the *Odéon*. The plea was founded on the facts of M. Lockroy having remodelled the play "after it was written by M. Dumas," cutting it down from

fifteen *tableaux* to six, and having altered and modified it in rehearsal. So far all was straight enough;—but *Act the Second* of the trial introduced into it a new intrigue. The plaintiff appeared against himself, according to the contemporary from whom we quote:—

"In answer to all this, M. Lockroy represented that the real object of the action was not what it professed to be, but that it was to damage M. A. Dumas, against whom MM. Lévy entertained a certain pique, by stripping him of part of the merit of a success which was entirely his own. He then said that if he had really been a collaborator in the play, he should have been very glad to have claimed the honour, and enjoy the advantages of the position. But he declared that he did not consider himself, and could not be considered, a collaborator in it; inasmuch as, though it was true that he had, owing to M. Dumas's absence from Paris, made some condensations in the play, and had superintended the rehearsals, he had done so, not as a collaborator, but as a friend of the author. His co-operation in the play, he added, amounted, in fact, to nothing more than what is done by every director of a theatre for every piece that is brought out. Garrick, for example, had modified the plays of Shakespeare, but had never pretended to be the collaborator of the great English writer. The Tribunal decided that M. Lockroy's share in producing the play did not amount to what is called collaboration, and it therefore dismissed the demand of MM. Lévy with costs."

As furnishing matter for an extra act, not in the French version of this comical serious drama,—we beg to put in one or two "interpellations." How came it that no one who bore the conscience to tell the *Civil Tribunal* whence '*La Conscience*' came originally? We fancy, from two or three German plays. Did the idea of "boiling down" these into one drama originate with a well-known English dramatist then resident in Paris, or not?—and did he not suggest the measure to M. Lockroy, who acted on the suggestion? Something of the kind we have been told on direct authority; and if we have been told true, we have here another proof that in dramatic, as in other differences, Law can sometimes pronounce without cognizance of some feature important to the case.

As codicil to this odd story, we may call attention to the verdict of the Westminster Court of Common Pleas, May 10th, by which 28l. were recovered under the Dramatic Copyright Act, from a management at Liverpool, in favour of Mr. Morton, some of whose theatrical works had been there performed, without account having been duly rendered.

A Correspondent states, that one of the new operas which are to be produced in Naples during the late summer season has been commissioned from Signor Pappalardo,—who has more than once been mentioned in the *Athenæum* as one among the few men of promise left in a land of musical decay.

Among the foreign gossip of the *Gazette Musicale* is a mention of a Symphony, in three divisions, entitled '*The Resurrection*,' by M. F. Liek, which has been performed at Trieste with great success. At the close of both the first and the second parts of the Symphony, the composer was crowned in the enthusiastic foreign fashion.

MISCELLANEA

Artizans' Visits to Paris.—A circular has been addressed to the Mayors of Boroughs and the Superintending Registrars, by the Home Secretary, to the effect that Her Majesty's Government, being desirous of affording facilities to workmen for visiting the Industrial Exhibition in Paris, intend to grant them passports free of the usual fees. Lists of such workmen as wish for passports are to be forwarded from time to time to the Foreign Office, when passports, valid for one month, will be transmitted to the Mayors and Registrars, who have been requested to see that each passport is properly signed.

Marine Telegraph.—A letter from Hanover states that M. André Ruyssenaer, who established the submarine electric telegraph between Scheveningen, in Holland, and Orfordness, in England, is about to lay down another line from the coast of Hanover to England, having already obtained an authorization from the Hanoverian government to that effect.

TO CORRESPONDENTS.—A. M.—S. S.—M. C.—S. F.—H. C. L.—W. M.—received.

MR. CHURCHILL'S
PUBLICATIONS.

On the Influence of Education and TRAINING in PREVENTING DISEASES of the NERVOUS SYSTEM. By ROBERT D. CARTER, M.R.C.S. Fcap. 8vo. cloth, 6s.

The Diagnosis of Diseases of the BRAIN, SPINAL CORD, and their APPENDAGES. By J. RUSSELL REYNOLDS, M.D. 8vo. cloth, 8s.

On the Action of Medicines on the SYSTEM. By F. W. HEADLAND, M.B. B.A. F.L.S. Second Edition, with Additions. 8vo. cloth, 10s.

On Diseases of the Rectum. By T. D. CURLING, F.R.S., Surgeon to the London Hospital. Second Edition, 8vo. cloth, 5s.

Observations on the Life, Disease, and DEATH of JOHN HUNTER, in Elucidation of the Nature and Treatment of Gout and Angina Pectoris; being the Oration delivered before the Hunterian Society, by JOSEPH RIDGE, M.D., Fellow of the Royal College of Physicians, &c. 8vo. price 2s.

On the Mineral Waters of Homburg. By F. H. PRYTHORCH, M.D., Resident Physician at Homburg. Third Edition, 12mo. cloth, 2s. 6d.

On Indigestion and Certain Bilious DISORDERS often conjoined with it. By G. C. CHILD, M.D., Consulting Physician to the Westminster General Dispensary. Second Edition, 8vo. cloth, 6s.

Pathological and Surgical Observations; including an Essay on the Surgical Treatment of Hemorrhoidal Tumours. By HENRY LEE, F.R.C.S., Surgeon to the Lock Hospital. 8vo. cloth, with Plates, 7s. 6d.
"This work will add to the reputation which Mr. Lee has already acquired as an able and scientific surgeon."—*Lancet*.
"There is much novelty and sound sense in the views propounded. We would cordially recommend them to the notice of our readers."—*Half-Yearly Abstract of the Medical Sciences*.

On Near Sight, Aged Sight, IMPAIRED VISION, and the MEANS of ASSISTING SIGHT. With 31 Illustrations on Wood. By W. WHITE COOPER, F.R.C.S., Ophthalmic Surgeon to St. Mary's Hospital, and Senior Surgeon to the North London Eye Infirmary. Second Edition, fcap. 8vo. cloth, 7s. 6d.

On the Use of Creosote in SCORBUTIC CAMP DYSENTERY. By JOHN BRAMSTON WILMOT, M.D., Fellow of the Royal College of Physicians. Price One Shilling.

On Electro-Lithotritry; or, the Application of the Mechanical Force of the Electrical Discharge to the Disintegration of Stone in the Bladder. By GEORGE ROBINSON, M.D., Lecturer on the Principles and Practice of Medicine in the Newcastle-on-Tyne College of Practical Science. 4to. with Plate, 2s. 6d.

On Lateral Curvature of the Spine. By BERNARD E. BRODHURST, Assistant-Surgeon to the Royal Orthopædic Hospital. Post 8vo. cloth, with Plates, 3s.
"The book before us is divided into four chapters, comprising—1st, the causes; 2ndly, the symptoms; 3rdly, the pathological anatomy; and, 4thly, the treatment. It contains much interesting matter; and we can strongly recommend it to those of our readers desiring information on the subject on which it treats. A modified, and, as it appears to us, a much improved instrument, is described and figured in a series of illustrations, which must make the whole of its use perfectly plain to any one."
Medical Times and Gazette.

The Treatment of Obstinate Ulcers and CUTANEOUS ERUPTIONS on the LEG, WITHOUT CUTANEOUS REMEDY. By HENRY T. CHAPMAN, F.R.C.S., late Surgeon to the St. George's and St. James's Dispensary. Second Edition, price 3s. 6d.
"Of his method of treatment we entertain the highest opinion, on account of its cleanliness, facility of application, economy and soothing support. We have found it to answer admirably."
Dublin Quarterly Journal of Medical Science.

On Nervous Diseases, Liver and STOMACH COMPLAINTS, LOW SPIRITS, GENERAL DEBILITY, and DISEASES of WARM CLIMATES; the result of Thirty Years' Practice. By G. B. ROWE, M.D. Fourteenth Edition, fcap. 8vo. 2s. 6d.

MR. HEPWORTH
DIXON'S
HISTORICAL MEMOIRS.

I.
FIFTH EDITION.
JOHN HOWARD:
A CONTRIBUTION TO THE SOCIAL HISTORY OF ENGLAND IN THE EIGHTEENTH CENTURY.

"The adventures of Howard are recorded in a loving and energetic spirit. The reflections are just, often ingenious and eloquent, almost always striking. The book contains many satisfactory evidences of an independent and vigorous intellect."—*Examiner*.

II.
SECOND EDITION.
WILLIAM PENN:
AN HISTORICAL BIOGRAPHY.
Founded on Family and State Papers.

"Mr. Dixon's sketch of the Governor's life in his American dwelling is tempting and picturesque. His style is good and easy. There is life in his narrative and vigour in his descriptions."—*Edinburgh Review*.

III.
ROBERT BLAKE:
ADMIRAL AND GENERAL AT SEA.
Based on Family and State Papers.

"The subject is noble; and Mr. Dixon has treated it with rare vigour, spirit, and conscientiousness. The glorious victories won by Robert Blake are universally known; but to find out *how* they were won, and what sort of man achieved them, we must apply to the famous Republican Admiral's latest, best, and completest biographer. His narrative is not only historically valuable, but is terse, vivid, and dramatic in no ordinary degree. We especially like the manner in which the extraordinary events of Blake's period are interwoven with Blake's life; and the rigorous and masterly clearness of the descriptions of the sea-fights."—*Leader*.

IV.
THE LONDON PRISONS:
WITH SOME ACCOUNT OF THE MOST CELEBRATED PERSONS CONFINED IN THEM.

"The London Prisons' is an enchanting volume. It is a book no less of great principles, which all statesmen and philanthropists would do well to ponder."
Evangelical Magazine.

V.
THE FRENCH IN ENGLAND;
BOTH SIDES OF THE QUESTION ON BOTH SIDES OF THE CHANNEL.

"The author wields a skilful pen, and tells his story with true historical fervour. The circumstances were worthy of his powers. The sketch of Bonaparte's measures for the concentration of his troops, and those for rendering Boulogne and the other harbours on that coast capable of containing his powerful armaments, and the description of the various kinds of troops and vessels, are admirable. The power and force of despotism stand before us in their grandest and most imposing characters. But far nobler and more inspiring is the account of what was meanwhile going on upon our own shores. The description of all this is brilliant."—*Gentleman's Magazine*.

DEDICATED BY PERMISSION TO THE QUEEN.
Complete in 2 large vols. royal 8vo.
THE BOOK OF THE GARDEN.
By CHARLES MINTOSH.
The Volumes are sold separately, viz.:—
Vol. I. On the Formation of Gardens and Construction of Garden Edifices, &c. 776 pages, and 1,073 Engravings, 2l. 10s.
Vol. II. Practical Gardening. 868 pages, and 270 Engravings, 1l. 17s. 6d.
William Blackwood & Sons, Edinburgh and London.

CAPE OF GOOD HOPE ALMANAC and DIRECTORY for 1855; containing Address and Business of Inhabitants of Cape Town, Graham's Town, Port Elizabeth, &c.; also, the New Cape Parliament and Chronicle of the Session, List of Mining Companies; together with every Official Information regarding the entire Colony. In Two Parts. Price 7s. 6d.
To be had of Alagar & Street Colonial Newspaper, Agents, 11, Clement's-lane, Lombard-street.

BIBLE LIGHT FROM BIBLE LANDS. By the Rev. JOHN ANDERSON, Helensburg, Author of 'Wanderings in the Bible Lands'.
"Even well-read men will find their stores of information augmented by the perusal of this volume. When we set out on pilgrimage to the Bible Lands, we shall take good care, side by side with the Sacred Volume, to store our knapsack with Mr. Anderson's 'Wanderings' and his 'Bible Light from Bible Lands'."—*Scottish Guardian*.
Glasgow: W. Collins.

MAUD; and OTHER POEMS.
By ALFRED TENNYSON.
TENNYSON'S POEMS. Tenth Edition. Price 9s. cloth.
TENNYSON'S PRINCESS. Sixth Edition. Price 5s. cloth.
IN MEMORIAM. Sixth Edition. Price 6s. cloth.
Edward Moxon, Dover-street.

IMPORTANT TO ALL WHO WISH TO IMPROVE THEIR HANDWRITING.
Now ready, price 1s. 6d.
AN ESSAY on the ART of WRITING, and a COURSE of TWENTY LESSONS on PENMANSHIP. Designed to aid both the Teacher and the Home Student. London: Houlston & Stoneman.

Just published, price 7s. 6d. handsomely printed in demy 8vo.
A LIBRARY EDITION OF THE
CONFESSION of FAITH, the Larger and Shorter Catechisms, and the Scripture Proofs at large; together with the Sum of Saving Knowledge, &c. &c.
Printed by authority, at the University Press, for R. Seton Edinburgh; and Whittaker & Co. London.

THE NEW NOVELS.
TO BE HAD AT ALL THE LIBRARIES.

The HEIRESS of HAUGHTON.
By the AUTHOR of 'EMILIA WYNNDHAM,' 'TWO OLD MEN'S TALES,' &c. 3 vols.
"The numerous admirers of this delightful authoress will welcome with pleasure the announcement of a new novel from her pen. In her writings we have never to complain, as in the case of some novelists, that there is no one to arouse our interest, and that the denouement is awaited with indifference. There is always some one (and it is generally in the difficult character of heroine) to excite our sympathy and awake our attention. Her heroine in the present instance is a charming creation. We may congratulate the author on having added another to the list of her literary successes."—*Sun*.
"The authoress of these volumes has frequently exhibited her peculiar qualifications as a writer of fiction, and in every instance increased her reputation; but we were not prepared for the impetuous delineations which abound in 'The Heiress of Haughton,' nor inclined to believe that she would surpass her 'Emilia Wyndham,' the power of which made her reputation at once. Nevertheless, we can only do justice to the matter before us by saying that we consider this tale to be the best which the authoress has yet written."—*Messenger*.

EUSTACE CONYERS. By JAMES HANNAY, Esq. Author of 'Singleton Fontenoy,' 'Satire and Satirists,' &c. 3 vols.

THE SECRET MARRIAGE; or, Contrasts in Life. By Miss FANNY WILLIAMS. 3 vols.
"The Secret Marriage' is one of the best novels of the season." *Literary Gazette*.

CONSTANCE HERBERT. By MISS JEWSEBURY. 3 vols.

"Constance Herbert' is a poem in its beauty and its lofty purpose—a romance in its variety and fascination. The tale is deeply interesting."—*Athenæum*.

THE WIFE'S TRIALS.
"The Wife's Trials' deserves to be a successful novel, for it is one of the most spirited and amusing we have read for a long time. The interest is sustained without flagging to the very last page." *Athenæum*.
Also, in the Press, in 3 vols.

THE NEXT-DOOR NEIGHBOURS. By the AUTHOR of 'TEMPTATION,' &c.
HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

Just published, in 1 volume, imperial 4to. half-morocco, price 5*l*.
THE ENGINEER AND MACHINIST'S DRAWING-BOOK: A Complete Course of Instruction for the Practical Engineer; comprising Linear Drawing, Projections—Eccentric Curves—the various forms of Gearing—Recess-cutting Machinery—Sketching and Drawing from the Machine—Projection of Shadows—Tinting and Colouring—and Perspective. Illustrated by numerous Engravings on Wood and Steel, including select Details and complete Machines, forming a Progressive Series of Lessons in Drawing, and Examples of approved Construction, on the Basis of the Works of M. Le Blanc and M.M. Armengaud.
 Blackie & Son, Warwick-square, City, London; and Glasgow and Edinburgh.

Now ready, in 12mo. price, with Key, 3*s*. 6*d*.; or the Arithmetic separately, 2*s*. 6*d*. cloth, and Key, 1*s*. 6*d*.

EXERCISES IN ARITHMETIC, for the Use of Schools, Artisans, and others who have to pass an examination, either for promotion or to obtain a situation. By ROBERT RAWSON, Head Master of the Dockyard School, Portsmouth.

Whittaker & Co. Ave Maria-lane.

NEW ORIGINAL PLAY.

Just published, price 2*s*. 6*d*.; post free for 36 stamps.

 "We confidently recommend it, not only to beginners, but to more advanced students."—*Guernsey Comet*.
 "Great simplicity of method and completeness of execution."

London: Simpkin, Marshall & Co.

HARRIET MARTINEAU'S GUIDE TO THE ENGLISH LAKES.

Now ready,

A COMPLETE GUIDE TO THE ENGLISH LAKES. By HARRIET MARTINEAU. Beautifully Illustrated from Original Drawings made especially for the Work. Elevations of the Mountains, and a large and accurate Map, coloured Geologically, by JOHN RUTHER, to which are added an Account of the Flowering Plants, Ferns and Mosses of the District, and a Complete Directory. Demy 4to. extra cloth, gilt, 7*s*. 6*d*.; foolscap 8vo. 5*s*.

"Harriet Martineau has great enthusiasm for her subject, and her pen not only describes but invites. A close observer of nature, she is an artist with her pen, and depicts with a few simple touches of language the scene to which she guides and attracts the tourist."—*Westmorland Gazette*, May 4, 1855.

"The work has evidently been with her a labour of love. A more tastefully got-up volume we would not desire to see. The paper and the typography are all that they ought to be, and the illustrations are of a high order indeed."

Kendal Mercury, May 5, 1855.

and Westmorland will not be delighted to hear of the publication of a "Complete Guide to the English Lakes" from the pen of Harriet Martineau? This is a book which is not a guide merely, but a most intellectual and agreeable companion for the tourist."

Liverpool Mercury, May 4, 1855.

Also, just ready, by the same Authoress,

A GUIDE TO WINDERMERE, with Tours to the Neighbouring Lakes, and other interesting Places. With Map and Illustrations, in neat cover, 1*s*.

"How different is her (Harriet Martineau's) air of conscious but matter-of-course superiority from the efforts of ordinary mortals who write Guide Books! If she gives herself the airs of an authoress, the instructress sends down herself to be a delightful companion."—*Westmorland Gazette*.

London: Whittaker & Co. Windermere: John Garnett; and sold by all Booksellers.

PATRIOTIC FUND JOURNAL.—Now ready, in 1 vol. cloth elegant, price 4*s*. 6*d*.; beautifully illustrated. Deaths of General Officers, Cavalry Charge, Battle of Inkermann, Sorties, and all the Events relating to the War.

On the 21st inst. Second Edition, 2 vols. post 8vo. cloth, price 12*s*.

THE MEMOIRS OF JOSEPH JOHN GURNEY. By J. B. BRAITHWAITE.

In passing through the press a second edition of these volumes, various additions have been made, principally from letters and papers communicated to the editor since the first edition was published, which will, it is hoped, add to the usefulness of the work. With a view to prevent its bulk from being increased, some passages have been omitted, which, upon a careful review, appeared not materially to add to its general interest or value.

We thank the biographer most sincerely for the rich repast he has furnished to enlighten and spiritualise Christians of all denominations, and venture to hope that the Memoirs of Joseph John Gurney will become a Christian Classic."—*Evangelical Magazine*.

Mr. Braithwaite's volumes are ably written, and they are a valuable addition to a branch of our literature,—the Biographies of the Friends,—on which they who are best acquainted with the productions of the British press in the last two centuries set a high value."—*Eclectic Review*.

"Those who are best acquainted with the writings of J. J. Gurney will turn to these volumes with large expectations, and they will not be disappointed. They are rich in traces of the strong Christian wisdom which characterized the subject of them."—*British Quarterly*.

Norwich: Fletcher & Alexander. London: W. & F. G. Cash, 5, Bishopsgate Without, Dublin; J. McGlashan, Edinburgh; John Menzies.

On Saturday, June 9, will appear the First Number, price 2*d*.

THE ILLUSTRATED TIMES. A FULL-SIZE, FIRST-CLASS FAMILY NEWSPAPER, CONTAINING NEAREST FIRST-RATE ENGRAVINGS, AND THE ENTIRE NEWS OF THE WEEK.

The Repeal of the Newspaper Stamp Duties enables the Projectors of THE ILLUSTRATED TIMES to provide the Public with an ILLUSTRATED PAPER that shall combine the highest attainable excellence with extreme cheapness. Amongst its Literary Contributors will be found the names of writers of recognized eminence, and its Designers and Draughtsmen on Wood will include the greater number of the more distinguished members of the profession.

THE ILLUSTRATED TIMES will publish numerous Authentic Sketches from the Seat of War. Arrangements have been made with various Officers on board the Fleet to furnish Drawings of the Naval Operations in the Baltic; while, with regard to the Siege of Sebastopol, one Artist attached to the Paper is already in the Crimea, and a second, Mr. JULIAN PORTER, is on his way out. An Officer of rank—the Author of 'Views of Simla,' who holds a command in the Turkish Army at Eupatoria, has also kindly undertaken to furnish Sketches of all events of interest occurring in that quarter.

THE ILLUSTRATED TIMES has likewise secured regular Artistic Correspondents at Constantinople, Paris, Vienna, Berlin, New York, and other large Foreign Cities, and in the Chief Towns of Great Britain and Ireland.

Notwithstanding its extreme cheapness, the various arrangements of THE ILLUSTRATED TIMES have been made on a scale of liberality adequate to insure the utmost efficiency in every department. The Proprietors feel that, without indulging in any undue boasting, they can promise the Public an ILLUSTRATED NEWSPAPER inferior to no Paper in existence, and combining all the best features of the most highly-favoured journals, at one-third of the usual price; and they commit their undertaking with confidence to Public support, assured that in tens, and they trust hundreds of thousands of English Homes, THE ILLUSTRATED TIMES will be regarded, on its appearance week by week, in the light of a welcome visitor.

THE ILLUSTRATED TIMES will consist of Sixteen full-size Folio Pages, containing Forty-eight Columns of News, and from Fifteen to Twenty admirable Engravings of the chief events of the week, well printed on Paper of superior quality.

THE ILLUSTRATED TIMES,

(Stamped Copies to go Free by Post, Three-pence.) Will be Supplied to Order by every News-vendor, Bookseller, and Periodical Dealer in the Kingdom, or be sent Free, direct from the Office, for Three Months, for 3*s*. 3*d*. paid in advance.

OFFICE, 149, FLEET-STREET, LONDON.

By the Rev. JAMES INMAN, D.D.
Late Professor at the Royal Naval College, Portsmouth.
Rivingtons, Waterloo-place.

FRENCH IN ONE VOLUME.
Just published, a New and Improved Edition, price 6s.

THE COMPLETE FRENCH CLASS-BOOK; or, Grammatical and Idiomatical French Manual; with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and original plan. By ALFRED HAVET, French Master in the Glasgow Athenæum, &c.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.
"One delights to luxuriate among its ample pages, replete as they are with excellent and clearly-arranged matter, explanatory and illustrative of the French language."—*Scottish Educational Journal*.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French Manuals yet published in this country. The new features that it possesses are chiefly that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language."—*The Educational Examiner*.

London: Dulau & Co.; W. Allan.

THE SCIENCE OF LIFE; or, **How to Live** and What to Live for: with ample Rules for Diet, Regimen, and Self-Management; together with Instructions for securing health, longevity, and that sterling happiness only attainable through the judicious observance of a well-regulated course of life. By a PHYSICIAN.—London: Piper Brothers & Co. 23, Paternoster-row; Hanway, 63, Oxford-street; Mann, 39, Cornhill; and all Booksellers.

BOOKBINDING.—W. HOLMES, Practical Bookbinder, 195, Oxford-street, London. Books bound in Morocco, Russia, or Calico, plain and elegant, on the lowest and most durable system, waited upon with patterns. Estimates given for large or small Libraries.—Address, 195, Oxford-street.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.
"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."
"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."
Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

THE NEW COLLODION, manufactured by BLAND & LONG, 153, Fleet-street, London, will bear comparison with any other preparation offered to Photographers. Price 9d. per oz. Ross, Featherstone-buildings, Holborn; and at the Photographic Institution, Bond-st.

*** Catalogues may be had on application.

BERDOE'S SPRING OVER-COATS and CAPES, rendered (without extra charge, or confining perspiration) thoroughly impervious to rain, a fact established beyond contradiction by ten years' extensive trial, superseding unhealthy air-tight materials. A very large stock of superior materials, intended not merely for rainy weather, but general use.—CAPES, 30s. to 40s.; COATS, 40s. to 50s.

W. BERDOE, 96, New Bond-street, and 69, Cornhill (only).

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer, Mr. WHITE, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c. For VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price, from 7s. 6d. to 16s. each; postage 6d.

MANUFACTORY, 228, PICCADILLY, LONDON.

PHOTOGRAPHIC CHEMICALS, APPARATUS, and LENSES.

R. W. THOMAS, CHEMIST, &c., 10, PALL MALL,

SOLE MAKER OF THE XYLO-IODIDE OF SILVER,

AND
MANUFACTURER OF PURE PHOTOGRAPHIC CHEMICALS AND APPARATUS.

In the APPARATUS DEPARTMENT of this Establishment every kind of first-class Photographic Apparatus may be seen, including—

CAMERAS, folding and rigid, of superior construction.

Folding and other **STANDS**, of the best make.

GLASS BATHS, arranged for carrying the Silver Solution, thus dispensing with the use of a bottle and funnel.

GUTTA-PERCHA BATHS, mounted, to carry the Silver Solution for Glass Plates, up to 15 by 12 inches.

Jointed LEVELLING-STANDS and SPIRIT-LEVELS.

COLLODION PLATE-HOLDERS, for preparing large plates with facility. Pneumatic, ditto, **PLATE-CLEANERS.**

COLLODION GLASSES.

A Choice Collection of **PASSEPARTOUTES**, made expressly for this house, from original patterns.

Albumenized and other **PAPERS**, French and English.

A great variety of Glass, Porcelain, and Gutta-Percha **DISHES.**

Also, a large assortment of **ROSS'S Portrait and Landscape LENSES.**

PHOTOGRAPHY ON PAPER.

Every requisite for practising the Calotype process may also be seen in the Apparatus room, including Buckle's Brushes, Shadow Glass Dishes for developing negatives, with case and covers, Deep Porcelain Dishes, for Washing the Iodized Paper, &c. &c.

An excellent Negative Paper, well adapted for Iodizing, after the method followed and recommended by Mr. Sutton, price 4s. per quire, or 3s. 10s. per ream, 19 by 15.

N.B. The stock (50 reams) has now been kept two years. This paper may also be had ready iodized.

XYLO-IODIDE OF SILVER.

This important photographic preparation is exclusively used at all the Photographic Establishments. Its superiority is universally acknowledged. Testimonials from the best photographers and principal scientific men of the day warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action.

In all cases where a quantity is required, the two solutions may be had at wholesale price in separate bottles; in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each bottle is stamped with a red label, bearing my name and address,

RICHARD W. THOMAS, CHEMIST,
10, PALL MALL,
to counterfeit which is felony.

NITRATE OF SILVER BATH for the above preparation may be always obtained of R. W. THOMAS, ready made, at a cost little more than the price of ingredients used.

CRYSTAL VARNISH.

PREPARED FROM THE FINEST AMBER.

This valuable Varnish, for protecting Negative Pictures, does not require the application of any heat to the plate. The coating will be found free from stickiness, hard, and transparent. It dries immediately.

HYPO-COLOURING BATH.

FOR RENDERING THE POSITIVES ON PAPER DARK AND RICH IN COLOUR.

CYANOGEN SOAP.

FOR REMOVING ALL KINDS OF PHOTOGRAPHIC STAINS.

The genuine is made only by the inventor, and is secured with a red label, bearing this signature and address,

RICHARD W. THOMAS, CHEMIST,

No. 10, PALL MALL,

Manufacturer of Pure Photographic Chemicals and Apparatus.

And may be procured of all respectable Chemists, in pots, at 1s., 2s., and 3s. 6d. each, through Messrs. EDWARDS, 67, St. Paul's Churchyard; and Messrs. BARCLAY & Co., 95, Farringdon-street, Wholesale Agents.

GREAT TRUNK RAILWAY COMPANY
OF CANADA.—NOTICE IS HEREBY GIVEN that a Call of 2s. 6d. per Share on each and every Share of the A Series of the Shares of this Company has been made, and will be due and payable on Monday, the 15th day of June, 1855.
A Call of 10d. will also be due and payable on each of the Certificates exchangeable for Company's Debentures; and 10d. on each of the Certificates exchangeable for Debentures of the Province of Canada.

Six per Cent. Interest will be charged on the Calls so long as they remain in arrear.
A Call Letter will be sent to each Shareholder for the payment of the Call on his Shares. The Debenture Certificates must be presented at the Bankers, in order that the payment of the Call may be marked upon them.
Holders have the option of paying up in full on their Shares and Debentures.

Interest at the rate of six per cent. per annum is paid on all sums received in advance of Calls either on Shares or Debentures.
All payments to be made at the Banking House of Messrs. Glyn, Mills & Co., 67, Lombard-street.

Offices of the Company, By order of the Board,
21, Old Broad-street, WILLIAM CHAPMAN, Sec.
London, May 15, 1855.

LAW LIFE ASSURANCE SOCIETY,
Fleet-street, London, May 10, 1855.

NOTICE is hereby given, that a SPECIAL GENERAL MEETING of the Proprietors of this Society will be held at the Office, Fleet-street, London, on FRIDAY, the 8th day of June next, at 12 o'clock at noon precisely, for the purpose of declaring a division of the Surplus of the ASSURANCE FUND of the Society in respect of the seven years ending on the 31st of December last. And Notice is hereby further given, that a SECOND SPECIAL GENERAL MEETING will be held at the like hour and place, on the following Friday, the 13th day of June, for the purpose of confirming the resolution which shall have been agreed to at such first Meeting, in pursuance of the provisions contained in the Deed of Settlement. And Notice is hereby further given, that any person who shall have been assured by the Society for two whole years may, on the production of his Policy and of the last receipt for the premium thereon, be present at such Meeting. At each of the said Meetings the chair will be taken at 12 o'clock precisely.

By Order of the Directors,
WILLIAM SAMUEL DOWNES, Actuary.

FIFTH DIVISION OF PROFITS

to be declared in October following, although only ONE YEAR'S Premium may have been received.

April, 1855. W. P. CLIREHUGH, Secretary.

LONDON LIFE ASSOCIATION,

Instituted 1806,
OFFICE, 81, KING WILLIAM-STREET.

President—Charles Franks, Esq.

Vice-President—John Benjamin Heath, Esq.

THIS Society is essentially one of Mutual Assurance, in which the Premiums of its Members are reduced after seven years.

The rate of reduction of the Premiums for the present year will be 70 per cent., leaving less than one-third of the original Premium to be paid.

The Society also undertakes other descriptions of Assurance, in which the Assured do not become Members, and having ceased to allow any commission to Agents, the Society has been enabled to reduce the Premiums for this class of Assurances to the following very low rates:—

Annual Premiums for the Assurance of £100.

Age.	£. s. d.	Age.	£. s. d.	Age.	£. s. d.
20	1 13 7	35	2 7 6	50	4 1 2
25	1 17 0	40	2 15 5	55	5 1 0
30	2 1 5	45	3 6 0	60	6 5 10

The Court of Directors are authorized by the Deed of Settlement to advance money on the security of Policies in this Association.

EDWARD DOCKER, Sec.

MICABLE LIFE ASSURANCE SOCIETY,
50, Fleet-street, London.
Incorporated by Charter of Queen Anne, A.D. 1706, and empowered by special Acts of Parliament, 8 Victoria, cap. viii. and 17 Victoria cap. xii.

Directors.

Francis George Abbott, Esq.
Benjamin John Armstrong, Esq.
John Baker, Esq.
Richard Holmes Goote, Esq.
Charles Fildes, Esq.
Mr. Sergeant Merewether.
Physician—Francis Burt, M.D.
Theophilus Thompson, M.D. F.R.S.
Solicitor—Charles Rivington, Esq. Fenchurch-buildings.
Bankers—Messrs. Goulings & Sharpe, Fleet-street.

This Society has been established a century and a half, and is the oldest Life Assurance Institution in existence. Its principles are essentially those of Mutual Assurance, and the whole of the profits are divided among the Members.

Assurances are granted, if desired, without participation in Profits, at reduced rates of Premium, and upon every contingency depending on human life. No charge is made for Policy Stamps.

The following is a specimen of the Annual Premiums required to assure 100l. for life on a single life.

Age.	With Profits.	Without Profits.	Age.	With Profits.	Without Profits.
15	£1 15 3	£1 11 9	40	£3 5 0	£2 18 6
20	1 19 7	1 15 8	45	3 15 9	3 8 2
25	2 4 2	1 19 9	50	4 9 9	4 0 9
30	2 9 9	2 4 9	55	5 8 9	4 17 10
35	2 16 10	2 11 2	60	6 15 0	6 1 6

The Directors are empowered to lend money upon Mortgage of Freehold Estates, Annuities, Life Interests, and other approved securities.

Prospectuses and every information may be obtained at the Office.
HENRY THOS. THOMSON, Registrar.

George Keys, Esq. Secretary.
Samuel Brown, Esq. Actuary.

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to future Insurers Four-fifths of the Profits, with Quinquennial Division, or a Low Rate of Premium, without participation of Profits.

The next division of Profits will be declared in June, 1855, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the Profits.

At the several past Divisions of Profits made by this Company, the Reversionary Bonuses added to the Policies from One-Half the Profits amounted, on an average of the different ages, to about One per Cent. per Annum on the sums insured, and the total Bonuses added at the four Septennial Divisions exceeded 770,000l.

FOREIGN RISKS.—The Extra Premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their Lives at the Tabular Premiums may have their Lives insured at Extra Premiums.

LOANS granted on life policies to the extent of their values, provided such policies shall have been effected a sufficient time to have attained in each case a year and a day.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

Medical Fees paid by the Company, and no charge will be made for Policy Stamps.

FIRE DEPARTMENT.—Insurances effected upon every description of property at the usual rates.

Losses caused by Explosion of Gas are admitted by this Company.

EAGLE INSURANCE COMPANY,
3, CRESCENT, New Bridge-street, Blackfriars, London.

Directors.

THOMAS DEVAS, Esq. Chairman.
JOSHUA LOCKWOOD, Esq. Deputy-Chairman.
Charles Bischoff, Esq.
Thomas Boddington, Esq.
Nathaniel Gould, Esq.
Robert Alex. Gray, Esq.
Chas. Thos. Holcombe, Esq.

Actuary and Secretary.

CHARLES JELICOE, Esq.
The business of the Company comprises Assurances on Lives and Survivorships, the Purchase of Life Interests, the sale and purchase of contingent and deferred Annuities, Loans of Money on Mortgage, &c.

This Company was established in 1807, is empowered by the Act of Parliament 53 Geo. III., and regulated by Deed enrolled in the High Court of Chancery.

The Company was originally a strictly Proprietary one. The Assured now participate quinquennially in four-fifths of the amount to be divided.

To the present time (1854) the Assured have received from the Company, in satisfaction of their claims, upwards of 1,480,000l.

The amount at present assured is 3,000,000l. nearly, and the income of the Company is about 130,000l. per annum.

At the last Division of Surplus, about 120,000l. was added to the sums assured under Policies for the whole term of Life.

The lives assured are permitted, in time of peace, without extra charge, to reside in any country (Australia and California excepted) north of 33 degrees north latitude, or south of 33 degrees south latitude, or to pass by sea (not being seafaring persons by profession) between any places lying in the same hemisphere, and not within those limits.

Assurances effected by persons on their own lives are not rendered void in the event of death occurring by suicide, duelling, or the hands of justice, unless such death take place within one year from the date of the Policy.

All Policy Stamps and Medical Fees are now paid by the Company.

The Annual Reports of the Company's state and progress, Prospectuses and Forms, may be had, or will be sent, post free, on application at the Office, or to any of the Company's Agents.

THE HOUSEHOLDER'S ASSURANCE COMPANY, Adam-street, Adolph.

R. HODSON, Secretary.

See Prospectus.

PELICAN LIFE INSURANCE COMPANY,
ESTABLISHED in 1797,

DURABILITY OF GUTTA PERCHA
TUBING.—Many inquiries having been made as to the
durability of Gutta Percha Tubing, the Gutta Percha Company
have pleasure in giving publicity to the following letters:—FROM
SIR RAYMOND JARVIS, Bart., VENI NOR, ISLE OF WIGHT.
—Second Testimonial.—“March 10th, 1862.—In reply to your letter,
received this morning, respecting the Gutta Percha Tubing for
Pump Service, I can state, with much satisfaction, it answers per-
fectly. Many Builders, and other persons, have lately examined it,
and there is not the least apparent difference since the first
laying down, now several years; and I am informed that it is to
be adopted generally in the houses that are being erected here.”
—N.B. From this Testimonial it will be seen that the GUTTA
PERCHA TUBING OF THE ISLE OF WIGHT has no effect on
Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTERS,

IMPORTANT TO INVALIDS.—The delicious
GERMAN MILK LOAVES, manufactured by P. McLachlan,
14, Giltspur-street, are well known as an article of diet for the
invalid. They are highly nutritious, and at the same time easy
of digestion. Only to be had genuine at 141,
Holborn-bars, and 6, Birch-lane, Cornhill.

HARVEY'S SAUCE.—The admirers of this
celebrated Fish-Sauce are particularly requested to observe,
that none is genuine but that which bears the name of WILLIAM
LAZENBY, and the back of each bottle in addition to the front
label used so many years, and signed ELIZABETH LAZENBY,
6, Edwards-street, Portman-square, London.

SCHWEPPE'S SODA, POTASS, and
MAGNESIA WATERS, and Aerated Lemonade, continue
to be manufactured upon the largest scale at their several estab-
lishments in London, Liverpool, Bristol, &c. The cele-
brity of these well known waters, and the high and uni-
versally command, are evidences that their original superi-
or quality over all others is well sustained. Every bottle is pro-
tected by a label, with the name of their firm, without which
none is genuine, and it may be had of nearly all respectable
Chemists throughout the Kingdom. Sole Importers of the German
Solter Waters, direct from the springs, as for the last thirty
years—51, Berners-street, London.

**TRELOAR'S COCOA-NUT FIBRE MANU-
FACTURES** consist of Matting, Door Mats, Mattresses, Has-
socks, Brushes, &c., and are distinguished by superiority and
excellence of workmanship, combined with moderate charges.
Catalogues, containing prices and every particular, free by post.

Patterns, at prices from 10s. to 101.
172, New Bond-street, London.

DINNEFORD'S PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent
of the Medical Profession as an excellent remedy for Acidity,
Heartburn, Headache, Gout, and indigestion. As a Mild Aperient
it is admirably adapted for delicate Females, particularly during
Pregnancy; and it prevents the Food of Infants from turning sour
during digestion. Combined with the ACIDULATED LEMON
SYRUP, it forms an Effervescent Aperient Draught, which is
highly agreeable and efficacious.—Prepared by DINNEFORD &
Co., Dispensing Chemists, and General Agents for the improved
Horse Hair Gloves and Belts, 172, New Bond-street, London; and
sold by all respectable Chemists throughout the Empire.

VIOLETS.
H. BREIDENBACH, Distiller of Flowers
and Eau de Cologne to the Queen, has now in great per-
fection several EXTRACTS of that favourite flower the WOOD
VIOLET. It has a lasting odour, and will not stain the hand-
kerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet
Powder, and several toilet preparations of the same flower equally
fragrant.
137, N. New Bond-street, facing Redmayne's.

MISS KIRBY, 23, Mortimer-street, Caven-
dish-square, having received numerous orders for her
EMULSION POMADE for RESTORING the HAIR, has
appointed the following Agents:—Forster, 52, and Barton, 77,
King's-road, Brighton; Savory & Moore, High-street, Chelten-
ham; Wells, Snaragat-street, Dover; Chater, Chemist, Watford;
Morris, 23, High-street, Kensington; Davies, Chemist, Bridge-
street, Row, Chelsea; Hallows, 31, High-street, Islington; Bl. Bou-
gall, 174, Regent-street; Adolphus, 185, Oxford-street; and Barclay,
Farringdon-street.

THE TOILET OF BEAUTY furnishes innu-
merable proofs of the high estimation in which GOWLAND'S
LOTION is held by the most distinguished possessors of brilliant
complexions. This elegant preparation comprehends the preser-
vation of the complexion, both from the effects of cutaneous
malady and the operation of variable temperature, by refreshing
its delicacy and preserving the brightest tints with which beauty
is adorned. “Robert Shaw, London,” is in white letters on the
government stamp, without which none are genuine.—Prices 2s. 9d.
and 5s. 6d.; quarts, 8s. 6d. Sold by Perfumers and Chemists.

OLDRIDGE'S BALM OF COLUMBIA pre-
vents the Hair from turning Grey and from falling off.—
Full instruction for use with each bottle, at 3s. 6d., 6s., and 11s.
31, Wellington-street North, Strand.

TO LADIES.

ROWLANDS' KALYDOR, an Oriental Botani-
cal Preparation for IMPROVING and BEAUTIFYING
the COMPLEXION. Eradicates CUTANEOUS DEFECTS and
DISCOLORATIONS, and renders the SKIN SOFT, FAIR, and
BLOOMING. It obviates all the effects of Climate on the skin,
whether with reference to cold and inclemency, or intense solar
heat, and affords immediate relief in cases of sunburn, stings of
insects, or incidental inflammation. Gentleman and ladies shaving will
appreciate its softening and ameliorating properties.
Price 4s. 6d. and 8s. 6d. per bottle.

CAUTION.—The words ROWLANDS' KALYDOR are on the
wrapper of each bottle, and their signature, A. ROWLAND
& SONS, 20, HATTON-GARDEN, London, in red ink, at foot. Sold by
them, and by Chemists and Perfumers.

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.?—No other compound for the Hair has
maintained such an enduring celebrity as EMILY DEAN'S
CRINELINE. It is a guaranteed and productive Whiskers, Mous-
tachios, eyebrows, &c. in a few weeks, and restore the hair in
baldness, from whatever cause, strengthen it when weak, prevent
its falling off, and effectually check greyness in all its stages. Price
3s. per Package (elegantly perfumed), sent post free on receipt of
24 penny postage stamps, by MISS DEAN, 37A, Manchester-street,
Gray's Inn-road, London. Sold by every Chemist in the world.
“In one fortnight it produced a beautiful set of moustachios,” H.
Atkins.—“It has prevented my hair falling off,” J. Hickson.—“It
has quite checked the greyness that was coming on,” Mrs. Elder.
Beware of imitations under closely similar names.

METCALFE & CO.'S NEW PATTERN
TOOTH BRUSH & PENETRATING HAIR BRUSHES.
—The Tooth Brush has the important advantage of searching
thoroughly into the divisions of the Teeth, and is famous for the
ease and regularity with which it cleanses and polishes the
teeth, without the least pain. Penetrating Hair Brushes, with the
durable unbleached Russian bristles. Flesh Brushes of improved
graduated and powerful friction. Velvet Brushes, which act in
the most successful manner. Smyrna Brushes.—By means of
direct importations, Metcalfe & Co. are enabled to secure to their
customers the luxury of a Genuine Smyrna. Spoons, only at
METCALFE, BINGLEY & CO.'S Sole Establishment, 130B,
Oxford-street, one door from Holles-street.

Caution.—Beware of the words “From Metcalfe's,” adopted by
some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DR. DE JONGH'S
LIGHT BROWN COD LIVER OIL.

This OIL, long known, extensively prescribed, and highly ap-
preciated on the Continent, has now, in consequence of its proved
superior power and efficacy, acquired the general and entire con-
fidence of the medical profession in this country. It is of the purest
and finest quality, free from admixture and adulteration, or the
least repulsive and nauseous matter, and is easily after the use of
the pale Oil of the coarse brown Oil commonly sold, though totally
unfit for medicinal use. It is as low in price per ounce as any
other genuine Cod Liver Oil, whilst its regular and speedy effects
render it incalculably cheaper. Medical and scientific testimonials
of the highest character delivered by Smyrna, Spence, only at
METCALFE, BINGLEY & CO.'S Sole Establishment, 130B,
Oxford-street, one door from Holles-street.

RUPTURES EFFECTUALLY CURED
WITHOUT A TRUSS!—All sufferers from this alarming
complaint are earnestly invited to consult with Dr. LESLIE,
as he guarantees them relief in every case. His remedy has been
successful in curing thousands of persons during the last twelve
years, and is applicable to every kind of single and double Rup-
ture, however bad or long-standing, in male or female of any age,
causing no confinement or inconvenience in its use whatever. Sent
post free to any part of the world, with full instructions for use
on receipt of 7s. 6d. in postage stamps, or post-office order, pay-
able at the General Post-office, to Dr. Herbert Leslie, 37A, Man-
chester-street, Gray's Inn-road, London.—At home daily (except
Sunday) from 11 till 4 o'clock. A Pamphlet of Testimonials, cases,
&c. sent post free on receipt of one postage stamp.

SPRING MEDICINE of GREAT EFFICACY.
—KAYE'S WORSDELL'S PILLS thoroughly purify the
blood, and promote the healthy action of the liver, stomach, and
bowels.—Sold Every where, 1s. 1d., 2s. 9d., and 4s. 6d. Wholesale
Depôt, 22, Broad-street, London.

A LIFE-GUARDSMAN (one of the Heroes of
Waterloo) CURED OF RHEUMATISM by HOLLOWAY'S
OINTMENT and PILLS.—Mr. Thomas Brunton, landlord of the
Waterloo Tavern, Coatham, Yorkshire, was afflicted for many
months with rheumatism and rheumatic gout; his legs were
dreadfully painful, and disfigured with colours of every hue,
frightful to behold. For ten weeks he was wholly unable to walk;
the treatment he received from several medical men not only
failed to do him any good, but left him, in fact, in a considerably
worse condition than before he had recourse to the Holloway's
Pills and Ointment were used. He was, however, by their sole
means, he has been completely cured and restored to health and
strength.—Sold by all Druggists; and at Professor Holloway's
Establishment, 244, Strand, London.

INTERESTING NEW PUBLICATIONS.

MEMOIRS OF THE RIGHT HON. RICHARD LALOR SHEIL.

By TORRENS M'CULLAGH, Esq. 2 vols. with Portrait.

Among other distinguished persons mentioned in these volumes will be found—The Dukes of Bedford, Leinster, Norfolk, Rutland, Sussex, Wellington; The Marquesses of Anglesey, Cornwallis, Thomond; Lords Brougham, Carleton, Castlereagh, Chesterfield, Clare, Clarendon, Clonmell, Coke, Combermere, Darnley, Downes, Eldon, Erskine, Essex, Fingall, French, Gormanston, Francis Leveson Gower, Grey, Hardwicke, Killeen, Kingston, Mannors, Norbury, Plunket, Roden, Ross, John Russell, Shrewsbury, Sidmouth, Teynham, Thurlow, Valentia, Wellesley, Winchelsea; Judges Daly, Fletcher, Johnson, Mayne, Moore; Sirs Francis Burdett, Theobald Butler, John Doyle, Thomas Esmonde, Frederick Flood, Henry Hardinge, Robert Inglis, James Mackintosh, John Newport, Boyle Roche; Drs. Doyle, Magee, Milner; Messrs. Bellew, Burrows, Bushe, Charles Butler, Canning, Coke, John Wilson Croker, Curran, Dawson, Duigenan, Leslie Foster, Fox, Fuller, Goulburn, Gould, Grattan, Joseph Hume, Joy, John Kemble, Macaulay, O'Connell, O'Loghlen, Phillips, Pitt, Ponsoby, Saurin, Scarlett, Sheridan, Stanley, &c.

OPINIONS OF THE PRESS.

"An able and elaborate biography of Mr. Sheil by his intimate friend Mr. Torrens M'Cullagh. Mr. Sheil played so distinguished and useful a part in the political commotions of his time, and his oratorical powers were of such surpassing excellence, that his biography cannot fail of proving deeply interesting, not only in Ireland, to whose service his brilliant talents and untiring exertions were mainly devoted, but in England also, where his excellent dramas and eloquent speeches had secured him many warm admirers. Mr. M'Cullagh has, therefore, performed a task which will gain him the gratitude of many of the present generation, and, we doubt not, the approbation of several succeeding ones."

Dublin Evening Post.

"Such a man as Sheil eminently deserved a biography; and Mr. M'Cullagh has, we think, proved himself an exceedingly proper person to undertake it. His narrative is lucid and pleasant, sound and hearty in sentiment, and sensible in dissertation; altogether, we may emphatically call this book an excellent biography."—Daily News.

Mr. SHEIL's LEGAL and POLITICAL SKETCHES.

2 vols.
"In these volumes Sheil has left us a memorial of all the gems of his rich and varied intellect—every phase and hue of his versatile and prolific mind."

Dublin University Magazine.

SKETCHES of the IRISH BAR, with other

LITERARY and POLITICAL ESSAYS. By WILLIAM HENRY CURRAN, Esq.
2 vols. (Just ready.)

LIVES of the QUEENS before the CONQUEST.

By Mrs. MATTHEW HALL. 2 vols. with Portraits, 21s.
"In every sense, an addition of decided value to the annals of the British people."

Messenger.

LIVES of the PRINCESSES of ENGLAND. The

SIXTH and CONCLUDING VOLUME; detailing the concluding scenes of Elizabeth of Bohemia's chequered life, and the scarcely less eventful history of the Daughters of Charles I.

"A work of deep interest and importance, which will rank among the most valuable contributions to the stores of English history."—John Bull.

HISTORY of the LANDED GENTRY. A Genea-

logical Dictionary of the whole of the Untitled Aristocracy of England, Scotland, and Ireland. By SIR BERNARD BURKE, Ulster King of Arms. A NEW and GREATLY IMPROVED EDITION, in 1 vol., uniform with the 'Peerage,' divided into 4 Parts, THE FIRST of which, price 10s. 6d., will appear in a few days.

Published for HENRY COLBURN, by his Successors, HURST & BLACKETT, 13, Great Marlborough-street.

Now ready, Volumes III. and IV. of

THE DUKE OF BUCKINGHAM'S MEMOIRS OF THE COURT AND CABINETS OF GEORGE III.

FROM ORIGINAL FAMILY DOCUMENTS. COMPLETING THE WORK. In 8vo. with PORTRAITS.

In the List of Distinguished Persons who figure in the Concluding Volumes of this Work will be found the following:—

EMPERORS.—Napoleon, Paul, Alexander, Francis.

KINGS.—George III., Frederick William, Louis XVIII., Joseph and Louis Bonaparte.

The PRINCE of WALES, the Dukes of York, Cumberland, Gloucester, Clarence, Kent, and other Members of the Royal Family.

DUKES.—Beaufort, Bedford, Bridgewater, Devonshire, Hamilton, Montrose, Newcastle, Portland, Queensbury, Richmond, Somerset, Sutherland, Wellesley.

MARQUESSSES.—Abercorn, Blandford, Buckingham, Cornwallis, Downshire, Drogheda, Ely, Headfort, Hertford, Lansdowne, Londonderry, Waterford, Wellesley.

EARLS, VISCOUNTS, and BARONS.—Auckland, Bathurst, Bective, Belgrave, Bexley, Bridport, Buckinghamshire, Bulkeley, Carrington, Carysfort, Cathcart,

Camden, Camelford, Carlisle, Carnarvon, Castlereagh, Chatham, Charlemont, Chesterfield, Colchester, Cowper, Collingwood, Cochrane, Dartmouth, Derby, Ebrington, Egremont, Eldon, Elgin, Ellenborough, Erskine, Exmouth, Falmouth, Fitzgibbon, Fitzwilliam, Folkestone, Fortescue, Glastonbury, Leveson Gower, Grenville, Grey, Grosvenor, Hardwicke, Harrington, Harrowby, Hobart, Holland, Hood, Howe, Howick, Hutchinson, Keith, Kenyon, Lake, Lauderdale, Liverpool, Macartney, Mansfield, Melville, Milton, Minton, Malmesbury, Moira, Morpeth, Mulgrave, Nelson, Nugent, Paget, Palmerston, Percy, Pembroke, Plunkett, Powis, Portarlington, Proby, Radnor, Rendlesham, Romney, Sandwich, St. Helen's, Sidmouth, St. John, St. Vincent, Sydney, Spencer, Temple, Teignmouth, Townshend, Westmeath, Westmoreland, Yarmouth.

BISHOPS.—London, Oxford, Limerick, St. Asaph.

SIRS.—Ralph Abercrombie, David Baird, Francis Burdett, Henry Burrard, John Cradock, Hew Dalrymple, Philip Francis, Francis Freeling, William Fremantle, Charles Grey, Henry Halford, Everard Home, Samuel Hood, John Moore, Evan Nepean, George Nugent, John Parnell, James Pulteney, Home Popham, Samuel Romilly, Sydney Smith, Charles Yorke, William Young.

ADMIRALS.—Berkeley, Campbell, Cotton, Duckworth, Gambier, Louis, Murray, Markham, Nelson, Patten, Parker, Saumarez, Stopford, Strachan, Trowbridge, Warren.

GENERALS.—Fitzpatrick, Hay, St. Leger, Smith, Simcoe, Spencer, Stuart, Whitelock.

MESSRS.—Addington, Brougham, Beresford, Canning, Croker, Cobbett, Dundas, Frere, Fox, Grenville, Huskisson, Horner, Spencer, Perceval, Horne Tooke, Tierney, Wyndham, Wilberforce, &c.

From the *Athenæum*.—"The present volumes exhibit the same features as the former portion of the series. The general reader is entertained, and the reader for historical purposes is enlightened. Of their value and importance there cannot be two opinions. There are abundant revelations of interest to arrest attention in many of these papers. On the characters of George the Fourth and the Duke of Wellington there are some very valuable letters. In Court scandals, the affairs of the Duke of York and Mrs. Clarke are brought under notice; and in what we may designate as public scandals, the 'horrors of routine' receive abundant illustration in the letters about the Walcheren Expedition and on the Peninsular War. Our extracts sufficiently show the high interest belonging to these volumes."

Also, now ready,

THE MONARCHS of the MAIN; or, Adventures

of the BUCCANEERS. By GEORGE W. THORNBURY, Esq. 3 vols.

PAINTING and CELEBRATED PAINTERS,

ANCIENT and MODERN; including Historical and Critical Notices of the Schools of Italy, Spain, France, Germany, and the Netherlands. Edited by LADY JERVIS. 2 vols.

"A most valuable and attractive work. We believe that it will be found the most serviceable handbook which any visitor to our principal picture galleries can procure."

Post.

FAMILY ROMANCE; or, Domestic Annals of

the ARISTOCRACY. By SIR BERNARD BURKE, Ulster King of Arms. 2 vols.

"It was impossible to praise too highly these most interesting volumes. The aristocracy and gentry owe, indeed, a great debt to the author as their family historian."

Standard.

The ROMANCE of the FORUM; or, Narratives,

SCENES, and ANECDOTES from COURTS of JUSTICE. By PETER BURKE, Esq., Barrister-at-Law. SECOND SERIES. 2 vols.

HURST & BLACKETT, Publishers, Successors to Henry Colburn, 13, Great Marlborough-street.

THE THEORY AND PRACTICE OF LAND- SCAPE PAINTING

IN WATER-COLOURS.

Illustrated by a Series of Twenty-four Designs, with two additional Plates on simultaneous Contrasts, printed by the Chromatic Process, several Tinted Diagrams, and numerous Woodcuts.

By GEORGE BARNARD,

Professor of Drawing at Rugby School; Author of 'Handbook of Foliage and Foreground Drawing,' 'Switzerland,' 'Studies of Trees,' &c.

London: WM. S. ORR & Co. Amen-corner. Sold by all Booksellers and Artists' Colourmen.

A DESCRIPTIVE ATLAS of ASTRONOMY, and of PHY-

SICAL and POLITICAL GEOGRAPHY; comprised in 74 Maps, exhibiting a comprehensive System of Astronomy, and of Physical and Political Geography, carefully constructed by DOWERS and PETERMANN; and the whole recently revised by the latter. With descriptive letter-press by the Rev. T. MILNER, M.A. Illustrated by several Hundred Vignettes. One thick volume, demy 4to. cloth lettered, 31s. 6d.; half-bound russia, 35s.

Dedicated, by Permission, to H.R.H. the PRINCE ALBERT,

THE ATLAS of PHYSICAL GEOGRAPHY; consisting of 16

Maps, illustrative of the Geology, Hydrography, Meteorology, Zoology, Botany, and Ethnography of the Globe. Constructed by AUGUSTUS PETERMANN, F.R.G.S. The letter-press, descriptive of the Physical Phenomena of the Globe, by the Rev. T. MILNER, M.A. F.R.G.S., illustrated by upwards of 130 Vignettes, Sections, and Views.

In the 'Atlas of Physical Geography' it has been the design of the Publishers to produce a work adapted and corresponding to the present state of knowledge—comprehensive in its plan, clear and simple in its delineations, and, at the same time, moderate in price.

The Constructor of the Maps, who is favourably known to the scientific and general public by his Geographical Publications, has made it his chief aim to represent the Phenomena of Physical Objects in their general and complete connexion over the Globe; and while availing himself of the previous labours of Humboldt and Berghaus, he has not failed to consult all recent researches and observations. In 1 vol. imperial 4to. price 15s. cloth, and 21s. half-russia.

DOWERS' GENERAL AND SCHOOL ATLASES.

The attention of Teachers is especially called to the following Atlases, which will be found, in *fulness of detail, correctness, and neatness of execution*, to surpass, while in prices they are much below, any similar publications. The whole of the Maps have been carefully revised and corrected to the present time, by A. PETERMANN, Esq. F.R.G.S. For general convenience, the Maps have been divided into Books suitable for the different Classes in Schools and Colleges, each of which are furnished with copious Consulting Indexes.

DOWERS' GENERAL ATLAS of MODERN GEOGRA-

PHY: compiled from the latest and best Authorities. With a copious Consulting Index, with the Latitude and Longitude. Price One Guinea, half-bound and coloured. A Library Edition, coloured and interleaved, price 25s. half-bound russia.

HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED

THE FOLLOWING NEW WORKS.

VOIS. III. and IV. of THE

DUKE of BUCKINGHAM'S ME-

MOIRS of the COURT and CABINETS of GEORGE III., from Original Family Documents. Comprising the Period from 1800 to 1810, and completing the Work. In 8vo. with Portraits.

"The present volumes exhibit the same features as the former portion of the series. The general reader is entertained and the reader for historical purposes is enlightened. Of their value and importance there cannot be two opinions. There are abundant revelations of interest to arrest attention in many of these papers. On the characters of George IV. and the Duke of Wellington there are some very valuable letters. In Court scandals the affairs of the Duke of York and Mrs. Clarke are brought under notice; and in what we may designate as public scandals, the 'horrors of routine' receive abundant illustration in the letters about the Walcheren Expedition and on the Peninsular War. Our extracts sufficiently show the high interest belonging to these volumes." *Athenæum.*

THE MONARCHS of the MAIN;

or, ADVENTURES of the BUCCANERS. By GEORGE W. THORNBURY, Esq. 3 vols.

"An unwritten page of the world's history is not to be met with every day. The author of these volumes has discovered one, and has supplied the deficiency. The deeds of alternate violence and heroism of the wild adventurers who, soon after the discovery of America, started forth in search of plunder, and sometimes of territorial conquest; now sweeping the main with their piratical vessels—now surprising and sacking some rich and flourishing town—now fortifying themselves in some strong island hold, where they could hold defiance to a world in arms against them,—form the subject of a narrative, rich in variety of incident, and replete with striking exhibitions of life and character. To the lover of maritime adventure these pages offer a fund of infinite amusement, doubly attractive from the novelty of the theme." *John Bull.*

FAMILY ROMANCE; or, Do-

MESTIC ANNALS of the ARISTOCRACY. By SIR BERNARD BURKE, Ulster King of Arms. 2 vols.

"It were impossible to praise too highly these most interesting volumes. The aristocracy and gentry owe, indeed, a great debt to the author as their family historian."—*Standard.*

THE WABASH; or, the Adven-

TURES of an ENGLISH GENTLEMAN'S FAMILY in the Interior of America. By J. R. BESTE, Esq. 2 vols. [Just ready.]

THE NEW NOVELS.

THE HEIRESS of HAUGHTON.

By the AUTHOR of 'EMILIA WYNDHAM,' 'TWO OLD MEN'S TALES,' &c. 3 vols.

"The numerous admirers of this delightful authoress will welcome with pleasure the announcement of a new novel from her pen. In her writings we have never to complain, as in the case of some novelists, that there is no one to arouse our interest, and that the denouement is awaited with indifference. There is always some one (and it is generally in the difficult character of heroine) to excite our sympathy and awake our attention. Her heroine in the present instance is a charming creation. We may congratulate the author on having added another to the list of her literary successes."—*Sun.*

"The authoress of these volumes has frequently exhibited her peculiar qualifications as a writer of fiction, and in every instance increased her reputation; but we were not prepared for the impassioned denunciations which abound in 'The Heiress of Haughton,' nor inclined to believe that she would surpass her 'Emilia Wyndham,' the power of which made her reputation at once. Nevertheless, we can only do justice to the matter before us by saying that we consider this tale to be the best which the authoress has yet written."—*Messenger.*

"A story of surpassing interest. The heroine is one of the sweetest portrayments of female loveliness which even the talented pen of the author of 'Emilia Wyndham' has produced." *John Bull.*

EUSTACE CONYERS.

By JAMES HANNAY, Esq. Author of 'Singleton Fontenoy,' 'Satire and Satirists,' &c. 3 vols.

THE SECRET MARRIAGE; or,

Contrasts in Life. By Miss FANNY WILLIAMS.

"'The Secret Marriage' is one of the best novels of the season." *Literary Gazette.*

THE WIFE'S TRIALS.

"'The Wife's Trials' deserves to be a successful novel, for it is one of the most spirited and amusing we have read for a long time. The interest is sustained without flagging to the very last page." *Athenæum.*

Also, just ready, in 3 vols.

THE NEXT-DOOR NEIGH-

BOURS. By MRS. GASCOIGNE, Author of 'Temptation,' &c.

GEORGE ROUTLEDGE & CO.'S NEW PUBLICATIONS.

REVIEWS

The History of Fulk Fitz Warine, an Outlawed Baron in the Reign of King John. Edited by Thomas Wright, Esq. Printed for the Warton Club.

AFTER long delay this work is sent forth as the first publication of the Warton Club,—a publishing Society intended to take the place of the dissolved Percy Society. This new Society differs from its predecessor, and from our other publishing Societies, in two important points. First, its existence is limited. A predetermined life of six years is assigned to it: at the end of that period its series of publications is to be completed. There may be good in such an arrangement. It ought to operate as a spur to activity. Certainly it will be a relief to book-buyers to be spared the infliction of another series so long as that of the Percy Society. Several smaller series would be better than one which is altogether indefinite and interminable. The second peculiarity of the new Society is, that for its period of six years it is to be entirely under the management of a Committee of "six gentlemen," who announce in their prospectus that they are "known for their attainments in this branch of literature." There are to be no general meetings, no president, no treasurer, no secretary, no auditors of accounts, none of "the forms of a Society." The "six gentlemen" are to be a Permanent Committee, and nobody else is to say a word. In a little matter of this kind it is scarcely worth while to object to such an arrangement; but if the business to be done were of any importance, it is impossible to conceive a scheme more likely to lead to abuses of every kind. We should have thought that the "six gentlemen" who have assumed the position of managers would not have liked to receive even so small a sum as two hundred pounds a year from their friends without making provision for, at the least, a proper investigation of their accounts. We shall be surprised if such a constitution should work satisfactorily. Already two observations have been generally made respecting the Club. It has been thought that some of the "six gentlemen" self-announced as "known for their attainments," &c. have yet to prove their qualifications; and the delay of twelve months in the publication of the first volume,—a delay which rendered it necessary to add a year to the Society's existence,—and put the first subscription to the second year's account,—is a poor guarantee for the activity of the Committee.

Having discharged our conscience with reference to the constitution of the Club and the doings of its Committee, we turn with pleasure to the book they have issued. It is an Anglo-Norman historical romance, written probably in the thirteenth century. Originally composed as a poem, it is not known to exist in that form. What is here published, from a manuscript in the old King's Library, is an Anglo-Norman prose rendering of the original, to which Mr. Wright has very properly added a nearly literal, but readable, translation.

The historical existence of Fulk Fitz Warine is unquestionable. It is equally true that early in the reign of King John he rebelled and was outlawed. It is probable that he went through a variety of hardships and dangers,—and certain that after a few years he was restored to his lands and to the king's favour. The dispute on this occasion between the king and the bold baron was chiefly of a personal and private character; but some years afterwards, when public wrongs drove the body of the nobles into rebellion against their mean-spirited monarch,

Fulk joined his brother barons, and was one of the men to whom we are indebted for Magna Charta and the rescue of the kingdom from John's ignominious surrender of his crown to the Pope. On this occasion Fulk shared with his compeers the honour of the Papal anathema, and was again dispossessed of lands and goods. In the fourth of Henry the Third he was once more restored to his castle and his rights. Matthew Paris says that he lived through the reign of Henry the Third up to the battle of Lewes, where he was one of a body of the king's friends who were drowned in the adjacent river. The author of the romance gives another account of the termination of his active life. He relates that in his old age:—

"Fulk and lady Clarice, his wife, one night were sleeping together in their chamber; the lady was asleep, and Fulk was awake and thought of his youth, and repented much in his heart for his trespass. At length he saw in the chamber so great a light that it was wonderful, and he thought what could it be. Then he heard a voice as it were of thunder in the air, and it said: 'Vassal, God has granted thee thy penance, which is better here than elsewhere.' At that word, the lady awoke, and saw the great light, and covered her face for fear. At length this light vanished. And after this light Fulk could never see more; but he was blind all his days. This Fulk was very hospitable and liberal; and he caused the king's road to be turned through his hall at his manor of Alleston, in order that no stranger might pass there without having meat or lodging or other honour or goods of his. * * This Fulk remained seven years blind, and suffered well his penance. Lady Clarice died, and was buried at the New Abbey; after whose death Fulk lived but a year, and died at White-Town. And in great honour was he interred at the New Abbey; on whose soul may God have mercy. Near the altar lies the body. God have mercy on us all, alive and dead! Amen."

Mr. Wright thinks the account of the romance writer is historically accurate, and that that of the historian is applicable to a son of the bold Fulk, who dared the power of King John.

A life of such varied interest offered good materials for the romance-writer, but, like others of his craft, the strangeness of truth could not satisfy his appetite for the marvellous. Fulk's real adventures look pale by the side of those which have their origin in the memory or the imagination of his romantic biographer. In his pages he is not only the veritable Fulk,—the baron who revolted because the king denied him justice,—but a dragon-killer like St. George—a dealer in exploits like those of Alfred and Robin Hood,—a combination, in fact, of all the heroic attributes which the writer could conceive. The large view of his hero's character thus taken by the romancer adds to the interest and value of his book. It is a storehouse of biographical fictions, and exhibits to us a considerable portion of the romantic wonders which were then current amongst our forefathers.

In that part of the book which is essentially biographical,—which gives, that is, a rendering of facts in Fulk's history not probably quite true, but certainly consistent with the general notions entertained of what was heroic at that period, there are many things worthy of note.

It is quite clear, for example, that the modern doctrines upon the subject of kingly authority and non-resistance were not thought of at that time. If the king's free-tenants could not get justice in the king's courts, they held themselves absolved from their allegiance. King John had an old quarrel with Fulk,—the cause of which is thus related:—

"Young Fulk was bred with the four sons of king Henry, and much beloved by them all, except John; for he used often to quarrel with John. It happened that John and Fulk were sitting all alone in a chamber, playing at chess. John took the chess-

board, and struck Fulk a great blow. Fulk felt himself hurt, raised his foot, and struck John in the middle of the stomach, that his head flew against the wall, and he became all weak and fainted. Fulk was in consternation; but he was glad that there was nobody in the chamber but they two, and he rubbed John's ears, who recovered from his fainting-fit, and went to the king, his father, and made a great complaint. 'Hold your tongue, wretch,' said the king, 'you are always quarrelling. If Fulk did anything but good to you, it must have been by your own desert.' And he called his master, and made him beat him finely and well for complaining. John was much enraged against Fulk; so that he could never afterwards love him heartily."

When John came to the throne he seized the earliest opportunity of gratifying his malevolence against Fulk. Moris, son of Roger de Powis, set up a claim to the lands which Fulk had inherited from his father. Moris won the king's heart by timely presents of "a fat and fair steed, a gerfalcon all white," with a promise to pay his majesty "a hundred pounds of silver," and thus procured from him an undertaking to seal to him a charter of Fulk's inheritance.

"There was close by a knight, who had heard all the conversation between the king and Moris; and he went in haste to Sir Fulk, and told him that the king was about to confirm by his charter to Sir Moris the lands to which he had right. Fulk and his four brothers came before the king, and prayed that they might have the common law and the lands to which they had claim and right, as the inheritance of Fulk; and they prayed that the king would receive from them a hundred pounds, on condition that he should grant them the award of his court of gain and loss. The king told them that what he had granted to Sir Moris he would hold to it, whoever might be offended, or who not. At length Sir Moris spoke to Sir Fulk, and said: 'Sir knight, you are a great fool to challenge my lands. If you say that you have right to White-Town, you lie; and, if we were not in the king's presence, I would prove it on your body.' Sir William, Fulk's brother, without a word more, sprang forwards, and struck Sir Moris with his fist in the middle of his face, that it became all bloody. Knights interfered, that no more hurt was done. Then said Sir Fulk to the king: 'Sir king, you are my liege lord, and to you I am bound by fealty, as long as I was in your service, and as long as I held lands of you; and you ought to maintain me in right, and you fail me in right and common law; and never was he good king who denied his frank tenants law in his courts; wherefore I return you your homages.' And with this word he departed from the court, and went to his hostel."

John's character is thus portrayed:—

"King John was a man without conscience, wicked, quarrelsome, and hated by all good people, and lecherous; and if he could hear of any handsome lady or damsel, wife or daughter of earl or baron or other, he would have her at his will; either seducing her by promise or gift, or ravishing her by force. And therefore he was the more hated; and for this reason many of the great lords of England had thrown up their homages to the king; for which the king was the less feared."

Many of Fulk's adventures give genuine pictures of manners and society: we will give one example. Returning to England from the exile into which the king had driven him, Fulk landed, with his brothers and companions, at Dover. Learning that the king was at Windsor, they travelled thither, and took up their quarters in the depths of the forest. Fulk swore a great oath, that he would be revenged on the king, "who forcibly and wrongfully had disinherited him,"—and he and his brothers kept themselves armed, in the hope of meeting the king on some of his hunting excursions. After a time, Fulk became tired of such irksome inactivity, and determined to "go and look out for adventures." Changing clothes with a collier,—that is, a charcoal-burner,

—he engaged in the collier's work, and stationed himself directly in the king's way, stirring his fire and "arranging here and there the pieces of wood":—

"At length came the king with three knights, all on foot, to Fulk where he was arranging his fire. When Fulk saw the king, he knew him well enough, and he cast the fork from his hand, and saluted his lord, and went on his knees before him very humbly. The king and his three knights had great laughter and game at the breeding and bearing of the collier; they stood there very long. 'Sir villan,' said the king, 'have you seen no stag or doe pass here?'—'Yes, my lord, a while ago.'—'What beast did you see?'—'Sir, my lord, a horned one; and it had long horns.'—'Where is it?'—'Sir, my lord, I know very well how to lead you to where I saw it.'—'Onward, then, sir villan; and we will follow you.'—'Sir,' said the collier, 'shall I take my fork in my hand? for, if it were taken, I should have thereby a great loss.'—'Yea, villan, if you will.' Fulk took the great fork of iron in his hand, and led the king to shoot; for he had a very handsome bow.—'Sir, my lord,' said Fulk, 'will you please to wait, and I will go into the thicket, and make the beast come this way by here?'—'Yea,' said the king. Fulk hastily sprang into the thick of the forest, and commanded his company hastily to seize upon king John, 'For I have brought him there, only with three knights; and all his company is on the other side of the forest.' Fulk and his company leaped out of the thicket, and cried upon the king, and seized him at once. 'Sir king,' said Fulk, 'now I have you in my power; such judgment will I execute on you as you would on me if you had taken me.' The king trembled with fear, for he had great dread of Fulk."

The king yielded whatever Fulk required, pledging his faith in presence of his three knights; "and he was very glad that he could thus escape." But, on his return to his palace, he, of course, repudiated all his vows, and called upon the whole body of his knights to arm in haste to take those felons in the park! Sir James, of Normandy, headed the pursuit, and marvellous adventures ensued, Fulk, of course, escaping.

Fulk visited France, where he performed wonders of knightly valour,—and Wales, the native prince of which country protected him. He sailed to the Orkneys,—thence into Spain,—and, finally, to Barbary,—meeting with wonders, and doing great deeds, wherever he went. Returning to England, he made the king captive in the New Forest. His Majesty, we are told, was "much abashed"; but, after "many words," "the king went thence to Westminster, and caused to assemble earls, barons, and the clergy, and told them openly that he had of his own will granted his peace to Fulk Fitz Warine and his brothers and all his adherents, and commanded that they should be honourably received through all the kingdom, and granted them entirely all their heritage. When Hubert the archbishop heard this, he was very glad, and sent his letters immediately to Fulk and to the earl of Gloucester, and to Randulf earl of Chester, and to Hugh earl-marshal, that they should come in haste to him at Canterbury; and when they were come, they ordained that Fulk and his brothers should surrender themselves at London to the king. Fulk and his brothers and the three earls with their power apparelled themselves as richly as they knew how and were able, and came through London with noble apparel, and knelt before the king at Westminster, and rendered themselves to him. The king received them, and restored to them all that was theirs in England, and commanded them to remain with him; which they did a whole month."

The Warton Club have certainly done well in beginning their series of publications with this unquestionably curious book. It has been printed before, but remained almost unknown. It will henceforth take the conspicuous place to which it is entitled in the history of English romantic fiction. Besides his translation, Mr. Wright has added a very judicious Introduction, and many useful illustrative Notes. Alto-

gether, it is a most creditable and satisfactory publication.

The Monarchs of the Main; or, Adventures of the Buccaneers. By George W. Thornbury. 3 vols. Hurst & Blackett.

THE exploits of the Buccaneers occupy a ground between history and romance. These rovers narrowly escaped becoming a nation, and playing a part in the legitimate drama of history. But they chose to remain mere adventurers: and they have paid the penalty,—they have passed away and been forgotten. It depended on themselves alone to have founded a powerful empire in the West Indies or South America, which might have changed the aspect of events during the last hundred years; but they could never combine together, except when they were engaged on an expedition. They worked without any plan, beyond the object immediately in view. They performed deeds of heroic enterprise, daring and endurance, which read like the exploits of the heroes and demigods of Mythology. Forts and cities defended with cannon, and strongly garrisoned, fell before their buccaneering muskets. Nothing could stand before their onset; but they flung their advantages away, caring only for plunder. They passed over the countries they attacked like a tropical storm, leaving no trace but desolation:—their devastations have been effaced, or swallowed up in other changes; and all that now remains of their renown is a gloomy tradition of bloodshed and crime.

Mr. Thornbury has chosen a subject which has not yet been completely handled; but there his good fortune has almost stopped. He has scarcely shown himself equal to his opportunity. He has evidently taken pains to collect facts and to tell the truth, so far as mere material incident goes, but the genius to re-animate the old Buccaneer—if present at all—is not sufficiently felt for complete success. To write the lives of buccaneers and adventurers, a man must have a strong dash of the adventurer in his own nature;—he must be able to make himself one of them;—he must love them with all their sins, or he can never understand what manner of men they really were. If he looks at them and judges them from a nineteenth-century point of view, he will make nothing of them.

Mr. Thornbury has chosen a subject from which "all the perfumes of Arabia" cannot take away the taint of blood: it is the main element of the story, and can neither be disguised nor softened. Mr. Thornbury is nervously anxious lest his readers should be scandalized; he has also great sympathy for himself, as a respectable man, who has taken up clients not fit for drawing-room society. He is ashamed of his heroes; does not feel the smallest enthusiasm about them, and is painfully alive to the impression they will make upon those who have "rights of property." The consequence is, that the Buccaneers themselves fare very ill at his hands; and the interest of his book is weakened because he cannot fling himself with courageous abandon into the wild life he has undertaken to depict. The narrative grows flat from constant repetition; and as every incident is made of equal importance, and as every object is made equally prominent, the attention of the reader is not arrested. The author wants literary perspective.

We turned from Mr. Thornbury's pages to Exmelin's 'Histoire des Aventuriers,' and it was curious to see the different spirit with which the selfsame incidents may be narrated. Exmelin was a surgeon, who served in that capacity in several buccaneering expeditions. He has left

us a record of the facts that came under his own notice. He reprobates the *cruauté détestable* of the Buccaneers; but the irresistible fascination in buccaneer adventures makes itself felt in every page, and the reader's pulse beats and his eyes gleam as he reads. Mr. Thornbury produces himself and his own opinions at every point,—Exmelin is entirely occupied with his subject; and his narrative, for its simple spirited reality, may take its place beside the *Conquistadores* of Bernal Diaz. We cannot resist giving the reader Exmelin's own description of his companions,—premising that a certain racy simplicity, which is its great charm, sadly escapes in translation.—

They every day perform incredible exploits against the Spaniards, so that if the Kings of France or England wished to conquer the Indies of the King of Spain, they might do so without other force,—for I state as a fact, and I have seen it more than once, that one of these men (Buccaneers) is equal to ten of the most valiant men of Europe. They are so brave, determined, and intrepid that no danger or fatigue can stop them in their course; and in battle they think only of their enemies and of victory,—all that, however, from a love of gain, and never from the desire of glory. They have no fixed country; their country is wherever they find wherewith to enrich themselves; their valour is their inheritance. They are altogether singular in their piety, for they pray to God with as much devotion when they are about to take the property of others as if they were praying him to preserve their own. * * They abandon themselves as willingly to labour as to pleasure; they are as hardened to the one as they are sensible to the other, and pass in a moment to the most violent extremes,—for one sees them sometimes rich, sometimes poor, now masters and then slaves, without ever seeming cast down by their misfortunes, or knowing how to profit by their prosperity. * * They associate fifteen or twenty together, all armed with a musket four feet long in the barrel, carrying a ball sixteen to the pound. Generally they have a pistol or two in their girdle, also a good sabre or cutlass. Being thus associated, they choose one of their number as chief, and embark in a canoe made of the trunk of a tree. They collect a few provisions to last them until they reach the place where they can get more; and for clothes, they have only a shirt and a pair of drawers, or at the utmost a couple of shirts. They set off in this style, and go until they reach some river or Spanish port, where they know ships will pass, and so soon as they see one they jump on board and make themselves masters of it. It seldom chances that they take a vessel where they do not find victuals and merchandise on board. With this they accommodate and clothe themselves! They usually have two meals a day when there is enough food; when there is not, they only have one. They pray to God before meals:—the French, being Catholics, chant the Canticle of Zacharias, the Magnificat, and the Miserere,—the English, who pretend to be Reformed, read a chapter in the Bible and the New Testament, and sing Psalms!

The Buccaneers made war on none but the Spaniards, who were obnoxious to all the rest of Europe; and to hunt the Spaniards and pillage them wherever they could be found "*c'était faire au même tems le bien public et privé!*" and, so long as it suited their politics, all other Christian kings and nations gave the Buccaneers absolution for whatever excesses they might commit. It is difficult to ascertain exactly when Buccaneering took its rise, probably about 1654 or 1655. At that period the *Boucaniers* were hunters in some of the islands of the West Indies, pursuing the wild boars and the wild cattle,—some of them for the hides, and some of them for the flesh, which they dried after a fashion called by the Indians *Boucan*. The Spaniards were ill advised enough to disturb these men, and to endeavour to drive them to extremities by famine, seeing only the temporary advantage of preserving the wild cattle, and securing some privileges of a coasting trade.

Those hardy hunters were a dangerous set of men to drive to despair. They took to the sea when their means of living failed on shore, and for fifty years were the terror and the scourge of Spain in her American possessions. At the Peace of Ryswick, 1698, Buccaneering was repudiated by the law of nations, but it was several years before that race of wild adventurers could be absorbed into other pursuits. Some accepted grants of land, and became planters; others became Pirates, and betook themselves to the coast of Africa, committing horrible atrocities, and attacking indiscriminately the vessels of all nations. They must in nowise be confounded with the Buccaneers; they were mere lawless brutal savages, like wild beasts rather than men. The last of them were hunted down about 1717. The chapter which gives an account of the Pirates of Madagascar is the best done in Mr. Thornbury's book.

This record of celebrated Buccaneers is not complete. Mr. Thornbury tells us nothing, for instance, of Capt. Kidd, whose exploits were scarcely inferior to those of Sir Henry Morgan himself. It would, also, have been worth while to mention the curious legend, that one of the Buccaneers, famous in his day, retired into peaceful life, and became an Archbishop of Canterbury, in the reign of William the Third! Blackmore was the name, if we recollect. Of course, the legend has been contradicted and exploded, but the fact of any Archbishop being suspected of such an antecedent shows that Buccaneering was not considered one of the deadly sins. Mr. Thornbury has taken much pains to give his facts correctly, and those readers who wish to obtain their information with the least possible trouble, may accept what he says without fear.

Biographical Memoir of John Montagu; with a Sketch of some of the Public Affairs connected with the Colony of the Cape of Good Hope, during his Administration as Colonial Secretary, from 1843 to 1853. By W. A. Newman. Harrison.

THE Dean of Cape Town, in writing a Memoir of the late Colonial Secretary, has performed a useful task. It is fit that the services of public men, though of a secondary and subordinate rank, should be acknowledged and remembered; and Mr. Newman's 'Biography' is well timed now, when administrators are receiving lessons, and when civil functionaries are likely to need instruction in the discharge of their duties. This record—John Montagu's life—will be of value to all who care to know how a man who conceived original designs was able to develop them; how difficulties that appear insuperable may be removed; and how the dust of ancient practice may be swept away by innovations at once rapid and careful. The narrative has little of that attraction which belongs to the picturesque or to the romantic. It is a plain history, with State-paper annotations; but it possesses a special interest for those who believe that, after all that heralds can do, knowledge, ability, and sincerity of purpose, are necessary for the service of the State;—and to such no study is more beneficial than the example of administrative success: it is experience anticipated; it marks out and illumines the path of official life.

Affection had a considerable share in the composition of the Memoir. It was written by a friend, and for the friends, of Mr. Montagu. Nevertheless, it is so far impartial that, when individuals are concerned whose acts were hostile to the late Colonial Secretary, their motives are not impugned while his are defended. In the spirit of a true biographer, Mr. Newman,

though he claims for John Montagu honours above those of ancestry, seeks to establish a lineage for him, and rather a long one too. Drogo de Montecuto was a Baron of Normandy, who came over when William quartered his followers on the English soil. Afterwards a chasm of five centuries is overlapped; but the transition brings us to Sir Edward Montagu, Chief Justice of the King's Bench in 1539. In the first Parliament of James the First a Montagu sat for the City of London, who became Lord Treasurer of England, Baron Montagu, and Viscount Mandeville. In the next reign he rose to an earldom; and, at the Restoration, he was one of those who "crooked the hinges of their knees" to Charles the Second, and called him "great king." From his third son descended Edward Montagu, who fell in the bloody trenches before Seringapatam. At his death he left an infant, John, the subject of Mr. Newman's 'Memoir,' who was then only two years old. Few indications of talent appeared in his earlier years,—at least, his friends reported so; but his school career was by no means unsuccessful. In February, 1814, he was gazetted to an ensigncy in the 52nd regiment, and fought with its battalions at the battle of Waterloo. Two incidents which occurred at this period of his life are worth noticing, since they illustrate, not accidental impulses, but permanent features of his character.—

"When he joined his regiment at Brussels, he was ordered to the rear with a detachment of invalids. He had gone back a day's march when he met a party proceeding to join his own regiment: as an engagement was daily expected he was extremely anxious to be present, and with this view asked to see the date of the commission of a young man of the party he met: finding he was junior to himself he commanded him to take charge of the invalids, and next morning astonished his commanding officer by making his appearance before him, as his regiment was marching from Brussels to Waterloo. The officer was much amused at his story, and told him he hoped he would not suffer for having played the senior officer."

Peace, which was planted on that great field, would not allow him to play out his part as a soldier; but the 52nd made a brilliant figure at Waterloo. The next circumstance we shall note suggests a rare tenderness of conscience, as well as strength of will.—

"When the army was quartered near Paris, young Montagu, for the first time in his life, was tempted to the gaming-table, and, after some playing, lost what to him was a considerable sum of money; this he felt he was bound in honor to discharge, and thus found himself in serious pecuniary difficulties: but his was neither a mind to despair, nor a heart to shrink under embarrassments,—and difficulty to him was but an occasion of contriving how he should overcome it. Nor was he long in determining how to repair his losses,—for he formed at once the resolution to withdraw from the mess of his regiment until his debt should be defrayed. With this determination he went to his commanding officer, Sir John Colborne, acquainted him with his position, and requested that he might be allowed three months' advance of pay, and to live by himself, on his rations, until he had paid off his losses. His request being acceded to, he lived alone in his tent, for six months, during the whole of that time refusing all invitations to parties; and nothing could induce him to break through his purpose of living upon the smallest possible allowance, until his debts were honorably liquidated; or of ever again being drawn into the excitement and ruin of the gaming-table."

Fifteen years afterwards, having filled with honour some civil offices, he resigned his military rank, which was that of Captain; and, in 1834, was appointed Colonial Secretary in Van Diemen's Land. During two years under Sir George Arthur, and four years under Sir John Franklin, he continued at this post, respected

by the colonists, esteemed by the public functionaries, and trusted by the Governor. In 1841, however, a difference of opinion between him and Sir John Franklin ended in his suspension, and he proceeded to England, to explain his conduct and vindicate his character. By the Home Government he was speedily relieved from any suspicion of perverse or dishonourable behaviour; and this confidence was practically avowed, in 1843, by his appointment as Colonial Secretary at the Cape of Good Hope. He and his official adversary never met again. The one gave a name to hills, and passes in Africa, the other to channels and islands in the Arctic; the one lost his life, the other his fortune, in the public service,—for while Franklin passed the limits of travel, and entombed himself amid the accumulated winters of the North Pole, Montagu abandoned to waste his wealth in Van Diemen's Land to replenish the exhausted treasury of the Cape, and suffered losses which his earnings until his death were not sufficient to redeem.

His memory, however, is associated with ten years of Cape history. When he arrived the colony was immersed in debt, and prohibited upon any plea of utility or demand from incurring the cost of public works until the public liabilities were paid. Its journalists were prophesying a return to barbarism, its inhabitants were paralyzed by despondency; between its commercial outlets and the rich agricultural provinces of the interior a mountain border rose, with only a few passes winding between terrific heights, and available merely for cumbersome waggons. Bankruptcy seemed near; in truth, the South African colony was at its lowest ebb, and its condition, deplored by the population, represented to the Home Government and criticized by the Press, was alleviated by no one.

Sir George Napier was Governor, and he had the wisdom to admit that the financial scheme devised by Mr. Montagu was preferable to his own. Mr. Montagu proposed to clear the colony from debt, to improve its revenues, to open its roads, and give it an opportunity to flourish. Here was a task for an administrator. But, with the sanction and assistance of his liberal chief and of worthy subordinates, he accomplished his design, cancelled the entire debt within two years and a half, encouraged the colonists to hope for new prosperity, stimulated trade, added to the revenue, and restored confidence to the public mind. Yet he imposed no new taxes, but simply made use of resources already abundant, and only requiring a vigorous hand to open the sluices of financial plenty. One example of his method will illustrate the narrative. In Saldanha Bay, near the coast, is the island of Matagan, literally loaded with deposits of guano, which had hitherto been utterly valueless. Montagu brought thence a golden influx into the colonial coffers. But Mr. Newman, writing on the undeveloped capabilities of South Africa, has much to say of similar neglect.—

"The wide-stretching and romantic country, capable of any degree of cultivation, lying round the Amatola region, whose rich soil and genial sun cause the fruits of the ground to dispense with all care and labour save the reaping and ingathering, offers a pure atmosphere and a tranquil peaceful home to thousands upon thousands, if the tide of emigration could be poured into it as the most sure and philanthropic barrier against further and future Kaffir invasions. The extensive district of Natal, with its almost tropical luxuriance, and with its immense resources, lies well-nigh useless, notwithstanding all its capabilities of abundance, from the dearth of steady, industrious, improving labour; and only waits for an enterprising increase of colonists to make it 'a land flowing with milk and honey.' In the Western Division, the newly-discovered and inex-

haustible copper mountains of Namaqualand, which give prospect of finding employment and wealth for tens of thousands, must, without a far greater accession of labourers than the Cape can at present supply, remain comparatively unworked, and with their rich veins for the most part unexplored."

At that period the absence of roads reduced the Cape to stagnation.—

"It was in vain that fertile and yet improvable regions, like the cold and warm Bokkeveld, could yield under diligent farming large supplies of grain and other products, so long as unopened kloofs, and rugged precipitous mountains divided them from the Cape district and every port from which they might be exported. It was in vain that the French refugees by their industry, and the introduction of their native vine into the Franche Hoek, made that sunny corner, and subsequently the Paarl and much of the Western division of the Colony, to hang forth their rich green and purple clusters, so long as the wine-growing districts found between them and an available market, weary tracts of sand, and rain-swollen torrents, which made intercourse at all times uncertain and hazardous, if not wholly unprofitable. Energy was cramped; farming was little better than growing for home want and family supply; each *boer's* homestead, with its cattle kraals and long ranges of outbuildings for slaves, was, more or less, a little world within itself, self-dependent for its means of support, with its dwellers consuming what they cultivated."

Montagu proposed to devote the wasted labour of convicts to cut highways through the maze of South African mountains. To drag a siege gun from Balaclava to the plateau before Sebastopol,—to haul a brewer's dray up the slopes of Snowdon, would seem to be less difficult than to pull a laden waggon across the ridges of Hottentots' Holland. Thirty-two oxen, yoked in pairs, laboured up the ascent; beyond this lay a plain, buried in sand, through which the wheels of the wine waggon were turned slowly by the strength of a prodigious team. Under Mr. Montagu's administration a raised causeway was carried along these flats, with bridges, culverts and drains of solid masonry. But this was by no means his principal engineering enterprise. Here is the account of an old road,—still more suggestively described in an illustration which accompanies the text. The oxen in front are out of sight of those yoked next the waggon.—

"The path was a mere ledge, with a terrific ascent up the rugged side of a steep mountain. To pass it was an undertaking of extreme peril, and almost certain destruction to some part of the travelling vehicle. Waggons had frequently to be unloaded, and together with their freightage, taken up the mountain by instalments of wheels, and sides, and yokes, and packages; and when this was not resorted to, it took from twenty to thirty oxen to each waggon to move it up a quarter of a mile an hour, and six men with ropes and *reims*, or strong thongs of hide, attached to the side to keep it from falling over the threatening precipice. The cruelty to the oxen on such occasions was extreme, besides the straining labour necessary for such a task; in the fury of the Hottentot driver to excite them upwards, frequently pieces of the flesh would be lashed out by the cracking whip, which could be heard sounding and echoing along the mountain windings; and not uncommonly one or more of the oxen would lie down and expire, from the very severity of the task, before the summit was reached."

By hewing and blasting the rocks, a "beautiful and easy passage" was made, which one team could traverse in three hours, but where a double team had sometimes toiled for three days and three nights together. Well might the colonists bestow the name of "Montagu Pass" on one of these avenues to the richest district within their borders. Some of the parapets built were only inferior in solidity and extent to those on the Alpine roads. In one place lofty walls were erected along the edge of a precipice three hundred feet high, beetling

fearfully over the defile. Yet the road winds along to Hell Crantz, with an ample breadth, a gentle slope and perfect security for animals and men.

Mr. Montagu's endeavours were not confined to prisons and road-making. He aided the movement for judicial reform, for improved criminal discipline, and for the spread of education. Mr. Newman also lauds his efforts in behalf of the Church. In the Kaffir war his services were of considerable value. Sir Harry Smith was pent up in a fort in the midst of an African wilderness swarming with savages. Only the Kaffir could glide in all directions through the tangled masses of this brilliant but deadly jungle. The Colonial Secretary's co-operation was prompt and successful. He continued his Cape career, indeed, for nearly ten years with unabated vigour, when, broken in health, he returned to England, and died in November 1853. Mr. Newman's 'Memoir' contains a full account of his administrative acts, and of the methods by which he secured their success. It is, therefore, interesting as affording practical lessons in the great science of administration. As a biography, it is ill constructed, the end of the story being told in the beginning; but the style is pleasant, and the estimate of character, though friendly, is not exaggerated or unphilosophical.

Eustace Conyers. By James Hannay. 3 vols. Hurst & Blackett.

SALT water seems to have a vast attraction for Mr. Hannay. Whatever subject he begins with, in whatever scene he finds himself, he contrives ere long to get out at sea. As a story-teller he makes little progress: his women are as shadowy, swift of tongue, and fanciful in their attributes as ever; his incidents still forget themselves, and his motives still fall asleep, to the reader's great amazement and amusement. But there is, nevertheless, growth in the novelist's mind and in his style of writing. In 'Eustace Conyers' we find evidence of wider culture—deeper reflection—more generous sympathy with all forms of heroism and all conditions of life, than were apt to distinguish Mr. Hannay's writings in an earlier time. 'Eustace Conyers' is, beyond comparison, his ablest, wisest, and maturest work.

As we have said, there is not much story. But there is a something in it better than story—there is abundance of character. Character is Mr. Hannay's strength. Much of 'Eustace Conyers' will delight the reader beyond the portraits: glimpses of natural scenery—midnight meditations at sea—pleasant satire on political and social ways—eloquent repinings after the old chivalry—brief, brilliant, epigrammatic sayings, thrown off with an affluence and a carelessness testifying to no ordinary wealth of imagination; but the present fascination and the lasting charm of the book will be found in its gallery of living, vigorous and subtle portraits. Some of these are so delicately seized and so finely contrasted,—not by varieties of nose, of gait, or of costume, but by the nicer shades of mental constitution and moral aptitude,—as to be perfect studies in their kind.

To read of the various generations of the Conyers, in Mr. Hannay's book, is to walk in their old portrait gallery and study them on the walls. Here is a study for an artist:—

"The young Conyers of 1700 sold the last remnant of the property, carried with him various household relics, which his descendants still possess, and left England. He and his wife (the daughter of a family of similar fortunes) established themselves in Holland; he engaged in trade as a merchant, but he never lost the advantages of his *noblesse*. He was known to the English diplomatists, as the heir of the

house of Conyers-lea; and his son was 'rocked, dandled, and swathed,' into that tradition. The eagle of Conyers was the earliest object that boy could remember. He grew up half a foreigner, and served in the German army; but the eighteenth century never so far influenced him, with all its satire, and its knowingness, as to make him indifferent to the romantic stimulus given him by his ancestry. The eighteenth century was the age of sneering and clever fellows, *par excellence*. It laughed at antiquities, at chivalry, and heraldry. It produced too, peculiar specimens of its own—gentlemen, for instance, who, while they quizzed coat-armour, and despised their own pretensions to blood, were merciless in their adhesion to privilege, and in their contempt for the masses. Charles Conyers had the wit of these pleasant personages, and rushed into many of their dissipations. But he was always hankering after some better outlet for the fire in his blood, than the mere spending the money which his father, the Amsterdam merchant, left him, could afford. Accident threw him into the way of the young Pretender. He was just the man whom the Stuarts knew (with their womanly gift for winning men,) how to attach to themselves. He fought at Culloden, that fatal field where Old Feudalism made its last stand against New Europe. He escaped the brutal ruffians, who crushed under their hoof, the white rose; wandered for weeks, a fugitive in the Highland glens, and was at last kindly sheltered in the mansion of a most worthy Scottish gentleman. The bonny young Jean Lockhart, the only daughter and heiress, fell in love with the handsome Englishman; he became her husband, and in due time (somewhat to his amusement,) 'Laird of Balmacalachan.'"

The great-grandson of this adventurous gentleman is the hero of our tale. In early life he begins to long for the sea; and his father, who has vainly endeavoured to form him into a scholar, or elevate him into an antiquary, lets him have his way. As we are told:—

"All notion of making Eustace a man of learning, had, by this time, vanished from his father's mind. Doubtless, he was thus saved much disappointment. Many a man bent on making his son 'follow in the footsteps of Porson,' finds that he follows them—only as far as the Cyder Cellars."

His "call" salt-waterward, is finely and tenderly moralized by his historian, in the following passage.—

"Is this mysterious longing for the sea which seizes some of us, in our youth, peculiar to the English? Does it run in our blood? It takes possession of you in your boyhood, (if you are one of its subjects) with a charm like that of love itself. It deafens you to all other music, and blinds you to all other beauty. Your nature becomes as full of the sea, as the poor murmuring shell. Eustace was born in an inland county, leagues from the ocean; but his thirst for its water was now that of a water-plant. There is no way of accounting for the fact in him, as in others, than by supposing, what is certainly true, that some men are born sailors, as others are born poets. Their case is like that of the sea-bird, which has been hatched far away from the rocks and caves; when it comes to its strength, the nameless Want seizes it; it rises into the air, and with a sure instinct, makes for the eternal waters. These sea-urchins of England have the sea-bird's eagerness; they must follow their instinct, or they pine. Their eye wanders to the horizon line, and they know that beyond it lies the great expanse. In storms they are awake, and think how the waves are lashed far away that night; and the genius whispers—your part is *there*. The longing comes first, as a pleasure, all the sweeter that it is vague and wild; by and by, it has a reproachful colour, and you feel that you are shrinking from your duty. The longing defines and narrows itself into a distinct resolution. Come what may, you and the sea have a part to play together; it has been arranged from the beginning of the world, and you must fulfil your destiny."

At sea, the boy meets with Lindsay, a young Scotchman,—all the Scots, in these volumes, let us say parenthetically, are good and noble fellows,—who becomes his guardian angel, and gives him a great deal of very wise advice, which

to our astonishment he takes. Mr. Hannay has certainly contrived to make Lindsay the favourite personage in his tale;—perhaps this is the consequence of making this character express the opinions which are evidently Mr. Hannay's own. Here is some of his excellent advice to Eustace:—

“Younker! never let me hear you attempt sarcasm. When I was a boy, I thought it a great accomplishment to be satirical. It did not improve my morals. There's a certain animal that browses on prickly herbage, and he isn't the wisest one.” —Studds says that epigram is the accomplishment of a gentleman,” said Eustace.—Epigrams are the product of corrupt ages, youngster: witness Martial. They belong to periods of despotism—not to free, manly countries. If a man has offended you, kick him; don't make faces at him like a clown.”

So, again, at another time:—

“Look out before you, my boy!” said Lindsay, ere Eustace spoke again. Eustace looked out—and, behold! the Sound, seen to a peculiar advantage, with all its noble shipping, lay before them; and the beautifully chequered light and shade of an Autumn day fell infinitely various on the sea. Lindsay knew the effect, perfectly. He saw the boy's eyes kindle with pleasure at the grand sight. They were silent for a minute or two. “Of course, I did,” said Eustace, answering the question, as if it had just been put to him that moment. “Why should one ever lose these feelings?” observed Lindsay, meditatively. “You have not, Lindsay?” Eustace said, turning quickly. “No! Happy am I to be able to say, honestly, “no.” But, when a boy, I dulled them for a time. I thought life—the sea—my work—and all—poor, and dull, and un-romantic. I lost my zest for things, and my faith in things. But it was my own fault! Never you believe, Eustace, that what they call “circumstances” are to rule us; we are to rule them! You can't take the citadel while the people have a well there—as the Romans knew. That is to say, my dear Eustace, that keeping the heart fresh is the best security for the principles.”

Have we not quoted enough to prove our assertion, that here is something wiser and better than a mere story of delicate distresses and questionable moral teachings? “Eustace Conyers” is a fresh, genuine, healthy book—a book to make men nobler in aspiration and stronger in the conflicts of the world. Mr. Hannay has capital material in him—material of knowledge, of imagination, and of experience; and it will be his own fault if he do not succeed to one of the high places of the literary hierarchy.

Encyclopædia Britannica. Eighth Edition. Edinburgh, Black; London, Simpkin & Co.

THE ‘*Encyclopædia Britannica*’ has been a fortunate undertaking. Among its contributors was Walter Scott, and among its readers was Napoleon Bonaparte. It has run through seven editions in Europe,—and enjoys the honour, as well as sustains the loss, of having been reprinted in America.

On looking over the volumes already reprinted here, we feel, however, that our friend is *old*. This is in itself no fault:—“the gods themselves are old.” But then the gods renew their youth perpetually,—as an “*encyclopædia*” should do. A great power of rejuvenescence is claimed by the publishers of the ‘*Encyclopædia Britannica*’; and in some departments of their work renewal is very evident. In others it is less so; and in some it is altogether wanting. A few instances of neglect—which we propose to take at random from the re-issue—will warn the editors and publishers of oversights to be avoided in future volumes.

We turn—for example—to the article on ‘*Bibliography*,’ and find the following piece of information:—“There is a copious account of all the *Block-Books* in Baron Heineken's learned work ‘*Idée générale d'une Collection*

complete d'Estampes,’ published in 1771, in one volume octavo.” That there could have been an account of *all* the *Block-Books* in a work bearing the date of 1771 will seem to most readers astonishing, when it is considered how little attention had then been given to the subject. The fact is, that Heineken's ‘*Idée générale*,’ excellent as it is, contains an account of only six *Block-Books*; while Falkenstein's ‘*Geschichte der Buchdruckerkunst*,’ published in 1840, contains an account of thirty. But of Falkenstein's history, or any other history of printing issued within the last four-and-forty years, the ‘*Encyclopædia*’ remains amusingly unconscious. The last work on the subject which it honours with its notice is Lichtenberger's ‘*Initia Typographica*’ of 1811; and not a word is said of the subsequent researches of Wetter and Schaab in Germany,—of Scheltema and De Vries in Holland,—of Bernard and Laborde in France,—researches which have thrown light into many corners which to the English public are still very dark.

Yet even these omissions sink into insignificance when compared with those of the subdivision on ‘*Bibliographical Dictionaries and Catalogues*’ in the same article. What are the two books of bibliography the most familiar in this country to every one who feels an interest in the study? Beyond a doubt the four well-known quartos of Watt, and the four equally well-known octavos of Lowndes, the ‘*Bibliotheca Britannica*’—issued, it may be remarked, by the same publishers as the Supplement to the ‘*Encyclopædia Britannica*’—and the ‘*Bibliographer's Manual of British Literature*.’ Our ancient friend the ‘*Encyclopædia*’ is still unacquainted with either; though the ‘*Bibliotheca*’ was completed in 1824, and the ‘*Manual*’ in 1834. We put it to the publishers, in the interest of their own credit, which we as critics wish to sustain and increase, whether twenty years were not enough to enable their bibliographer to glance at Lowndes, and inform the world of his many imperfections? The secret of all this is contained in one word—stereotype.

On comparing past editions, we find that the article ‘*Bibliography*’ in the eighth edition of the ‘*Encyclopædia Britannica*,’ bearing date 1854, corresponds exactly, line for line and letter for letter, with the article in the seventh edition, bearing date 1842,—with only one exception: the article of the seventh edition bears no signature,—that in the eighth has the initials (M. N.) enclosed within parentheses. What the letters may be intended to denote, we are unable to say; but assuredly they cannot stand for “Much Novelty.” Are we to go a little further? This article ‘*Bibliography*,’ we find, corresponds—two or three very trifling alterations excepted—with that in the Supplement to the sixth edition of the ‘*Encyclopædia Britannica*,’ edited by Mr. Macvey Napier, which was commenced in 1815, and finished in 1824. The precise date at which this article was written is shown by a passage on its first appearance, relating to Dibdin's edition of Ames's ‘*Typographical Antiquities*,’ which runs as follows:—“A third edition, illustrated with superb embellishments, and containing some valuable additions by Mr. Dibdin, is now (1817) in course of publication.” This passage is altered in the seventh and eighth editions of the ‘*Encyclopædia*’ thus:—“A third, illustrated with many embellishments and containing some valuable additions, has been published by the Rev. Dr. Dibdin.” It is odd that the information given so elaborately—and repeated with such nice variations—is not after all correct. Dibdin's ‘*Typographical Antiquities*’ came to a full stop before it had accomplished half its journey. The

fourth volume of his edition goes no further than midway of the second volume of Herbert's ‘*Ames*,’ and the reader, who, on the faith of the ‘*Encyclopædia*,’ purchases the work as a complete one, will find himself disappointed and misled.

It may be observed—since we are on the subject—that the article on *Bibliography*, which has turned out so obstinate a stickler for its primitive form, was by no means remarkable for excellence even in its first manufacture. Not to waste time on small matters, it will be sufficient to advert to the description of Panzer's ‘*Annales Typographici*,’ a book the name of which is a “household word” to every dabbler in the science. We are told by the ‘*Encyclopædia*’ that this work, the most elaborate and trustworthy record yet published of the early history of printing, “comes down to the year 1536, though the title-page of the first volume limits it to the fifteenth century.” The mystery is easy of solution. Panzer's great compilation consists of eleven volumes, published at intervals in the course of eleven years,—the first in 1793, the last in 1803. At first the author proposed to carry his *Annals* no further than the year 1500, and he achieved his purpose in five volumes; he then extended his design and carried the work up to 1536 in six volumes more; and though “the title-page of his first volume” expresses his original intention only, the title-pages of his sixth and of those that follow tell us just what the *Encyclopædist* gives as a discovery of his own. There is, it may be remarked, one very serious defect in Panzer's arrangements. While he inserted books in every other European language—Swedish, Dutch, Bohemian, &c.—he systematically omitted all those in German, because they were included, or intended to be included, in a separate work, the ‘*Annalen der ältern deutschen Litteratur*,’—which he unfortunately did not live to bring down further than the year 1526. This circumstance is of some importance to those who make use of the invaluable labours of Panzer, and this the ‘*Encyclopædia*’ omits to notice.

We turned—by the merest accident—from “*Bibliography*” to “*China*.” This article, as we see at once, is five-and-thirty years behind its date. It is true that at the end a few columns have been added about the “*War with England*,” and that one paragraph has been inserted on the subject of the population,—but with these exceptions, and possibly a few other paragraphs here and there, the account of China furnished is the identical account written by Sir John Barrow for the Supplement of 1815—24. A glance at the notice of the Chinese plays and novels will be sufficient to show the disadvantages of this preference of old articles over new. “The little novel of ‘*Hao-kiau-tchuan*,’ edited by Dr. Percy from the papers of an English supercargo, is,” says the ‘*Encyclopædia*,’ “so charming a specimen of that kind of writing as to make us regret that we have not more.” This regret is now a little out of season. The ‘*Haou-kew-chuen*’ (to use Morrison's orthography) has now been translated three times, and oddly enough each time with a different title: though each time the translator intended to reproduce that of the original. The word “*Haou*” in Chinese means “good,” “*kew*” may be rendered “choice,” and “*chuen*” stands for “story.” Bishop Percy, or rather Mr. Wilkinson, the supercargo, putting the three words together and making out of them the phrase “a good choice story,” rendered the title “*A Pleasing History*.” Sir John Francis Davis considered the words “good choice” to denote a happy marriage, and called his translation ‘*The Fortunate Union*.’ M. Guillard d'Arcy, alleging that “the good choice” was a Chinese para-

phrase for a lady whom a lover would do well to choose, introduced the novel to the Parisians as 'La Femme accomplie.' Luckily, the translators do not differ as much from each other in the rest of the book; and we have only to regret that they did not study variety more in making a "good choice" of what to translate. But this is by no means the only Chinese novel now accessible to European readers. There is another volume of short stories by Sir J. F. Davis, — 'The Lasting Resentment of Miss Keaou-Lwan-Wang,' by the active Robert Thom, under his usual pseudonym, of "Sloth," — 'The Rambles of the Emperor Ching-Tih,' translated into English by a native Chinese, Tkin-Shen, — the 'Iu-kiao-li,' rendered from Chinese into French by Abel Rémusat, and from French into English, under the title of 'Yu-keou-le; or, the Two Fair Cousins,' — the 'Blanche et Bleue,' by M. Stanislas Julien, — the 'Fi-fa,' by M. Bazin, — and the 'San-kwo-che,' by M. Théodore Pavie. There are, in fact, more novels from the Chinese now to be had in English circulating libraries than novels from Bohemian, Polish and Hungarian united — three European languages which are tolerably fertile in that kind of composition. The 'Encyclopædia' is equally unfortunate in its remarks about the drama. "The 'Orphan of the House of Tchao,'" it continues, "was not unworthy of the tragic muse of Voltaire; and yet it was the only specimen of this kind of composition that had appeared in an European dress till a comparatively very recent period. We have now another drama, more closely and more faithfully translated by Mr. Davis, taken from the same collection of 100 dramas, in which the 'Orphan' is found." The drama mentioned as just published by Mr. Davis (who for about the last thirty years has been Sir J. F. Davis) is 'An Heir in his Old Age,' published in 1817. Since then he has given us the 'Sorrows of Han,' — M. Julien, the 'Cercle de Craie,' — M. Bazin, a whole volume of the 'Théâtre Chinois.' Nay, more, the ingenious and indefatigable M. Bazin has analyzed and reviewed, with copious extracts, the whole of 'The Hundred Plays of the Yuen Dynasty' — the glory of the Chinese drama, of which the 'Sorrows of Han' is one, and the 'Orphan of China' another. So much for plays and novels. On the subject of grammars and dictionaries, the 'Encyclopædia' is equally dark. The names of Rémusat, Prémare, Gonçalves, Endlicher, Medhurst, Bridgeman, are not to be found in it; and the Chinese student is referred in these days to the grammars of Morrison and Marshman. It is amusing to observe with what confidence, in the midst of all this "palpable obscure," the knottiest points in Chinese philology are disposed of to the writer's satisfaction, while his valuable lucubrations are illustrated by some of the most horrible misrepresentations of Chinese characters ever cut on wood by a non-Chinese engraver.

China is popularly described as a petrified land; and, perhaps, it was only a species of poetical justice that the article devoted to it in a book of popular reference should be a little obstinate and unchangeable in form. Here, however, is a summary of "Literary Chronology," brought up to the year 1854, and certain, therefore, not to be entirely a stereotype from the seventh edition. Indeed, on referring to that edition, we find that it contained no literary chronology at all; so that this article is altogether new. We are sorry to say so, but, on consideration, we are bound to record our opinion that such new matter as this article presents is worse than none at all. In the "Universal Literary Chronology" the only Chinese we can find is Confucius. It is true that the names of Meng-Tsze, of Sze-ma-

tséen, of Ma-twan-lin, and other Chinese literary men of the "first chop," are not so familiar at London or Edinburgh as they are at Nankin; but as this is a "universal chronology," they had surely as much right to admission as Nasir Khosru, Said-ben-Bartrick, and other illustrious Arabs, whose claims have been considered imperative. Ma-twan-lin, especially, as the great encyclopædist of an empire so fertile in cyclopædias as the Celestial, had a peculiar claim on a brother compiler. Their neighbours of India have found still less favour. One of the greatest literary events of the last three-quarters of a century has been the discovery and exploration of the ancient cave of Sanscrit literature. It is somewhat singular, therefore, that not one Sanscrit poet or philosopher, or ancient Indian writer of any kind, should appear in the "Literary Chronology" of the most popular 'Encyclopædia' of the nation which holds that portion of the gorgeous East in fee. In a table of literary history which aspires to be complete, the name of Valmiki is now almost as indispensable as that of Homer, and the name of Kalidasa as that of Shakspeare. The Arabs, on the contrary, have been inserted with no sparing hand, except that a singular economy has been exercised in the spelling of their proper names. Abu Temam figures as "A. Temam," and Ibn Kotaibah as "J. Kotaibah": for what reason is not very apparent, as we find in full "Abu Jafar" and "Ibn Doraid." To swell the cohort of Arabs, other nations are sometimes stripped of their most illustrious names: Ferishta, the Persian historian of India, and Baber, whose 'Autobiography' is famous as a choice specimen of Jagatai Turkish, are both set down as Arabic authors. This transfer of literary glories is, indeed, among all the blunders of the "Literary Chronology," the very commonest blunder. A long controversy has raged as to the authorship of the famous ascetic treatise 'De Imitatione Christi,' — whether the glory belongs to Thomas à Kempis and the Netherlands, or to Jean Gerson, Chancellor of the University of Paris, and the French. Some confused notion of it seems to have penetrated to the House of Commons, where, the other night, there was a not very luminous discussion between two of the literary members as to "who wrote 'Thomas à Kempis.'" The "Literary Chronology" coolly settles the pretensions of the French by informing us that Gerson was a German. Theodore Beza, hitherto thought a Frenchman, was, it appears, a German also. Luca di Burgo, heretofore considered an Italian mathematician, was a Spaniard; so were Coelho and Magalhaens, whose names speak somewhat in favour of their being Portuguese. On the other hand, "Her. y. Tordesillos," which is the abbreviated and also erroneous form under which the name of Herrera y Tordesillas, the great Spanish historian, appears, was, according to this catalogue, a Greek; and Lucan, Martial, Quintilian and Seneca, the fourfold pride of classical Spain, were all four Romans. It might be thought that by some singular principle they were called Romans merely because they wrote in Latin, but other Latin writers are described according to their countries. Priscian, for instance, is not called a Roman, but an Italian, — and this happens also to be a mistake, as he was born at Cæsarea.

It is unnecessary to pursue this branch of the subject further. The miscellaneous mistakes are numerous and sometimes entertaining. Ferdusi, the Persian poet, was, as we all know, alternately patronized and persecuted by Mahmoud of Ghuzni, the invader of India, who carried off the gates of which everybody has heard so much — and Lord Ellenborough will

never hear the last — the gates of Somnauth. Of all dates, that of Mahmoud's first invasion is the most easily remembered, for it took place in A.D. 1000, neither more nor less. The Chronology tells us that Ferdusi was living in the year 1302; — if so, it follows that he must have attained the respectable age of over three hundred years. The name of G. L. Staunton is inserted for his connexion with the 'Chinese Code,' and he is stated to have died in 1801. It is true that Sir George Leonard Staunton died in 1801, and therefore he could not well have been the translator of the 'Chinese Code,' — the 'Ta-Tsing-Leu-Le,' which was published in 1810, not as a posthumous work, but with the translator's Preface, and fresh from his hand. The Chinese scholar is Sir George Thomas Staunton, son of Sir George Leonard, — and he, we are happy to say, "still lives, a prosperous gentleman," and only last year, in conjunction with Mr. Major of the Hakluyt Society, completed a new edition of Mendoza's work on China. To some of the names merely a general statement is annexed of what they were famous for, — as, for instance, to the great school divine of the Middle Ages, Occam, we find appended "Law"; while, in other cases, a particular work is specified, — as in the case of Jovellanos, the Spanish dramatic and miscellaneous writer, against whose name stands, in inverted commas, "Agrarian Law," because one of his numerous works was on that subject. What motives may have guided the chronologist in drawing these distinctions it is not easy to divine. In the case of William von Humboldt, the entry stands thus: — "W. von Humboldt, German, 'Hermann und Dorothea,' Philology." Surely he ought to have added his authority for so startling a disclosure. William von Humboldt, the author of 'Hermann und Dorothea,' hitherto regarded as one of the brightest gems in the crown of Goethe! What may we look for next? Is Alexander von Humboldt the author of 'Hamlet'? — But a word to the wise suffices; and we believe we have said enough to render a useful service to the proprietors of a great and costly undertaking.

Before we leave the subject, it may not be amiss to call attention to the fact of there being in this Chronology innumerable cases of misspelling in proper names: — for instance, we have "Theodorus Melochita" for Theodorus Metochita, "Raymond Lullo" for Raymond Lully, "Juan van Helen" for Jan van Heel, "Droglossus," the Pole, for Dugossus, "Baron Museres" for Baron Maseres, "Hugh de Brachon" for Hugh de Bracton, — and so on. Such misprints are serious in a work of reference.

Moredun: a Tale of the Twelve Hundred and Ten. By W. S. 3 vols. Low & Son.

'MOREDUN' is out. The tale, whatever its authorship, proves to be a heavy and spiritless imitation of the historical romance, — not equaling the poorest of Mr. James's stories.

Seventy-two pages of Introduction precede the novel, in which pages M. St.-Maurice Cabany does his best to keep up the excitement, by re-producing every past statement, argument, and analysis, and by enlarging on certain points of these with an emphasis which, possibly, betrays more anxiety than he wished to display. Regarding the *Athenæum*, the 'Directeur Général de la Société des Archivistes de France' is particularly earnest in his use of adjectives. "Fiery" and "wicked" are hard words; and is it not enough to make any English journalist tremble, to read, as we do, that our refusal to insert a letter from M. Cabany, — rejected merely on account of its length and inconsequence, as our readers were told at the time, — "would

have been a *crime* and *punishable* in France, especially when a copy is not sent to the person attacked, the same as wounding with intent to kill is felony in England"? But let us tremble ever so much, we must ask a question. Needs it to be pointed out how, with showmen of a certain class, it is considered "a sure card" to represent examination as insult? The veriest quack who drags his drugged accomplice on to the platform of some "Institute," there to give details concerning the lost British discoverer in the ice; or to make the shade of Coleridge "rap out" the last words of his Anglo-German theology,—will bristle up, and talk of the feelings of a gentleman, "outraged honour," and such grand things, if a simple man of science, fancying the presence of a drug possible, and anxious for the truth, attempt to satisfy himself that no charlatany or collusion can have existed. After many pages of Introduction, in which Mr. Skene, Mr. Huntley Gordon, Sir Walter's niece, and ourselves are lashed with a worn thong (for whips and wits *will* wear out, when they are used in the circus too miscellaneously), come a question and answer worth pondering,—

"Before I do so, may I be pardoned for saying, in as few words as possible, why I, a foreigner, am so bold as to undertake such a task. I have already stated that up to the period when I read of such fierce attacks as came in my way, with which I was assailed in England when I made known the existence of the MSS.,—I was as ignorant as the generality of my countrymen of every particular in the personal or literary life of the great Scottish novelist which could in the smallest degree guide me in replying to those attacks. But my profession is that of *Biographer*—in which department of literature I have already published more than Sir Walter Scott ever gave to the world either as biographer or historian: and as these biographical notices respect, for the most part, those of whom no memoirs have previously been published, and for which materials are sent to me from every country in Europe,—it follows that the translation and examination of MSS., the collecting and the sifting of evidence, being my profession, has become habitual and easy to me. I give *my whole mind* for the time to the life of the individual, whose family records I have to arrange and digest:—and now, applying the same *modus operandi* to the memoirs and memoranda of Scott lying before me, I ask my readers to form a candid judgment on a summary of what I have found in the course of that examination."

This profession of "biography," coupled with the name of a Society of Archivists, is an unlucky appeal to English readers. These may recollect a Circular from the *Administration des Archives Historiques*, last year circulated among Her Majesty's Ministers [*Athen.* No. 1377], in which the "Excellency" addressed was promised a good, better, or best biography, according to the amount his Excellency was willing to pay for the favour—"good," "better," and "best," being severally offered at 200, 500, and 1,000 *francs*. M. Cabany's statement of his claims to credence, when venturing to examine matters so difficult and delicate as the private affairs of Sir Walter Scott, too closely resembles in tone and import the Circular in question to serve him much among English men of letters.

As we have already said, his facts and convictions are not sustained by the Tale itself. In this, there will be found hardly a page of description or dialogue,—not a paragraph of speculation,—not a snatch of song which recalls the Author of 'Waverley.' Let us give a specimen, taken at random, of the scene-painting which is to be found in 'Moredun.'—

"The thaw had come on with unwonted rapidity, just as the tide had nearly reached its flow; and the thick crust on the river broke up, at and above the town, ere it gave way at two narrow gullies formed by an island lower down the river. The ice below,

borne up by the ocean wave, sent back the water swelled by a descending current loaded with sheets of ice, of a magnitude and weight sufficient to have borne away the bridge before them, had they not been kept in check by the opposing tide. Thus the agglomerated mass of ice was forced up, and the waters with it, above the walls of the town in many places, and over the part of the bridge at which the passage of the king was stopped. In the lower parts of the town the inundation reached to the eaves of some of the humbler houses, filled with few exceptions the narrow streets, and hid the first and in some cases even the second stories of the higher habitations, amongst which was the palace itself. To the south and west the town resembled the *fantastic rocks of the Simplon rising out of the glaciers, and lighted up here and there by the torches of exploring travellers*;—to the north, far as the eye could reach, an icy lake carried on its surface myriads of white and ever-changing glacial groups, to which the soft light lent the strangest and most unearthly forms. Here and there, where torches were carried, their lurid gleams contrasted singularly with the silvery subdued light of the moon, and added to the wildness and terrors of a night which the then capital of Scotland carried long in its remembrance."

The fancy of describing Scotland by Savoy is very unlike Scott. But the allusion to the Simplon offers stronger evidence against the assumed authorship. M. Cabany represents 'Moredun' as "the Romance describing elder manners," announced by John Ballantyne in his letter to Miss Edgeworth, under date of 1814. An apt suggestion, but not a happy one. Will M. Cabany tell us *how* Sir Walter Scott, in 1814, could know anything about "the fantastic rocks of the Simplon"? Was the Simplon at that time—before the peace—known to English travellers?

Again, how unlike the ordinary talk of Scott's heroes is the following oration in a grotto, with which the second volume of 'Moredun' opened!—

"When the different parties had gone off on their several missions, the chief took Moredun aside into a grotto overlooking the stream, and, after they were seated, addressed him thus—"I will not pretend, Sir Robert de Moredun, to be ignorant of or insensible to the annoyance thou must have felt yesterday, and must still labour under to-day, at being so suddenly snatched from the proper sphere of thine occupations and devoirs; but, I hope, ere we part company, thou mayest think thyself recompensed for the delay, and rewarded for the patient and courteous manner in which thou hast conducted thyself under this trespass on thy patience and time. To convince thee in some measure that I have not done so—for Godfrey acted by my express injunctions—without being actuated by better motives than mere caprice, I must tell thee that, for reasons which cannot be made known at present, but which thou mayest be informed of afterwards, I take a deep interest in thy welfare, and am not ignorant of what hath happened of late at the Scottish court, not even of that which they are at present the most anxious to hide."

Thirdly, if the minstrel of 'Allen-a-dale,' and 'The Coronach,' and 'County Grey,' ever wrote the following namby-pamby, he did well to give away his MS. to his "daughter Anne," and almost deserved the honours of disinterment by M. Cabany:—

"A sweet voice from the chamber nearest the gallery, of the adjoining house, seemed to respond to his meditation, accompanied by a lute, thus—

Is it fear which keeps thee veiled,
Is it fear which makes thee fly,
Timid dove?

No rude hands have thee assailed,—
Can it be love, then, makes thee shy?
Yes, 'tis love.

—Godfrey, who knew the stanzas, took up the next couplet, and sang—

Why should gentle love alarm thee—
Love with wings like thine so bright,
Gentle dove?

'Neath its plumage what could harm thee?
Is it love that shuns the light?

—The refrain was given from the room—
Yes, 'tis love."

Can any evidence be more complete than such as the above passages from 'Moredun' furnish? There is a thing called "style," by which an author may be detected as surely as a painter may be known by his colour. This thing even palsy could not wholly destroy in the glorious veteran, when he toiled, as a dying man, to complete 'Count Robert of Paris' and 'Castle Dangerous.' By this, we were enabled to affiliate 'The New Timon,' even at the moment its parentage was steadily disclaimed by its author. By this, we ventured to indicate 'Cecil' as the work of Mrs. Gore, in defiance of every rumour, asseveration, and "certain intelligence," which assured the town that 'Cecil' owned an origin far more mysterious. By this, we are constrained to believe—despite M. Cabany's attestations, his siftings of evidence, and assertions of authority to decide such points—that Sir Walter Scott had no hand in 'Moredun.'

Sussex Archaeological Collections, relating to the History and Antiquities of the County. Published by the Sussex Archaeological Society. Vol. VII. J. R. Smith.

THERE is no local association of antiquaries more flourishing, or that deserves to be more flourishing, than that of the county of Sussex. It includes among its members, not only most of the nobility and gentry of that part of the kingdom, but others who have no connexion with it, beyond the general interest they feel in matters that are investigated, and questions that are discussed, in the annual volumes published under the care and sanction of the Society. On several previous occasions we have been glad to notice those volumes, always with approbation more or less; and having gone through that which has just been put forth for the past year, we can say that it in no respect falls short of those by which it has been preceded. If we have now and then felt called upon, heretofore, to point out a mistake, or to supply an omission, that course by no means detracts from the general excellence of the papers, which have often the more attraction, if not the more merit, because they are not the productions of habitual and experienced writers, who too frequently avail themselves of their skill to give importance to trifles, and to cast a gloss of novelty over topics sufficiently hackneyed.

Mr. Blaauw is an excellent secretary in more ways than one, for he is not only active in promoting the objects in view, by stimulating the members to research and exertion, but he has a considerable fund of what we may term remote knowledge, and a discreet pen in making it available. He has four papers in this volume, and though he is a little too apt to dwell on heraldic details, he shows considerable versatility, and makes up for the deficiencies of one subject by the superabundance of another. He has good supporters and seconders; and by the soberness of his own views and manner of writing checks the rather inconsistent flippancies of some of his younger contributors. His article 'On the Ornamental Brickwork at Loughton Place' is his best; but his other essays, 'On the Effigy of Sir David Owen,' 'On the Tax-payers of Arundel,' and 'On the Monasteries of Sussex,' have their separate recommendations.

The place of honour in the present publication has been assigned to Mr. W. D. Cooper, who gives a rather interesting etymological dissertation 'On the Retention of British and Saxon Names in Sussex.' He observes, that—

"Even in Saxon times this district remained comparatively untouched by the Danes and the Northmen. Whilst Kent on the one side, and Hampshire, Dorsetshire, and Devonshire on the other, were attacked and devastated again and again; whilst the Isle of Wight was more than once occupied by the Danes, who drew their supplies in 998 from Sussex and Hampshire; whilst the Limene and the Thames were entered by the hostile fleet and the remains of one of the Danish vessels, discovered a few years since near Appledore, attest the accuracy of the account given in the Saxon Chronicle of the landing of the Danes in 893 at the very verge of East-Sussex: the district around Chichester alone contains records of Danish occupation, and the only town in Sussex in which a Danish settlement seems to have been fixed is *Hastings*; there is no record existing, which shows that Sussex generally was ever occupied by the unbelievers, and there are only very slight evidences of any serious attempt by the Danes to subdue the Saxons occupying the Downs and the Weald of Sussex."

Hence, after some further introductory observations, he proceeds with his subject geographically and topographically; and nobody who was not well acquainted with the whole district could pretend to compile such an accumulation of names of places and persons of British and Saxon origin. There is a good deal of fancy in some of these appropriations; but, looking at the result, it really is surprising how little alteration has taken place during the lapse of from twelve to fifteen centuries.

Mr. M. A. Lower's 'Memorials of Seaford' evince great industry and considerable research, and the materials are put together with ingenuity, but they are too numerous; there could have been no difficulty in assorting them into subjects, or in separating them into periods. On p. 94 Mr. Lower has inserted the oath administered to the grand jury of the hundred, anterior to the reign of Henry the Eighth; and, as the English is ancient and obscure, he has accompanied it by what he terms a translation in modern language. Here, we may remark, that the translator has rendered his task more difficult by not having used a good copy of the original. We will give two instances, where the transcript of the oath must have been defective. In one place it refers to the punishment of persons who clip the king's money or "counterfeth the kyngs senechal":—this Mr. Lower renders "who oppose the king's steward"; but it seems clear that the word *seal* must have been mistaken for the abridgment of the word "senechal," and that the infliction was intended for those who clipped the king's money or *counterfeited the King's seal*. Just above, "conceit tresun" ought to be *concele* treason; and, further down, Mr. Lower was obliged to leave a blank for a version of "hoystroppers," because he could make nothing of it, when, in fact, the decipherer was unable to read *horstoppers*—i. e., horse-troopers or highwaymen, who robbed at night. These defects are not to be charged so much against Mr. Lower, as against the person he employed to copy the relic. His paper, on the whole, is one of much local value and interest.

History of My Life—[*Histoire, &c.*]. By George Sand. Feuilleton of *La Presse*.

SINCE we last noticed Madame Dudevant's 'History' [*ante*, p. 345], the chapters added to it have contained only a moderate portion of such matter as the English care to read: and among this we have no study of character approaching to that of the tough and homely Priest whom we then presented to the reader. The section at the close of which we again meet the French Lady is mainly devoted to the history of her heart and affections,—to explanations of the manner in which her devotional aspirations were

kindled, calmed and modified into what she now accepts for devotion,—and to apologies for those eccentric manners which subjected her, even before she was married, to reproach and animadversion. These changes and circumstances are narrated by aid of recollections so methodical, conversations so minutely reported, as to give the 'History' the air of a romance. It is noticeable that while, on the one hand, Madame Dudevant is so unnaturally explicit, on the other she becomes more and more capriciously mysterious as the tale proceeds, throwing every object into shade or sunshine, with an artist's rapidity of hand, for the purpose of self-exhibition or self-commendation.

Most of all does her plan of reckless disclosure, accompanied by reservations yet more damaging, strike us as strange and painful, when applied, as it is, to the character and proceedings of her own mother. For this wild and wayward woman Madame Dudevant professes herself to have always cherished a romantic and impassioned affection. The child Aurore (who as a young wife was to write 'Lelia') is described by herself as having early made election betwixt the natural genius of her mother and the courtly *esprit* of her grandmother,—preferring the former. For a time after the death of Maurice Dupin, the two ladies lived together on the family estate of Nohant, agreeing about as ill as mother-in-law and daughter-in-law are apt to agree. At length they determined on a separation. The young widow was to return to Paris, leaving her daughter behind her as the recognized heiress of the elder gentlewoman, to be trained as a young lady should be trained. According to our 'History,' Mdlle. Aurore was thrown into a passion of high-minded despair by this separation. She despised money—she hated the idea of accomplishments—she was as ready to trample upon coronets and orders as the English lady who is said to exact the performance of such a humiliation from all the titled folk who cross her threshold. She longed to run away from her grandmother with her tiresome circle of old Countesses; she would help her mother to keep a shop, or to work with her hands; she would take up any plebeian and practical mode of life, if only herself and her parent were not separated. These enthusiasms, however, by no means suited Madame Dupin the younger, who seems to have been as willing to disencumber herself of her daughter as the latter was eager to cling to her. The girl was soothed and amused with promises, and left at Nohant under the care of her grandmother. The old lady's adoption of her grandchild proved no sinecure. Aurore was sullen, rebellious and lawless, inaccessible to discipline or affection. It was necessary to explain to her in what light her mother was regarded by the family and by the world,—and accordingly the old lady made the revelation. But the grandchild (to believe Madame Dudevant) seems even then to have been able to analyze what was told her with the acuteness and toleration which are illustrated and preached in all her fictions; and so recusant did she continue to be, that other methods of "reducing the absurdity" of her irregular habits and unequal spirits had to be tried. The French system of convent education was thought of:—Mdlle. Aurore was placed in the English Convent at Paris, at that time a place of Catholic education high in European repute, where the ideas of certain English ladies—now circulating in the world of London fashion—were taught "how to shoot," and their manners received the due touch of French grace—the required varnish of French polish.

This part of Madame Dudevant's history is too dull and too puerile to interest the general

reader; but the student of character will trace throughout it that steady spirit of self-exaltation which seems the settled purpose of this narrative. The 'Memoirs' of Madame de Genlis were frivolously, frantically vain, in the claims on wonder and regard asserted by their writer. Our own Fanny Burney, most demure of the demure, least conspicuous of the "conspicuous," exhibited in her 'Diary' a shy but solid sense of her own shrewdness, sweetness and spirit. But neither the Authoress of 'The Palace of Truth,' nor the Authoress of 'Evelina,' the two antipodes of the

—large-brained woman and large-hearted man

(as Mrs. Browning has styled *George Sand*),—was more self-conscious,—more resolute to recommend herself,—more quietly astute in "marking every trick" to her own advantage,—than is Madame Dudevant. There were plays in the English Convent:—she managed them,—she made them something quite different to what boarding-school plays have ever been, before or since. There was a poor lay-sister,—as superior a saint, in her way, as Miss Brontë's *Helen Burns*, in 'Jane Eyre,'—but who was homely, and ugly, and ungracious. She penetrated the homeliness, and ugliness, and ungraciousness,—worshipped the sanctity,—and took the sister to her heart. During her convent-residence, too, Mdlle. Aurore had ecstasies, visions, convictions. She would have taken the veil, had she been allowed;—and only mitigated her devotional asceticisms at the bidding of an admirable Jesuit, her spiritual director,—*à propos* of whose candour, justice and gentleness she finds occasion to say handsome things of Jesuitism, such as, coming from so vehement a Liberal, may perplex those who have not studied the elastic and incoherent system which herself and congregation accept for code of faith and morals. From the convent, Mdlle. Aurore was taken back to Nohant—to be married, according to the usage of the *ancien régime*. But here, again, something more than ordinary was arranged for her by her star. Her grandmother fell sick:—became partially imbecile. This circumstance placed Mdlle. Aurore at the head of her grandmother's household, to the management of which she was perfectly equal—according to her own report. But her better sense, in despising forms, ordinances, and established modes of attire, subjected her to antipathy, to insult even, from her country neighbours. She was given up, by the gossips of La Châtre, as "no better than she should be,"—and on the occasion of this verdict, and of the impertinence which led to it, she reports a long philosophical argument, held by her and M. Deschartres, the family friend and preceptor,—with as nice an arrangement of *pro* and *con* as distinguishes the most didactic pretence at real talk which may be found in Miss Martineau's 'Illustrations of Political Economy.' After a period of decay, long-protracted enough to test the devotion of Mdlle. Aurore, Madame Dupin died:—conforming, outwardly, to all the solemn ceremonials of the Roman Catholic Church; but accompanying the rites with a running commentary of reserves and remarks, by which she saved her philosophical consistency with those who could understand her, and for whose benefit she had been used to criticize Priestcraft, with all its superstitions.

On Madame Dupin's death, Mdlle. Aurore's mother thought it proper to claim her. Time, the fading of beauty, and the irregular and obscure life which this strange person had led during some years of her widowhood, had made her more intolerable than ever. After saying many fine things in general concerning her mother's changes of humour, Madame Dudevant goes on with facts and traits.—

My mother [says our historian] had need of violent emotions; and though her life had been steeped in them, they had never been enough to satisfy that sort of strange and fatal hatred which she had conceived for repose of body and mind. She must for ever be refreshing the agitated atmosphere in which she lived by new agitations,—by changing her residence,—by quarrelling and reconciling herself with some person or some thing,—by going to pass some hours in the country, and then hurrying back into town to get rid of the country,—dining at one *restaurant* after another,—destroying and replacing her *toilette* from head to heel every week, . . . She would buy, for instance, a bonnet, because she thought it charming. The evening of the day she bought it, she would find it hideous,—take off the ribbons, and then the flowers,—take out the lace,—and change the arrangement with readiness and taste. Her bonnet would please her all the next day. But the day after, there must be another radical reform,—and so on, for some eight days, until the unlucky bonnet, always in a state of metamorphosis, became totally indifferent to her. Then she would wear it with the utmost disdain, professing that she did not care what she put on,—till the fancy should seize her to buy another new bonnet!—Her black hair was still very fine. She got tired of being a *brunette*, and put on a *blonde* wig: yet by doing so she could not manage to disfigure herself. She took a fancy for herself as a *blonde* for a while,—then she abused herself for being flaxen, and chose to be bright chestnut. Presently she returned to ashey-pale locks,—then went back to her own mellow black hair,—and this to such purpose that I saw her with different hair for every day in the week. This childish frivolity did not exclude laborious occupations and very minute domestic cares. She had her own delights of imagination, and would read the romances of M. d'Arlincourt with positive frenzy—far into the night;—but that did not hinder her from being astir at six in the morning, to begin anew her *toilettes*, her excursions, her needlework, her merriment, her despair, and her fits of passion.

This tumultuous woman (to borrow the epithet which Wordsworth applied to a Transatlantic heiress,) had not long resumed the charge of her daughter, ere, between the two, there was acted one of those scenes of confession or counsel, the record of which recalls the Martineau dialogues. The mother was candid, the daughter was Christian; and reasoned with her parent just as Madame Dudevant used to expatiate in her novels on points of faith and forbearance, with more eloquence than logic. Mdlle. Aurore, however, could not secure any permanent ascendancy over the wild woman—who spoke to her as “*Sainte-Tranquille*,” and who spoke of her as “a pedant,” and “strong-minded” and original,—discharging against her a volley of reproof, on the authority of the malignant gossip which had been transmitted from La Châtre:—compelling her to quarrel with the relations under whose tutelage she had been placed—accusing Deschartres of dishonesty and speculation in the administration of the old lady's estates—and committing as many violent and unreasonable excesses as a semi-savage creature bent on making a sensation could commit. Such people, however, as Madame Dupin exhaust themselves by their own vehemence. After a time she found her daughter “too much for her.” One fine day, becoming weary of Mdlle. Aurore, just as she was used to become weary of the six-times-trimmed bonnet, she took our heroine into the country to pay a week's visit to some friends, and left her there four or five months. This new scene was a fine villa of the time of Louis Seize in the *pays de Brie*, about two leagues from Méhun. The hostess, Madame Roettiers Duplessis (who had married her uncle James, a captain of *Chasseurs*), and the host at once “took mightily” to this neglected girl. James and she presently came to one of the wonderful explanations which abound in this curious

‘History.’ He assured her that both he and his wife were interested by her unhappy look—that the best thing which could happen to her would be a discreet marriage—that her present abode offered many advantages in that respect, seeing that many young people were coming and going—and that he would take care, during her mother's absence, that she should not fall into bad hands. And many suitors did come accordingly; and most did go as they came, being dismissed; we are assured, by our heroine, with a generosity and considerateness which would have done honour to *Harriet Byron* herself. But the river was nearing the precipice Matrimony. Ere we are swept on to this, however, we must stop for the sake of what may be likened to a flower on the bank—a bright character of a famous French woman, encountered when she was a child by Mdlle. Aurore, and thus happily touched. No musical person need be reminded that Mdlle. Lōisa Puget was for years one of the most popular *romance* composers of France, and that her ‘*Mauvais Œil*,’ (a one-act *opérette*) kept its place at the *Opéra Comique* of Paris longer than any musical work by a woman has ever kept the stage.—

Since I have mentioned Lōisa Puget [says Madame Dudevant], of whom I lost sight after two or three years, I must devote a *souvenir* to this extraordinary child, who, when I knew her, had hardly come to girlhood. She was then some years younger than I, which made so great a difference that I cannot now recall the intimacy which we then struck up without astonishment. Yet certain it is, that she was the only creature with whom I could sometimes talk of literature and art while I was at Plessis. She was endowed with a remarkable precocity of intellect, and showed, at once, a surprising cleverness and a remarkable indolence in all her studies. She was, I imagine, a victim to her “*facility*.” She understood everything in a trice, and at once digested all literary and musical ideas. Her mother had been a singer in the provinces; and though her voice was broken, could still sing admirably when she consented to allow herself to be heard in a small society. She was also a very good musician, and used to torment Lōisa to study in earnest, instead of improvising at random. Lōisa, who was fortunate in improvisation, paid no attention whatsoever to the mother. She was a terrible child, much worse to manage than any of the Plessis children. Pretty as an angel, full of quaint answers, she managed to get herself spoiled by all the world. I think, too, that she must have spoiled herself by her readiness in contenting herself with her facile ideas. The works she has produced are gay in purpose, spontaneous, happy in rhythm, clear in colour, perfectly rounded as to form,—qualities carrying off the common-place of the style in which they are written. But I, who recollect more about her than she, possibly, imagines, . . . know that she has in her much more than she has ever given out; and if I were to be told that, retired as though she was forgotten in the provinces, she had produced some works more serious and thoughtful than her old *chansons*—were they still *chansons* (for form and dimension have nothing to do with the quality of the work)—I should not be in the least astonished at an immense progress made by her.

Among the persons to whom Mdlle. Aurore was handed thus unceremoniously by her mother was an eccentric, meddling old bachelor; one M. Stanislas Hue, than whom a more mean and troublesome person could hardly be conceived. A dull joke of his was the word of fate to the misunderstood and neglected girl. M. and Madame Duplessis came up to Paris, and brought with them Mdlle. Aurore,—taking her duly the round of *cafés*, theatres, and other resorts of good company and marriageable youths—and allowing her, half in jest, half in earnest, to call them father and mother.

One evening [says the ‘History’] we were taking ice at Tortoni's after the play, when my Mamma Angele said to her husband, “Why, here's Casimir!” A thin young man, elegant enough, with a gay ex-

pression of countenance and a military bearing, joined them to shake hands and answer their eager questions about his father, M. le Colonel Dudevant, who was much loved and respected by the family. He sat down beside Madame Angele, and inquired in a low voice who I was. “My daughter,” was the answer. —“Then,” continued he, still speaking low, “is that my wife that is to be? You know you have promised me your eldest daughter; I thought it would be Wilfrid, but as this one seems of an age nearer my own, I will take her if you will give her to me.” Madame Angele began to laugh; but this pleasantry was a prediction. Some days later Casimir Dudevant came to Plessis, and entered into our children's parties with a gaiety and eagerness which I could not but conceive argued well for his character. He did not court me—which, indeed, would have troubled our careless life—nor even thought of it. A quiet comradeship was established between us,—and he would say to Madame Angele, who had long been in the habit of calling him “son-in-law,” “Your daughter is a good fellow,” while, in my turn, I would say, “Your son-in-law is a fine boy.” I don't know who encouraged us to carry the pleasantry on. Father Stanislas, determined to get some mischief out of it, cried to me, when we were playing at *barres* in the garden, “Run after your husband!” Casimir, excited by the game, shouted in turn, “Set my wife free there!” So we came to call one another “husband” and “wife,” with as little awkwardness or passion as the children, Norbert and Justine, could have had in using like names. One day, Father Stanislas having said some impertinent thing about the matter in the park, I put my arm under his, and asked the old bear why he wished to give a bitter-turn to such insignificant trifles.—“Because,” replied he, “you are mad when you fancy that you are going to marry that young man. He will have sixty or eighty thousand *livres* for income; and certainly he does not want you for his wife.”—“I give you my word of honour,” said I, “that I have never, for a single instant, thought of him as a husband; and since a pleasantry, which would have been in bad taste if it had not been carried on among persons so correct (*chastes*) as every one here is, can be turned into earnest by wits so cross-grained as yours, I shall desire my *papa* and *mamma* to put an end to it at once.”

Accordingly, Mdlle. Aurore did make the request to M. Duplessis; but *Papa* James did not accept her scruples. He told her that Father Stanislas doted when he talked of the marriage as impossible. On the contrary, it might be, or it might not be; but, if it *should* be, it would be no bad match for either:—and so the two went on playing in the garden, and, by pretending to no love, came (as many a youth and maid in a comedy have done) to the point at which the youth said “*pray*,” and the maiden said not “*nay*.” Family connexions began to arrive,—due introductions were made; Madame Dupin came from Paris to survey “the intended,” was struck by the gentlemanly manners of the old Colonel, M. Casimir's father, and went back, being for once, apparently, laid out to behave reasonably. Then reciprocal arrangements about fortune began to be talked of, and all was going on to admiration, when,

at the end of a fortnight, my mother fell like a bomb amongst us all at Plessis. She had *discovered* that Casimir, among other disorders of his life, had been for some time a waiter in a Parisian *café*. Where she had fished out this trashy rumour I have not an idea. I think it must have been some dream of the night before, which she had persuaded herself, on waking, to fancy was a real fact. This grievance was received with a laughter which threw her into a passion. James took the pains to answer her seriously,—to assure her that he had never lost sight of the family Dudevant,—that Casimir had never fallen into any irregularities. Casimir, in his turn, protested that he should not be ashamed to have been a waiter in a *café*; but that, having only quitted the military school to make a campaign as sub-lieutenant, and having only left the army, on furlough, to take his degree at Paris,—living with his father, on a good allowance, or following the campaign like

a young man of good family,—he never could have had, during eight days, during twelve hours even, leisure to play waiter in a *café*. She became obstinate,—pretended that they were tricking her,—and getting me aside, burst out, in the most insane invectives, against Madame Angele, her manners, the tone of her house, and the intrigues of the Duplessis, who drove the trade of marrying heiresses with adventurers, in order to get bribes and perquisites, &c. &c. She was in a paroxysm so violent, that I was alarmed for her reason; and to divert her attention, I told her that I would pack up at once, and depart with her there and then: that at Paris she could obtain all the information which she professed to wish for, and that until she was satisfied we would not see Casimir again. She became calm immediately. "Yes, yes," she said; "Come! let us pack up." But my packing had scarce begun, when she said—"On reflection I will go; I do not like this place. You stay, then; I will find out what I want to know, and inform you what I learn." And away she went that very evening.

There is no reading the above without remembering the exclamation—"This looks not like a nuptial"! So tepid a courtship, prosecuted in such squally weather, was hardly likely to conduct a phlegmatic gentleman and a transcendental young lady to the haven of a peaceful domestic life. Middle. Aurore and M. Casimir managed to weather the tempests raised by Madame Dupin, who retained her antipathy for her son-in-law elect, because the shape of his nose displeased her. She proved to the last troublesome in the article of settlements,—though unable to resist their resolution to be married. The next entries in the 'History,' following those which concern the marriage, announce disparities. They tell of the young husband away, or, when at home, establishing an order which was detestable to his better half,—they confess that the young wife was either as freakish as a child, or else morose, self-concentrated and gloomy. Among these "disparities" we take leave of Madame Dudevant for the present,—by no means sure that she will not, in future chapters, break the resolution announced in the opening of her 'History' [vide *Athen.* No. 1407] of saying nothing concerning her partner. On the contrary, we fancy that with the same angelic and damaging candour, which she has employed in "showing up" her mother, she may work out her "solidarity" theory by "showing up" her husband.

OUR LIBRARY TABLE.

Widow-Burning: a Narrative. By Henry Jeffreys Bushby, Esq., Barrister-at-Law. (Longman & Co.)—Mr. Bushby, who was for three years assistant to the President in Majpootana, contributed to the *Quarterly Review* a paper on the Hindoo rite of Sutte, which paper he has now reprinted with some additions. Sutte, or as it should more correctly be written Satî, signifies simply "a virtuous woman," "one who completes a life of conjugal fidelity by Saha-gamana—accompanying her husband's corpse." The word, however, has come to designate the cremation of a widow with her husband's dead body; but Mr. Bushby has preferred to give his *brochure* a name more generally intelligible to the English ear. It is a singular fact that the barbarous custom of widow-burning arose in the first instance out of a corruption of the text of the Rig-Veda. By substituting the single word *agneh* for *agreh*, a precept to lead the widow, after her husband's obsequies, to her dwelling, was changed into one for her cremation. This mistake has been clearly proved by Prof. Wilson in a paper read before the Royal Asiatic Society. But so long ago as 1829 Col. Tod had pointed out the inconsistency of Sutte with other precepts of Hindû law. The difficulty was to convince the natives of the error. Various injudicious attempts to induce them to lay aside the inhuman practice led to an increase of zeal on their part in supporting it. At last in 1834, Col. (then Major) Ludlow, political agent at

Typore, succeeded by the most dextrous tact and management in persuading some influential members of the Regency there to abolish the rite. The example of Typore was followed by other Rajpoot States, and, as these hold a proud pre-eminence among the great Hindû nation, other conversions rapidly followed, so that now but a comparatively small extent of country remains in which the new principle has not spread. This movement, of infinite importance in itself, acquires new weight from the consideration, that after the capture of this one bastion of Hindûism, the whole citadel may be expected to fall ere long. Such is the outline of the facts with which Mr. Bushby has dealt. His style is lively and agreeable, and he has handled his interesting subject with much ability.

The Exile: a Tale of the Sixteenth Century. By Phillip Phosphorus. (Bosworth).—"The Exile" contains the first great requisite of a story—it is amusing. Its probability, or possibility, is another matter. In the *naïve* unconsciousness of difficulties, and the childish reliance upon the reader's good will, we are carried back to the nursery legends of the days of our youth; and it is written with an evident sense of enjoyment, which of itself creates an interest. Of course, as a picture of the manners and mode of thought in Germany during the Revolt of the Netherlands, it can stand no criticism; 'Thaddeus of Warsaw' and 'The Scottish Chiefs' are historical documents in comparison. The villains of the story are of the true old-fashioned kind, and the good characters all speak and move like so many Sir Charles Grandisons;—even the Grand Inquisitor of Valladolid, before whose tribunal the hero has been brought by the machinations of his enemies, dismisses him "with a polite bow," and the assurance that "he is at perfect liberty to take his departure when convenient to himself"! He also directs that all the money and effects in the possession of the prisoner shall be restored, and allows the jailer to deliver him "two letters, with their seals intact"! All the incidents proceed through the book in the same jaunty way to a happy termination, which certainly spares the reader any great expenditure of anxiety. There is talent in Phillip Phosphorus, and we expect he will do much better things, but he needs study and practice.

The Pride of the Mess. By the Author of 'Cavendish.' A naval novel of the Crimean War. (Routledge & Co.)—Mr. Routledge certainly gets up his "original novels" in the form and type most certain to repel fastidious readers. No one, looking at this book without previous knowledge of the series, would expect to find anything good in it. Nevertheless, those who begin to read 'The Pride of the Mess,' will be very likely not to lay it down until they have got to the end. It has the great virtue of a novel,—it is amusing and is readable (if people are not blinded by bad print). When they have come to the last page it is probable they will grow critical and declare they have read every incident before in the letters of "our own Correspondent,"—which it is very likely they have. Nevertheless, an individual interest is given to the scenes in the person of the young hero, who before he is three-and-twenty goes through more adventures, performs more wonderful acts of heroism, and makes more hair-breadth 'scapes than would have sufficed to make the reputation of all the Knights of the Round Table, if they had been fairly divided amongst them.

My Brother's Keeper. Reprinted from 'Excelsior.' (Nisbet & Co.)—"My Brother's Keeper" is about the least satisfactory reprint we have seen of this style of American story. It is full of sickly religious sentimentalism and affectation, which, besides being extremely tiresome, is liable to mislead those who may in their simplicity be inclined to look for the same wonderful results from the same means. Real religious life is not found amenable to texts and hymns, nor do these afford support to sorrow and anxiety, any more than in actual life the best advice and the wisest apophthegms avail to assist a sore heart to bear its burden. The idea of 'My Brother's Keeper' is good, and it is to be regretted that it should have been spoiled in the handling. A young girl devoting her life to reclaim her brother from question-

able courses, might have been made not only interesting, but inspiring. It required, however, great skill and judgment in the author, and, above all, common sense,—and the story bears trace of none of these things. Rosalie, the heroine, is ineffably tiresome; she preaches without mercy, and wears a certain sweet victimized look of patient perfection which must have been unspeakably aggravating to any mortal brother. This offending brother is the only character that excites a particle of sympathy throughout the book; he has to endure not only exhortation, in season and out of season (generally out of it), but he has also to see himself treated with the utmost sweetness as a reprobate, and to have all his whims studied and indulged, in the same way that condemned criminals are allowed to choose their own viands on the day of execution. We consider that the way in which he is represented as enduring this state of things is admirable, whatever the rest of his conduct may be! The story itself is meagre and sketchy; the reader is led on in the hope of an incident, and meets with long dialogues inclosing a text or the verse of a hymn by way of kernel—in the same way that we sometimes begin to read a poem on a promising theme and find ourselves drop at the end into a pot of "Warren's Jet Blacking"! We are severe upon this book because we consider the subject is far too good and too important to be exposed to ridicule by overlaying it with twaddling sentiment.

The Planetary Worlds: the Topography and Telescopic Appearances of the Sun, Planets, Moon, and Comets. By James Breen. (Hardwick).—It has not often happened that we have met with a small book containing so large an amount of valuable information conveyed in a pleasing manner as 'The Planetary Worlds.' The chapters devoted to the physical condition of the sun, and to the general character of the comets, are, in this respect, especially remarkable. The work is illustrated by plates engraved by the author himself. The drawing is correct, but the engraving is coarse and ineffective. We recommend this work to young people desiring some acquaintance with the worlds beyond our own.

Coal-Mining: investigated in its Principles and applied to an improved System of Working and Ventilating Coal-Mines. By Joseph Marlor, Sen., Oldham. (Bartlett).—Mr. Marlor has a pet scheme for ventilating coal-mines, and this book is devoted to its development. There are some few remarks in it on the present modes of working the coal which, as the result of experience, are of value; but, generally, the work contains little that is new or interesting beyond the circle of professional readers.

The Photographic Primer. By H. Cundall. (Cundall).—Here is a "very primer" of photography, which may prove useful to persons who have everything to learn. These photographic books are far too numerous. Every trader in cameras or photographic chemicals appears to have grown learned in the art, and what is far less endurable, imagines he has a mission to write for the instruction of his customers. What necessity is there for the multiplication of indifferent works?

Vanity's Victim: a Comedy. (Nottingham, Rawson & Richards).—We are disposed to imagine that 'Vanity's Victim' in his most perfect type must be the author who publishes plays such as this. But the anonymous writer with whom we are dealing seems to vibrate betwixt visions of presenting himself as another Congreve, or as a new Sheridan Knowles, going from prose to verse, and from verse to prose, with a versatility which is as artless as it is charming. With his wit we will not trust ourselves; but the reader shall judge of his sentiment as measured out "in lengths," by the following new lines on an old subject.—

Bertha. No, no.
When a man, from the love he bears a woman,
Tells it to her he loves, he pays her then
The highest compliment she can receive,
The utmost adoration man may offer,
The homage of the heart; and, wanting which,
The bended knee were fulsome mockery,
The honied words a bitter sarcasm.
Nor are men weak when they admit they love;

Rather, they own a feeling than that casts
A radiance over them and all that's theirs,—
Their thoughts, their aspirations, words, and actions,—
That tempers till it makes ambition noble;
(For when it loves, it ceases to be selfish.)
An influence that enlarges our affections—
Till loving one, we are for that one's sake
Benevolent to all :—whose magic spell
Sweetens the words till they become like those
Used by the bright inhabitants of light.

—The farce of 'Vanity's Victim' is as racy and
bright as its feeling is gentle and delicate; and its
quality may, perhaps, be inferred from the passage
extracted above.

*Sisters of Charity, and Some Visits with them;
being Letters to a Friend in England.* (Masters.)

—This is a well-intentioned little book, and is
intended to press on the attention of the English
public the question of the organization of charity,
especially as regards the exercise of female bene-
volence. There are many lively and interesting
details given of the practical working of the out-
of-door orders of charity in France. The spirit in
which the book is written is good and sensible,
and especially urges the necessity there is that
those who desire to devote their time or their
money to objects of charity and benevolence
should learn how to apply their means to the
best advantage; for charity is a science as well
as a virtue, and is no exception to the rules of
common life. It cannot be taken up on the spur
of the moment, but requires patient learning and
discipline—an apprenticeship—as much as any
other art. Amateur charity, except for the good
will it indicates, is, to all practical purposes, of as
little value as the general run of other amateur
performances:—only it is more mischievous,—it is
a more precious thing spoiled or run to waste.
What John Kemble once said of his own pro-
fession holds good for all who take up *any* calling
without the necessary training:—"No amateur
actor I ever saw would be worth eighteen shillings
a week!"

The War pamphlets form a body of fierce and
pungent crimination. They resemble the separate
counts of a great indictment,—one impeaching
the Cabinet of France,—another asking for a
verdict against Prussia,—a third charging the
English Government with high crimes and mis-
deemeanours,—and a fourth imputing recklessness,
without daring, to the Earl of Lucan. A more
militant series of these writers, the Parthians of
the pen, has seldom defied before us. Most con-
spicuous, and most telling, is the memoir attributed
to Prince Napoleon, entitled *The Crimean Expe-
dition*. It is inaccurate and abrupt,—yet signi-
ficant and impressive.—Lord Lyndhurst's speech
On the Position and Policy of Prussia deals in
terms of more direct severity with the acts of
another Government.—Capt. White, in the *Govern-
ment and the War*, accuses the departments at
home of the neglect which has annihilated an
English army. Thus, we have three pamphlets, of
different calibre, against the belligerent and neutral
powers.—The succession is continued by Mr. John
Langford in *The War with Russia; its Origin and
Cause*, which divides its bitterness between the
Czar and the Quakers, though in a style not cal-
culated to damage either.—Rear-Admiral Scott,
in *Naval Reform*, makes a far more skilful use of
his opportunity. Every line is well aimed.—With
equal force and precision, "a Cavalry Officer"
reviews *The British Cavalry Action at Balaklava*,
in reply to Lord Lucan's defence of his fatal error,
which lost the Light Brigade.—The Queen's pro-
clamation of a fast is criticized by T. Binney in
*Illustrations of the Terribleness of God's Doings
towards Men and Nations*. Mr. Binney appends
an argument in favour of copyright in sermons.—
A theory on *The Reform of the Army* is explained
by a writer who discusses it in *Connexion with that
of our Schools and Universities*.—Leaving such
practical topics in the rear, the Right Rev. Dr.
Southgate, of the American Episcopal Church,
examines *The War; its Origin and its Conse-
quences*.—Mistaking its origin, he is naturally
bewildered as to its consequences, describing it as
"purely a Christian question."—Cardinal Wise-
man's lecture on *The Future Historian's View of
the Present War* is by many degrees more instruc-
tive and philosophical.—As a political study,

however, M. Alexander Herzen's *Discourse*, deliver-
ed last February on the occasion of a revolutionary
anniversary, has more point and meaning than the
foregoing.—We had thought to find a similar sub-
ject developed in *Russia's Policy and Napoleon's
Prophecy*; but it is a mere advertisement.—The
remainder of our War miscellanies consist of an
excellent manual, by J. S. Erlam, late of the
Royal Engineers, *The Outlines of Military For-
tification*,—and a useful *Glossary of Military
Terms, intended as a Handbook for Junior Officers,
&c.*—In contrast with these is the Rev. Mr.
Glover's *Poetry of War*, including rhapsodies,
criticisms, and compound epithets.

LIST OF NEW BOOKS.

Bible History for Young Children, Vol. 2, cr. 8vo. 2s. 6d. cl.
Boys of the Bible, sq. 16mo. 2s. 6d. cl. gilt.
Brameld's (Rev. G. W.) Practical Sermons, 2nd series, 6s. 6d. cl.
Chambers's Educa. Course, 'Acquisitions of Zoology,' new edit. 3s. 6d.
Confession (The) of Faith, 8vo. 7s. 6d. cl.
Crabbe's Extracts from best German Authors, new edit. 12mo. 5s.
Crawford's (Miss) French Cookery and French Confectionery, 3s. 6d.
Drummond's (H.) Future Destinies of the Celestial Bodies, 1s. 6d.
Evans's Vintage Cleanings, 3rd edit. 32mo. 3s. 6d.
Felix on the Bat, 3rd edit. 4to. 9s. cl.
Fleury's L'Histoire d'Angleterre, 18mo. 2s. 6d. cl.
Fleury's L'Histoire de France, 18mo. 2s. 6d. cl.
Goodwin's Guide to the Parish Church, 2nd edit. 18mo. 3s. 6d. cl.
Grant's (Dr. A.) Historical Sketch of the Crimea, fc. 8vo. 3s. 6d. cl.
Gray's Elements of Arithmetic, by Rutherford, new edit. 1s. 3d. bd.
Hallam's Europe during Middle Ages, Vol. 1, post 8vo. 6s. cl.
Harrison's (R.) Notes of Nine Years' Residence in Russia, 10s. 6d.
Honeymoon (The), by A. W. Cole, fc. 8vo. 1s. 6d. bd.
Jackson's (Dr.) Witness of the Spirit, 2nd edit. fc. 8vo. 5s. 6d. cl.
Jones's (Rev. J.) Spiritual Piety, 12mo. 2s. 6d. cl.
Keightley's Account of Life, Writings, &c. of Milton, 12s. 6d. cl.
Kingsley's (C.) Glaucus; or, Wonders of the Shore, fc. 8vo. 3s. 6d.
Kingsley's (C.) Westward Ho! 2nd edit. 3 vols. post 8vo. 1l. 11s. 6d.
Lardner's Museum of Science and Art, Vol. 6, 12mo. 1s. 6d. bds.
Latham's English Language, 4th edit. 2 vols. 8vo. 1l. 8s. cl.
Levien's (Rev. E.) Outlines of History of Rome, Vol. 1, 1s. (Weale.)
Lingard's History of England, People's edition, Vol. 10, 3s. 6d. cl.
Marryat's (Dr.) Therapeutics, or the Art of Healing, 12mo. 3s. 6d.
May's Sunshine of Greystone, 4th edit. fc. 8vo. 5s. cl.
Montgomery (Rev. R.) The Sanctuary, 18mo. 5s. 6d. bd.
Moreau, by W. S., 3 vols. post 8vo. 1l. 11s. 6d. cl.
Morning of Life, Memoir of Miss A.—n, new edit. fc. 8vo. 2s. 6d. cl.
My Brother's Keeper, by Amy Lothrop, fc. 8vo. 2s. 6d. cl.
Pain's Library, 'Familiar Handbook of Sonnets,' fc. 8vo. 1s. 6d.
Private Life of an Eastern King, post 8vo. 10s. 6d. cl.
Railway Library, 'Leila,' by Sir E. B. Lytton, fc. 8vo. 1s. 6d. cl.
Selwyn's (Dr.) Verbal Analysis of the Holy Bible, folio, 14s. cl.
Stewart's (Dugald) Collected Works, Vol. 7, royal 8vo. 12s. cl.
Stier's (Rudolf) Words of the Lord Jesus, Vol. 1, 8vo. 10s. 6d.
Tanner's (Dr. H.) Manual of Clinical Medicine, royal 12mo. 3s. 6d.
Topham's (Rev. E. C.) Philosophy of the Fall, post 8vo. 8s. 6d. cl.
Ullmann's (Dr. C.) Reformers before the Reformation, Vol. 1, 10s. 6d.

[ADVERTISEMENT.]—EXHIBITION OF ART-INDUSTRY
IN PARIS.—The ART-JOURNAL for JUNE contains an
Illustrated Report of the most beautiful and interesting
contents of the Exhibition in Paris. The ENGRAVINGS from
the ROYAL PICTURES in the ART-JOURNAL for JUNE are:—
'Portsmouth Harbour,' after C. Stanfield, R.A.; and 'Ariel,'
after H. J. Townsend. The Sculpture is 'The Nymph of the
Rhine,' from the statue by Schwanthaler. The Exhibition
of the Royal Academy and the two Water-Colour Societies
are noticed at full length; also articles on 'Kaulbach's
Illustrations of Shakspeare'; 'British Industries,' by Robert
Hunt, F.R.S.; 'The Exhibition of French Pictures in Lon-
don,' &c. &c.—VIRTUE, HALL & VIRTUE, 25, Paternoster
Row.

VOLCANIC ACTION.

At the present time, when Vesuvius is belching
forth its molten floods,—of which your Naples cor-
respondent has given us so graphic a description,
—it may perhaps add to the interest which your
readers take in the accounts of this sublime phe-
nomenon that they be put in possession of a few
remarks as to the true nature of volcanic action in
general,—the sublimity of the contemplation of
which appears to me to be so vastly enhanced
when we take a correct view of its real nature,
namely, that the floods of molten lava which vol-
canoes eject are, in truth, nothing less than remain-
ing portions of what was once the condition of the
entire globe when in the igneous stage of its early
physical history, no one knows how many years
ago!

When we behold the glow and feel the heat of
molten lava, how vastly does it add to the interest
of the sight when we consider that the heat we
feel and the light we see are the residue of the once
universal condition of our entire globe, on whose
cooled surface we now live and have our being!
But so it is; for if there be one great fact which
geological research has established beyond all
doubt, it is that we reside on the cooled surface of
what was once a molten globe, and that all the
phenomena which geology has brought to light
can be most satisfactorily traced to the succes-
sive changes incidental to its gradual cooling
and contraction. If this one grand principle
be kept in mind, all the apparently complex
and perplexing phenomena which the present

condition of the earth's surface presents to our
contemplation disappear, and the nature of those
actions which have, through a vast succession of
ages and changes, given to its crust its present
character and aspect becomes comparatively simple
and understandable.

And, as before said, when we behold a volcano
belching forth its fiery floods, how vastly is the
sublimity of the sight enhanced when we consider
that in the molten lava we have before us a sample
of the present condition of the interior of our
globe, and also of what was the condition of its
entire mass during the earliest days of its physical
history!

In former times, when geological research had
made but little progress, volcanic action was
ascribed to some adventitious union of substances,
whose combination resulted in the development of
intense heat and violent eruptive action. This
notion as to the nature and cause of volcanic
action has been long since abandoned by all those
who have carefully studied the phenomena of all
classes of volcanic action. Volcanic action depends
on a great cosmical principle, and when rightly
considered, is an expiring phenomenon,—one whose
vehemence in early periods of the earth's history
was infinitely more tremendous, frequent and ex-
tensive than it is now, and is destined by the
lapse of time gradually to disappear as one of the
active phenomena of nature.

That the influx of the sea into the yet hot and
molten interior of the globe may occasionally occur,
and enhance and vary the violence of the phe-
nomenon of volcanic action, there can be little doubt,
but the action of water in such cases is only
secondary. But for the pre-existing high tem-
perature of the interior of the earth, the influx of
water would produce no such discharges of molten
lava as generally characterize volcanic eruptions.
Molten lava is, therefore, a true vestige of the
Natural History of the Creation, and, as such, is
held in the most profound veneration by, Yours &c.

JAMES NASMYTH.

Patricroft.

FOREIGN CORRESPONDENCE.

Florence.

PERMIT me a few words on the principal Floren-
tine sculptors. Santorelli has been usually ac-
knowledgeed as the chief,—though Costali would
now take the precedence. There were few things
in his studio but repetitions, yet, as they are of
works not generally known to the British public,
I may venture to describe them. The 'Concezione'
is a fine and exquisitely finished statue, the
original of which is in the Cathedral of Montpelier.
The figure is standing on a serpent, and the robe
which covers her head falls down in graceful folds
to her feet, being caught and supported half way
on her left arm. Every traveller who has spent
twenty-four hours in Florence must know that
Santorelli executed the noble statue of Michael
Angelo under the Colonnades of the Uffizi. He
has a repetition of this work now in his studio. I
do not describe what is so well known, and only
allude to it to observe on the exquisite finish which
is displayed in it,—the rich damask tunic—the
robe! It was only last year that he sent off his
portion of the great monument erected to Colum-
bus in Genoa. The cast of it remains. It is a
colossal figure, called 'La Forza,' and is crowned
with laurel; in her left hand she holds a club, whilst
her right rests upon her knee. A work now exe-
cuting for the first time is a 'Maddalena.' She is
seated on her left leg; the other is turned back-
wards. On the ground is a skull, and to her breast
she clasps a cross. There was a bust, half executed,
of Sir Walter Scott, who is canonized in Italy, and
a girl at her prayers, in very bad taste. She is a
little, premature, French coquette, with her hair
turned back, who seems to be saying "Am I not
very interesting?" Without rising to the sublime,
Santorelli is always classical, pure and elegant,—
and the finish of his statuary is not surpassed, if
equalled, by anything I have seen in Florence.
The drapery reminds me of that of some fine Greek
statues excavated at Cumæ some two years since.
There is not merely surface finish, but the interior

is as highly executed as the exterior. You may put your finger into a fold and coil it round. With all his merits, however, Costali is, perhaps, gaining upon him in the great race of Art. He is now at work on a large colossal bust of Charles Duke of Lorraine. The commission is for the descendants of the Duke at Paris. A grand national work now occupies much of his time, and will require two years more to complete. It is one of the four *bassi-relievi* for the great monument of Columbus at Genoa. The moment chosen for description is when the great discoverer has just landed and is about to plant the Cross. His sword is in one hand. On either side of him are six figures, twelve in all, besides Columbus, and they are in various attitudes, according to the passion which animated them. One is praying; another, on his knees, is kissing the hand of Columbus, and asking pardon. On the further left stands the notary, in his long robe, reading the form of taking possession. As yet, this splendid *rilievo* is only in cast. A beautiful group, and made more interesting from the history connected with it, is 'Columbus presenting America to the World.' She is on his left, dressed in an Indian costume, and there are three other female figures, clasping hands,—due attention being paid to their geographical relations. He turns his back on Europe and Asia, as though he were facing the New World. The idea is good, and it was offered to the Committee at Genoa for the erection of the monument as a centre-piece. However, in a fit of economy, it was voted too expensive, and rejected. Subsequently, some brethren of the art cast some slights upon its merit,—when the Grand Duke took the matter up, ordered it to be cast in bronze, and placed it in one of the great galleries here—if I remember Costali aright—in the Pitti Palace. I have given the anecdote as having some interest in connexion with Art. The group has never, I believe, been executed in marble. There is in his studio now executing for Mr. Crawford, an Englishman, a repetition of his beautiful statue of 'The First Grief.' This is the third he has executed: the first was for a Milanese nobleman, and the second, which the artist considers his best, for Lord Rendlesham. A beautiful girl has just received intelligence of her first sorrow. Nothing can equal the overwhelming depth of grief expressed in the countenance, or the utter abandonment to her sorrow, by the drooping of the hands and the loose manner in which she holds her letter. In Lord Rendlesham's statue it has already fallen to the ground, which gives, I think, much more expression to the idea.—Before leaving the Italian sculptors, let me say that, so far as I have been able to gather, they set their faces against colouring statuary,—at all events, they have not adopted the practice; and at Santorelli's I was told that such works did not please.

Amongst the artistic celebrities of Florence must on no account be omitted Mdlle. de Fauveau,—and though her genius is not of the highest order, her works are distinguished by taste, high finish, and delicate execution. Indeed, I had some difficulty in gaining admission, but on intimating that I had a specific object in view, she opened wide her folding doors. Mdlle. de Fauveau works in marble, gold and silver, and wood. Her style is the mediæval, arabesque and grotesque, and her works are scattered over the world. Her Majesty has a Fountain executed by this artist for her boudoir;—and for the Emperor of Russia she executed a Bell, which was cast in bronze, and has since been wrought in some precious metal. The design was curious, and is much talked of still. From the base to the top is a whole train of dependents in a royal establishment, awakened by the sound of the bell, and put in a state of the most energetic and ludicrous activity,—all except the chaplain, who at the base is tranquilly pursuing his orisons, in presence of the Madonna and the Bambino. Of works now actually in hand, first, there is a 'St. Dorothea,' a Prussian saint. At the top of the column is a façade of a church which was built on the site of her martyrdom, and for which the monument is intended. The figure, half nude, is looking to Heaven, whence descends an angel with the flowers of Paradise as the reward

of her faithfulness. Her *chef-d'œuvre*, however, just completed, is a 'Vase for Holy Water,' executed for the Grand Duchess, and intended for her private chapel: a beautiful and rich work of Art. The outline is that of a cup. Round the rim are eight winged angels, who direct the prayers on their ascent to Heaven; whilst the handle is formed by an archangel with extended wings, who presides over the company of kindred spirits. Underneath and around the body of the cup are the Bourbon lilies, expressive of the descent of the Ducal family. Their respect for religion is their strength, which is more fully expressed by these words on a scroll:—"Hoc federe lilia florent." Underneath again are flowers, the lilies of Tuscany, concealing a serpent; whilst not far distant is a lizard panting and listening with iniquitude. The pedestal is triangular, and at each corner is a lion's head, the emblem of Florence. A Crucifix, representing Christ in the moment of death, is remarkable for its anatomy, and its complete abandon. Nor must I conclude this notice without alluding to a curious and highly-wrought piece of carving in pear-wood, called 'The Mirror of Vanity.' On the top is a peacock, the emblem of Pride. Under his feet are the attributes and ornaments which awaken the vanity of man and the coquetry of woman. Two personages in the rich costume of Louis the Thirteenth, one on each side, are completing their toilette in a glass, and, too much occupied with themselves, do not perceive the snares which a satyr below is setting for them,—in which the lady has been already caught. Beneath the mirror and on either side are carved the following old French verses.—

Parfois en ce cristal maint galant qui s'admire
Va droit au trébuchet que lui tend un satyre;
Et la coquette aussi, trop facile aux appaux,
Livra son pied mignon au lacet des oiseaux.

Florence is not so rich in painters as in sculptors; but it is impossible to pass over a young American artist, Mr. Buchanan Read, already well known to the English public and still better to the American, as the author of a volume of poems. They were favourably noticed in the *Athenæum* and other English reviews, and have arrived at a second edition in America. He has just sent off to his country for publication another poem, entitled 'The New Pastoral,' descriptive of American pastoral life. His poetical genius is manifest in his paintings. The subjects are all of the most highly imaginative character. The 'Culprit Fay' is one,—the idea being taken from a poem of the same name by Dr. Drake of America. The King and Queen, surrounded by their Court, are seated on a toadstool for their throne, with a lily for their canopy of state. The culprit Fay, who has dared to marry a mortal, stands before them on his trial, whilst on a lower step to the throne is the court jester, with a convolvulus for his cap. Lilies, flowers and various kinds of shrubs are growing around. There is much expression in the figures, which tell their own tale; and the light which surrounds the royal presence contrasts well with the dark background. 'Undine carried off by her Lover' is another successful painting. The passion and triumph of the mortal as he turns his head round to gaze on the water sprite are well given,—whilst she, on other thoughts intent, seems to be pointing to the waters she has left, and smiling with unimpassioned feelings. 'The Lost Pleiad' is the most original and imaginative painting in his studio. "I formed the design of painting such a subject," he said, "as I was gazing one splendid night upon this beautiful constellation, appearing as it did to float in the ocean of blue atmosphere." The Pleiads are represented by six lovely female forms, clad in a gauzy dress, which scarcely serves to conceal their forms. They are embracing one another, and seem to be unconscious of the loss of their sister, all except the highest in the group, who perceives the vacuum that has been created, and is shading her eyes whilst she looks down on the falling Pleiad. The adjustment of the hair is open to correction. She is supposed to be falling so rapidly that her hair, instead of streaming down, is carried upwards, and assumes, therefore, almost its natural position. Each Pleiad wears on her forehead a star, which

ornaments of course are arranged in the form of the constellation. The ground or sky on which they float is that hazy, silvery blue which marks an Italian sky on an Italian night. The painting is full of imagination. The grouping is well managed. The faces are marked by sweetness and placidity, with the exception of that of the higher Pleiad, who from her more exalted position perceives the loss from the family group. Altogether, it is a highly original and beautiful painting, and we trust that it will create golden opinions for the young artist in America, whither it is shortly to be sent. A.

OUR WEEKLY GOSSIP.

Prof. Graham's elevation to the post of Master of the Mint left vacant the office of Assayer to that establishment; and we understand that the staff has been completed by the nomination of Dr. Hoffman, Chemist to the Museum of Practical Geology, to the vacant office. We have not heard whether Dr. Hoffman proposes to continue his duties in Jermyn Street. While there are so very few state occupations for men of science, it is scarcely desirable that the best of these should be gathered into single hands.

A topographical model of our Indian Possessions, constructed by Mr. Montgomery Martin, has been on view during the week at the Privy Council Office.

Col. Rawlinson has arrived in London from Bagdad, having brought to a close the excavations in Assyria and Babylonia which he has been superintending for the last three years on behalf of the Trustees of the British Museum. The results of these excavations have already in part reached the Museum, but the most valuable portions of them are still in transit. One hundred and fifty cases containing sculptures, inscribed tablets, terra-cotta cylinders, and a very large collection of small objects of Assyrian Art, were recently unpacked at the Museum. One perfect obelisk, and the fragment of a second, are the only objects of this collection which have been yet exhibited to the public in the Assyrian Gallery; but the inscribed tablets, which amount in number, we believe, to at least 10,000, the two fine cylinders from Kileh Shergat, and all the smaller relics—which, for better security, are deposited in closed cases—can be examined by the curious. A collection of almost equal extent and of greater value—inasmuch as the sculptures belong to the culminating period of Assyrian Art, and are infinitely superior to those which form the present Nineveh Gallery at the Museum—was shipped last month at Bussorah, and may be expected to reach the Thames in August or September; while a third or supplementary collection, composed of select specimens, the master-pieces of Assyrian Art which were disinterred from the new Palace at Nineveh during the past autumn and winter, is about to be brought to Europe, in virtue of an arrangement concluded between Col. Rawlinson and M. Place on board the *Manuel*, a vessel which was sent out by the French Government for the purpose of bringing home the collections of MM. Place and Fresnel. Col. Rawlinson has further brought with him overland a single small case, containing, among other relics of especial interest, the Nebuchadnezzar cylinders which he obtained from Birs Nimrūd in the autumn of last year, and those still more valuable cylinders of Nabonidus, the last king of Babylon, which record the name of that monarch's eldest son Belshazzar, the Belshazzar of Daniel. It is sincerely to be hoped that means will be found for exhibiting these slabs to the public, as soon as the whole of the three collections shall have arrived, either by a new arrangement of the present Assyrian Gallery, or by the allotment of fresh space to the Antiquity Department of the Museum. Unless, indeed, some measures of this nature are taken, the fruits of the late Assyrian Expedition, of which the labours are now brought to a close, will be lost to the great majority of the nation,—the number of those who can appreciate the historical and scientific results, obtained from so vast an accumulation of cuneiform materials, being, of course, comparatively few.

On Tuesday, such supporters of the Literary Fund as love it with all its faults, or cling to it earnestly in hopes of future good, dined together at the Freemasons' Tavern, when the Bishop of Oxford occupied the chair, and the usual toasts and congratulations passed to the usual accompaniments. When the fruit and wine had been discussed, it was announced, in the midst of cheering, that "the subscriptions of the evening amounted to upwards of 800*l*."—a very satisfactory announcement, on which it is needful for us to make only two remarks. The sum is so large as to silence for ever the assertions of those who contended that the Committee of Revision, now sitting, would disgust the patrons of the Fund and spoil the annual dinner. Such was clearly not the case. The compliments were as choice, the speeches as little to the point, as in times past, ere the dream of the sleepers was broken by the intrusion of the literary body. The Bishop of Oxford told the old anecdotes, the Society made the old allusions, and with one or two exceptions the old speakers repeated their ancient speeches. As nearly as possible the dinner was stereotyped:—assuredly, therefore, it was not spoiled. The other point on which it is needful to remark is more important. "The subscriptions of the evening amounted to upwards of 800*l*."—is this announcement literally true? Is it true, in any sense, literal or figurative, that the evening—the dinner—produced for the Fund this large amount of money? Such is the inference to be drawn from the terms used; such is probably the belief which the Committee making the statement desire to see received. But is it true? We fancy, on the contrary, that much—probably the greater part—of this sum is derived from sources independent of the dinner, and which the abolition of the dinner would leave as actively beneficial as ever.

Lord Ellesmere held his second Reception on Wednesday last, at Bridgewater House. A very large company—including a goodly number of ladies—assembled in the Picture Gallery. Among the novelties exhibited was Mr. M. Martin's model in relief of our Indian Empire.—Mr. Weld had a *conversazione* on the same evening in the rooms of the Royal Society: Some new and very large photographs by Mr. Mayall excited interest. A horn-book, belonging to Mr. Longman, lay on one of the tables; and a fine specimen of chromo-lithographic printing was shown. But the "lion" of the evening was the Calculating Machine, invented by Messrs. Scheutz and Son, the action of which was obligingly explained by Mr. Gravatt.—Mr. Weld's second *soirée* will be held next Wednesday.—Earl de Grey had issued cards for a reception last night (Friday).—On Tuesday, next week, a *conversazione* will be held at the rooms of the Civil Engineers.

Illustrations of the War are multiplying round us. A new picture of Sebastopol has been opened during the week at Burford's Panorama, in Leicester Square. The picture includes within its field of view the Harbour and Fortifications of Sebastopol, the encampments, the field-works, the approaches of the Allies, the stations of the Fleet, the eminences of Balaklava, the ridge of the Alma, the battle-ground of Inkermann, and the vast sweep of magnificent hill-country in the rear of our forces towards Theodosia. Altogether, this is one of the grandest compositions ever exhibited in Leicester Square.—Mr. Wyld, in addition to his very attractive model of Sevastopol, announces a new model of Cronstadt and the surrounding shores of the Gulf of Finland, and also a new model of the Baltic Sea and the countries on its borders.—Messrs. Grieve and Telbin add to their deeply-interesting series of War Pictures graphic and effective illustrations of every new event in the progress of the great contest.

Majesty did not visit Drury Lane—on occasion of the Amateur Pantomime—in vain. Seven hundred pounds have been handed over to the Wellington College from the proceeds, after paying all expenses. Fifty pounds, we are glad to hear, has been sent from the same source to the fund originally raised in behalf of Mr. Angus Reach by the first performance of the pantomime. Pressing entreaties for a third performance in London have

been received at the Fielding Club; but the merry Mimes have played their play, and are not disposed to turn their sport into a trade. If a third performance shall take place at all, it will probably be in Paris,—where the pantomime, as a form of dramatic entertainment, is almost unknown. Imperial allurements, it is said, have been thrown out; and from what we hear it seems not unlikely that they may prevail.

The English Transatlantic Telegraph Company have effected arrangements with the American Company bearing the same designation, by which the latter are held bound to lay down submarine wires between Ireland and St. John's, Newfoundland, before the 22nd of January, 1858. Wires will be laid down before the close of this year between Newfoundland and Prince Edward's Island; and, as a telegraph already exists between that island and New York, the communication, when these projected operations are carried out, will be complete between America and Europe.

The Departments connected with the teaching of the Oriental languages in Russia, which, up to the end of last year, were somewhat irregularly distributed amongst several institutions, have been consolidated. The Oriental Languages now form a special Faculty in the University of St. Petersburg. The curriculum is extended from four years to five. The languages taught are: 1, Arabic; 2, Persian; 3, Turk (or Tartar); 4, Mongol (Kalmuck); 5, Chinese; 6, Hebrew; 7, Armenian; 8, Georgian; 9, Mantshu.

Mr. "O." Smith, the master of histrionic *diableries*, as some of our readers may know, was a collector of books illustrative of the stage; and his death having thrown these into the market, they have been dispersed by the hammer of Messrs. Sotheby & Wilkinson. Some of the lots were of extreme interest for their class, and brought good prices. — Lot 312, Collections for a Dramatic Every-Day Book, formed by the late Mr. Smith, sold for 8*l*. Lot 313, Dramatic Autographs, consisting of letters of David Garrick, Mrs. Siddons, and other dramatic celebrities, sold for 17*l*. 5*s*. Lot 558, a collection of materials towards a History of the English Stage, by the late Richard John Smith, Esq., 25 vols., half-bound, sold for 31*l*. Lot 559, 'Manuscript and Printed Collections relative to the English Stage,' compiled by the late Mr. Joseph Haslewood, 9 vols., sold for 25*l*. Lot 608, 'Garrickiana,' a collection of engravings to illustrate the life and theatrical career of David Garrick and his contemporaries, in 2 atlas folio vols., sold for 95*l*. Lot 617, a collection of 47 Initial Letters from Illuminated Service Books, sold for 8*l*. 15*s*. Lot 871, Theatrical Caricatures, a large collection of engravings, mounted in a volume, sold for 7*l*. 7*s*. Lot 872, Title-Pages, a very large and interesting collection, presenting examples by Faithorne, Cross, Dorigny, De Bry, and others, in 2 vols., sold for 5*l*. 12*s*. Lot 876, Wilkinson's (J.) *Theatrum Illustrata*, Memorials of Ancient Play-houses and Modern Theatres, copiously illustrated by the late Mr. Smith, sold for 8*l*.

Among the letters of thanks, of remonstrance, and of recrimination with which we are daily honoured by grateful or aggrieved correspondents, are many which would startle and amuse the reader had we ill-nature enough to print them. As a rule, we mercifully abstain from using the arms placed in our hands, and rarely notice any abuse levelled at ourselves, unless appeal is made in print against our judgments. For example, what good can arise to an author from remonstrances so oddly composed of gratitude and anger as the following, received from a gentleman whose verse-book, 'The World and its Beautiful Lights and Sympathies,' we have had the duty to read and the pain to describe?—

"I beg to express my gratitude for the service you have done me in noticing my volume, for it was an infinite condescension on your part to bring it before the public. But I do think you erred in the *rules of criticism*, which assert a double power,—one of discovering the faults and the other of discerning the merits. It must really be a sad thing for a work to possess no value at all, not even a single thought worth a critic's notice. Though you have damned the book so fearfully, I am not daunted nor discouraged. Thirty opinions on the opposite side counterbalance an individual effort, however influential among a class of society,

You may be right about my mistake in the tastes of my patrons, but allow me to say the names were sent in after a portion of the work appeared as specimen pages. It might not be your taste, and I am grieved it was not, for I should then have had as honest a review in favour, no doubt. I hope another time to produce something which may obtain your good opinion. I shall be happy, however, to forward you another advertisement shortly; and I hope by your severe critique to learn something. I am, &c.,

"JAMES WAYMOUTH.
"P.S. I am sadly vexed that the fallen Adam within me should rise above the better nature, but cannot avoid making one odd comparison, suggested by your critique. You speak of 'Archangels' and 'Sylvia' 'blending.' Do you suppose they will not in a future state of existence? I might have discussed the Devil on one page and the Editor of the *Athenæum* on another. Is it requisite they should 'blend'? Hope they won't shake hands or be handcuffed hereafter. If angels and men meet in Heaven, is it unreasonable to 'blend' them in a book, or couple their names on a page? Unsound logic rather!"

—In another style, we have received a letter from the Rev. P. H. Mason, of Cambridge, joint-author of 'An Easy, Practical Hebrew Grammar,' noticed by us last year [No. 1371]. Other critics, it appears, have been severe upon Mr. Mason,—and he has taken it into his head to fire his guns at them and at ourselves, in the shape of 'Strictures.' Against this course we had nothing to object; his reply was open to examination: and the public was able to judge the cause. Mr. Mason, indeed, as he says, "shows his contempt" for our opinion "by reprinting it" in his reply; though it is possible enough that readers will suspect quite another motive for its re-appearance than "contempt," when they see the following note, which accompanied the 'Strictures':—

"St. John's College, Cambridge, May 22.
"I feel bound to lay before you the accompanying pamphlet, in which I have quoted and remarked upon a notice that appeared in your valuable paper about a year ago. I hope you will not think that I send you this in bravado; my only reason for laying it before you is, that I do not think it right to make behind your back the remarks I have there made. I dare say you will consider the pamphlet itself a thing not at all worthy of notice:—to myself, it seems unworthy of notice. But, should you think proper to notice it, you will, perhaps, allow me to say that there are a few expressions in it which are taken (I am told) in a far different sense from any I intended them to bear—some, which were intended to express merely a little amusement, being taken for needless severity. I most extremely regret their occurrence; since my object was by no means to cause my friend pain, but only to repel his attack,—as, in fact, I told him when I carried him the pamphlet a few minutes before its publication. But, really I fear you will think this quite unnecessary to yourself. I fear I have trespassed too much on your valuable time.

"Believe me, &c., P. H. MASON."
—Cannot Mr. Mason exhibit "the courage of his opinions"? In his 'Strictures' he accuses us of "anonymous writing"—of "ignorance"—of "bitter railing" against his work—of "throwing mud and dirt" at him personally. What need then for this deprecation? If our "opinion" be worth no more than the "critical notices" quoted from other quarters, in his favour, and to which he triumphantly appeals, why apologize to us by letter for his abuse of us in print?

ROYAL ACADEMY OF ARTS, Trafalgar Square.—The EXHIBITION of the ROYAL ACADEMY IS NOW OPEN.—Admission (from Eight to Seven o'clock), 1*s*. Catalogue, 1*s*. JOHN PRESCOTT KNIGHT, R.A. Secretary.

SOCIETY OF PAINTERS IN WATER-COLOURS.—The FIFTY-FIRST ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East, close to Trafalgar Square.—Admittance, 1*s*. Catalogue, 6*d*. JOSEPH J. JENKINS, Secretary.

The SECOND ANNUAL EXHIBITION of the FRENCH SCHOOL of the FINE ARTS IS NOW OPEN daily, from 10 to 6 o'clock, at the Gallery, 121, Pall Mall, opposite the Opera Colonnade.—Admission, 1*s*. Catalogue, 6*d*.

GALLERY OF GERMAN ARTISTS.—The THIRD ANNUAL EXHIBITION of the WORKS of MODERN GERMAN ARTISTS, in London, IS NOW OPEN daily, from 10 till 6.—Admission, 1*s*. Catalogues, 6*d*.—Gallery, 168, New Bond Street, next door to the Clarendon.

PHOTOGRAPHIC EXHIBITION.—An Exhibition of the finest English, French and Italian Photographs IS NOW OPEN at the PHOTOGRAPHIC INSTITUTION, 168, New Bond Street.—Open from 10 to 5. Admission, with Catalogue, 1*s*.

ADAM AND EVE.—This great original Work, by JOSEPH VAN LERUÏ, IS NOW ON VIEW at 57, Pall Mall, opposite Marlborough House, from 11 to 6 daily.—Admission, 1*s*.

THE BATTLE OF THE ALMA.—NOW OPEN, from 10 until 6, at the Egyptian Hall, Piccadilly, the GREAT PICTURE of this important Military Event, Painted by Mr. GOODALL, from studies made during four months spent in the Crimea during the present war. Admission, 1*s*.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—The Railway at Balaklava, Battle of Inkermann, Storm in the Black Sea, Battle of the Alma, Cavalry Charge at Balaklava, Piccadilly, &c., are now exhibited in the Diorama, together with a Map of Sevastopol, &c.—The Lecture by Mr. Stocquerel, illustrating 'Events of the War.' The Lecture by Mr. Stocquerel. Daily at 3 and 8.—Admission, 1*s*, 2*s*, and 3*s*.

SIEGE OF SEVASTOPOL—GREAT GLOBE.—All the New Approaches and Siege Works are placed on the MODEL of SEVASTOPOL, including Inkermann, Bahaklava, and the Tchernaya, at the GREAT GLOBE, Leicester Square. KALITIC, also a large Model of the Balty Sea and 'Cronstadt.' Admission to the whole building, 18s. Children and Schools, Half price. Open from 10 to 10. A large Collection of Trophies taken from the Russians.

LOVE'S POLYPHONIC ENTERTAINMENTS.—UPPER HALL, REGENT GALLERY, 69, Quadrant, Regent Street.—Every Evening at 8, except Saturday, Saturday, at 3.—Monday and Tuesday, Mr. LOVE, universally accepted as the first Dramatic Ventriquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called THE LONDON SEASON, and other Entertainments. On Wednesday, Thursday, and Friday, Mr. Love will present the ENTERTAINMENT CALLED LOVE IN ALL SHAPES, to be followed by a ZOOLOGICAL CONCERT, and LOVE'S LABOUR'S LOST. On Saturday, at 3, LOVE IN ALL SHAPES, with other entertainments.—Tickets at Mitchell's Royal Library, 33, Old Bond Street; and at the Rooms.

WHITSUN HOLIDAYS.
ROYAL POLYTECHNIC INSTITUTION.—The LECTURES AND EXHIBITIONS, as delivered before HER MOST GRACIOUS MAJESTY and HIS ROYAL HIGHNESS PRINCE ALBERT, the PATRON of the INSTITUTION, will be CONTINUED, consisting of the TELEPHONE CONCERT, DISSOLVING VIEWS OF SINBAD the SAILOR, DR. ROSS'S ILLUMINATED CASCADE, the DIORAMA illustrating the VOYAGE across the ATLANTIC, and the CITIES in the UNITED STATES.—LECTURES IN MUSIC, by GEORGE BUCKLAND, Esq., with VOCAL ILLUSTRATIONS.—DISSOLVING VIEWS of the WAR, &c.—Monday Evening, the 28th inst. LECTURE to the INDUSTRIAL CLASSES, by DR. LANKESIER, F.R.S. &c., on PLANTS and ANIMALS, their Differences and Resemblances.—WHITEHOUSE'S ELECTRIC HARMONIOGRAPH and RHUMKOFF'S COIL explained daily.

SCIENTIFIC

SOCIETIES.

GEOLOGICAL.—May 16.—W. J. Hamilton, Esq., President, in the chair.—Mr. E. H. Hargreaves was elected a Fellow.—'Notes on the Geology of the Hudson's Bay Territories, and of portions of the Arctic and North-Western Regions of America, including Oregon and Russian America, with a Coloured Geological Map,' by Mr. A. K. Isbister.—'On the Geology of Georgia, United States,' by Mr. W. Bray.—'On the Geology of New Zealand,' by Mr. C. Forbes.—'On the Geology of Some Parts of New Zealand,' by Mr. J. C. Crawford.—'On the *Dicynodon tigriceps*,' by Prof. Owen. In this paper Prof. Owen described a new species of extinct bidental reptile (*Dicynodon tigriceps*), transmitted by A. G. Bain, Esq., from South Africa. The skull surpasses in size that of the largest Walrus, and resembles that of the lion or tiger in the great development of the occipital and parietal ridges, the strength of the zygomatic arches, and the expanse of the temporal fosse, all indicating the possession of temporal (biting) muscles as largely developed as in the most powerful and ferocious of the carnivorous mammalia. This unique modification of a sauroid skull is associated with the presence of a pair of long, curved, sharp-pointed, canine tusks, descending as in the machiroidus and walrus, outside the lower jaw when the mouth is shut, these tusks being developed to the same degree as in the smaller species of *Dicynodon* (*D. laeticeps*, *D. testudiceps*, &c.) described by the author in a former memoir; and, as in those species, so in the present more gigantic one, no other trace of teeth was discernible, the lower jaw being edentulous, as in the extinct *Rhynchosaurus*, and the Chelonian reptiles. Most of the extinct reptiles exemplify the law of the prevalence of a more general structure, as compared with the more specialized structures of existing species. The Labyrinthodonts combined sauroid with Batrachian characters; *Rhynchosaurus*, sauroid with Chelonian characters. The *Ichthyosaurus* had modifications borrowed from the class of fishes, and the Pterodactyle others borrowed from the type of birds and bats,—in both cases engrafted on an essentially sauroid basis. The *Dicynodonts*—which were like lizards in their more important cranial character, as, for example, the divided nostrils, the dependent tympanic bone, and the pair of symmetrical suboccipital processes—resembled the crocodiles in the extent of ossification of the occiput, resembled the *Tryonyces* in the extent of ossification of the palate, and in the form and position of the posterior nostril; and resembled the Chelonian generally in the edentulous trenchant border of the whole of the alveolar part of the lower jaw, and of a great part of that of the upper jaw. But they also superadded to this composite reptilian structure of the skull a pair of long, sharp, descending tusks, and temporal fosse and ridges, which seem to have been borrowed from the mammalian class.

SOCIETY OF ANTIQUARIES.—May 17.—Admiral Smyth, V.P., in the chair.—The nomination of E. Hawkins, Esq., to fill the vacancy in the Council by the death of Sir R. H. Inglis was read to the meeting.—The Rev. W. C. Lukis, the Rev. J. Booker, and the Rev. J. M. Jephson were elected Fellows.—The Society's extensive collection of proclamations, arranged by Mr. Lemon, was exhibited.—The Rev. T. Hugo exhibited a fragment of a Roman pavement found in the city.—The President, Earl Stanhope, communicated a copy of the inscription on the sarcophagus found at Sidon. It had been received by the Dean of St. Paul's from the Hon. E. Everett.—Mr. H. Jackson exhibited a pedigree of the family of Fitch.—Mr. Allies communicated an account of the discovery of Roman coins in the Forest of Dean.—A communication was read from Dr. Bell 'On the Palladia and Prophecies of Constantinople.'

STATISTICAL.—May 21.—Col. Sykes, V.P., in the chair.—Messrs. R. D. Baxter, J. B. Haycraft, W. F. Nooth, G. K. Rickards, J. R. L. Walmisley, and Josh. White were elected Fellows.—'On the Mining Resources of France,' by H. R. Lack, Esq.—'On the Distribution of the Emigrants from Europe over the Surface of the United States,' by the Rev. R. Everest. The author showed, from data given by the late American Census, the total number of each European nation resident in the United States, and the proportion of each resident in the four different divisions which he had described, viz., the old free States, the new free States, the old slave States, and the new slave States; the old States being those founded prior to the Declaration of Independence, and the new those founded subsequent to that event. The natives of Switzerland, Norway and Holland, which had been shown to enter the prisons and almshouses in smaller proportions than the others, were also those who settled in the largest proportions in the new States,—thus avoiding the old States, in which the great cities were situated. The migration of the citizens of the United States from one part of their territory to another was next adverted to; and it was shown that a much larger number of persons migrated from the slave States into the free than from the free to the slave States,—thus evincing a preference for the free States, and accounting for a fact, often observed, the comparatively small population of the slave States.—The Chairman then adjourned the meeting to Monday, the 18th of June next, and took the opportunity of announcing that a paper of great public interest would then be brought before the Society, entitled, 'The Mortality caused by Naval and Military Operations.'

ZOOLOGICAL.—May 22.—Dr. Gray in the chair.—Mr. P. L. Slater read a paper, containing descriptions of four new or little known Tanagers from Bogota and Ecuador. They were characterized under the names of *Arremon erythrorhynchus*, (Sci.), *Tachyphonus xanthopygius*, (Sci.), *Tanagra notabilis*, (Jardine), and *Saltator arremonops*, (Jardine).—Mr. E. W. H. Holdsworth read an account of a new species of Sea Anemone, which he referred to the genus *Scolanthus*. His specimens were all found near low-water mark, embedded in the fine, chalky mud which fills the crevices of the rocks at Seaford, near Beechy Head, their expanded discs being just level with the surface, but so nearly covered that only a faint, star-like outline was visible. On being alarmed, they retire into the mud, their extraordinary powers of inversion enabling them to hide at some little distance below the surface. The body tapers a little posteriorly, and terminates with a rounded base, having a distinct central perforation. When closely contracted, the two ends of the body are nearly alike, and the animal assumes the appearance of a more or less flattened sphere or bead, the resemblance to which is much increased by the terminal orifices. This bead-like form suggested the specific name of *Sphaeroides*, which Mr. Holdsworth proposed for the animal.—The Secretary read a communication from Mr. W. A. Lloyd, containing some notes of his experience in the management of an Aquarium supplied with artificial sea water.

ENTOMOLOGICAL.—May 7.—J. Curtis, Esq., President, in the chair.—Messrs. H. Ansell, J. S. Baly, and J. M. Jones were elected Members of the Society.—The death of Dr. De Haan, of Haarlem, one of the Honorary Members of the Society, was announced.—Mr. Crewe exhibited two specimens of *Notodonta cucullina* reared from the eggs.—Mr. Stevens exhibited five specimens of *Notodonta Carmelita* reared from the eggs, and five of *Aleucis pictaria*, taken at Dartford Heath.—Mr. Newman exhibited three species of the Australian genus *Deretaphrus*,—two specimens of the rare *Diphylllocera gemellata*,—the till recently unique *Dohrnina miranda*,—and three specimens of the scarce *Athous Campyloides*, taken on the flowers of elder at Ramsgate.—Mr. Foxcroft sent for exhibition three specimens of *Endromis versicolor* recently captured in Perthshire.—The Rev. W. H. Hawker exhibited a specimen of the very rare *Cloanthia perspicillaris*, found in a spider's web at Ashford, Hants, and two *Argynnis Lathonia* taken at the same place.—Mr. Douglas called the attention of the Society to the statement by Dr. Boisduval, in the 'Annales' of the Entomological Society of France, that the *Saturnia*, recently imported from India into Malta and Italy for the sake of the silk spun by the caterpillar, is a species distinct from *S. Cynthia*, and for which the name of *S. Ricini*, after its food-plant, is proposed.—Mr. Douglas also brought under the notice of the meeting the 'Verhandlungen' of the Zoologisch-botanisch Verein of Vienna, containing many articles of interest to English entomologists.—Mr. Stainton brought before the Society the 'Berättelse' of Prof. Boheman, just published at Stockholm, being a very complete report on all the entomological papers and notices of 1851 and 1852.—A note by Mr. Stainton on the occurrence in tropical countries of the small genera of *Tineina*,—a fact hitherto doubted, but established by the discovery of the larvae of three species of *Lithocolletis* at Calcutta by Mr. Atkinson.—'On the Entomostraca of South America,' by Mr. John Lubbock, and 'A Description of a New British Agrotis—*A. Ashworthii*,' by Mr. Henry Doubleday.

SOCIETY OF ARTS.—May 23.—Sir W. Cubitt in the chair.—'On the Mutual Relations of Trade and Manufactures,' by Prof. E. Solly.—This paper was introductory to the opening of the Collection of Animal Produce and Manufactures, formed under the joint authority of Her Majesty's Commissioners for the Great Exhibition of 1851 and the Society of Arts, and designed to form the first division of a General Trade Museum. After drawing attention to the mode in which either progress or decay in either trade or manufactures has always influenced, and ever must influence, the prosperity of the other, and to the evils which throughout have arisen from unfair monopolies, as well as from the wilful or accidental ignorance of technical matters in those by whom restrictions and protective enactments have been framed, the author proceeded to point out the nature and objects of the proposed Trade Museum, and how he conceived it would be of national utility, serving at the same time to illustrate the history of past industry, to indicate the sources of present prosperity, and to suggest the best and most desirable objects for the exertion of future energies. The Trade Museum, he considered, should contain samples of the productions of all parts of the world, both raw and manufactured;—there should be samples of the leather, wool, silk, woods, gums, oils, dye stuffs, drugs, stones, ores, and other productions, whether wild and indigenous or the result of cultivation; so that a visitor could at once compare the silk or wool of France, Russia, Sweden, Italy, or England with that of Canada, the United States, Persia, China, the East Indies, South Africa, or New South Wales. Again, if he wished to see the productions of any country, he should find arranged together in proper order the produce of each country, so that he could at once know those which form articles of commerce and those not at present imported. These were two perfectly distinct kinds of information, and the Museum ought to afford them both. Secondly, there should be illustrations of all manufactures,—from the collection or raising

of the raw produce, through every stage or operation to which it was subjected, down to the most finished products; and these should be so complete as to exhibit all the more important variations in the process employed in different countries. For this purpose, the tools, implements and machinery should be shown, accompanied by working specimens showing progress, and illustrating the advantages and disadvantages of each process. Thirdly, the Museum should show progress. It should contain specimens of raw and manufactured articles of known age, for the purpose of comparison with those of the present time, in order that the precise kind of improvement effected might be accurately known and estimated,—an element which was quite essential in any attempt to generalize or to arrive at correct conclusions as to the future progress of any art. In order to be practically useful, Prof. Solly believed that such a Museum should be situated in London, within reach of merchants and others likely to desire the information which it would be calculated to give; and at the same time he thought it ought to be made a centre for the dissemination of technical knowledge, for aiding local Museums in all parts of the country, and, indeed, in the colonies also.

MEETINGS FOR THE ENSUING WEEK.

- MON. Geographical, 1.—Anniversary.
 Institute of Actuaries, 7.—On the Analogy between the Aggregate Effects of the Human Will, and those attributed to Chance, by Mr. Gay.
 TUES. Institution of Civil Engineers, 9.—President's Conversation.
 Royal Institution, 3.—'On Voltaic Electricity,' by Dr. Tyndall.
 WED. Society of Arts, 8.—'On Earth-Boring Machinery,' by Messrs. Mather and Platt.
 Royal Institution, 3.—'On Electro-Physiology,' by Dr. Du Bois-Reymond.
 Geological, 8.—'On the Occurrence of a Bore at Port Lloyd, Bonin Islands,' by Mr. Graves.—'Notice of the Occurrence of an Earthquake at Brussa on April 11, 1835,' by Mr. Sandison.—'On the Extension of the Coal Measures beneath the South-Eastern Parts of England,' by Mr. Godwin-Austen.
 THURS. Royal Institution, 3.—'On Christian Art,' by Mr. Scharf, jun.
 FRI. Royal Institution, 8.—'On the Currents of the Leyden Battery,' by Dr. Tyndall.
 SAT. Royal Institution, 3.—'On Electro-Physiology,' by Dr. Du Bois-Reymond.
 Asiatic, 2.

FINE ARTS

ROYAL ACADEMY.

HAVING reviewed the works of imagination and all the more noticeable portraits, we come now to the Landscapes, which are, we think, less numerous than last year.

They are divisible into two classes:—those in which eternal spring or eternal autumn reigns. Green and brown are at present struggling for dominion, and, by the violence of their opposition, are producing two sects who refuse to modify each other's peculiarities. Early autumn has rich ochres and golden browns,—late spring, much of the opaque green and dusky richness of late summer; but at present the Pre-Raphaelites and their opponents see no medium between treacle and duckweed. Liquorice and emeralds are their war-cries, as if Nature dealt with such ingredients. Autumn, surely the old master fanatic might see, steeps her brown woods in sunshine till they grow mere masses of golden vapour, as she sometimes veils the spring woods with mists and rain-clouds till they are dusk as autumn when autumn is the dreariest.

Mr. Lee disports himself this year in Devonshire, and is more than usually coarse, unfinished, and mannered. His pictures are *A Devonshire Mill* (No. 154),—*Sketch from Cliefden, looking towards Maidenhead-on-the-Thames* (186),—*Trees, on the Banks of the River Taw, North Devon* (219),—*The River Awe, Argyllshire* (356),—*Cattle on the Banks of a River* (422),—and *The Taw Vale, North Devon* (624).

These Devonshire scenes seem to us very unartistically chosen. Take, for instance, 'The Taw Vale.' There is no pictorial subject in it; nothing but a dull stream with a boat, and straight, unbroken, clayey banks, flat meadows, sloping woods, and so many acres of the landscape-painter's blue and white sky. The water is not lucid, but a smear of rather opaque paint. The trees are knobs of brown and green, and the sky is hard and

wainscoty. The scene is cold, and full of insipid buff colours and dull greens; and was by no means (though *vale* sounds pretty) worth the trouble of painting. When we think that Nature's variety is inexhaustible, that every nettle-leaf is a world, and every hedgeroad a system wide as space, we must say we do feel galled at this clever and patronizing sort of sketching,—painted either at once on the spot, wet paint over wet paint, with no subtle retouching, no loving consideration of hour and season,—or else laboured at in winter fogs, in a London studio, when the old feeling of the original draught is forgotten, the atmosphere of winter unconsciously added to a summer foreground, or a November sky foisted on to a spring background. Of course, with Mr. Lee's talent we have air, colour, light, breadth, vigour, and a thousand mechanical delights; but we have much undecipherable foliage, where spiky touches serve for willow, fan-work for chestnut, jags for oak, dots for elm, and spots for birch; and over all there is an air of confidence and of mastery which makes us lament that such skill should stop short at hints where it could, if it would, convey a scene of most perfect beauty. Above all, a want of imagination is painfully evident in Mr. Lee's works. For instance, "Trees on the Banks of the Taw" want much to make them trees,—depth, roundness, intricacy, multitude, varieties of distance and of colour. Trees are not all one colour at any time of the year. In Spring (take the elm) they have the thousand gradations of transparency, from the golden tincture of the flaccid newly-opened bud to the richer emerald of the thickening tissue; later still, they have their minute cloudings of red blossoming, and their pink-tipped shootings; then the summer advances, and the green light deepens into dark sombre masses that shroud a thousand birds, and keep out the sunbeams, and hide the framework scaffolding of the boughs that lately stood out dark against the green; and they crisp and fade into golden spots, and then into rich masses of ochreous browns, and earthy reds and yellows, and at last turn into jewelled mountains of tremulous gold, slowly crumbling away into barrenness, desolation and death. But the foliage we see painted now is the monotony of Summer's green, without the variety of Spring, or the sombreness of Autumn. Then Pre-Raphaelites paint with a mustard-and-creosote minuteness—a certain quantity of raw, unqualified green, unmodified by sun or light, night or morning, throwing eternal Spring over their pictures, and seldom daring to touch Autumn, as if from very fear of falling into those liquorice monotones that distinguish the more faded and obscured of the old masters. Italian painters, accustomed to the olive and the ilex, to evergreens and deciduous trees, can hardly be blamed for not painting the showery freshness of our May forests, and still less would they blame us for not bartering this delicious and virgin brightness for that "brown horror" that lent a strange equality of twilight to the landscapes of a school that painted in cities and not in the open air.

Mr. Lear has a beautiful scene of desolation in *The Temple of Bassæ, in Arcadia* (319). Though the scene is formed of a few trees and rocks, a mere ruined temple, and a line of hill, it embraces—as every spot in closely-packed Greece does—a world of associated thought. Here in the rock-strewn valley, low among the hills, stand the pillars of the temple to which generations of shepherds and peltasts have come to worship, where now the Klept bivouacs or smokes round the fires which boil his kettle. In the front are the oak woods of Mount Cytium,—in the distance are the hills of Sparta, Athome and Navarino. That is the barrier over which Cleomenes leapt and Agis marched at the head of his mountaineers. We cannot quite account for that oak-tree rising from the solid rock; but still believe in some secret marble cleft in which its roots burrow. There is an air of honesty and truth over the whole. The rock surface is gritty and lichen, and the oak trunks are serpentine and bossy. Every glimpse of such a country is interesting.

Mr. Cooke's best picture is *A North-Sea Breeze on the Dutch Coast—Scheveling Fishermen hauling*

the "Pinck" out of the Surf (269). It is all air and motion,—sails breaking loose, flapping, washing, foaming, drifting, shouting,—all the excitement of danger without the fears. How these sailors tug at the capstan and strain at the helm. The air is full of spray, and blows strong and fresh on the cheek. The sea is of a dull, hoar green, and the sand, fresh-washed, reflects the rich umbery colours of the sails and of the swift clouds,—and the sea-birds fly startled about. We do, however, object to that cool fisherman on the shore, who without any audience, is carrying off an anchor of some hundred-weight upon his shoulder. The outline is less firm and distinct than in some of Mr. Cooke's previous works. Indistinctness is not softness; and we see no reason why the lugger's mast should not cut clear and bold against the windy sky. Mr. Cooke delights in these sturdy, homely boats, so sure and steadfast, beating on through surf and storm. Increased force would not injure the figures, and seems demanded in a subject of human interest like this; for the first concern of the spectator is, of course, the safety of the lugger's crew. The silt and coloured grit on the shore are a peculiar excellence of Mr. Cooke's. Another clever picture is a fresh aspect of the same place, *Scheveling Sands, low water, Tide making in* (323). The colour here is deep and clear and fresh, three great requisites in such painting; for the sea is a blank monotony to a mere hack painter. A very bright and pleasing work is *Riva degli Schiavoni* (344). Some fishing-boats have just arrived, gay with coloured sails, light against the blue; and covered with badges and religious crosses and emblems.

Mr. Hook's *Market Morning* (9), though too like Mr. Redgrave, is a pretty fresh bit of Nature. We like the market pony and the girl who rides it,—we like the old grandmother on the brow of the hill and the little child who shouts a farewell,—we like the two children who watch the scene, half intent on the passing pony, half on the pet pigeons that nestle in their arms. The sheep break down naturally enough through the brambles at the side, and the fresh green of the herbage to the left is spring-like and inviting. The figures, too, are better than the landscape-painter can generally supply,—the faces being innocent, bright-shadowed, and embrowned. We are not quite certain that the chest and fore-legs of the pony would bear severe criticism,—but let that pass.

The *Ruins of the Castellum of the Julian Aqueduct, Rome* (337), by Mr. Linton, is a good sound picture of the old school. We cannot say so much for the wonderful buffaloes and eccentric herdsmen in the foreground. We like the distant arches traversed by shadows in the distance to the right. The atmosphere and tone of the whole seem to us Italian in feeling.

There is something clever in Mr. Dearmer's *Maggie Island, near Henley-on-Thames* (665), though the greens are rather raw and, in some places, inky; and the sunbeam, glinting across on the left, is more like a sprinkle of flour than light of sun. Still, the place is a snug nook of greenery, with its willows light and sparkling, the fishing party below, and the water all green with reflections, and netted with black shadows of roots and boughs, twisting and waving about as if the water were a nest of scorpions or knotted snakes. The foliage, though clever, is not very successful. Where close imitation cannot be obtained, nothing requires so much artistic feeling as these masses, where every touch must convey an impression.

Mr. Redgrave is less ambitious than last year, both in subject and size, but equally delicate, and tenderly poetical. He does not view Nature with a very masculine mind, and seems not to attempt to bind the Proteus by force, but sits down rather in sunny corners, and watches lovingly the shiftings of her spells. He requires no great or epical materials; give him a broad reach of gilded grass, a few emeraldine boughs, feathery, speckled and wavy, a few wild flowers, and a little gurgling spring,

That makes a moan o'er moss and stone
 As through the fields it rambles,

and he is happy. Over all he does there is the

pleasant smiling benevolence of a contented and quiet nature, full of gentle Wordsworthian feeling, and not much perturbed by the mysteries or the sorrows of the earth. Add to this a calm technical skill and unostentatious satisfaction at the results, and you have the impression these pictures convey. *The Sylvan Spring* (88), full of crisp, spotted, little foliage; and the children at the spring, in the foreground, happily introduced,—*The Bird-Keeper* (240),—and *The Source of the Stream* (347) are Mr. Redgrave's contributions this year. They are all full of daylight and of honest English nature, refined by a judicious eye, and animated by a quiet, fresh poetry, not startlingly original, but yet pleasing and delightful. We think stronger painting in the foreground would help to increase the distance and softness of the receding parts.

Mr. Creswick is conventional and repeats himself. For instance, in his *Morning—the Mouth of an English River* (65), we have the mill of last year's Exhibition. The scene is, however, original. The mill is picturesque, with its wild arms, and its contrasting greys and browns. About all Mr. Creswick does there is vigour, though not minute truth,—pleasing colour, though not much variety; but there are always broad air and light, and a feeling of width and freedom—a great merit this, for in some landscapes no one could breathe.—His *Afternoon—the River's Bank* (94), is a pretty scene, with its rustic bridge, but is less fresh than the 'River's Mouth.'—These with *Common Scene, in Surrey* (302), a *Welsh Hill* (415), and the *Nearest Way in Summer Time* (440), form his quota to this Exhibition. The last picture is painted in conjunction with Mr. Ansdell, who contributes the horses that are dragging the timber truck across the ford. Much is slurred, much is hasty, and the effect produced is rather by established rule than by thought on the spot directed to the individual instance. But allowing for this mechanical treatment, the whole is admirable. The water is green and turbid, with gleamy ripples,—the ducks swim at their ease,—the distant willows are grey and receding, and the sun burns with white heat upon the distance hidden by the light. The cottage is picturesque and deeply coloured—the windows glimmer just as landscape windows do, and every accessory of the art is attended to; but either artist producing for fame, and not for a market, could have carried the picture ten times further. Half their strength has not been used.

Mr. F. Danby surprises us by the richness of his imagination, and still more by the narrowness of its range. Why must this coppery firelight for ever tinge those dark, close-set, bushy trees, and flicker about that water? What a marshy enamelled surface—what a confectionery hardness of polish, with such strange little dimples, just as you see in baked sweetmeats; and yet with all this, what poetry—what an elaborate monotony of systematic finish covering all—sky, water, tree!—*A Party of Pleasure on the Lake Wallenstadt, in Switzerland*, (46) is conventional. The figures dancing in a boat—the strange Claude Lorraine, toy-like figures that seem of all sorts of epochs. Mr. Danby repeats himself when he should repeat Nature.—Better than *Evening* (287), with its hard sky, is a very impressive picture—*Dead Calm—Sunset at the Bight of Exmouth* (563). The sky is again too green; but the masts and tapering spars of the vessel rise with singular force against the sky, throwing its shadows down below upon the quiet darkling water.

The Poet's Hour (527), by Mr. T. Danby, has great repose about it, though the poet seems uncomfortable, and the glowworm at first does not quite account for itself. The nightingale, moreover, is generally a bird that, as Milton says—

In shadiest covert hid tunes its nocturnal note.

It is too shy a bird to sing in such a brazen, public way, as it is doing now. The water, with the trailing grasses and bristling rushes,—and the tone of the whole, though it has not the glow of summer, are full of a pensive melancholy, excellent in its way.

Mr. Linnell has *A Country Road* (542),—a scene full of Surrey nature, broken sand slopes, leafy hedges, winding lanes, and everywhere, in the horizon, a broad, vapoury sea of hills, with white

cots peeping out here and there, like doves' wings against the blue expanse of a pure sky. The trees are careful and singularly bossy and leafy; but the ground has a strange, carpet effect, most artificial and mannered,—not solid and defined, or broad enough for Nature. It actually, as we look, seems heaving or lifting, like a matting on a windy day. We need scarcely say that the painting is richly empastored,—the very antipodes of the thin tinting that, though careful, is so emasculating in its effect.

Mr. Dearnley's *Trout Stream, in Wales* (686), is full of talent. This painter is fond of strong contrast; his sky always twinkles through bars of latticed boughs, and the shadows lie heavy and dark on his streams. His foliage is vigorous and self-supporting, but the oak, in this case, seems covered with flakes of wool. Unless this is an effect of road-dust, we hardly know what it is meant to imply, for we cannot feel its truth. An error in composition is the cutting off the feet of the unfortunate angler in the foreground. Such defects check the imagination, and do not allow it to do full justice to the truth of the scene.

Mr. Witherington is a matter-of-fact observer of Nature, and does not see very much beyond the first front leaves that fringe his streams. His greens are dark, and his water is sometimes metallic. *Gathering Water-Cresses, on the Banks of the Mole* (207), has fresh, bright bunches of leaves, and is hearty and English, but it is not a creation. It is a mere every-day bit of nature, with the usual English facility of conveying out-of-door effects and the charm of atmosphere.

The works of a young but evidently gifted observer, though hung out of all reach, are Mr. Inchbold's—*The Moorland* (244), *At Bolton* (1075), and *A Study in March* (1162). They are prodigies of labour, rather flat, and a little mouldy, but full of the minute poetry that lurks under every lichen and in the heart of every bud. The artist's mind seems of a pensive cast, for the one picture has the wind-sifted dreariness of spring, with all its promises but none of its charms; the Moorland is dreary as an abandoned battle-field, and is a sort of place where crows croak and hawks whistle; while Bolton is a piece of sunlit decay—a ruined arch of a deserted monastery, traversed by a stray sunbeam with the well-known White Doe wandering past to gather its scanty pasture from the nettles of the choir. The touch displays a feminine delicacy and an almost painful elaboration of the motive of every spot and speck in nature's handiworks. This gives these pictures a variety of surface that the eye never exhausts, and can try to master with as little success as it can the mellow gloom of a summer twilight,—letting the fancy loose and keeping the imagination in exercise.

A most delicate mechanist is Mr. Hicks. His *Haymaking* (268) is a beautiful bit of colour, and all about it has a grace and a charm which neither the scene nor the subject is sufficient to account for. The pink dress and the blue sky are in beautiful harmony, and the pretty figure of the haymaker has all the delight of a lark's song or an impromptu lyric.

Mr. M. Anthony is not so successful as usual in his *Close of an Autumnal Day—Stratford-upon-Avon* (23). The sky is of an unpleasant yellow, the foreground is heavy and wanting in air, and the scene itself is not chosen with much felicity. The spire of the distant church, that shrouds

Our Shakspeare's hallowed bones, the closed lock, and the weedy banks are all singularly and rigorously truthful; and yet the whole is not pleasing.

Mr. Webb has scarcely made the most of his *Mount's Bay, Cornwall* (8). The Castle is there like a fairy pile looking seaward to greet no longer returning pilgrims and exiled kings. The shore is pretty and many coloured; but the whole refuses to rise into anything but a clever transcript of a mere fact.

Mr. Ansdell is less ambitious in subject than last year, but more vigorous and dramatic in colour and grouping. His *Feeding the Calves* (343), in which Mr. Frith has added a female figure, is his least interesting work. His *Scotch Gamekeeper* (468) and *English Gamekeeper* (520) are well con-

trasted, and very pleasing in colour and texture. The dead game is painted with care and power, and the touch is firm and more than usually successful in imitation. We think it is in small pictures after all that Mr. Ansdell's greatest triumphs will be achieved.

Mr. S. Cooper paints too rapidly. His cows are all from the same mould—coarse, and blocked in with a dangerous facility. His *Cattle on the Banks of a River* (422) are not very well drawn. The black head of one of these lying down is of exorbitant length, and the back of another out of all shape. There is no dry crisp imitation of hair or texture; but a wet, glistening succession of touches of raw paint, wanting in care and individuality.

FINE-ART GOSSIP.—Mr. Solomon, in his companion pictures—'The Departure' and 'The Return'—now on view at Messrs. Colnaghi's, preparatory to passing under the engraver's hands, deals with the sentiment of the moment after a very sentimental and romantic fashion. The scene of 'The Departure' is the interior of a second-class railway carriage. A humble and ambitious youth is being whirled to the port of embarkation, attended by a sorrowful mother and sister,—committing with a pang of the heart their hope to the risks of storm and war. The scene of 'The Return' is a first-class carriage. The youth has realized his dream. He is an officer of rank; and is riding to lay his glory at the feet of those who sent him forth to win it in the service of his country. No longer silent and uneasy, he is telling the story of his career to his companions in the carriage,—an English Brabantio and Desdemona. In the look of the latter lies the future of the hero. These pictures are excellently timed, and will doubtless appeal to many strong hopes and many ardent affections.

M. Monti's "Lectures" on Ancient and Modern Art are postponed—"at the desire of the Subscribers"—for a week. They are now announced to begin next Wednesday.

A shilling subscription has been entered into at Brighton for the purpose of raising a fund to purchase a bust of General Sir De Lacy Evans,—the work of Mr. Pepper, a local sculptor. A clay model of the hero, in his regimental costume, and covered with decorations, has been on view during the past week at M. Claudet's gallery in Regent Street.

A Correspondent draws our attention to the wretched way in which the Royal Academy Catalogue is prepared, and enters a protest—we fear an unavailing one—against the wrong done to many artists by misdescription, by suppression, and by bad spelling. While on the subject of errors, let us amend one of our own. Last week, it appears, we did not "remember rightly" as to the place of Evelyn's first meeting with Gibbons; and we hasten to correct the impression. Mr. Cary had the authority of a literal text for that portion of his picture.

Some sight-seeing antiquaries have been chipping the Dacre Tombs at Lanercost Priory. Are antiquaries in league with Time to destroy, that they may write the sooner about the forgotten?

A French gentleman has discovered a vehicle for painting, which he calls Colocirium; and believes it identical with that used by Pompeian artists. It is described as brilliant and durable—as having no smell—as capable of being used in any weather.

A French journal speaks of a subterranean city, proposed by some American speculators. An external "smoke" pyramid is talked of as an ornament for the suburbs.

There is to be an Exhibition at Brighton in the autumn,—as there will be soon, we hope, at every town in England, for good pictures are silent preachers in Art:—very potent missionaries in the cause of Art-progress.

The Scotch seem progressing with their public improvements. The fair Castle of Linlithgow, the favourite residence of the Stuarts, where the unhappy Mary was born, is about to be restored. The loch is to be cleaned out, and the grounds are to be beautified. The Edinburgh meadows are

also to be turned into plantations, gardens, and walks; so that modern Athens will soon have a shady Academe for its rising philosophers, even if it be to discourse on political economy rather than the essences.

An equestrian statue in bronze of Napoleon the Third has been erected on a pedestal opposite the eastern front of the Exhibition Palace. The statue is of the size of life, and was cast by M. Gaillard, from a model by M. Debay. The Emperor is represented in the uniform of a general officer, and is mounted on a magnificent horse. His Majesty holds the reins in the left hand, and is saluting with his hat in the right.

In the *Melbourne Argus*, under the novel title of 'Art in the Colonies,' occurs the following paragraph of Art-news in Australia:—"One illustration of the singular manner in which the results of high civilization have been transferred to this new country is to be found in the degree of artistic skill possessed by many of our artisans. The Port Phillip Farmers' Club have lately distributed gold and silver medals to the successful competitors at their recent annual Exhibition. These medals are furnished by Messrs. Campbell & Ferguson; and in design and execution are unexceptionable. The scrip of the Victoria Vineyard and Fruit Gardens Company, lately issued, is an exceedingly beautiful specimen of artistic design and successful engraving. An enterprising artist has recently exposed for sale plaster casts of the 'Greek Slave,' half-life size; but this daring act of his was immediately interfered with, and the statue which 'enchanted the world' as assembled in the Crystal Palace, Hyde Park, has been protested against as unfit for the public view in Victoria."—We are glad to notice even such small beginnings in the cradle of the southern empire of Great Britain.

MUSIC AND THE DRAMA

MUSICAL UNION.—H.R.H. PRINCE ALBERT, Patron.—TUESDAY, May 29, half-past Three.—WILLIS'S ROOMS. Quartett, No. 79, in D. Major; Trio, No. 2, in G. Piano-forte, Beethoven; Double Quartett in E minor, Spohr. Solos, Piano-forte. Executants: Sainston, Cooper, Hill, Piatti, Goffric, Carrodus, Webb, and Paque. Pianist, Halle.—Visitors' Admissions to be had of Cramer & Co.; Chappell & Olivier, Bond Street. Owing to the crowded state of the Rooms, no more free admissions can be given to artists. All letters to be addressed to

J. ELLA, Director.

MISS MANNING begs to announce that her CONCERT will take place at the HANOVER SQUARE ROOMS, on THURSDAY EVENING, May 31. The following distinguished artists will appear:—Madame Clara Novello, Miss Huddart, Miss Loebe, Herr Reichart, Mr. Miranda, and Mr. Frank Bodda, Piano-forte. Conductor, Signor Pilotti.—Tickets, 7s. 6d., to be had at Messrs. Cramer & Beale's, 201, Regent Street; Mr. Mitchell's Royal Library, 33, Old Bond Street; and at Miss Manning's residence, 17, St. George's Terrace, Kensington.

HERR ERNST PAUER has the honour to announce that he will give a GRAND EVENING CONCERT with the full Orchestra of the Celebrated Orchestral Union, under the direction of Mr. MELLON, at the HANOVER SQUARE ROOMS, on FRIDAY, June 1, to commence at Eight o'clock precisely, when he will be assisted by—Vocalists: Miss Emilie Krall (from the Imperial Opera, Vienna), Miss Dolby, and Herr Reichart; Conductors, Mr. Alfred Mellon and Herr Ernst Pauer. The Members of the highly distinguished London Deutscher Männer Chor have kindly consented to perform on this occasion selections from Mendelssohn's 'Antigone' and 'Edipus.' Herr Ernst Pauer will play Hummel's Concerto in A flat, and his new Symphony in C minor, will be given for the first time. Stalls, Half-a-Guinea, Tickets, 7s. each, may be had at all the principal Music Warehouses, and of Herr Ernst Pauer, 32, Alfred Place West, Thurlow Square.

MESSRS. H. and R. BLAGROVE'S GRAND ORCHESTRAL CONCERT, at the HANOVER SQUARE ROOMS, MONDAY EVENING, June 4, at half-past Eight o'clock. Vocalists: Miss Dolby and Mr. Sims Reeves. Mr. H. Blagrove will perform Mendelssohn's Violin Concerto, 'La Tremolo de Bériot, and in his new Duett with Mr. Richard Blythe, who will also perform on the Concertina, Mayrader's 'Premier Morceau de Concert,' and his Fantasia on the 'Prophecie' and 'Huguenots.' Conductor, Herr Molique.—Stalls, 7s.; Tickets, 5s. and 3s., to be obtained of Messrs. Blagrove, 71, Mortimer Street.

MISS MESSENT and MR. BRINLEY RICHARDS'S CONCERT will take place at the HANOVER SQUARE ROOMS, on FRIDAY EVENING, June 8. They will be assisted by Madame Clara Novello, Miss Mescent, the Misses M'Alpine, and Miss Dolby; Herr Reichart, Mr. Bodda, Mr. Brinley Richards, Mr. John Thomas, Herr Carl Bodda, and Signor Bottesini. Conductors, Mr. Frank Mori and Herr Ganz.—Single Tickets, 7s.; Reserved Seats, 10s. 6d., to be had at the Music-sellers; and of Miss Mescent, 6, Hyde Street, Manchester Square; and of Mr. Brinley Richards, 4, Torrington Street, Russell Square.

MISS DOLBY and MR. LINDSAY SLOPER'S ANNUAL GRAND CONCERT will take place at ST. MARTIN'S HALL, on WEDNESDAY EVENING, to commence at Eight o'clock, June 13, when they will be assisted by Mdlle. Jenny Ney, Madame Ruderdorff, Miss Amy Dolby, Mr. Sims Reeves, Signor Belletti, M. Sainston, and Mr. Benedict. The Orchestra will be conducted by Mr. Alfred Mellon.—Stalls, 7s. each, and Reserved Seats, Half-a-Guinea each, to be had only of Messrs. Cramer & Co., 201, Regent Street; at Ebers's Library, Old Bond Street; of Miss Dolby, 2, Hyde Street, Manchester Square; and of Mr. Lindsay Sloper, 7, Southwick Place, Hyde Park Square. Gallery Tickets, 5s. each, and Reserved Seats, 10s. each, may be had at all the principal Music Warehouses and Libraries.

MADAME BASSANO and HERR WILHELM KUHE'S ANNUAL GRAND MORNING CONCERT, will take place at the HANOVER SQUARE ROOMS, on MONDAY, June 11, to commence at Two o'clock, when they will be assisted by Messrs. Clara Novello, Gassier, Weiss, Stabbinch, Teresa Bassano, and Madame Bassano; Messrs. Reichart, Fornes, Weiss, Gassier, Ernst, Paque, John Thomas, Wilhelm Kuhe; Conductors, Messrs. Golmick, Lehmeier, Beryer, and Kuhe. Tickets, 10s. 6d., Stalls, 15s., to be had of all principal Music-sellers, at Madame Bassano's, 18A, Margaret Street, and Wilhelm Kuhe, 70, Margaret Street, Cavendish Square.

Under distinguished patronage.—Mr. AGUILAR respectfully announces that he will give a MATINEE MUSICAL at WILLIS'S ROOMS, on THURSDAY, June 14. Vocalists: Madame Anne Bochkoltz-Falconi, and Madame Ferrari, Mr. Miranda, Signor Ferrari, and Signor Ciabatti; Violin, Herr Ernst; Flute, Mr. R. S. Pratten; Violoncello, Signor Piatti; Piano-forte, Mr. Aguilar; Conductor, Mr. Frank Mori.—Reserved Seats, 15s.; Single Tickets 10s. 6d., to be had of Mr. Aguilar, 63, Upper Norton Street, and at all the principal Music Publishers.

NEW PUBLICATIONS.

INSTRUMENTAL.

Quartett for Two Violins, Tenor and Violoncello. By Robert Volkmann. Op. 14. (Scheurmann.)

—Were there a score of this Quartett, the critic might speak to its merits from sight; though in this case, even, he must speak with hesitation, since that reader who can prefigure to himself all the effects of sound which may result from this chord or the other sequence of chords must be endowed with the lightning quickness and prodigious experience of a Mozart or a Mendelssohn. Judging from the separate parts according to our best ability, we dare but say, that Herr Volkmann appears to have found energetic subjects—to have connected and conducted them with ease and spirit. In place of *menuetto*, we have a *scherzo*, in *♩ tempo*, apparently in the style of Mendelssohn's favourite *scherzo* to his noble Quartett in E flat. When we add, that greater variety of key might have been given,—three among the four movements being in the wild and gloomy key of G minor,—as much is said as can be said with safety, until Mr. Ella, or M. Sainston, or some other Quartett-giver, shall afford us an opportunity of hearing the work.—We are rendered all the more desirous of such opportunity by having heard of other chamber-music by Herr Volkmann, betokening promise. These are not days in which any new composer, who is only partially musical, can be overlooked. From M. Scheurmann, also,—who seems desirous of enlarging the charmed circle in which London publishers of music are too apt to move,—we have three grand *Solos* for the Violoncello,—a *Fantasia on Themes from 'Norma'* (Op. 25), and *Recollections of Switzerland*, *Fantasia* (Op. 28), by A. Lindner;—and a *Cantilena ed Allegro Moderato alla Mazurka* (Op. 10), by F. A. Kummer.—All three are brilliant, demanding violoncellism of a greater perfection than is attained by the generality of amateurs. If the last seem to us "the worthiest" (as old-fashioned grammars say), it is because we are satiated not merely with themes from Bellini's Druid Opera and from Swiss melodies, but also with the *Fantasia* and the *pot-pourri* in general:—no species of manufacture requiring so small an expenditure of originality and science.

Another assurance that the "bass fiddle" flourishes amongst us is to be found in Herr Pauer's *Sonata for Piano-forte and Violoncello* (Op. 45), published by MM. Schott; and, according to excellent modern fashion, published in score. Of this duett, we spoke when its composer introduced it to the public. Herr Pauer makes progress as a writer in the good forms of music. Here and there his touch is undecided; and till the creator has come to agreement with himself, whatever be the promise, there is no creation. Let any one who may desire illustration of this maxim refer to the chamber-music of Schubert. Hardly a *sonata*, *duett*, or *trio* by him could be cited, which is not animated by interesting and clear ideas. But tact in presenting these, and in limiting their development, was totally wanting to him; and hence we find that even now, when a fresh musical thought could almost claim Pitt or Pigott diamond as its reward, the instrumental music of Schubert, known as it is to many amateurs, has still no musical public:—a speaking illustration of the necessities of science, proportion, experience, to the art of music, not to be nullified by the mention of such examples as Mozart, Rossini, Mendelssohn,—in whom instinct either

superseded study, or enabled its possessor to employ the fruits thereof at an age when meanness must be contented still to appear as students. —Another speculation has been revived by the publication of Herr Pauer's clever and agreeable *duett*. Why is it that, seeing the number of attempts made to produce the violoncello, so few writers attempt to supply one of our most urgent wants,—which is, more *sonata* music for piano-forte and violin?

CONCERTS OF THE WEEK.—At Madame Puzzi's Concert most of the foreign artists who do not belong to the *Royal Italian Opera* were heard:—among others, Madame Luigi, who has a fair mezzo-soprano voice and some style,—Madame Fiorentini, whose beautiful soprano seems to have suffered little by journeying to America,—and Madame Gassier, whose peculiar organ is more effective perhaps in a concert-room than in a theatre. Some finish and measure are still wanting to this Lady's execution:—were these attained, she might rank with the foremost among those modern *cantatrici* having command over the *altissimo* tones of the voice; whose appearance in such numbers, at a period when the diapason is almost a tone higher than it was a hundred years ago, is a curious phenomenon. Such were among the entries of Madame Puzzi's lavish "bill of fare."

On Monday evening the last *Amateur Concert* of the present year was held. These concerts claim the regard of all true lovers of music, for the very reason which should make the critic more indulgent in chronicling them,—because they are more strictly amateur concerts than formerly. Yet the instrumentalists are not afraid of orchestral or of *solo* music, be the difficulty what it may. Hummel's *Septett*, for instance, is no piece for Tyros to meddle with:—yet it was given, on the whole, well on Monday, and by amateurs; with a Lady at the piano-forte. It would seem as if vocal proficiency and vocal courage were in a less developed state,—the songs at Monday's concert being supplied by that useful and rising singer, Mr. Herbert, and by Mdlle. Emilie Krall. The *cantabile* in A flat, from 'Der Freischütz,' enabled this young Lady, who is a new comer, to display a clear and not unpleasing soprano voice,—trained, we fancy, according to the German rather than the Italian method.

At Wednesday's *New Philharmonic Concert* the "great card" was H. R. H. the Duke of Cambridge, who was advertised with a more than usually vehement flourish of trumpets. The two next and last concerts of the series will be conducted by M. Berlioz.—Yesterday evening 'The Creation' was to be given by the *Sacred Harmonic Society*, and Miss Stabach was to hold her Benefit Concert.

STANDARD.—Simultaneously with the reproduction of 'Henry the Eighth' in the West, one of far humbler pretensions has been attracting large audiences in the East. This theatre, capable of holding a number of persons that would be deemed fabulous in more fashionable quarters, and of whom half could not be crowded into the more fashionable theatres, has for several nights, during the last two or three weeks, been filled to the roof, to witness the sorrows of *Queen Katharine*, without more than the ordinary accessories afforded by a district theatre. It has not been found needful to bribe, by excessive pageant, those who could not appreciate fine poetry and good acting, to hear Shakspeare, or to see Miss Glyn. Prices within their means, a play-house in their neighbourhood, and a fair assurance that the drama would be decently acted, have proved sufficient inducements. "There is always morning somewhere in the world;" and there is always dramatic taste somewhere existing which needs no extraordinary stimulant and prefers no foreign ware for its gratification. We are not, therefore, called upon to concede that Shakspeare is now dependent for his audience on the scene-painter and the machinist;—at most, it is but a question of place and circumstance, not of absolute necessity. An evidence like this relieves the mind of much that might be depressing. At the same time, we may acknowledge that

'Henry the Eighth,' with but ordinary appliances, would possibly exhaust its attractions in a dozen nights, whereas, with the aid of the pride and pomp of archaeological illustration, it may continue to draw for a hundred. But, is it desirable that an old play should keep the boards for a longer period than the first named?—and must not the extended term be placed to the credit of the spectacle, not to that of the drama? The cause of the latter is, indeed, injured in precise proportion to that extended term, during which the revival is made the stop-gap of the season, excluding the possibility of original genius appearing, and preventing the necessity of engaging new talent. Such is then the evil; but it is happily restricted in its operation by its extravagant expense. Ultimate profit, it may be arithmetically demonstrated, there can be none. The vanity of the actor, who is thus enabled to appear so many nights in an old character, may be gratified; but this is the only advantage that can be gained. George Frederick Cooke regarded the fact of an actor having to study a new character as a proof that he had ceased to attract in the old; and John Kemble himself sympathised with this opinion. Such, then, is the feeling which may be supposed to animate the actor-managements of the present day. The greater number of theatres operates against it, however, in a beneficial manner, and affords room for experiment beyond interested circles. While then, on the one hand, we can see with tolerable clearness the ruinous tendency of the spectacular movement to the capitalists who embark in it; we have promise on the other, from the extended arena now permitted by law, of a purely dramatic counteraction, which has already begun to be efficient, and will yearly gain strength, having its ground in popular education, and its motive in the natural competition of which the new-born freedom of the stage must be productive.

MUSICAL AND DRAMATIC GOSSIP.—We are informed that the management of the *Royal Italian Opera* has found no better way of making up the loss caused by Signor Ronconi's discreditable conduct, than by engaging Signor Tamburini to sing in a few operas. There is no doubt that this veteran artist will be more acceptable on the stage than younger men, who can neither act nor sing anything save a *cavatina* or two by Signor Verdi;—but what a reproach is such a necessity, and such a preference, to the rising baritones and basses of Italy! Is there no one else capable of taking the parts specified?—Signor Belletti, it is true, is in London, and an excellent and conscientious singer, but hardly a *Don Juan*—hardly a *Figaro* for the two Beaumarchais operas.—The management again brought forward Madame Grisi, on Thursday, for the first of ten "very last performances," pleading that substitute for her there is none at present. With regard to these appearances, and others of the kind, of old favourites in old parts, we shall be silent on principle. For the sake of many pleasant memories and past obligations do we wish that those who have pleased us much might be left untouched by remark, when inexorable Time ordains that they must please us less; but for the sake of Art, and in guardianship of true admiration, if we are compelled to contemplate change, we must declare that change there is; nor abuse public faith by declaring that weakness is strength, because the weak artist was once strong,—that a bad voice is a fine one, because that which is bad erst was fine. It may suit managements to tempt artists to postpone the day of retreat,—it may suit the artists to be so tempted; but it cannot suit truth-tellers, who stand by, to ratify the compact, except by favour of insincerity, to which it is painful that any old friend should needlessly expose himself.

In pursuance of that oddest of odd records, the story of attempts made in London to produce operas with English text, we may notice that Miss Romer's season of management at the *Surrey Theatre*—announced, by-the-bye, as her last managerial season there—is to be opened on Whit Monday with 'Mephistopheles,' a new setting to music of the legend of Faustus and Margaret, by Herr Meyer Lutz. The *libretto* is announced as

by Mr. Henri Drayton, who will personate *Mephistopheles*: Mrs. Drayton is to be *Margaret*.

The farewell performances of Madame Thillon, at the *Lyceum Theatre*, have been brought to a sudden pause,—the advertisements state by an accident which has happened to that lady.

Among the many doings of this busy musical season must be counted a series of Lectures, at the *Royal Institution*, by Mr. Ella, the last of which was delivered the other evening.—Among June pleasures, in preparation at the Sydenham Palace, we observe that concerts are announced, at the first of which Messdames Albini and Fiorentini, Herr Ernst, and Signor Bottesini are to appear.

The grand organ at St. George's Hall, Liverpool, is to be opened by two performances on Tuesday and Wednesday next, presided over by Dr. Wesley, and in aid of the "Elmes Testimonial Fund."

M. Halévy's new opera, 'Jaquarita,' which has just been produced at the *Théâtre Lyrique* in Paris, seems to be only a partial success,—so far as we can translate the irony of M. Berlioz and the managed phrases of other French journalists. The story is one of Eastern savagery; and for its tigress-heroine, Madame Cabel is by common consent described as too pretty and graceful. The music, so far as we can make out, is found queer and violent, without startling originality, though with some attempt at rudeness and Oriental ferocity.—A new tenor, M. Montjauze, is described as having thoroughly succeeded, and as combining such rarities as a suave, delicate voice with passionate action, when the scene demands passion.

There will be a Musical Festival at Poitiers on the 19th, 20th, and 21st of June. The *programme* includes Haydn's 'Imperial Mass,' Beethoven's 'Symphony in B flat,' and some of Mendelssohn's 'Midsummer Night's Dream' music, and an Overture by M. Eugène Chaine.

The manager of La Scala, at Milan, has "thrown up his book"—the balance in his disfavour amounting to more than one hundred and eighty thousand Austrian florins.

The home obituaries of this week include the name of Mr. Thomas Romer, "known to the musical profession as Mr. T. R. Travers."—The French chronicle of deaths announces that M. Delphat, oldest among the musicians of France, died the other day at Lyons, aged 99 years. To him, says the *Gazette Musicale*, "we owe the first monster concert organized in France." This was given in 1791, by way of funeral celebration in honour of the officers killed at Nancy; and Vogel's overture to 'Demophon,' arranged for twelve hundred wind instruments, was performed on the occasion. The town of Nancy complimented M. Delphat with the present of "a flute of honour." The old musician, when on the point of death, requested that this flute might be buried with him.

Miss Faucit is under-lined as shortly to appear at the Haymarket. A new and original play, by Mr. John Saunders, entitled 'Love's Martyrdom,' will also be produced, in which Miss Faucit will sustain the part of the heroine.

MISCELLANEA

Prevention of Smoke in Steam-vessels.—An experiment has been tried at Portsmouth, on board the royal steam-tender *Elfin*, with Mr. Prideaux's furnace valves for the prevention of smoke. Not only was the smoke effectually got rid of, and with West Hartley (!) coals, but the steam was kept up in the boilers at full pressure after one furnace fire out of four was extinguished, showing that the advantages conferred by these valves in preventing smoke and reducing the temperature of the engine-room are obtained without any diminution of the steam-generating power of the furnaces. Upon Mr. Prideaux's valve doors being removed and the ordinary doors substituted, the thermometer, which had previously stood at 66 degrees, rose to 96; exemplifying what must certainly be regarded as one of the features of this invention—viz., that during its use the exterior of the fire furnace door always remains cool no matter to what extent the firing may be pushed.

TO CORRESPONDENTS.—T. W. — J. W. — W. M. — F. S. A. —received.

MR. CHURCHILL'S PUBLICATIONS.

A Guide to the Practical Study of

DISEASES OF THE EYE. By JAMES DIXON, Surgeon to the Royal London Ophthalmic Hospital. Post 8vo. cloth, 8s. 6d.

"All who have attended Mr. Dixon's *clinique* at the Moorfields Ophthalmic Hospital will be prepared for the remarkable excellence of this work.... We must content ourselves with expressing our strong conviction that this is a work of sterling and permanent value, carrying all the weight that belongs to years of faithful experience, and deserving, even as a hand-book, to rank with the best practical monographs in our language."—*Lancet*.

The Diagnosis of Diseases of the

BRAIN, SPINAL CORD, and their APPENDAGES. By J. RUSSELL REYNOLDS, M.D. 8vo. cloth, 8s.

The Pathology and Treatment of

LEUCORRHEA. By W. TYLER SMITH, M.D., Physician-Accoucheur to St. Mary's Hospital. With Engravings, 8vo. cloth, 7s.

"The volume is of very great value; it contains matter of importance which is usually original. It is a book which ought to be in the hands of all interested in obstetrical studies. The whole profession must be gratified to see the true spirit of science carried into the troubled questions in regard to leucorrhœa, and to observe the great progress made in the investigation."—*Monthly Journal of Medicine*.

On Pulmonary Consumption. By

THEOPHILUS THOMPSON, M.D., F.R.S., Physician to the Brompton Hospital for Consumption and Diseases of the Chest. With Plates, 8vo. cloth, 7s. 6d.

"We know of no modern treatise in which, while the physical signs are not neglected, the various manifestations of the disease are so fully discussed."—*Philadelphia Medical Examiner*.

"We cannot close the volume without warmly recommending its careful perusal to the attention of students and practitioners."—*Edinburgh Monthly Journal of Medical Science*.

Lectures on Insanity (Lettsonian).

By FORBES WINSLOW, M.D., D.C.L., Oxon. 8vo. cloth, 5s.

"Never before have the chief points connected with psycho-logical medicine and law been stated in a manner so clear and rigorous, and so argumentative, as in these admirable lectures. The medical practitioner will find in this work more of guiding principles, more exact and rational rules for the formation of his judgment, and the determination of his conduct, than in any other work on mental diseases. Dr. Winslow has by his writings given a great impetus to an enlarged and liberal study of the philosophy of insanity, cerebral pathology, and medical psychology, and has contributed more than any other man of his day to the dissemination of an improved, enlightened, humane and curative treatment of the insane."—*Lancet*.

On Diseases of the Rectum. By

T. B. CURLING, F.R.S., Surgeon to the London Hospital. Second Edition, with Additions, 8vo. cloth, 5s.

On Gout: its History, its Causes,

and its Cure. By W. GAIRDNER, M.D. Third Edition, post 8vo. cloth, 8s. 6d.

"Essentially a practical work, and may be consulted with equal service by the student and old practitioner. We are much mistaken if this volume does not assume a permanent and honourable position in British medical literature."—*Medical Chirurgical Review*.

On Local Treatment of the Mucous

MEMBRANE OF THE THROAT FOR COUGH and BRONCHITIS. By J. E. RIADORE, M.D., F.R.C.S. Foolslop 8vo. cloth, 3s.

A Compendium of Domestic Medi-

CINE, and Companion to the Medicine Chest; comprising Plain Directions for the Employment of Medicines; their Properties and Doses—Brief Descriptions of the Symptoms and Treatment of Diseases—Disorders incidental to Infants and Children—Directions for Restoring Suspended Animation—Counteracting the Effects of Poison—A Selection of the most efficacious Prescriptions, and various Mechanical Auxiliaries to Medicine: the whole intended as a source of easy reference for Clergymen, Master Mariners, and Travellers, and for Families residing at a distance from professional assistance. By JOHN SAVORY, Member of the Society of Apothecaries. Fourth Edition, 12mo. cloth, 5s.

The Principles and Practice of the

WATER CURE, and HOUSEHOLD MEDICAL SCIENCE, in Conversations on Physiology, on Pathology, on the Nature of Disease, and on Digestion, Nutrition, Regimen, and Diet. By JAMES WILSON, M.D. Second Edition, 8vo. cloth, 7s.

On Diseases of the Urinary and

GENERATIVE ORGANS in both SEXES. Part 1. Non-specific Diseases. Part 2. Syphilis. By WILLIAM ACTON, late Surgeon to the Islington Dispensary. Second Edition, 8vo. cloth, 3s.

"The present edition of Mr. Acton's work is very much enlarged, and contains a most valuable collection of matter."—*Lancet*.

"A section on which great labour has been bestowed is that on spermatorrhœa."—*Practical Medical Journal*.

"We have no doubt that Mr. Acton's treatise will take its place among the standard treatises in medical literature, a position to which its merits so well entitle it."—*Dublin Medical Post*.

No. 11, NEW BURLINGTON-STREET.

THE DUBLIN UNIVERSITY MAGAZINE

for JUNE, price 2s. 6d., contains:—

London: Williams & Norgate, 14, Henrietta-street, Covent-garden.

HARRIET MARTINEAU'S GUIDE TO THE ENGLISH LAKES.

Now ready,

A COMPLETE GUIDE to the ENGLISH LAKES. By HARRIET MARTINEAU. Beautifully Illustrated from Original Drawings made especially for the Work. Elevations of the Mountains, and a large and accurate Map, coloured Geologically, by JOHN RUTVEN, to which are added an Account of the Flowering Plants, Ferns and Mosses of the District, and a Complete Directory. Demy 4to. extra cloth, gilt, 7s. 6d.; foolscap 8vo. 5s.

"Harriet Martineau has great enthusiasm for her subject, and her pen not only describes but invites. A close observer of nature, she is an artist with her pen, and depicts with a few simple touches of language the scene to which she guides and attracts the tourist."—*Westminster Gazette*, May 4, 1855.

"The work is evidently born with her a labour of love. A more tastefully got-up volume we would not desire to see. The paper and the typography are all that they ought to be, and the illustrations are of a high order indeed."

"What summer visitor to the mountain region of Cumberland and Westmorland will not be delighted to hear of the publication of a 'Complete Guide to the English Lakes' from the pen of Harriet Martineau? This is a book which is not a guide merely, but a most intellectual and agreeable companion for the tourist."—*Liverpool Mercury*, May 4, 1855.

Also, just ready, by the same Authors,

A GUIDE to WINDERMERE, with Tours to the Neighbouring Lakes, and other interesting Places. With Map and Illustrations, in neat cover, 1s.

"How different is her (Harriet Martineau's) air of conscious but matter-of-course superiority from the efforts of ordinary mortals who write Guide Books. If she gives herself the airs of an instructress, the instructress soon shows herself to be a delightful companion."—*Westminster Gazette*.

London: Whittaker & Co. Windermere: John Garnett; and sold by all Booksellers.

In 12mo. with Portrait, price 5s.

MEMOIR of VICE-ADMIRAL SIR JAHLEEL BRENTON, Bart., K.C.B. Second and cheaper Edition, re-edited by his Son.

Price One Guinea.

London: D. Nutt, 270, Strand.

Just published,

PRACTICAL PHOTOGRAPHY, on GLASS

and PAPER: a Manual containing simple Directions for the Production of Portraits and Views by the Agency of Light, including the Collodion, Albumen, Calotype, Waxed Paper, and Positive Paper Processes. By CHARLES A. LONG. Price 1s., per post, 1s. 6d.

PHILOSOPHICAL INSTRUMENTS.

GENERAL and DESCRIPTIVE CATALOGUE of Philosophical Apparatus and Chemical Preparations Manufactured and Sold by BLAND & LONG, Opticians, &c., 153, Fleet-street, London; comprising Twenty-one Sections on various branches of Natural Philosophy.

Price 1s.; per post, 1s. 6d.

Published by Bland & Long, Opticians, Philosophical and Photographical Instrument Makers, and Operative Chemists, 153, Fleet-street, London.

PHOTOGRAPHIC CHEMICALS, APPARATUS, and LENSES.

R. W. THOMAS,

CHEMIST, &c., 10, PALL MALL,

SOLE MAKER OF THE XYO-IODIDE OF SILVER,

AND

MANUFACTURER OF PURE PHOTOGRAPHIC CHEMICALS AND APPARATUS.

In the APPARATUS DEPARTMENT of this Establishment every kind of first-class Photographic Apparatus may be seen, including—

CAMERAS, folding and rigid, of superior construction.

Folding and other STANDS, of the best make.

GLASS BATHS, arranged for carrying the Silver Solution, thus dispensing with the use of a bottle and funnel.

GUTTA-PERCHA BATHS, mounted, to carry the Silver Solution for Glass Plates, up to 15 by 12 inches.

Jointed LEVELLING-STANDS and SPIRIT-LEVELS.

COLLODION PLATE-HOLDERS, for preparing large plates with facility. Pneumatic, ditto. PLATE-CLEANERS.

COLLODION GLASSES.

A Choice Collection of PASSEPARTOUTS, made expressly for this house, from original patterns.

Albumenized and other PAPERS, French and English.

A great variety of Glass, Porcelain, and Gutta-Percha DISHES.

Also, a large assortment of ROSS'S Portrait and Landscape LENSES.

PHOTOGRAPHY ON PAPER.

Every requisite for practising the Calotype process may also be seen in the Apparatus room, including Bockle's Brushes, Shallow Glass Dishes for developing negatives, with case and covers, Deep Porcelain Dishes, for Washing the Iodized Paper, &c. &c.

An excellent Negative Paper, well adapted for Iodizing, after the method followed and recommended by Mr. Sutton, price 4s. per quire, or 3s. 10s. per ream, 19 by 15.

N.B. The stock (50 reams) has now been kept two years. This paper may also be had ready iodized.

XYLO-IODIDE OF SILVER.

This important photographic preparation is exclusively used at all the Photographic Establishments. Its superiority is universally acknowledged. Testimonials from the best photographers and principal scientific men of the day warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action.

In all cases where a quantity is required, the two solutions may be had at wholesale price in separate bottles; in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each bottle is stamped with a red label, bearing my name and address,

RICHARD W. THOMAS, CHEMIST,

10, PALL MALL,

to counterfeit which is felony.

NITRATE of SILVER BATH for the above preparation may be always obtained of R. W. THOMAS, ready made, at a cost little more than the price of ingredients used.

CRYSTAL VARNISH.

PREPARED FROM THE FINEST AMBER.

This valuable Varnish, for protecting Negative Pictures, does not require the application of any heat to the plate. The coating will be found free from stickiness, hard, and transparent. It dries immediately.

HYPO-COLOURING BATH.

FOR RENDERING THE POSITIVES ON PAPER DARK AND RICH IN COLOUR.

CYANOGEN SOAP.

FOR REMOVING ALL KINDS OF PHOTOGRAPHIC STAINS

The genuine is made only by the inventor, and is secured with a red label, bearing this signature and address,

RICHARD W. THOMAS, CHEMIST,

No. 10, PALL MALL,

Manufacturer of Pure Photographic Chemicals and Apparatus.

And may be procured of all respectable Chemists, in pots, at 1s. 2s., and 3s. 6d. each, through Messrs. EDWARDS, 67, St. Paul's Churchyard; and Messrs. BARCLAY & Co., 95, Farringdon-street, Wholesale Agents.

FRENCH IN ONE VOLUME.

Just published, a New and Improved Edition, price 6s.

THE COMPLETE FRENCH CLASS-BOOK; or, Grammatical and Idiomatic French Manual; with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and original plan, by ALFRED HAVET, French Master in the Glasgow Athenæum, &c.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language." *Athenæum*.

"One delights to luxuriate among its ample pages, replete as they are with excellent and clearly-arranged matter, explanatory and illustrative of the French language."

Scottish Educational Journal.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French Manuals yet published in this country. The new features that it possesses are chiefly that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language."

The Educationalpositor.

London: Dulau & Co.; W. Allan.

Just published, New and Cheaper Edition, price 1s.; or, by post for 1s. 6d.

THE SCIENCE OF LIFE; or, How to Live and What to Live for: with ample Rules for Diet, Regimen, and Self-Management, together with Instructions for securing Health, Longevity, and that sterling happiness only attainable through the judicious observance of a well-regulated course of life. By a PHYSICIAN.—London: Piper Brothers & Co. 23, Paternoster-row, Hanway, 64, Oxford-street; Mann, 39, Cornhill; and all Booksellers.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical acting focal coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

REMOVAL.—HOCKIN & CO., from 289, Strand, to 38, DUKE-STREET, MANCHESTER-SQUARE.

IODIZED COLLODION, unsurpassed in sensitivity and density of negative.—LENSES, mounted achromatic, Quarter Plate, double, 2s. 2s.; Half, 3s.; Whole, 10s.—Waxed and Albumenized Papers.

PRACTICAL HINTS ON PHOTOGRAPHY, by J. B. HOCKIN. Price 1s.; per post, 1s. 6d.

THE NEW COLLODION, manufactured by BLAND & LONG, 153, Fleet-street, London, will bear comparison with any other preparation offered to Photographers. Price 9d. per oz. Can be had separate from the Iodizing Solution. Nitrate of silver, 1s. 6d. per oz.; Potassium Iodide, 1s. 6d. per ounce; Glacial Acetic Acid, 6d. per oz.; Hypsulphite of Soda, 1s. per lb. CAMERAS, LENSES, and every description of Apparatus, of first-class workmanship.

Chemicals of ABSOLUTE PURITY, and every material required in the Photographic Art, of the finest quality.

Instruction in all the processes.

Catalogues sent upon application.

CROSSE & BLACKWELL, Purveyors in Ordinary to Her Majesty, respectfully invite attention to their PICKLES, SAUCES, TAITS FRUITS, and other table delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. The practice of colouring pickles and fruit by artificial means has been discontinued, and the whole of their manufactures are so prepared that they are not allowed to come in contact with any deleterious ingredient. A few of the articles most highly recommended are, Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Solano Sauce, Essence of Anchovies, Jams, Jellies, and Fruit Preserves; Anchovy and Blended Mustards, and other Potted Meats, and Calf's-foot Jellies of various kinds for table use. **C. & B.** are also Sole Agents for **M. Sayer's** Sauces, Relish, and Aromatic Mustard; and for **Carstairs's** Sir Robert Peel's Sauce, and **Payne's** Royal Osborn Sauce. The above may be obtained of most respectable Royal Vendors throughout the United Kingdom; or a wholesale of **CROSSE & BLACKWELL**, 21, Solano-square, London.

SCHWEPPE'S SODA, POTASS, and MAGNESIA WATERS, and Aërated Lemonade, continue to be manufactured upon the largest scale at their several establishments in London, Liverpool, Bristol, and Derby. The celebrity of these well-known waters, and the preference they universally command, are evidences that their original superior quality ever obtained is still sustained. Every bottle is protected by a label, with the name of their firm, without which none is genuine, and it may be had of nearly all respectable Chemists throughout the Kingdom. Importers of the German Seltzer Waters, direct from the springs, as for the last thirty years.—51, Berners-street, London.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES consist of Matting, Door Mats, Mattresses, Hasp-covers, Brushes, &c. and are distinguished by superiority and excellence of workmanship, combined with moderate charges. Catalogues, containing prices and every particular, free by post.—**T. TRELOAR**, Cocoa-Nut Fibre Manufacturer, 42, Ludgate-hill, London.

An Exhibition of 30*l.*, open to Students intended for the Universities, or for the Legal and Medical Professions, and tenable for three years, will be annually adjudged. Students entering before Christmas next will be admissible to contend.

Each Proprietor has the right of nominating one Pupil at a time to the School at reduced fees.

R. HADSON, Hon. Sec.

** The Second Master RECEIVES BOARDERS at 24, Boundary-road.

EDUCATION.—A LADY residing in a

healthy locality, near London, RECEIVES a select and limited number of YOUNG LADIES, she has had many years' experience, and can offer the advantages of a superior education, combined with the comforts of home. Professors of reputed talent attend.—Address H.Y., at Roland's Library, 20, Berners-street.

EDUCATION.—40*l.* PER ANNUM.—A

Professor at a First-Class Establishment at St. John's Wood, has the privilege (in return for his services) of introducing a YOUNG LADY, who will receive the same advantages as the other Pupils, and be instructed by the Masters at the above (which are little more than half the usual) terms.—Address, immediately, L. T., Post-office, 15, Charing-cross.

FOREST HOUSE SCHOOL, WOODFORD WELLS.

Conducted by Mr. G. F. H. SYKES, B.A., late First Assistant Master of MIL HILL SCHOOL.

The object of this Establishment is to furnish an Education based on Christian principles, and comprehending instruction in the Arts of Commerce, in the Languages, and in Science.

Omnibuses from the City pass the door several times in the day.

Prospectuses will be forwarded on application.

ENGLISH AND FRENCH EDUCATION in

PARIS.—LOUIS DIREY, M.A. of the University of France, and ALGERNON FOGGO, B.A. of Christ's College, Cambridge, undertake personally the ENTIRE CHARGE of a small number of Pupils.—Letters to be addressed to Messrs. DIREY & FOGGO, to the care of Messrs. John W. Parker & Son, Publishers, West Strand, London.

COMMERCIAL INSTITUTION in

LUBECK.—This celebrated Institution, founded in the year 1829 by Mr. A. B. Rey, offers a thorough INSTRUCTION in all branches of Mercantile Knowledge and Foreign Languages to Young Gentlemen who wish to prepare themselves for commercial careers, or to complete their education.—The Plan of Instruction and Terms may be had on application to Mr. WILLIAM REV. LUBECK, Germany.

UNE DAME PARISIENNE PREPARES

ADULTS for the FRENCH EXHIBITION by an easy method, which enables them to Speak, and to understand when spoken to. She has first-class Certificates, and teaches also ITALIAN thoroughly. References to Adult Pupils and to Families of distinction. Readings and Scientific Translations undertaken. Ten Lessons three guineas.—Apply to Madame P., at Bull's Library, 19, Holles-street, Cavendish-square.

MISS POLE, having made arrangements for

the reception of EIGHT YOUNG LADIES as RESIDENT PUPILS, in addition to her Morning Pupils, has the honour of announcing that the Studies commenced April 4th, at her residence, 23, Circus, Bath, where the Plan of Study and Prospectuses may be obtained.

CAIRO, JERUSALEM, ATHENS.—A Physi-

cian, of great experience and reputation as an Author, wishes to ACCOMPANY a NOBLEMAN'S or GENTLEMAN'S FAMILY to visit these places in the Spring of 1855-1856. Address the Rev. W. Adams, Rector of Throcking, Buntingford, Herts.

STAMMERING.—Monsieur DUVAL success-

fully CURES STAMMERING, on natural and scientific principles, without drawl, or any of the artificial means generally used. His Orthophonic Exercises enable Gentlemen speaking in public to be clearly and distinctly heard at a great distance. He can give the best references.—181, Warstone-lane, Birmingham.

LESSONS in COMPOSITION.—Pupils out of

Town taught by Correspondence. Manuscripts prepared for the Press.—Address to A. B., 31, Newman-street.

EDITOR.—A GENTLEMAN who has been

hitherto editing with success a Weekly Provincial Newspaper of large circulation, will in a short time be DISENGAGED. Address H. G., care of John Corderoy, Esq., 3, Kennington-green, Lambeth, London.

AN OXFORD GRADUATE in HONOURS

(Second Class, 1854), desires to meet with an ENGAGEMENT AS TUTOR to a Gentleman's Son who is going to study Abroad. Testimonials given.—Address (stating particulars) to P. D. S., care of Mr. Shrimpton, Bookseller, Broad-street, Oxford.

TO NEWSPAPER EDITORS or RE-

PORTERS.—Any Gentleman having a knowledge of the Newspaper Business, willing to embark from 1200*l.* to 1500*l.* as PARTNER in a most respectable old-established NEWSPAPER, may meet with a favourable opportunity by addressing F. F., Mr. White's, 33, Fleet-street, London.

TO PARENTS and GUARDIANS.—A POR-

TRAIT and HISTORICAL ENGRAVER, in full practice, has a VACANCY for a steady YOUTH as Out-door Pupil, with partial board. Some previous knowledge of drawing indispensable. Premium 100 guineas.—Apply, A. Z., Messrs. Graves & Co.'s, 6, Pall Mall.

A B.A. of Trinity College, Cambridge, who has

recently taken a First Class in the Classical Tripos, would be happy to READ WITH TWO OR THREE PUPILS during the ensuing Long Vacation, either in France or in Germany. Letters to be addressed to G. W., care of Messrs. Rivington, Waterloo-place.

AS PRIVATE SECRETARY and LIBRA-

RIAN.—A Gentleman is desirous of meeting with an ENGAGEMENT in the above capacity, where active energetic habits and a general acquaintance with French and Foreign Literature might render his services valuable. The Advertiser is a good Accountant, can converse and correspond in French and German, and read Italian fluently. As he has received a classical education, and has had some experience in tuition, he will be glad, if required, to discharge, in addition to the duties of a Secretary, those of a Tutor, where the pupils are tolerably advanced. The highest references will be given both as to character and acquirements.—Address, Mr. BURTON, Lentrans House, Inverness.

THE SEAT OF WAR.—The Undersigned has

established himself at CONSTANTINOPLE, as Agent for Steamers and Sailing Ships engaged in the TRANSPORT SERVICE. He will be prepared to make ADVANCES to Captains on LETTERS of CREDIT, also to take charge of Parcels or Letters, and be glad to make his services generally useful. Constantinople, March 15, 1855. WILLIAM HADFIELD.

INTERESTING AUTOGRAPH LETTERS, The Property of a GENTLEMAN, consisting of a Fine Series of Letters to and from several Poets and Letters of Burns and Moore; a Holograph Letter of Oliver Cromwell; an Early Interesting Notice of Dr. Johnson in a Letter of Joseph Ames; Five Letters of Earl Nelson to Lady Hamilton, and a Series of French Marshals, Republicans, &c. Also, a small collection of EARLY and RARE DRAWINGS, among which are a few by Hollar and Albert Dürer.
May be viewed two days previous, and Catalogues had; if in the Country, on receipt of four postage stamps.

National Antiquities.
MESSRS. S. LEIGH SOTHEY & JOHN WILKINSON, AUCTIONEERS of LITERARY PROPERTY and WORKS illustrative of the FINE ARTS, will SELL by AUCTION, at their House, 3, Wellington-street, Strand, on MONDAY, the 11th of June, and following day, at 1 o'clock precisely,

A MOST INTERESTING COLLECTION OF
NATIONAL ANTIQUITIES, discovered principally in the Metropolis during the last Fifteen Years; consisting of Roman and British Remains in Glass and Pottery; Cinerary Urns, in the most perfect state; a Roman Monument discovered in Blackfriars; Domestic Utensils, amongst which are several perfect Samian Bowls, Figured Paterns and Cups, with some rare Moulds used in their Manufacture; Earthenware Amphoræ, and a great variety of Roman Vessels of elegant form; some unequalled Specimens of Roman Glass, Amphoræ, Vases, &c. Personal Ornaments, Fibulæ, Armillæ, Rings, Pins, a Roman Sandal, &c. Bronze Penates, fine Statuettes of Heathen Deities, Vases, Keys, Stylæ, a pair of Scales, and other curious Objects; Tesselated Pavements, Fresco Paintings, Tiles, and other interesting Remains. Amongst the Early English Antiquities are many rare Anglo-Saxon Fibulæ, a great variety of Earthenware Vessels, from the earliest period to the Seventeenth Century; Amphoræ, Costrels, Pitchers, Drinking Cups, Bellarmine's, &c.; some rare Glass Vessels, Specimens of Sher of the Thirteenth and Sixteenth Centuries; Eusebian Tiles, Bronze Implements, Keys, Rings, &c.; being the Private Collection formed by Mr. W. CHAFFERS, F.S.A., of Watling-street.
May be viewed two days previous, and Catalogues had; if in the Country, on receipt of six postage stamps.

South Sea Curiosities, Shells, and other Natural History Specimens.

MR. J. C. STEVENS will SELL by AUCTION, at his Great Room, 3, King-street, Covent-garden, on FRIDAY, June 8, at 12 for 1 o'clock, a MISCELLANEOUS COLLECTION of War Implements and Curiosities from the South Sea, many of which are highly interesting, having been presented to the late Proprietor by Queen Victoria.—A Collection of SHELLS, including numerous rare Specimens—Reptiles from India—Minerals, Fossils, &c.
May be viewed on the day prior and morning of Sale, and Catalogues had.

The First Portion of the Valuable Stock of Architectural and Scientific Books of Mr. JOHN WEALE, of High Holborn (declining the Retail Trade).

SOUTHGATE & BARRETT will SELL by AUCTION, at their Rooms, 25, Fleet-street, on MONDAY, June 4, and two following days, at 12,

THE FIRST PORTION OF THE VALUABLE STOCK OF
ANCIENT AND MODERN BOOKS, consisting of the best standard works in Architecture and Engineering, Civil and Mechanical, the Fine Arts, and other Sciences, and a great variety in Miscellaneous Literature, together with the entire remaining Stocks and Copyrights of several important Publications.
Catalogues will be forwarded on receipt of four postage stamps.

The whole of the remaining Coloured, Proof, and Plain Copies of LOUIS HAGHE'S last Illustrated Book.

SOUTHGATE & BARRETT will SELL by AUCTION, at their Rooms, 25, Fleet-street, on TUESDAY, June 5, and following day, the remaining Copies of

AYA SOFIA, CONSTANTINOPLE, as recently restored, by H.M. the Sultan Abdul Mejid, 25 plates in the very best style of double-tinted Lithography by Louis Haghe, from the original drawings by the Architect Chevalier Gaspare Fossati, being a Series of Twenty-five Interior and Exterior Views of the Mosque of St. Sophia, and four Panoramic Views of Constantinople.

Apart from the great interest attaching to the subject here illustrated, associated as it is with the events now passing in the East, this work is itself by an artist who has attained the highest degree of the highest class, and the very last from the pencil of Mr. Haghe.

Miscellaneous Books.—Four Days' Sale.

PUTTICK & SIMPSON, Auctioneers of Literary Property, will SELL by AUCTION, at their Great Room, 191, Piccadilly, on FRIDAY, June 8, and following days, a LARGE COLLECTION OF THEOLOGICAL and MISCELLANEOUS BOOKS, including Dugdale's Monasticon and St. Paul's last and best edition, 2 vols., Aldrich's, curia, Baber, 4 vols.—Freytag's Lexicon, 4 vols.—Büfion, Histoire Naturelle, 20 vols.—Scrope and Grosvenor Roll, 2 vols., privately printed—and many Curious and Valuable Books, Aldine and other scarce editions of Classic Authors—a MS. Koran, beautifully written and illuminated.

Catalogues will be sent on application.

Highly interesting and extensive Collection of Printed Books, Manuscripts, Deeds, &c. relating to the County of Suffolk.

Also a matchless Series, in 50 large volumes, of Pictorial Illustrations of the County, in Prints and Drawings, Portraits, Topography, and Miscellaneous Subjects.

Catalogues in the press.

Pall Mall.—English Pictures of Great Importance.

MESSRS. FOSTER & SON respectfully announce that they have received instructions from Messrs. LLOYD BROTHERS, the enterprising Publishers of Ludgate-hill, to SELL by AUCTION, at the Gallery, 54, Pall Mall, on WEDNESDAY, June 13, at 12 for 1, the ORIGINAL PICTURES by eminent British Artists purchased by Messrs. Lloyd & Co. mostly for the purpose of Engraving; and that being accomplished, they are now to be sold, including two Academy Pictures by the late J. M. W. Turner, R.A., viz. the Grand Canal at Venice, with the State Barges conveying the Pictures of John Bellini to the Church of the Redeemer, now in process of engraving; and the well-known Burning of the Houses of Parliament—Infant Prayer, by W. P. Frith, R.A. the Academy Picture, engraved by Stokes—Did you Ring? by the same artist, now engraving by Hall, and a smaller Picture, also by Mr. Frith—the Spirit of Justice, the poetical Academy Picture, by D. MacIse, R.A. not yet engraved—the Fight for the Standard, by R. Ansell, engraved by Ryall—Cromwell and his Daughter, engraved by Tomkins, and Nelson in his Cabin on the Eve of the Battle of Trafalgar, engraved by Sharpe, both by Chas. Lucy—the Wood Nymphs Surprised, an exquisite Academy Picture, by W. E. Frost, R.A.—a set of four Hunting Pictures, by Herring, Sen., engraved by Harris—the Golden Age, an important work by F. Danby, A.R.A. &c.; and Specimens of

T. Feed A. Linnell T. Wain, R.A. Linnell Jun. J. Linnell J. Phillips Lee and Cooper T. Creswick, R.A. W. Müller D. Roberts, R.A. W. Douglas.

Catalogues will be ready on the 12th, and may be then had of Messrs. Foster, 54, Pall Mall.

Engravings, Portraits, Views, &c.

MR. HODGSON will SELL by AUCTION, at his New Rooms, the corner of Fleet-street and Chancery-lane, on TUESDAY, June 5, at half-past 12, an INTERESTING COLLECTION OF ENGRAVINGS, containing some scarce and early Portraits of Distinguished Characters—Illustrations to Shakespeare, Milton, &c.—Views in Great Britain, and Miscellaneous subjects.

To be viewed, and Catalogues had.

A Set of Hansard's Parliamentary Debates.

MR. HODGSON will SELL by AUCTION, at his New Rooms, the corner of Fleet-street and Chancery-lane, on TUESDAY, June 5, at 1, a SET OF HANSARD'S PARLIAMENTARY HISTORY AND DEBATES, from the Conquest to the 13 & 14 Victoria inclusive, in 512 vols. half-bound russet. A complete set of this valuable work is now rarely to be met with. This copy is in excellent condition, the volumes being all uniformly bound, and would form a great acquisition to the library of any gentleman either in Parliament or interested in the History of our Laws and Constitution from the present time to the present time. A fine copy of Howell's State Trials, with Jardine's Index, in 34 vols. half-bound russet, is also included in the same Sale, together with a large Collection of Books in General Literature, being the Library of a Gentleman removing.

To be viewed, and Catalogues had.

Law Books and Office Furniture.

MR. HODGSON will SELL by AUCTION, at his New Rooms, the corner of Fleet-street and Chancery-lane, on WEDNESDAY, June 6, at half-past 12, the VALUABLE LAW LIBRARY of a Barrister, retiring from the Profession, comprising a complete set of Ruffhead's Statutes at Large, from Magna Charta to 1854; a Large Collection of Modern Practical Works and Books of Reference, and a Series of the Reports in the various Courts of Chancery, Queen's Bench, Common Pleas, Exchequer, Cases before the House of Lords, &c. The above Series is in good condition, and many of the Cases are noted up to the present time. Also, the Office Furniture, in Tables, Chairs, Secrétaire, Bookshelves, &c. &c.

To be viewed, and Catalogues had.

To Book Societies, Public Libraries, and Others.

MR. HODGSON will SELL by AUCTION, at his New Rooms, the corner of Fleet-street and Chancery-lane, on TUESDAY, June 12, and two following days, at half-past 12, a very Extensive CIRCULATING LIBRARY, containing upwards of

TWELVE THOUSAND VOLUMES OF THE BEST MODERN WORKS,

in Novels, Romances and Works of Fiction, Histories, Biographies, Scientific Works, Voyages and Travels, &c. This Collection comprises nearly all the most Popular Books published during the last ten years as well as the usual Standard Works found in every Library, among others may be mentioned the Works of Macaulay, Layard, Grote, Hallam, Ruskin, Merivale, Kaye, Lord John Russell, Alison, Gibbon, Madame D'Aulnoy, Pepps, Emerson, and other esteemed Authors; Works lately published on the War with Russia, &c. &c.; also, all the most recent Novels and Romances, many published in 1854 and 5. The whole are in excellent condition, some being nearly new, and would be found very suitable for Public or Private Libraries, Book Societies, &c.

May be viewed, and Catalogues had; if by post, on receipt of four stamps.

Stock of Books, Stereotype Plates, Printing Materials, consisting of many thousand pounds' weight of Type, Seven capital Printing Presses, &c. &c.

MR. HODGSON will SELL by AUCTION, on the Premises, Strand, about the middle of June, (by order of the Assignees of Mr. John Loft's) the STOCK OF BOOKS, in Sheets and Boards, comprising many Popular Works of Fiction, Amusing and instructive Illustrated Books, with the Stereotype Plates and Copyrights; the Printing Materials, consisting of several thousand pounds' weight of Type, Seven capital Double-crown Printing Presses, and the usual Fittings of a Printing Office.

Catalogues are preparing.

FRENCH IN ONE VOLUME.

Just published, a New and Improved Edition, price 6s.

THE COMPLETE FRENCH CLASS-BOOK; or, Grammatical and Idiomatic French Manual; with Progressive Illustrations and Exercises, and Conversational Lessons, on a new and original plan. By ALFRED HAVET, French Master in the Glasgow Athenæum, &c.
"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language." —Athenæum.
"One delights to luxuriate among its ample pages, replete as they are with excellent and clearly-arranged matter, explanatory and illustrative of the French language." —Scottish Educational Journal.

"M. Havet's 'Class-Book' is one of the best arranged and most complete French Manuals yet published in this country. The new features that it possesses are chiefly that it makes frequent comparisons between the English and French idioms, and that it contains CONVERSATIONAL LESSONS, calculated to impart information, as well as to exercise the learner in speaking the language." —The Educational Examiner.

London: Dulau & Co.; W. Allan.

On the 5th of June will be published, price 3s. 6d. cloth,

THE HISTORY OF ENGLAND,
FROM THE ACCESSION OF GEORGE III.

TO THE

ACCESSION OF QUEEN VICTORIA.

By the Rev. T. S. HUGHES, B.D.

Late Canon of Peterborough.

With a Memoir of the Author, and Portrait.

Opinions.

"The author appears moderate and impartial as regards opinions. He seems to have sought after his facts and information with painstaking industry, and to have combined his materials with sufficient skill; whilst his narrative carries us smoothly and quietly along, without excitement, without weariness."—*Speedator*.
"Mr. Hughes is a temperate and, so far as we have been enabled to judge, an accurate historian. His history is just what such a history should be—clear, nervous, and singularly faithful in its details."—*Sun*.
"Of this work we are bound to speak in terms of high approbation."—*John Bull*.

London: George Bell, 186, Fleet-street.

Recently published, 12mo. 4s.

CHRIST in the WILDERNESS: FOUR SERMONS preached before the University of Cambridge in the Month of February, 1855.
It was a bold thing, as Mr. Goodwin honestly and manfully acknowledges, to handle the subject of the Temptation before the University of Cambridge so soon after Dr. Mill's great discourses upon that theme. Mr. Goodwin's mode of treatment is, of course, very different, and it is, perhaps, owing to the simplicity and sincerity of his style that he has produced so interesting a volume upon so great and mysterious a subject. His 'Christ in the Wilderness' is a very good set of sermons. The subject is treated with reference to the history of Our Lord's own life, to the history of the Church, to the preparation for Orders, and to the general temptations of mankind.—*Guardian*, May 24.

Cambridge: Deighton, Bell & Co. London: Bell & Daldy.

NURSES FOR WOUNDED SOLDIERS.

THE ENDOWED CHARITIES: with some

Suggestions for further Legislation regarding them.
By J. P. FEARON.
London: Longman, Brown, Green, and Longmans.

Just published, in 12mo. price 3s. 6d. cloth.

THE FIRST FOUR BOOKS of MILTON'S

PARADISE LOST: with Copious Notes, Grammatical, Classical, and Critical. By C. W. CONNOR, M.A., Reading Master, Lower School, Greenwich Hospital.

The idea of this book is very excellent, and that idea has been well carried out. The book is a genuine addition to school publications, supplying an excellent example of enlightened criticism. In that respect it will serve as a pattern of the manner in which the perusal of the poets ought to be conducted.—*Christian Witness*.

London: Longman, Brown, Green, and Longmans.

The Third Edition, in 1 vol. 8vo. price One Guinea.

THE RURAL LIFE of ENGLAND. By WILLIAM HOWITT. Third Edition, corrected and revised; with Illustrations on Wood by Bewick and Williams.

By the same Author. New Editions, with many Woodcuts, VISITS to REMARKABLE PLACES—Old Halls, Little-Fields, and Scenes illustrative of Remarkable Passages in English History and Poetry. 2 vols. 8vo. price 21s. each.

The BOY'S COUNTRY BOOK. Fcap. 8vo. Woodcuts, 6s.

LAND, LABOUR, and GOLD; or, Two Years in Victoria. 2 vols. post 8vo. price 21s.

London: Longman, Brown, Green, and Longmans.

In June will be published, in 8vo.

HISTORICAL and CRITICAL COMMENTARY on the OLD TESTAMENT. By Dr. M. KALISCH, M.A. First Part—EXODUS: in Hebrew and English, containing a New English Translation from the Hebrew Text, based on the Authorized Version, copious Notes, Critical, Philological, and Explanatory, illustrative of the History, Natural Philosophy, and General Archaeology of the Holy Scriptures.—and embodying and reviewing, in a systematic Digest on every difficult Verse, the opinions of Ancient Interpreters, and the Researches of Modern Biblical Critics.

An Edition comprising the English Translation, and an abridged Commentary, with the omission of all philological remarks, for the use of English readers, will be published simultaneously.

s The present volume forms a complete work in itself; and is published first, because it is best calculated to show, by the Mosaic legislation, and the other important subjects of which it treats, the spirit and tendency of this Commentary. It is written without sectarian bias; is exclusively based on the original text; and, although the theology of the Old Testament is carefully considered, it is constantly derived from a literal analysis of the Sacred Records.

London: Longman, Brown, Green, and Longmans.

THE NEW NOVELS.

NOW READY AT ALL THE LIBRARIES.

THE NEXT-DOOR NEIGHBOURS. By MRS. GASCOIGNE, Author of 'Temptation; or, a Wife's Perils,' &c. 3 vols.

EUSTACE CONYERS. By JAMES HANNAY, Esq. Author of 'Singleton Fontenoy,' 'Satire and Satirists,' &c. 3 vols.

"Eustace Conyers" is a fresh, genuine, healthy book—beyond comparison Mr. Hannay's ablest, wisest, and maturest work. There is something in it better than story—there is abundance of character. Character is Mr. Hannay's strength. Mind of 'Eustace Conyers' will delight the reader beyond the portraits: glimpses of natural scenery—pleasant satire on political and social ways—eloquent repinings after the old chivalry—brief brilliant epigrammatic sayings, thrown off with an affluence and a carelessness testifying to no ordinary wealth of imagination; but the present fascination and lasting charm of the book will be found in its gallery of living, vigorous, and subtle portraits.—*Athenæum*.

The HEIRESS of HAUGHTON.

By the AUTHOR of 'EMILIA WYNDHAM,' 'TWO OLD MEN'S TALES,' &c. 3 vols.

"The numerous admirers of this delightful authoress will welcome with pleasure the announcement of a new novel from her pen. In her writings we have never to complain, as in the case of some novelists, that there is no one to arouse our interest, and that the document is awaited with indifference. There is always some one (and it is generally in the difficult character of heroine) to excite our sympathy and awake our attention. Her heroine in the present instance is a charming creation. We may congratulate the author on having added another to the list of her literary successes.—*Sun*.

"We were not inclined to believe that the author would surpass her 'Emilia Wyndham,' the power of which made her reputation at once. Nevertheless, we can only do justice to the matter before us by saying that we consider this tale to be the best which the authoress has yet written."—*Messenger*.

"A story of surpassing interest. The heroine is one of the sweetest portraits of female loveliness which even the talented pen of the Author of 'Emilia Wyndham' has produced."—*John Bull*.

THE SECRET MARRIAGE; or,

Contrasts in Life. By Miss FANNY WILLIAMS.

"The 'Secret Marriage' is one of the best novels of the season."—*Literary Gazette*.

Also, in the press, in 3 vols.

THE JEALOUS WIFE. By Miss PARDOE.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

The THIRD and FOURTH VOLUMES

are Now Ready, comprising the Period from 1800 to 1810, and completing the Work, of

The DUKE of BUCKINGHAM'S MEMOIRS of the COURT and CABINETS of GEORGE III.

FROM ORIGINAL FAMILY DOCUMENTS.

From "THE TIMES," May 30.

"The present collection is more valuable than the last, inasmuch as Lord Grenville, having attained higher dignity and experience, is a more dispassionate observer of passing events. Whoever would desire to read the running comments of so eminent and well-informed a man as Lord Grenville upon a decade so interesting as that of 1800—10, would do well to consult these volumes. Lord Grenville was certainly among the most far-sighted men of his time; and to him, from the first, belongs the credit of appreciating truly Napoleon Bonaparte's position and designs. He did so even to a higher degree than Pitt; and it is most remarkable how far his predictions have been verified by the event, even when submitted to the sharp test of the judgment of posterity. The principal points on which light is thrown by the present correspondence are, the negotiations before and after the Treaty of Amiens until the time of its rupture—the true character of Addington's Administration, and the relations between 'the Doctor' and Pitt—the formation of the Pitt and Sidmouth Cabinet, when the King's prejudices against Charles Fox were found to be insurmountable—the Grenville and Fox short Administration—the Duke of Portland's Cabinet—the expedition to Portugal, with its climax at Cintra—the Duke of York's scandal with Mrs. Clark—Sir John Moore's retreat, with the earlier Spanish campaigns of Sir Arthur Wellesley—and, finally, the disastrous 'Walcheren affair.' There is much curious matter interposed in the shape of *précis* upon the situation of affairs written from time to time by Lord Grenville himself; and perhaps still more curious reports made to the Marquis of Buckingham by a certain —, whose name remains a mystery, but who seems to have been tolerably well acquainted with the *arcana imperii* at the beginning of the century. There is much in these volumes which well deserves perusal. There is a portion of their contents which possesses nearly as high a claim upon our instant and careful consideration as the Minutes of the Sebastopol Committee."

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

Now ready, in 3 vols.

THE MONARCHS of the MAIN;

Or, ADVENTURES of the BUCCANEERS.

By GEORGE W. THORNBURY, Esq.

"An unwritten page of the world's history is not to be met with every day. The author of these volumes has discovered one, and has supplied the deficiency. The deeds of alternate violence and heroism of those wild adventurers the Buccaneers—now sweeping the main with their piratical vessels—now surprising and sacking some rich and flourishing town—now fortifying themselves in some strong island hold, where they could bid defiance to a world in arms against them—form the subject of a narrative, rich in variety of incident, and replete with striking exhibitions of life and character. To the lover of maritime adventure these pages offer a fund of infinite amusement, doubly attractive from the novelty of the theme."—*John Bull*.

"Up to this time the history of the Buccaneers remained unwritten, although their career was of the most exciting description. Mr. Thornbury has taken up that history, and the result is a work the terrible interest of which is not surpassed in any language. The book brings new scenes and new creations to the novel reader, laded with worn-out types of conventional existence—it traces the foundation of our colonial empire—it adds a new page to human history—and it furnishes deep matter for speculation upon the mission and destinies of mankind. It is a work at once perfectly novel and deeply interesting."—*Observer*.

Also, in 2 vols, post 8vo.

THE WABASH; or, the ADVENTURES of an ENGLISH GENTLEMAN'S FAMILY in the INTERIOR of AMERICA. By J. R. BESTE, Esq.

BOHN'S STANDARD LIBRARY FOR JUNE.

HISTORY of RUSSIA from the Earliest Period to the Present Time, compiled from the most authentic sources, including KARAMZIN, TOOKT, and SCOTT. By WALTER K. KELLY. In 3 volumes. Vol. II. with General Index and fine Portraits of the Emperor Nicholas and Prince Menschikoff. Post 8vo. cloth. 3s. 6d.
Henry G. Bohn, York-street, Covent-garden.

BOHN'S CLASSICAL LIBRARY FOR JUNE.

PLINY'S NATURAL HISTORY, translated, with copious Notes, by the late JOHN BOSTOCK, M.D. F.R.S., and H. RILEY, Esq. B.A. Vol. II. Post 8vo. cloth. 5s.
Henry G. Bohn, York-street, Covent-garden.

BOHN'S CHEAP SERIES FOR JUNE.

WASHINGTON IRVING'S LIFE of GENERAL WASHINGTON, AUTHORIZED EDITION, (uniform with Bohn's Edition of the complete Works.) Vol. I. containing his Early Life, Expeditions into the Wilderness, and Campaigns on the Border. Post 8vo. fine Portrait, boards. 2s. 6d.
Henry G. Bohn, York-street, Covent-garden.

In 12mo. with Portrait, price 5s.

MEMOIR of VICE-ADMIRAL SIR JAHLEEL BRENTON, Bart., K.C.B. Second and cheaper Edition, re-edited by his Son.
London: Longman & Co. Ryde: Briddon.

NEW WORK ON ART, BY JOHN LEIGHTON, F.S.A.

In 4to. cloth, 16s.; half-bound morocco, gilt tops, 21s.

SUGGESTIONS in DESIGN. By LUKE LIMNER. For the Use of Artists and Art-Workmen. Containing 600 Hints for Workers in Metal, Wood, Ivory, Glass, and Leather; the Potter, Weaver, Printer in Colours, Engraver, Decorator, &c. &c.
J. & J. Leighton, 40, Brewer-street, Golden-square.

BURNET ON PAINTING.

In 4to. price 4l. 10s. bound in cloth.

A TREATISE ON PAINTING. In Four Parts. Illustrated by 130 Etchings, from celebrated Pictures. By JOHN BURNET, F.R.S.

The Parts may be had separately,

1. On the Education of the Eye. Price 1l. 5s. boards.

2. On Composition. 6th edit. Price 15s. bds.

3. On Light and Shade. 6th edit. Price 18s.

4. On Colour. 5th edit. Price 1l. 11s. 6d. bds.

In royal 4to. with Proof Impressions of the Plates on India paper, having a double set of Plates to the colour, and a Portrait of the Author. Price 8l. 8s. half-bound morocco, gilt tops.
J. & J. Leighton, 40, Brewer-street, Golden-square.

LONDON, SATURDAY, JUNE 2, 1855.

REVIEWS

Fairy Tales. By the Countess d'Aulnoy. Translated by J. R. Planché. With Illustrations by John Gilbert. Routledge & Co.

OUR Easter public is well acquainted with the Countess d'Aulnoy. Night after night, they have been held in a brief enchantment of two hours by some humorous adaptation of her fairy romances. In these stage travesties—though the allusions are brought down to passing events—the supreme elegance of the original is not for a moment lost, but rather made plainer by the bright sparkles of epigram, the flashings of nimble repartee, the graceful, easy verse, the frequent interposition of popular music, and (in these latter days) by the poetical scenery of the prince of fairy painters, Mr. Beverly. Mr. Planché had already taken his station by the side of Madame d'Aulnoy,—who, could she have come back from the grave, to witness one of these gay and many-coloured extravaganzas, half-reflecting, half-mocking, her own rainbow fantasies, would confess that, even in the days of the *Grand Monarque* himself, no such worthy realization of her fairy world either was or could be seen. As if to celebrate the intellectual marriage (for Mr. Planché has been a Benedick lover, making mischievous sport of his mistress, and fencing at her with the quick rapiers of his wit),—there comes forth this earnest and respectful translation of her tales. The nuptials are complete.

Madame d'Aulnoy—d'Anois, our ancestors used to call her, with that perverse aptitude for being wrong in such matters by which they were distinguished—has been for the last century and a half the great treasury of juvenile romance. Her rich and sparkling mine has supplied, at a moderate computation, half the graceful stories of enchantment which contribute to the sunshine of childhood, and, by encouraging our sense of the beautiful and marvellous, the humane and heroic, make the external world more glorious and life more noble and exalted. From her we derive the old familiar tales of 'The White Cat,' 'The Yellow Dwarf,' 'The Fair One with Golden Locks,' 'The Royal Ram,' 'The Invisible Prince,' and many more. Several generations of children have grown up to be old men and women, and have passed away from mortality, since the amiable French Countess, even in her English dress, began to amuse, and we will add, to improve, the juvenile mind. For it is as long ago as the commencement of last century—Mr. Planché tells us in his Preface—that the first English translation made its appearance. This is the book from which the stories in children's collections have been abridged and altered. It was entitled 'A Collection of Novels and Tales of the Fairies, written by that celebrated wit of France, the Countess d'Anois, translated, from the best Edition of the original French, by several Hands.' The period was one in which a taste was arising for that kind of literature,—induced, probably, by Galland's introduction to Europe of the Arabian Nights, and fostered by Addison and Steele in their little Oriental apologues in the *Spectator* and *Guardian*. The tales of the "celebrated wit of France," therefore, seem to have become immediately popular; and we find that in 1766 the collection had reached a fifth edition. In 1817, we are informed by Mr. Planché, the same translation re-appeared in two small volumes, with a new preface, under the title of 'Fairy Tales, translated from the French of Madame d'Anois.' But this version—though the writer of the preface to the

edition of 1766 vouches for the rendering being literal and not paraphrastic—is far from a fair representation of the original. Mr. Planché states:—

"It will scarcely be believed that, although the collectors introduced the novels which link the second series of her Fairy Tales together, after the fashion of the old Italian novelists, they not only omitted the whole of the first series, but also several of the best of the second; substituting, in the place of the latter, tales by the Countess de Murat, and the Countess d'Auneuil, without distinction or explanation, changing the titles where they occurred in the intermediate narrative, and altering or wholly omitting the remarks made upon them by the personages for whose entertainment they are supposed to be related, so that the reader could not suspect the imposition that was practised upon him, for what reason it is difficult to imagine. Nor was the injustice to the author limited to this singular caprice. The tales, instead of being faithfully translated, were recklessly abridged and loosely paraphrased; while the incidental couplets occasionally, and the versified morals invariably, were dispensed with altogether."

Mr. Planché adds, that the volume which he now presents to the public contains nothing which is not the composition of the Countess d'Aulnoy,—though he has found it advisable to make certain omissions.

The name of Madame d'Aulnoy being better known than the circumstances of her life, such as they were, the reader may perhaps be glad to see some account of her. Here is the brief sketch with which Mr. Planché favours us.—

"Marie Catherine, daughter of Monsieur Le Jumel de Barneville, was born in 1649, and died in Paris in January, 1705. Her father was connected with some of the first families in Normandy. She married François de La Mothe, Comte d'Aulnois, who was accused of treason by three Normans, imprisoned, and would have lost his head, had not one of his accusers, struck with remorse of conscience, declared the whole charge to be groundless. The Countess herself was at another period compromised through her intimacy with the beautiful Madame Tiquet, who was beheaded on the Place de Grève, for the murder of her husband. To considerable personal attractions, Madame d'Aulnoy joined much wit and great facility of expression. She was universally popular in society, and possessed to a remarkable extent the talent of combining instruction with amusement in her most ordinary conversation. She had read much, travelled a little, and was gifted with an excellent memory. Whatever might be the subject under discussion, she is said to have always had some information to impart upon it. Nobody could relate an anecdote better or more seasonably, and her facility in composition equalled that evinced in her conversation."

The Fairy Tales of Madame d'Aulnoy are essentially different in their general character from the legends of the Brothers Grimm, or from those other stories of elf-land which we have recently derived from German and various Teutonic sources. The latter have the character of ancient myths or primitive legends,—are brief, intense, earnest, and sincere,—often grave and thoughtful, sometimes almost religious, in tone, yet freaked with wild, rich, jovial humour, like the glintings of tremulous gold on the dark plumage of birds. They are written, also, for the people,—are reverend, and as it were grey-bearded, with antiquity,—and have in them the energy and vital manhood of Teutonic democracy. The French stories treat of none but princes and princesses, kings and queens: the German legends have their royal splendours too (for who could endure a Republic in a fairy tale?); but they have also their heroes and heroines among the poor and lowly-born, and thus possess almost a dramatic sympathy with many-visaged human life. The inventions of Madame d'Aulnoy, however, are more elaborate, ingenious, and magnificent. They are, in fact, little romances, exhibiting much imaginative

and fanciful invention, yet retaining, in spite of their narrow limits, something of the diffuseness, prolixity and artificiality of the Tales which amused the readers of a century or so earlier,—the 'Arcadias,' 'Dianas,' &c. of the pastoral writers,—the endless novels of Calprenède and Scudéri,—and the narratives of knight-errantry which Cervantes burlesqued. It may seem extravagant to place in anything like the same category with these huge folios, fictions, of which the longest barely extends to fifty of the light pages now before us. But, as all size is comparative, so is all prolixity; and a tale which would be very short if treating of human incidents and passion, may be somewhat too large in its proportions when placed upon the evanescent earth of fairy land. A fairy tale should be rapid, airy, volatile; should "hop as light as bird from briar," and have in it as little tendency towards the centre of gravity as the down from off a summer blow-ball when shaken into the wind. But, perhaps, these observations apply to the elf-legends of the North rather than to the stories which Madame d'Aulnoy wrote, and which, as we have indicated, are little novels of chivalric adventure, combined with the stately enchantments of Southern poetry and fable,—the fairies in them being by no means the elves of Germany and England, but the *fées* of Italian and Provençal poetry, the lineal descendants of the Greek nymphs. Still, we incline to think that the two kinds of fairy tales are sufficiently analogous to justify their classification, with more or less stringency, under the same literary laws; and we, therefore, hold that Madame d'Aulnoy would have improved her fictions had she woven them a little closer, and omitted some of the courtly formalities which now contribute to their bulk and detract from their ideal truth.

This brings us to a consideration of the most prominent feature of these narratives. They are all, on the face of them, manifestly written for court reading,—intended for the perusal of none but ladies and gentlemen of "quality" and "condition." They are also intensely French,—or rather let us say, intensely French according to the time of Louis Quatorze; full of amiabilities, prettinesses, insineries; showing to us virtue as she appears when fit to enter the drawing-room, heroism in court suits, simplicity with "a thousand artless charms" and an equal number of artful epigrams, and morals with "the most engaging air and mien,"—as if the only purpose of virtue, heroism and morals was to add yet another indolent pleasure to the amusements of court Strephons and Chloes. "*La grande nation*" of the time of Louis Quatorze is visible in every line of the volume which Mr. Planché has translated. Versailles is the model of every enchanted palace in the series (saving, of course, those of the bad enchanters); not a hero or heroine but speaks the language of M. Le Dauphin and Mdle. La Princesse;—all is according to the etiquette of the most accomplished of nations and the most brilliant of courts. This *politesse*, this everlasting readiness to fall in love, and to make a fuss about it, and talk about it, and write verses about it, and address "Ye gods," concerning "the cruel fair,"—these languid hyperboles and full-dress conceits, were learnt in the *salons* and the "circles" of Paris, though they here present themselves among the purple lights and magic glooms, the baseless visions and golden fantasies of fairy-land. Madame d'Aulnoy might have asked, in the language of Antolycus—"Seest thou not the air of the court in these enfoldings?" As we read, we do indeed seem to "taste the air of palaces;"

though not so much of palaces in general, as of French palaces in particular, and of French palaces during the sensuous exuberance and gorgeous noon of the *Renaissance*. And besides this moral reference to the Court of those days, there are, as Mr. Planché informs us, several implied historical allusions to particular persons and events. These narratives, we are told, are "not only amusing fictions, but curious reflections of the Courts of Versailles and Madrid at the close of the seventeenth century; the dress and manners accurately described, and the pomps and pastimes in many instances scarcely exaggerated." In elucidation of these matters, Mr. Planché has added some interesting foot-notes, and an Appendix.

Another remarkable feature of these stories may be found in their intensely "moral" tone. This may seem strange in productions of the close of the seventeenth century; but it sometimes happens that the most self-indulgent epochs produce, by the very necessity of an antidote, the most rigid exhibitions of virtue. The fair Countess herself, albeit a beauty, a wit, and a gay and fascinating woman, moving about in high society, seems to have been a model of propriety; and her stories, though kindly, cheerful, and seductive, are (with two exceptions which Mr. Planché has omitted) as unimpeachably "virtuous" as Exeter Hall itself could require. But, as usual in such cases, the thing is a little overdone. Not to mince the matter, some of these princesses and shepherdesses are intolerable prudes. They think themselves very wicked when they find they are falling in love with the handsome young princes, and have plenty of prudent maxims and rules of conduct, ready cut and dried, with which to meet the advances of those amorous youths. We cannot be surprised at this. It is one of those little simpering insincerities by which a licentious, effeminate, and over-artificial age contrives to persuade itself that it is mighty fond of simplicity and virtue. Not that Madame d'Aulnoy is chargeable with hypocrisy in the matter, for she appears to have been a very estimable person; but every one is moulded by contemporary influences. We are also disposed to object to a fondness for mental reservation and deceit on the part of the heroes and heroines when they are in a dilemma—a characteristic in which, perhaps, we may detect the circumstance of these tales having been written in a land where Jesuitism was—and, alas! still is—an institution of the State. Nevertheless, there is much in Madame d'Aulnoy's stories that is morally beautiful. We find in them the old chivalric virtues of kindness, courage, devotion, and honour; and the principle of protection to the lower animals is often enforced.

Mr. Planché does not inform us what was the source of Madame d'Aulnoy's tales, or whether they were pure inventions. If the latter, they certainly indicate a most extraordinary power of imaginative creation. Probably they were new combinations of old materials; indeed, some of them are evidently Eastern in their character, and suggest for themselves a remote Oriental paternity. Mr. Planché, in an obscure comment upon 'Finette Cendron' contained in his Appendix, says that the story is partly taken from Perrault's tale of 'Cendrillon,' known to us under the title of 'Cinderella'; and suggests that "the authors had a common original which has hitherto escaped notice." We are not sure that we understand Mr. Planché's meaning aright; for there is a confusion in the paragraph, which renders the words we have quoted rather ambiguous. But we think the above is a fair representation of what he says. Yet, is it possible that he can have forgotten that the story of

Cinderella is an old Greek or Egyptian tradition,—and that versions of it are to be found scattered through the whole of Germany and the other Teutonic nations, as well as through Russia, Poland, Servia, Wallachia, Italy, Wales, and indeed almost the entire length and breadth of Europe? Even, however, if we grant that Madame d'Aulnoy found the raw material of her slight romances ready to her hand, she must have possessed great fertility of invention in weaving the old matter into new forms; and she cannot have derived from others all the events, the scenery, and the rich details of enchantment which flush and glitter through her pages. Some of these are extremely beautiful. We know of nothing finer than the opening of 'The Golden Branch.' That solitary, dusty tower, closed up for two hundred years,—the books in a long-forgotten language,—the painted windows, with their vital and prophetic histories,—the pictures that have life and motion in them,—the discovery of the unexpected treasure,—and the sleeping princess, suddenly awakening from the dream of two centuries:—all these conceptions possess a vision-like splendour unsurpassed by anything in fairy fiction. But the latter part of the tale is tedious. The pastoral scenes are neither real nor ideal; and Dresden china shepherds and shepherdesses, disporting themselves after the manner of ladies and gentlemen in Watteau, are very uninteresting beings. Mr. Planché was true to the spirit of these scenes when, in his extravaganzas, he introduced into them the *Menuet de la Cour*. In fact, the pleasantest thing about them is, that they remind us of that brilliant spectacle, which still lives in our memory,—though we have had since then we know not how many revolutions, insurrections, and European convulsions, together with the birth and death of several Republics, the creation of a new Empire, and a war with Russia.

The literary style of these productions may be sufficiently judged from the foregoing general remarks. It is full of artificialities, set forms of expression, and a certain mechanical and predetermined impulsiveness which is peculiarly French. At the same time, there are many felicities of phraseology. For instance, in the story of 'Gracieuse and Percinet,' we read of an ugly old woman who aspires to be thought young and handsome.—"She was hoisted up on the beautiful horse, and looked like a bundle of dirty clothes. Eight gentlemen held her, for fear she should fall off." The same old lady being thrown (notwithstanding the eight gentlemen), and her artificial "making-up" being scattered, we are told that the attendants "picked her up in pieces, like a broken glass." There is satirical genius in this, and a snatch of grotesque poetry, too.

Notwithstanding all drawbacks, these Tales must always remain great favourites; and in the present translation Mr. Planché seems to have performed his task lovingly and well.

Modern Jesuitism; or, the Movements and Vicissitudes of the Jesuits in the Nineteenth Century, in Russia, England, Belgium, France, Switzerland, and other Parts. By Dr. Edw. H. Michelsen. Darton & Co.

WHEN Walpole heard that a Russian poet and actor had translated 'Hamlet' into the Russ tongue, and that the play had been represented before Catherine, his ecstasy was charming. He would have given anything, he said, to have witnessed the scene of the poisoning of the husband represented in the presence of that Catherine who had murdered her own. There was but one other circumstance of the time which afforded the lively letter-writer equal

pleasure. The admission, of the Jesuits into Russia by the unclean Czarina, when they had scarcely another refuge in Europe, would be followed, he thus expressed his hope, by their establishing a permanent superiority which should shake the throne of that ablest and most wicked of ladies. With few exceptions, the pages in the volume before us contain little that is new. A great amount, however, of scattered material has been brought together,—and of this the notice of the Jesuits in Russia is the most interesting, and perhaps would have in some degree gratified even Walpole. It is less for the sake of the reverend fathers than for that of citing samples of Muscovite character, that we make an extract from this portion of Dr. Michelsen's volume. The sons of Loyola had been permitted to enjoy an asylum in Russia on condition that they made no proselytes. They accepted the condition, and disregarded it, with equal alacrity.—

"Two circumstances in particular accelerated the catastrophe in the political drama of the order in that empire. Prince Alexander Galitzin, nephew of the afore-mentioned minister, after having visited for two years the college of the pious fathers at St. Petersburg, openly declared, in 1814, his conversion to the Roman Catholic church, a circumstance which excited the more attention, as he had, until that period, been notorious for his fanatical attachment to the established church of the country. Although he was at once removed from the college, and installed among the pages at court, he clung to his new religion with all the devotion of an orthodox Catholic, and was even once seen clad in the dress of a penitent monk, with curious amulets hung round his neck, and a scourging girdle round his body. It was long before the Archbishop *Philarethes* succeeded in bringing him back to the religion of his family. While the above event was still the talk of the town, another intrigue of a similar character plunged one of the first families in the empire into the deepest mourning. A charming young princess had been by her parents confided to the instruction of a disciple of Loyola, who, to convert her to his creed, continually represented to her in the most fendish colours the eternal torments she would have to undergo beyond the grave as a heretic. The poor girl, unwilling on the one hand to offend her parents, and wishing on the other to accustom herself in lifetime to the torments by fire, which she was sure awaited her after death, tried to exercise herself into endurance by scorching her body several times a day with a hot-burning copper pan, until the repeated agonizing pain at last threw her on a sick bed, from which she never rose."

The ukase decreeing the abolition of the order was published in 1816. The Jesuits were thrust forth, but they asked alms of Constantine on their way westward. The following is characteristic of both parties:—

"Soon after the banishment of the Jesuits from the two metropolises of Russia, two of the worthy members arrived at Warsaw, for the purpose of requesting the Grand-Duke Constantine to allow them to establish a college in the Polish capital. Not venturing, however, to make such a bold request after their recent expulsion from the Russian capitals, they began by asking the favour of an audience from the Grand-Duke, naming for its object the permission for themselves and a few of their exiled brethren to take up their residence at Warsaw during the cold winter season. The readiness with which Constantine granted them their reasonable simple request during their interview with him, encouraged the fathers to enter into the details of their sufferings, and as the Grand-Duke seemed to listen to them with interest and sympathy, they had the imprudence or rather impudence, to take chairs and sit down at the side of Constantine without his having bid them to do so. In the heat of their gesticulation, they gradually approached so near the Grand-Duke as frequently to touch his arm. The latter felt so annoyed at the familiarity, that he rose and called for his carriage. The two fathers, however, far from taking the hint, actually followed him to the very steps of the carriage, and were about to enter it after

Constantine had taken his seat, when the latter, losing all patience, said to them: 'Now I am truly sick of it; you have just shown me, my good fathers, the manner in which your Order is accustomed to abuse the least favour held out to them. Within one single hour you have become, from timid petitioners, impudent claimants, not even allowing me the free use of my own time and carriage. I now limit your abode at Warsaw to only fourteen days.' The anecdote was told by the Grand-Duke himself to the French ambassador, the Duke of Richelieu."

When the question of the expulsion of the members of the Order was agitating Switzerland a few years ago, the supporters of the question quoted as their justification a Catechism composed by Sconville, and which is *now*, on the recommendation of Bishop Laurent, the Papal Nuncio in Luxembourg, taught to the youth under his episcopal care. We quote it purely as a sample of the theological literature of the Order. Our readers may form their own opinions upon the instruction here conveyed.—

"Q. In what place will each one arise in the resurrection?—A. Each one will rise in that place where the largest portion of his body remains.

"Q. In what form will each rise again?—A. Of a middling stature, with well-proportioned limbs, and each according to the sex previously possessed.

"Q. In what age shall we rise from the dead?—A. In the age of Christ, as if we all were thirty-three years old.

"Q. Shall the world be inhabited again?—A. Some think, unbaptized children will inhabit it, but none else, not even the beasts. * *

"Q. Is it a sin not to pay tithes?—A. Yes, it is a great sin. * *

"Q. Where is hell?—A. Hell is in the middle of the earth.

"Q. Is hell very large?—A. Not very, for the damned lay packed in it one upon another, like the bricks in a brick oven."

We do not remember, in the literature of pains and penalties, to have met with a more curious illustration than this last. We know of but one other which approaches it,—namely, in the old German list of retributive punishments, wherein it is asserted that all unworthy clergymen who pass into the next world will be condemned to pass the whole of their time in reading all the bad sermons which have been written in this. Poor fellows! But the idea is too horrible.

Essays on the Spirit of the Inductive Philosophy, the Unity of Worlds, and the Philosophy of Creation. By the Rev. Baden Powell. Longman & Co.

Worlds Beyond the Earth. By Montagu Lyon Phillips. Bentley.

THE first of the three Essays in the volume by the Savilian Professor of Geometry is a reprint, —or, as Mr. Powell more correctly calls it, "an amplification of a few paragraphs" in a former article on 'Necessary and Contingent Truth.'

The argument in this essay is directed to show that the inference of a Supreme Moral Cause, which is itself distinct from and above Nature, "results immediately from the recognition of the eternal and universal maintenance of the order of physical causes, which are its essential external manifestations." The conclusions of the Third Essay, after due weighings of the speculations of the philosopher and the arguments of the divine, are that "the idea of a *beginning*, or of *creation*, in the sense of the original operations of the Divine volition to constitute nature and matter, is beyond the province of physical philosophy, and can only belong to that of faith, and find expression in the language of inspiration." The Second Essay is the most important of the three. Its conclusions, however, can hardly be said to be dissimilar. That we know little, and yet may be permitted to speculate much, without fear that

the end of speculation can tend to the uprooting of our theological system,—may be said to be a portion, at least, of the conviction arrived at by the accomplished Professor; who says, wisely and significantly, that—"Men who take comparatively little interest in the tangible details of real attainable science, feel stimulated by the desire to penetrate those recesses where all is obscure, and *certain* knowledge unattainable." As a sample of how the Savilian Professor employs and compares the opinions of others, and adds to them the weight of his own, we can find no more appropriate passage than the following:—

"The materials of which Jupiter is composed are of a specific gravity about equal to that of water, which is the same nearly as that of the sun. The essayist, in his assumed magisterial vein, lays it down as by no means an arbitrary hypothesis, that Jupiter is a globe of water; and argues accordingly that his inhabitants, if any, must be aquarian creatures of a soft, pulpy, boneless, watery character, to which, he thinks, we should naturally feel it very difficult to ascribe intelligence or moral attributes, that is, without violating those analogies which we are so prone to form (perhaps groundlessly) from contemplating our own species. But, as Sir D. Brewster, on the other hand, very justly observes, there are many solid substances, and even some minerals, as pumice, pitchstone, &c., and the metals of the alkalis, of less specific gravity than water. Jupiter, therefore, may just as well be composed of solid materials, and be tenanted by animals capable of living on land, as by aquatics. Similar calculations have shown, that in all the outer planets the conditions of gravitation are nearly the same; nor need the small specific gravity requisite for such animated beings occasion any difficulty. On our own planet, animals differ widely in this respect. It is hardly necessary to remark that birds, *e. g.*, have their bones, coverings, &c., of much greater specific lightness than the corresponding parts of terrestrial animals. Nay, Sir D. Brewster has shown, by direct calculation, that even a human being, constituted as we are, would not really be much inconvenienced if transported to the surface of Jupiter; and buildings and trees, such as occur on our earth, might grow and stand secure, in so far as the force of gravity is concerned; and the same would be true for the planets exterior to him. At any rate, when we reflect on the extremely varied forms of animated life on our own globe, on the diversified structures of different classes of animals, and the marvellous adaptations of their respiratory and circulatory functions to the conditions of their existence under the most varied circumstances, yet all preserving the most recondite relations to analogy and unity of composition, we conceive there can exist no difficulty in *imagining the possibility* of living beings constructed with bodies of greater or less specific gravity, suited to the most widely different conditions of gravitation or atmospheric pressure in which they might be destined to live, and with respiratory, muscular, digestive, or locomotive powers and capacities developed in infinitely varied degrees, according to the different conditions under which they might subsist, and the media in which they might have to move—yet always preserving an unbroken analogy with *some* grand and universal scheme of uniformity, of which we enjoy only partial glimpses; while under any such variety of external form or condition, they *may* be equally capable with ourselves of being the recipients of higher principles of intellectual, moral, or spiritual life."

From Prof. Baden Powell's earnest and graceful volume, we turn to that of Mr. Montagu Phillips. The author sets out by asserting that preceding writers on the same subject have founded their arguments on incorrect and confined views of the constitution of the universe; —and he professes to take a much wider range than any other writer. We do not find, however, that he excels Prof. Powell in this respect. The latter, in his inquiry touching the assumed inhabitants of the planets, begins with that nearest to us, and goes even beyond the "chilly orbs on the verge of creation." It is due, how-

ever, to Mr. Phillips to say, that he is an original thinker, and gives fearless expression to every thought. We will not accompany him through his argument, but rather quote his conclusion. After showing that gases by chemical union become solids, he proceeds to examine the objection that has been made to the assertion, that animal life may be supported on the plane of planets that have no atmosphere.—

"Is air indispensable to the existence of all animals? *Are lungs absolutely necessary?* When we consider the infinite variety of living creatures on our own Earth, some breathing air, others dying in it; some with lungs, others without; when we learn from geologists the former existence of such strange and monstrous forms as those which have tenanted the earth itself, in remote periods, long before the creation of man; when we look at their restorations of the ichthyosaurus, the strange labyrinthodon, the monstrous pterodactyl, how can we pretend, upon any philosophical principle, to limit what may or what may not be the forms assumed by animal life? Why is so large a globe as the Moon, and the still greater moons of Jupiter and Saturn, to remain untenanted? Is it merely because we cannot understand how animals can exist without air? That would be to limit the power of the Creator; to deny that He could make any other than air-breathing creatures, an assumption for which we have no warrant. The Moon may be inhabited, and possess a very numerous population. The only reason that can be urged against them is that *we cannot see them*. The public, generally, expect too much from the power of the most gigantic telescopes yet constructed. If the inhabitants of the Moon do not require habitations as we do, perhaps they will not erect them; if they do erect buildings, they may have chosen, for some reasons best known to themselves, to elevate them on that side of the Moon's surface which is never turned towards us. Consider the similar condition of things in our own Earth. If we turn a terrestrial globe towards ourselves, in one direction we shall scarcely see *any land at all* upon which cities could be built; and, certainly, none of our large towns. If that side of the Earth were turned towards us, from a distance, we might infer, from the almost total want of a solid surface, the uninhabitability of a globe which yet contains a busy population of millions upon millions. Now, suppose, for the sake of argument, that that side of the Moon which is invariably directed towards the Earth, be the barren volcanic district which it is considered to be, does that warrant us in the belief that *the other side is the same?* We see, then, that the hypothesis of the Moon's surface being uninhabitable is not founded upon philosophical facts. It can, at most, only be contended that human beings cannot exist there. In this latter opinion we coincide; and we believe, moreover, that human beings exist *nowhere else in the universe* than on this Earth—man's world, made for him, and to be his present, and probably his future abode."

We have classed these two volumes together, because they may be read profitably in conjunction. They are popularly written, and are useful contributions to the discussion of the questions upon which they treat.

The Rag-Bag: a Collection of Ephemera. By N. Parker Willis. New York, Scribner; London, Trübner & Co.

THAT which was said of 'Idlewild' applies, "with a difference," to 'The Rag-Bag,'—since besides happy touches and glimpses of scenery and nature, the Editor of the *Home Journal*,—who here reprints some of his articles,—sets New York manners to rights,—tells Ladies which way they should dress, how they may most elegantly admire the Opera, in the fashion of Europe,—and criticizes "dishes and dances" with a quiet coxcomby, which is precious in its generation and curious as belonging to its country. A speculator's vision "before the fact" of a Transatlantic *Bickerstaff* would have been something far different from this.
